Obscure as this subject is to many people, they succeed in establishing their work, and when it once stands it is like a fate decreed, to which all must bow because they do not see its evils clearly, and it is difficult to amend it. Nay, as an existing thing it is defended and elevated into a principle, although the original principles on which it was founded were quite at variance with the subsequent facts.

In this respect the English legislation of 1816, which established the gold valuation, furnishes a striking example. At that time nobody dreamed of California and Australia, and, as the literature of the time shows, a comparative scarcity of gold was anticipated, and England urged to secure a share by its new system. But how completely have the conditions been reversed!

So with Michael Chevalier in 1850; first he wrote down gold and recommended its demonetization; then he turned the table upon silver; now he is in doubt, inclining to Wolowski's views.

From England, of course, you will for some years to come yet hear views in favor of gold valuation, and altogether you must expect from here the tendency of making tokens of all the lower classes of coin. Our esteemed mutual friend, Mr. Alfred Latham, even goes so far as to declare that the half sovereign might be made a token. Where are the principles which justify such a view? Do they lie deeper than the natural sense of equity, or is the suggestion one arising from surface experience? I imagine that there can be but one truth, and that this truth can not be supplanted by mere expedients, which, in violating it, draw consequences after them of which their authors can not give an account, because, forsooth, they mistake a certain degree of prosperity, as brought about by these very measures, whereas that prosperity rests on quite different grounds, and would be greater if these unjustifiable violations of truth did not irrevocably damage the interests of certain sections of the community.

The whole question of token currency, or rather that of the "portion of token currency," in any monetary system is as yet in its infancy. Historical experience and plain common sense have, however, established the fact that the levying of seignorage on all descriptions of coins is impossible, and that the so-called standard coins, at least, must be of full value.

On the other hand, experience has shown that copper coins and the lower class silver coins can be issued with a heavy seignorage without any apparent damage to the interests of those who use them principally. Yet that this damage does nevertheless exist is plainly shown. The conversion of the masses of copper coin into standard coin, for instance, is very difficult.

In the brewery business here there are firms who sometimes hold £5,000 or £6,000 in copper and small coins, and can not pay them away. The loss of interest and working power on capital thus accruing must be charged on their manufacture, *i. e.*, the consuming poor must pay more for it, and are thus unduly taxed. Again, as the issue of such copper coin is more according to the good and bad judgment of the authorities, the large sums thus accumulating withdraw a portion of the means of exchange supposed to be measured out for the intercourse of those who require them.

I will, however, concede that the issue of such debased copper coin can not be avoided, and that the evil must be borne; and here I must remark that section 33 of the bill which authorizes the United States mints to redeem copper coin in national currency is a proper measure, for it will prevent the accumulation of copper coins in private hands, and give the holders, though in a roundabout way and not without charges of forwarding, etc., the chance of converting it. In Europe, we follow a different policy; the mints undertake no such obligation, and do not redeem copper coin for this reason: the stamps of their copper coin can be so well imitated that the mint itself, especially if the coin appears to be a little worn, can not distinguish false pieces from their own, and as the manufacture itself leaves about 60 per cent clear profit, forgers would set to work provided that they could freely dispose of such pieces.

Fortunately, it is impossible here to dispose of copper coin by way of tender value for more than a few shillings at a time, hence the thing does not pay—nevertheless false copper coins are known to exist. But if, as you contemplate by section 33, the mint is to redeem copper coins in sums above $50, *i. e.*, giving them, so to speak, their tender value, you may be sure that false coins will soon take advantage of this facility. So that, although I call it a proper measure for one purpose, it will bear its penalty in another way, and I am, on the whole, inclined to favor our European policy, provided that the evil of seignorage be not attached to the higher class coins, viz, the full-valued standard of gold pieces and large silver coins and confined to only the copper and lower class silver coins. For in this extreme extension of the application of seignorage lies the whole error.

When those who favor a full-valued silver coinage plead their cause on the ground that the principles of justice and logic demand that a whole thing (say a standard coin) can only be divided into parts of equal value, and that those parts ought again to give the whole in substance or in true equivalent value they are told: Why, then you must include the copper coin as a standard and permit anybody to make payments of, say, $50,000 in copper coins, and that would not do.

We quite agree with this, but we allege, on the other hand, that "enough is the evil thereof," and that the necessity of thus limiting the tender value of copper is no justification for also and entirely limiting the tender value of silver, for if it be maintained that no interest can suffer when the coin concerned is of the value of 2 or 4 shillings, we have the right to say that you might extend seignorage to pieces of 10 or 20 shillings in value, which, we have all agreed, can not be done.

The question, then, between these two views is one of degree, and the thing to be determined is, where is the right point of value below which token currency may be admissible, and above which the medium of exchange must be of full value?

What should govern this decision?

The advocates of the gold valuation say "gold;" *i. e.*, they decide the point in question according to the usually recognized proportions of value between gold and silver as 1 to 15½, and say thereby "we also gain a unity of value." Now, the basis of pieces as between commodities and the precious metals has nothing to do with the proportionate value of gold and silver. It is so far immaterial whether a measure of value of 4 shillings (or more or less) be made of gold or silver or any other material, and so these proportions between gold and silver can not furnish the principle upon which the question is to be decided.

We, on the other hand, say the decision should be governed by the idea that this evil of token currency must be suppressed as much as possible, and that, as a thing essentially bad, contradictory, and unjust, it must be kept under even at the sacrifice of the supposed advantage of a unity of standard. And this includes the idea that, whereas those who are able to deal in gold complain of silver as too heavy for the pocket, they must, nevertheless

less, bear with this inconvenience for the sake of those who deal principally in silver.

As to the idea of unity of standard, although we dispute its validity, inasmuch as we allege that for the maintenance of the just value of gold silver is a necessary adjunct whose value must not be suppressed, we might for a moment admit this consideration. If there were gold enough in the world to furnish all the means of exchange required for money, this unity would be possible, and so even the lower kinds of money could be made from gold; in which case, however, the value of gold must have fallen so very much below what it is now that the objection of weight would arise again with greater force.

If a two-and-one-half-dollar piece or a one-dollar piece were worth in commodities but 50 or 20 cents, all the trouble for effecting payments in large quantities would be revived.

Without this fall in the value of gold, all the coins, which can not (on account of their smallness in gold) be made of that material, must thus, under the single gold valuation, be forever condemned to the position of tokens. And when all other nations, in self-defense, following the examples of England and America, are compelled to demonetize silver, the inevitable fall in the value of that material must be added to that of gold, so that the rise in the value of gold will increase the baneful effects of the debased silver coinage.

But you may ask again, "Where is the mischief?"

A half dollar, though debased, passes for a half dollar, and no one seems to complain.

The mischief is this: A token currency, as part of a system combined with full-valued coins, must be kept within very narrow limits as to issue. Whilst the full-valued coin can be issued freely, and finds, by its very nature, free ingress and egress, the token currency can not be issued excepting for what appears absolute necessity; its issue must be restricted, its export must be prevented by debasement.

Whereas, for instance, if the mintage of the whole set of coins were left free to the action of international and national trade, there might be in any country, say, two hundred millions of coins of larger value (such as gold coins) and sixty or one hundred millions of coins of lesser value (say silver coins), so as to suit the intercourse between all the stages, and in the mutual intercourse of each stage of society. No such proportion can possibly be arrived at where such lower coins are condemned to be tokens. It has been ascertained that we in England can not use more than 10 per cent of tokens, and even with that limit we find a surplus in the hands of bankers, and consequently so much short for the wants of the people. Hence the proportion to the above supposed two hundred millions is but twenty millions of tokens or coins below ten in value. And these twenty millions, despoiled of their metallic value, and placed under severe restrictions in payment, may be called the scanty offal of the monetary system, with which the less wealthy must be contented.

That the rich do not complain of this state of things is explicable; it does not directly affect them; on the contrary, it makes the lower classes more dependent. "Then, why do not the poor complain?" may be asked. Is it to be expected that Dick, Tom, and Harry, the workmen, should study social economy so as to be able to propound the doctrines of truth and the practical value of their applications to a subject so obscure as that of money is to most men? Enough that, in vague terms, they complain of a scarcity of money, of idleness, and want of work; and that this idleness and want of work are in direct relationship with the available means of exchange for intercourse you may admit if you lend an ear to the arguments in the following passages:

Money is the absolutely necessary element in the effecting exchanges in commodities—*i. e.*, for carrying on intercourse, *i. e.*, the consumption as well as the production of commodities; hence the numerical presence of money to a great extent guides the number of transactions in either direction. In this sense a supply of money encourages, a diminution of money lessens, the number of transactions.

So well is this rule recognized in all schools of national economy, that we in England pride ourselves specially upon the freedom which we give to gold, for its import, export, and free coinage. We know that by exhibiting a "demand" for gold, and acting accordingly, we can obtain it; but we take great care not to bar its supply in any way; we do everything in order to encourage it, recognizing that in the theory of supply and demand the former is the really active, positive, and productive agent; whereas the old theory contented itself by adhering to the false doctrine—"the demand rules the supply."

We feel and know that this free supply does not only encourage our international trade, but also (and what is more important) our own inland intercourse between ourselves, as it encourages consumption and production; the universal presence of sovereigns increase the demand for consumption.

It is evident, however, that the benefit of this enhanced consumption can, in the first place, be enjoyed only by those who can afford to deal in sovereigns—*i. e.*, by those who are wealthy enough to consume twenty times as much as others; those to whom the sovereign is no more than a shilling to others.

For the purposes of this latter class (those to whom the shilling is as important as the sovereign to the wealthier) it would thus seem reasonable that the shilling should also be supplied with the same freedom, so that the consumption pro rata should be guided by the same rules, encouraging, in its turn, production and labor. A very large section of our poorer community is benefited, no doubt, by the supply of gold coin coming into this country, as also the industrial classes laboring for the international trade, and the inland consumption of the wealthier; but this is, so to speak, only a partial matter, for by far more important is the consuming power of the people themselves.

More than three-fourths of the inhabitants of this country, for their daily or weekly transactions, use silver coin, must give silver coin, because the amounts involved can not be paid in gold. True, if an individual in that class receives a sovereign, he can get it changed (though not without trouble, and even at times with the tax of a glass of beer as an excuse); but that is not the point, for this question of change for one or more sovereigns stands apart from the great question of the universal supply of the less valuable mediums of exchange for the purpose of encouraging and developing consumption and production between this three-fourths of the nation themselves.

Thus, whilst for the reasons given we supply gold coin freely, we in England follow the directly contrary course with regard to the less valuable mediums of exchange; we debase them, limit their tender value, close ingress and egress, and thus confine the whole of this great national intercourse between the majority of our people to within a narrow compass or cage, in which it becomes crippled. Hence the want of supply limits consumption, the want of consumption limits production; hence idleness, poverty, demoralization, and crime. Tom, Dick, and Harry, with their wives and families, stand idle and become demoralized, not, forsooth, that there is want of food in this country, for there is enough to eat, but because there are not mediums of exchange sufficient to set the one going to produce something for the other, some of those many things, beyond meat and drink, which, made from cheap and abundant raw material, assist and comfort in bearing life, keeping the one as well as the other to God-ordained modest labor and morality, and profiting both. And for the prevention and violation of these sacred rights, I hold responsible the men or soi-disant economists who have framed our monetary laws, who insist on saying and try to prove by all the sophistry in their power that a despoiled shilling is nevertheless not a despoiled shilling, and that they may rob Peter to pay Paul with impunity.

Men of that class, who have made their fortunes in international trade, have no other eye for anything else than custom-house statistics or the rules of competition in our manufacturing districts; they overlook altogether the minor and far more important life of the people themselves, and say to them, "Here, we want gold; you must be content with bad silver, and we can not give you much because it is inconvenient to us," and with this offal, which even in that sense is not supplied freely and is kept within very narrow and unnatural limits, the people must be satisfied."

A curious feature in connection with this matter is the often repeated saying, "There is no demand for silver." Blowing hot and blowing cold. First praising supply of gold, then calling for a demand of silver before it is supplied. I say the demand for silver has been destroyed, the strength to use it is gone. Pauperism is too great to make a demand such as would satisfy the authorities. And what kind of form must the "demand" take in order to force a supply? How far must the agony go in order to burst its bounds? Some time ago a general cry arose throughout the country on account of the scarcity of silver. There were people who ascribed this to Col. Tomlin's efforts to agitate the subject, as if that gentleman had bought up and hidden many millions of silver. But the demand seemed genuine, for it was impossible in some parts of England to find silver. The authorities took care to show that the demand was accidental, and promised that as soon as the mint had finished coining gold in a few months it would coin silver.

Yet, during this time the demand had to wait, and many hundred thousands and millions of modest transactions between the poorer and industrial classes, from which they might derive comfort and sustenance, could not take place. This accidental demand for silver was a mighty effort of the crippled intercourse, caused by offers for mutual exchange, which exchange could not take place because the means were absent. The sick man tried to rise, and had a craving for nourishment; he fell down again because it could not be given him when he wanted it. Since then the mint has coined much silver, but the demand is gone again and our bankers will soon cry out and complain of too much silver. Lessons like these are lost upon our economists.

Who can wonder that they utterly failed to recognize the silent suffering of our poor classes less versed in social economy than themselves when they refused even to profit by such manifestations which so completely bear out all that we, the advocates of the double valuation, have brought forward. And if you bear in mind the great gulf that exists in Europe between the ruling classes and the people, the deep root of prejudice against their rising, the peculiar kind of charity and charitable social economy whose stock arguments rest on abuse of the lower classes, with just so much effort for elevating them as "caution" may admit, you might come to the conclusion that scarcely anything short of rebellion will be found strong enough to serve the authorities as sufficient manifestations of demand for "silver."

To this point, I am certain, we must ultimately come. Grave political questions may occupy the world for some years to come, but this question will be one of the rest. Rebellions for similar objects have happened before in the present age, when international commerce and more "refined" trading reduces margins to more mathematical precision, and thus leads to a more definite and clearer appreciation of differences in theory and practice; and the glaring injustice perpetrated by such proceedings as here laid bare will be recognized with unerring force.

And although England has been prosperous, and though her prosperity is vaunted as a truth in opposition to what I have here said, yet it will be recognized that this prosperity is due to other causes and is not due to the monetary laws, but that her excessive pauperism can be traced to their injustice; and although I hope that England will continue prosperous, yet I anticipate that this prosperity will be enhanced by a reform in her monetary laws, *i. e.*, by the adoption of the double valuation. It may be alleged, indeed, that as a universal trader, England would have done much better with the double valuation.

You may, or may not, be disposed to attach some value to these remarks respecting the systems of valuation, but you may think that America, so favorably situated as regards emigration and resources, need not regard the delicate distinction in the matter. But if the remarks here made are true, and if you bear in mind that in many matters of social truths we look to America with great hopes and watch her example, you may feel disposed on cosmopolitan grounds to consider the matter. On national grounds you may also come to the conclusion that inasmuch as many of the most thickly populated and industrial districts of America resemble districts in Europe, and have before them an extensive future, the effects here set forth are worth guarding against. I may call upon you to do so when I remind you that the system of valuation proposed in your bill is more severe than the English one, because you limit the tender value of silver to one-half of what it is here: hence the supply of this coin must be more unnaturally restricted.

Permit me also to call your attention to another matter connected with this controversy in your bill.

Section 33 authorizes the mint to redeem copper coins. Why should not silver coins be thus redeemed? Section 29 says, "it shall be lawful to transmit parcels, etc., under regulations." Why is not that as clearly stated as with copper? Both descriptions are tokens, and the fact that silver coin contains comparatively more value than copper coin is of little consequence, for in its character as mere token it might, indeed, contain less. I have no doubt that here you are in a quandary, and fearing that silver "privately coined" or artificially abrased, "might be presented in large quantities to the mint, you guard yourself by the indefinite regulations to be proposed by the Director of the Mint."

The thing is a sort of Gordian knot, a consequence of the whole unjust system of the gold valuation, which can all be avoided if you take the course previously recommended by me, viz: "That of issuing a full-valued silver dollar as the piece to stand between your gold coin and your debased silver coinage.

I am myself, as you will perceive from my writings, and others with me, in favor of the full and complete adoption of the double valuation, giving full legal tender to coins as low even as one-fourth dollar in value, believing that this is the only true system upon which a future universal system of coinage can be based (see suggestions, page 167), nevertheless recognizing the difficulty of carrying this point at present; and in order to enable you to uphold the essential features of the gold valuation, I limit my recommendation to the issue of this single full-valued dollar piece, under the proposed restriction of tender value to $50 or $100, partly for enabling you, without drawback or inconvenience whatever, to widen or to close the valuation question at any time, and partly in order to relieve you of the unsuitable obligations of the mint to redeem a surplus of either the token silver or the token copper coinage.

For, if such a full-valued silver dollar is issued, there will be no need of so many half and quarter dollars. The sordid consideration that the mint would thus make less profit will not, I trust, interfere with this consideration; the matter should be left to its natural development, and if more half dollars are wanted, it might be found suitable to convert the whole dollars as they are presented for the purpose to the profit of the mint.

I think that such a whole dollar would be the bridge, and that if it were issued the Government might (like we do here) altogether drop the obligation of redeeming silver tokens (whatever regulations may be contemplated), except such as are worn light and defaced, and the equalizing tendency of the issue might even compensate for the dangerous necessity of redeeming copper coins, which, as here, might be left to be dealt with by the public.

I trust these lengthy remarks will not be tedious to you. The frankness with which you asked for criticism on the bill has induced me to make them; and when a man's life has been passed in the study of and the practical handling of a matter like this he can not well help in bringing forward as much as he hopes may be useful; and in the case of the United States, where I have lived many years and where I have studied social economy from an American point of view, and am now able to extend this view, I imagine that that which I have proposed to you is not contrary to American habits and customs. The national currency has no doubt changed some of the conceptions in reference to money; but the original truth that solid, full-valued currency is the best will ultimately assert its authority.

I am, dear sir, yours, very obediently,

ERNEST SEYD.

To SAMUEL HOOPER, Esq., M. C.

P. S.—I have sent to you in parcels by bookpost, addressed "Samuel Hooper, esq., M. C.," Bullion and Foreign Exchanges, Suggestions on American Coinage, Demonetization of Silver, several pamphlets, reference to which is made in this letter.

SILVER COINAGE.

Mr. PEFFER. I desire to give notice that on Thursday morning next, immediately after the conclusion of the routine business of the morning hour, I shall ask the Senate to indulge me while I submit some remarks upon the bill (S. 570) discontinuing the purchase of silver bullion, reported by the Senator from Indiana [Mr. VOORHEES] from the Committee on Finance.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. T. O. TOWLES, its Chief Clerk, announced that the House had passed without amendment the bill (S. 50) in aid of the California Midwinter International Exposition.

The message also announced that the House had passed a joint resolution (H. Res. 4) to make the provisions of the act of May 13, 1890, which provides for town site entries of lands in a portion of what is known as Oklahoma, applicable to the territory known as the Cherokee Outlet, and to make the provisions of said act applicable to town sites in the Cherokee Outlet; in which it requested the concurrence of the Senate.

SILVER COINAGE.

The VICE-PRESIDENT. The Chair lays before the Senate the bill (S. 570) discontinuing the purchase of silver bullion; on which the Senator from Indiana [Mr. VOORHEES], according to previous notice, is entitled to the floor.

Mr. VOORHEES. Mr. President, Congress has been convened in extraordinary session and under extraordinary circumstances. It is undoubtedly true that the calm, unbiased public opinion of the great body of the American people, irrespective of parties, justifies the action of the Executive in assembling the legislative branch of the Government at this time, and yet the causes which have made such action necessary are, I think, widely and dangerously misunderstood, and by certain classes purposely and persistently misrepresented. I have conceived, therefore, that a few plain words in this connection, embracing a careful and candid look at the present financial condition of the country in its general as well as in its special features, and spoken in no spirit of strife or controversy, may not be unfit for this striking occasion.

For the last five months and a little more, the cry of the pessimist, the voice of the prophet of financial evil, and the wail of the apostle of national bankruptcy have all been heard in the land. These sounds of warning and menace against the authorities of this Government have gone up from all those financial centers where money, its gains and its power, constitute the chief objects of human worship, and from those centers have also emanated the cruel edicts of great financial corporations, commanding a stern contraction of the currency, a sudden and harsh shrinkage in its circulation, and the consequent inauguration of a panic, a distress period in the public mind.

Sir, no candid observer of existing public facts can believe that this attempted panic and business distress has been inspired by any real fear, or genuine want of confidence in the credit of the Government or in the soundness and stability of its various kinds of currency. It is true that amongst the ugly assets of a former Administration which came over on the 4th of last March were an empty Treasury and the record of a billion-dollar Congress in its expenditures, but despite so heavy a handicap the public credit of the United States has not faltered for a single moment, nor has the faith of the civilized world been lessened by the breadth of a hair in American honor and American resources, in this year of 1893, and in the custody of the Administration now in power.

The national credit of the American Republic, tried by every test which can be applied, is better and stronger to-day than the credit of any other government on the globe. Her bonds, her promissory notes to pay her debts, as they may be called, bearing a low rate of interest, stand at a premium in the money markets of the whole earth, and even the cold, cowardly instinct of hoarded, inactive, interest-hunting capital, in its cautious search for permanent investments, seizes upon them with swift greed wherever they can be found. The safety of the security appeases somewhat even the usurer's highly-seasoned appetite for richer profits.

Not only do the traffickers in money and the permanent investors of capital hunger and thirst after all the Government bonds now in existence, but their chief complaint against the present Administration is that the President and his very able Secretary of the Treasury have refused their demand to issue at least three hundred millions more. This additional block of national indebtedness, increasing in a time of profound peace the interest-eating burdens of American labor, would be hailed with the keenest delight and swept with miser enjoyment and avidity into unpatriotic vaults by the very parties who have most loudly and continuously declared, ever since the present Administration came into power, that the credit of the Government was in deadly peril and its Treasury practically bankrupt.

Sir, there are many and powerful reasons, plain to the thoughtful mind, why at this time our financial credit as a nation is stronger, more permanent, and freer from future danger than ever before, and far safer than that of any other of the great powers of the world. The mighty rock on which American credit now rests is the absolute unity of purpose on the part of the American people that it shall be upheld. For the first time since 1820, when sectional discord startled the country like a fire bell ringing in the night, there is a perfect union of design and of patriotic effort between the people of all the States in behalf of the honor, the power, the dignity, and the glory of the Republic. Peace, content, repose, and fraternal confidence have taken the place of sectional strife and distrust forever.

There are no mental reservations now, not the slightest friction of interest or of feeling, as we move forward in the pathway of public duty. All eyes are bent in the same direction; all prayers ascend for the welfare of a common country; all the ends and aims we have are bound together and linked to a single destiny. No one now but a political madman could deem a political contest in this country ever again possible on lines of sectional animosity; nor does there linger in the public opinion of the world the slightest trace of doubt that the people of all the sections are the same in their pride as American citizens and in their jealous love for the name and fame of their Government, for its unsullied honor and high bearing among the nations of the earth.

Let those who are looking with anxiety on this extra session of the Fifty-third Congress, whether they are here at close range or at distant points in the United States or in Europe, dismiss their unfounded fears, banish the imaginary dangers and evils which they have conjured up, and rest thoroughly assured that the financial credit of this Government was never quite so secure as at the present hour. The task of its maintenance ought not to be a difficult one. The public credit of every Government on the map of Europe is unceasingly threatened by the shadows of coming wars, and financial resources there are constantly weakened by vast standing armies and permanent navies.

We are not only a united people among ourselves, but throughout all the wide earth there are none to molest or make us afraid of war or rumors of wars. Nothing within the range of reasonable conjecture can be more improbable than war between this Government and any foreign power. In Europe there are none but antagonistic and distrustful neighbors; the natural and inevitable selfishness of nations makes them so. The providence of history, the conformation of continents, the geography of the earth and seas, have all combined to give the American Republic a widely different and more fortunate career.

None but friendly neighbors will ever touch her tremendous boundaries. The two oceans on the east and on the west are her gigantic and unsubsidized allies in the world's advancement, and those who dwell on her northern and southern borders have no desire to break the peace to their own overthrow. Alone, as it were, the Colossus of the Western Hemisphere, and towering up in isolated power and glory, her limitless material resources are sometimes overlooked in summarizing the elements of her

financial strength. Nature has here endowed a free people with wealth more prolific, more infinite in variety, and more inexhaustible than was ever before disclosed in the annals of the human race. We hear at all times of the boasted commerce of Great Britain and other European powers engaged in carrying the productions of the entire world.

Sir, it may be stated as a fact that the interstate commerce of the United States alone is greater in value than all the foreign commerce and carrying trade of Great Britain, Germany, France, Austria, Holland, Russia, and Belgium put together. With absolute freedom of trade between the States, an equitable exchange of their productions has taken place according to the wants and necessities of producers and consumers. Developments of wealth on the farm lands, in the manufactories, in the rich cañons of the mountains, on the mighty rivers, along the vast ocean borders, and on the inland seas of this favored country have consequently followed in such profusion and magnificence as to dwarf into insignificance the achievements of every other age, race, or nation.

If our foreign trade has not kept pace with our domestic commerce, the reason is open before us in our statutes. Legislation, avowedly unfriendly to trade with foreign countries, placing their productions under the ban of our displeasure, ordering them away from our ports by prohibitory tariffs, can have but one result on the foreign commerce of the United States. Ungracious and forbidding to others, we have no right to expect others to be gracious and friendly in trade to us. We have not to-day a commercial friend in the world. Nobody abroad seeks our trade unless under some sort of compulsion. Nobody in Europe, Asia, or Africa will buy a bushel or a pound of our breadstuffs or our meats if they can get what they want anywhere else.

Human nature governs nations as well as individuals, and for every law we enact denying to foreign productions a place in our markets on fair terms, and announcing that we decline all commercial friendships, we may be certain of an injurious blow in return from every trading people in the world. But I have abundant faith that the giant evil which has restricted and crippled our foreign commerce and closed foreign markets, or made them hostile to the productions of the American farmer, will be removed with other evils which challenge our consideration and action.

In the meantime, if farmers, mechanics, merchants, intelligent bankers, and even Wall-street brokers and stock gamblers, will study the true greatness and the inevitable and invincible future of their country in the light of the last census, they will learn that financial panics and alarms can have no real foundation here, and must pass away, like vapors before the sun, notwithstanding a vicious law may now and then temporarily disturb the public mind.

But there is yet another, and an exceedingly sensitive and powerful test of our Government credit, which, in this connection, asserts its claim, not only to the trust and admiration of the American people, but also to the business confidence and respect of every civilized nation beneath the sun. Money is simply a medium of exchange of values, furnished in this country by the Government for the business transactions of its people. Money has no other origin or power to exist in the United States than is to be found specifically granted by the Constitution.

Let all the vague and chimerical delusions which in some minds always haunt this subject with mysterious and intangible talk about the source and derivation of money be dismissed at once and forever. Neither in the heavens above nor in the earth below is there any power to make a dollar for the American people, whether it be in gold, silver, or paper, except the power of the American Congress. Money is the creature and Congress its creator. Gold and its alleged intrinsic value goes for naught as a circulating medium unless the coin bears the stamp of the Government—a stamp more powerful than the grasp of the lion's paw or the eagle's claw in bestowing life and activity on a dead and otherwise useless material. The same official stamp on silver, or on paper at once ennobles them to an equality with gold in purchasing power, no matter how debased, how degraded, or how valueless the silver or the paper may have become as commodities by sinister and unwise legislation.

Sir, I hold in my hand the Government's official statement, made July 1, 1893, of its various kinds of currency now circulating by its authority as money in the hands of the American people. It will doubtless sound strange to some ears that there are nine different currencies here described as now engaged in transacting the business of this country, and to a large extent the business of the world. The amount of each kind coined or issued is here put down, how much remains in the Treasury, and how much of each is in circulation. This table carries with it a lesson of profound importance and is entitled to the gravest consideration.

Statement showing the amounts of gold and silver coins and certificates, United States, notes and national bank notes, in circulation July 1, 1893.

	General stock, coined or issued.	In Treasury.	Amount in circulation July 1, 1893.	Amount in circulation July 1, 1892.
Gold coin	$513,743,623	110,109,923	$403,633,700	$408,767,740
Standard silver dollars	419,332,459	362,305,707	57,026,743	56,799,984
Subsidiary silver	77,256,212	11,855,944	65,400,268	62,386,518
Gold certificates	94,041,189	1,071,170	92,970,019	141,235,329
Silver certificates	330,957,504	4,468,339	326,489,165	326,880,803
Treasury notes, act July 14, 1890	147,190,227	6,528,583	140,661,694	98,051,657
United States notes	346,681,016	25,805,333	320,875,683	311,814,840
Currency certificates, act June 8, 1872	12,365,000	430,000	11,935,000	29,830,000
National-bank notes	178,713,872	3,982,733	174,731,139	167,305,957
Total	3,120,281,093	526,554,682	1,593,726,411	1,603,073,328

In it will be found, circulating at this time, a currency of gold amounting to over $400,000,000, and a currency of silver dollars and of subsidiary silver amounting in the aggregate to nearly $500,000,000; a currency of gold certificates and a currency of silver certificates; a currency of Treasury notes authorized by the act of July 14, 1890, and a currency of certificates authorized by the act of June 8, 1872; a currency of national bank notes, and a currency of United States notes, or, in other words, the well-known greenbacks created more than thirty years ago, and protected and preserved at $346,681,016 by the act of May 31, 1878. So uniform in purchasing and debt-paying power are all these currencies, so in harmony with each other, and so interchangeable at even and equal rates, that hardly one-half of them are generally known to exist.

If one kind of our circulating, purchasing, and debt-paying mediums ranked below the others in practical use, there would be friction and confusion at once in every channel of trade and business. The creative power of Congress, however, as defined by the Constitution, underlies and supports every American dollar in existence, and it has proved impossible for the most determined assaults of interested and powerful classes, on any one of our currencies, to shake the faith of the American people in the credit and honor of their Government. National credit has been tested by the smooth and harmonious circulation of our nine separate currencies, and has met the ordeal in a manner to awaken the pride of every patriotic American heart.

It is, indeed, a historical fact, fraught with extreme significance and importance, that no branch or part of our national currency was ever at a discount, or stood below a parity with the best in circulation, except it was first discredited and dishonored by the Government itself. This happened once, and only once, in American history, and it will never happen again. Provision was made in the memorable year of 1862 for the purchase of Government bonds with a depreciated currency for the benefit of capitalists seeking investments, and who could be induced in no other way to support their Government in the hour of its deadliest peril. The greenback currency was authorized, and everybody required to take it in payment of debts except the Government which created it.

The bar sinister was written on its escutcheon when it was made nonreceivable for customs duties and interest on the public debt; when it was stripped of the highest functions of money in the hands of the citizen, and stood in open disgrace before the world. In that condition it became an instrument of gigantic wrong and oppression on the laboring masses of the American people. For every dollar received by the Government an obligation was issued to pay in the long run more than two, and the people of the United States are still engaged in carrying out this unjust and dishonest arrangement. What a striking contrast to American statesmanship in 1862 was presented by the statesmanship of France when crushed to the earth in the Franco-Prussian war in 1870.

France issued her assignats with full legal-tender power for all kinds of debts, and based them on national honor and national resources. They never wavered in the storm; they never sunk below gold, and France maintained, as she has ever since, the strongest financial credit in Europe. The American greenback, however, has had its full revenge for all the indignities once heaped upon it. In the midst of obloquy, opprobrious epithets, threats of total destruction wherewith its interested enemies assailed it fifteen years ago, the greenback currency was again touched by the power of the Government, this time with respect; and by the authority of law it has remained in circulation ever since, always on an easy level with the best money in existence, whatever that might be.

This once despised and slandered currency is now in the pockets of the people, perpetuated by act of Congress, guaranteed by the public credit, and defying the impotent rage of its enemies.

I have referred to its well-known career and to its present useful and honorable existence in order to still further illustrate and emphasize the power and the duty of the Government in furnishing a sound, reliable, and constitutional money for the use of the people.

But, sir, at this point we are confronted by a law without precedent or parallel in American history, a law which for months past has been the theme of all tongues and pens, and in whose name financial panic, alarm, and distress have been invoked, and for whose repeal this Congress has been convened. The origin of the Sherman act, its motives, and the object it was designed to accomplish, claim especial consideration in reaching a conclusion as to its merits. Its author, the distinguished Senator from Ohio, has repeatedly and quite recently explained the end he had in view in its enactment.

A bill for the free coinage of silver had passed the Senate by the great majority of 16, and then the measure, since known by the name of the Senator from Ohio, was brought forward and tendered to the representatives of the States having silver bullion to sell as a compromise in lieu of the great victory they had just obtained. In an evil hour, the worst and darkest that ever befell the cause of bimetallism or the honor and existence of silver money, this pernicious compromise was accepted and fastened on the country. The Senator from Ohio, it is true, now claims credit for his repeated assertion of late that there has never been an hour since the compromise was effected that he has not stood ready to violate it by voting for its repeal.

In other words, having induced the producers of silver to surrender their right to its free coinage at the mints in exchange for the right to sell 4,500,000 ounces per month of bullion to the Government, the Senator from Ohio and his followers on that side of the Chamber have been willing and anxious ever since to break the compact, repeal the consideration on which the compromise was made, and leave their victims of misplaced confidence from the Pacific coast and mountain ranges empty-handed, without either the privilege to coin their silver or even to sell it as a mercantile commodity to the Government.

The dog in the fable, letting go the meat he already had for the shadow which looked larger, made no greater mistake than did the silver States when they supported the Sherman act as a substitute for legitimate free coinage. The act was not intended in good faith for the coinage of silver at all. On the contrary, it emanated from the enemies of silver money, and its purpose was to degrade, dishonor, and disgrace this one of the precious metals until it could no longer hold its place with gold as a part of the specie basis of this country and of the world.

In reducing silver to a merchantable commodity, placing it on a level with corn, wheat, cotton, tobacco, and other productions of the field and farm, issuing Treasury certificates on it according to its market value, there could be but one effect on the rank, dignity, honor, and stability of silver as one of the great money metals. It reeled and staggered under the blow, until now its enemies predict with joy its speedy and total destruction. Sir, I speak in no partisan vein to-day, and yet it is with great satisfaction I find from the record that not a single vote on this side of the Chamber was cast for the act which bears the name of the Senator from Ohio to such a peculiar eminence. The vote by yeas and nays, by which this most dangerous makeshift ever known in our financial history passed this body, appears as follows:

YEAS.—Aldrich, Allen, Allison, Blair, Casey, Cullom, Davis, Dawes, Dixon, Dolph, Edmunds, Evarts, Farwell, Frye, Hawley, Higgins, Hiscock, Hoar, Ingalls, Jones of Nevada, McMillan, Manderson, Mitchell, Moody, Pettigrew, Pierce, Platt, Plumb, Power, Quay, Saunders, Sawyer, Sherman, Spooner, Squire, Stewart, Stockbridge, Washburn, Walcott—39.

NAYS.—Barbour, Bate, Blackburn, Call, Carlisle, Cockrell, Coke, Colquitt, Daniel, Faulkner, Gibson, Gorman, Hampton, Harris, Jones of Arkansas, Kenna, McPherson, Pasco, Pugh, Ransom, Reagan, Turpie, Vance, Vest, Voorhees, Walthall—26.

Let the grave responsibility for the violation of every sound principle of finance which such measure creates be met before the American people by those who are shown by the record to have assumed it. As a firm, unfaltering believer in bimetallism, and as an undeviating supporter of the coinage and use of both gold and silver as the standard money of the country, without discriminating against either metal, I voted against the passage of the Sherman act, and for the same reasons I shall vote for its repeal. The outcry in certain quarters at this time that those who vote for the repeal of this measure are enemies of silver as money, and in favor of its demonetization, is not only false, so far as I am concerned, but, in the light of what has happened in the past, it is absurd.

Beginning with the first speech I made in this body, and down to the present hour, I can recall no vote or word on the subject of the coinage and circulation of silver which I would now change or blot from the record if I could. And now in this, the darkest day ever known for silver amongst civilized people since Abraham, the Hebrew prince, paid 400 shekels "current money with the merchant" for a resting place for the beloved Sara, I avow my unshaken faith that it will remain forever one of the world's great and potential factors of finance, commerce, traffic, and daily business transactions.

It will neither be demonetized nor driven away from the habitations of the laboring masses of mankind. It has come down to us from immemorial ages, and it will continue to exist as one of the precious metals, upholding the credit of nations and bringing blessings to the sons and daughters of toil when the scenes through which we are now passing have grown dim in the light and progress of distant centuries. I shall vote to repeal the Sherman act as I would remove a dead fly from a box of sweet ointment, as I would abate a nuisance, and wipe out an obstruction to rational, wholesome legislation. It taints and vitiates our entire financial system, and destroys confidence in all business transactions every hour it remains a part of our laws. Often the question has been asked whether a vote should be given for its unconditional repeal, or whether, before it goes, something in the way of a substitute must be agreed upon to take its place.

Sir, I would at once eradicate this confessed evil, this universally condemned enactment, from the body of our laws, with no other condition than my right and free agency to support and to secure in connection with its repeal—or afterwards by an independent measure, as the success of its immediate repeal, the primary duty of the hour may at the time dictate—a sound financial system, embracing the coinage of silver on an equality with gold. In making this statement I only repeat the declaration of the Democratic party in national convention at Chicago in June, 1892, and on which the American people restored to the Presidency one of the strongest, ablest, purest, and most patriotic characters ever known in American history. That declaration, containing as it does the consensus of Democratic opinion from every State and Territory in the Union, may be heard at this time again with profit and advantage:

We denounce the Republican legislation known as the Sherman act of of 1890 as a cowardly makeshift—

That is no reflection on the courage of the Senator from Ohio, for that is too well known: but we go on to say—

fraught with possibilities of danger in the future which should make all its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal, or charge for mintage, but the dollar unit of coinage for both metals must be of equal intrinsic or exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

It will here be seen that the united Democracy of the country, fourteen months ago, in formal convention assembled, denounced the Sherman act which had degraded silver to a commodity, demanded its repeal, and declared in the strongest language in favor of the coinage of both the precious metals on fair and honest terms of absolute equality. But the record made on this subject in the momentous year of 1892 does not stop at this point. Grover Cleveland, the great leader of his party then and the great Chief Magistrate of the whole people now, in accepting his nomination, addressed the public in well-remembered terms, which have been in nowise changed, modified, or contradicted by the singularly able message delivered a few days ago to this body. His language was as follows:

The people are entitled to sound and honest money, abundantly sufficient in volume to supply their business needs. But whatever may be the form of the people's currency, national or State, whether gold, silver, or paper, it should be so regulated and guarded by governmental action, or by wise and careful laws, that no one can be deluded as to the certainty and stability of its value. Every dollar put into the hands of the people should be of the same intrinsic value or purchasing power. With this condition absolutely guaranteed, both gold and silver can be safely utilized upon equal terms in the adjustment of our own currency.

Mr. STEWART rose.

Mr. VOORHEES. I shall have to decline in advance. I can not be interrupted to-day. This is not the kind of a speech for interruptions, and I shall have to appeal to the Chair.

The VICE-PRESIDENT. The Senator from Indiana declines to be interrupted.

Mr. STEWART. I should like to ask the Senator a question.

Mr. VOORHEES. I will say to the Senator now that he will have plenty of chances at me. I shall be a naked object here. I expect to remain for some time, and will answer all questions as far as I can. I hope I may have a little peace to-day for about an hour.

Sir, this statement of President Cleveland of the duty of the Government toward the American people is embraced in four brief sentences, and yet it contains every sound, wholesome, enduring principle of finance ever known in the history of the most prosperous nations of the earth. "Sound and honest money, abundantly sufficient in volume," "gold, silver, and paper," "regulated and guarded by governmental action," "by wise and careful laws," "securing certainty and stability" in the people's currency, guaranteeing that "every dollar put into the hands of the people should be of the same intrinsic or purchasing power," and then upon these sure and everlasting foundations the use of both gold and silver in the adjustment of our currency is squarely indorsed and recommended.

Where in the annals of financial legislation can be found a wiser, a stronger, a more comprehensive monetary system, or one more richly freighted with blessings to the laboring masses of mankind, than is here so briefly and so powerfully depicted? Who dares in the face of the clear and explicit words which I have just read to charge that their author is a monometallist in disguise, a believer in the use of gold and gold alone, but wearing, for the sake of an election to the Presidency, a bimetallic mask?

Sir, who has the hardihood to assert or to insinuate that Grover Cleveland is a dissembler, a man who conceals his opinions or dispositions under a false appearance, a hypocrite, practicing deception upon his countrymen in order to gratify his personal ambition? On the contrary, his fearless frankness in the expression of his views on all public questions without regard to their effect upon himself has long been conceded by friend and foe to be the leading characteristic of his mind. Lord Bacan says:

It is the weakest sort of politicians that are the greatest dissemblers.

I think it will be admitted by all that Mr. Cleveland belongs to the strongest and not the weakest school of political thought and action. The secret of his immense strength with the plain masses of the American people has long since been solved. By his bold, clear utterances, followed by his manly and direct action, he has inspired universal and absolute confidence, from one ocean to the other, in his perfect integrity of purpose, in his unfaltering patriotism, his supreme love of country, as well as in his stalwart and commanding ability.

If I am reminded that he did not repeat his letter of acceptance in his recent message, recommending the repeal of the Sherman act, my answer is, that while such a reassertion of his well-known views would have gratified many worthy and well-meaning people; yet it was not necessary on his part in order to retain the confidence of the people that he was in favor of the coinage and use of both gold and silver on terms which would insure a parity in their values. He has never recalled, retracted, or explained away a single word of his letter accepting the nomination for the Presidency. His assurances in that letter are to-day alive and in force, and as binding this hour as they were when first given to the world; and I hereby declare that I am willing to stand or fall by my faith in the truth and honor of Grover Cleveland and in his well-known fidelity to pledges when once they are made. [Applause in the galleries.]

The VICE-PRESIDENT. The Chair desires to remind the occupants of the galleries that a repetition of this offense will cause the galleries to be cleared instantly.

Mr. VOORHEES. Sir, I also invoke in this connection the honored name of the Secretary of the Treasury. John G. Carlisle is the peer in intellect and spotless integrity of any of the illustrious statesmen who have held the folio of finance since the Treasury Department was created, including Alexander Hamilton, its first Secretary. I make no mistake in placing him as a bimetallist, concurring fully with the President in support of a bimetallic system of coinage.

As a Democrat, as an American citizen, as a man loving and believing in justice, fair play, and common sense, I appeal to those around me, and to the great body of the people, to know whom we can trust, whom we can believe, if we are to turn our backs, at such a time as this, on such men as Grover Cleveland and John G. Carlisle?

Sir, the terms, conditions, and ratios fixing the intrinsic or interchangeable value of these two metals have always from the earliest ages been matters of detail, and will so continue; but the great, paramount fact has been declared and established in the most solemn and overwhelming manner by the voice and votes of the American people within the last year that silver shall not be demonetized, that one-half the specie basis of the world shall not be destroyed, that the volume of paper money now in circulation for the payment of labor and the products of labor shall not be contracted, with their consent, to the basis of monometallism, and to the standard and the existence of gold alone. It is not my purpose at this time to discuss the details of coinage, or the number of grains of each of the precious metals which should go into the different coins of silver and gold.

Let it be distinctly understood, however, not only by the American people of every class, calling, and condition, but also by the people of every nation with whom we have commercial relations, that a fair and honest ratio will be established and maintained by the American Congress, and that neither the one nor the other of the two metals will be dismissed from the public service. We will omit no honorable effort to induce foreign governments to unite with us in achieving, by international agreement, this great and gigantic blessing for the human race; but let it be distinctly understood now and for all time to come that the laboring, debt-paying masses of this country, constituting nine-tenths of the people, will never, under any circumstances, consent to double the debts of debtors and double the claims of creditors by destroying one-half the money authorized by the Constitution with which debts may rightfully be paid.

It is well also to remember that the American Republic is a government of the people, whatever may be true of other nations, and that here on American soil no system of public policy can stand, or ought to stand, which does not rest on the consent of the governed. Nor will I hesitate to say to those who are now urging the adoption of monometallism, with gold alone as a standard, and a specie basis for all our currency, to the exclusion and extinction of silver money, that by virtue of their great powers of self-government the people at the very earliest opportunity will tear down and utterly annihilate such an oppressive and destructive system of finance, should it ever be established.

Sir, the peculiar relations which the silver-producing States and Territories of the country bear to the question now under consideration can not be overlooked, and ought not to be misunderstood. Not less than five States and three Territories are richly endowed with the precious metals, and, indeed, all that vast and magnificent region of wealth and power from the Rocky Mountains and the upper waters of the Mississippi to the Pacific Ocean, and from our Mexican boundary to the British possessions [illegible] in close affinity of interest as well as of feeling on this subject. Every American heart swells with pride in contemplating the gigantic progress and development there accomplished.

Under the guidance of that supreme and overshadowing Providence which shapes and dictates the history of nations, the discovery of gold and silver, those mighty talismans of the human intellect and of human energy, was not to take place in their full strength and glory on this continent until the hour came, in the fullness of time, when their presence would not only round out the boundaries, but also fix the destiny and complete the colossal greatness of an ocean-bound Republic.

Early in the sixteenth century, more than three centuries and a half ago, the foot of the gold-hunting Spaniard was on the soil of California; and his covetous eye scanned in vain her plains and mountain slopes in search of the tremendous treasure which had laid hidden there since the morning stars sung creation's hymn of praise in the beginning of time. Spain, at that time the most powerful government on the globe, was engaged in discovering, subduing, and colonizing the countries of the western hemisphere, and a look now at her ancient boundaries on the map of the United States is full of instruction to the thoughtful student of history.

She owned and possessed, when at the zenith of her power, the treasure-laden lands of California, Nevada, and nearly all of Colorado, together with New Mexico, Arizona, and the most of Utah. She was the mistress of more wealth than was contained in all the world besides, but she knew it not. She hungered and thirsted for the precious metals; she sent forth fleets and armies, and squandered life and treasure to find them; she was a pirate on the seas and a robber and murderer on every shore in their search, but she passed over them on the Pacific coast with blinded eyes, while the years and the centuries moved on, waiting for a different people and a higher dispensation of human affairs.

Not only the map of the world, but the destiny of the human race would have been changed, marred, and blotted had the discovery of gold and silver on our western shores been given to Spain; to such as Cortez, Pizarro, and other ferocious, red-handed Spanish adventurers, then engaged in wholesale pillage and slaughter. That peaceful region would have been transformed at once, as if by an infernal magic, into the very similitude of hell.

The uproar of avaricious strife, the enslavement and destruction of unoffending native tribes, the shock of contending armies representing the frantic greed of every nation, the desolation of fire and sword, the hideous riot of vice in all its dark and bloody forms, marking the downfall of the kingdom of peace, love, and mercy, would have prevailed like inextinguishable fires throughout all those vast realms, from San Francisco to Denver and to St. Louis, and blighting and blackening for centuries to come everything of value, and every hope of resurrection, on the sun-

set side of the Father of Waters. A ruined land, rifled and plundered of all its treasures, worn out, seamed, and wasted in its substance by the nonlaboring, warlike marauders of the whole earth, and at last abandoned, like a miner's claim when it ceases to pay, or held in the clutch of some victorious European power for further diggings—such would have been the condition of the trans-Mississippi country when our fathers struck for independence, in 1776, if the providence of history had permitted the Spaniard to see gold and silver when he was walking over them.

Sir, may I not be pardoned for the faith I cherish, that the mighty revelation which burst upon the world in 1849 from Sutter's Camp in California, and from the cañons and gulches of the mountains, was reserved for a people of wisdom and patriotism, and came at the right time to draw the best energies and intellects of this country, and of the world, into the development of the wilderness and the waste places of the Republic, and to assist with the power of invincible cement in holding together the American Union, and in making it the pride and wonder of the earth and of the ages yet to come?

Let no man lightly consider or put aside what God hath wrought. The States of the Pacific, of the Sierras, of the towering peaks of the Black Hills, and all others bearing in their bosoms the precious metals, are the treasure houses of American riches, power, and glory. They have been preserved to us, and placed in our hands as a trust and a blessing to the present and future generations. With the discovery of gold and silver forty-four years ago, and their coinage and use on free and equal terms by the American people, came such an abounding prosperity, such an increase of national life and force, and such help to individual exertions as were never before known in the history of nations.

We bounded forward with such impetuous force that even the calamity of a tremendous interstate war hardly checked the speed of our progress, and has not even left a scar visible to-day on the material advancement of the country. The aid of both metals was invoked, without discrimination against either, and the result was a financial strength equal to the severest emergencies that can overtake a nation whether in peace or in war. In fact, no disturbance in business circles or in the channels of trade, in connection with silver, ever took place in this country until after the stealthy and treacherous attempt to stab it to death in 1873.

While silver has been honorably coined on proper terms, while it has been treated with dignity and respect as money and not discriminated against and dishonored as an ordinary product, a commodity to be hawked in the markets, it has never failed to do its duty and to stand the peer, at all times and under all circumstances, of gold. I appeal on this subject with great respect, and with full confidence in the ultimate result, to the silver-producing States themselves. The very able and distinguished Senators from those States need no assurance of my warm personal regard, nor of my keen and anxious desire for the welfare of their constituencies. May I not, therefore, submit to them, without offense, that the safety, the stability, the honor, and the very existence of a true silver currency in this country require the fair and legitimate coinage of silver rather than its sale as bullion? Must we not, at once and without delay, get back of all makeshifts, subterfuges, and insincere compromises, and place ourselves, after the financial deck has been cleared, on the plain constitutignal right to coin gold and silver into money? Why should any friend of silver money from the Pacific, or from any of the other States, vote to retain the Sherman act a day longer as a law?

The worst calamites that have ever befallen the cause of silver money have come since its enactment and in its name. What hope is there that silver will rise from the degradation inflicted on it while that enactment remains? Who supposes for a moment that the present financial condition of the country can be improved by simply clinging tenaciously to a law which forces a low, reluctant, grudging market for silver as a commodity? Who in this Chamber or elsewhere is willing to remain responsible for such an enactment a single day longer than its repeal is possible?

Sir, the people of Indiana own no silver mines; they have no silver bullion to sell; their only interest is in the silver dollar itself with which to do business; but had it been my destiny to represent on this floor a State inlaid with silver and threaded with veins of gold, I would have resented and resisted to the utmost any and every attempt by legislation to cast contumely and reproach on either one of these great metals or to discriminate between them in their coinage, even down to the point of a charge for mintage.

Were I a Senator from a silver-producing State, as I am from a great industrial State simply desiring the use of silver in the shape of a sound currency to help in the daily transactions of her business, I would vote with even increased zeal and pleasure for the repeal of the ill-omened and bad-odored act now under discussion. I would then, as I will now, hail the hour in which to cast such a vote successfully as one of the most auspicious of my life.

But there are still further features of the present financial situation which, in my judgment, demand consideration, and which do not result from the Sherman act, except in so far as its unsoundness in principle and its outlawed character as an instrument of finance are seized upon to shake public confidence and create business distress, thus advancing the ends and aims, not yet openly avowed, of certain vigilant and powerful moneyed classes in this country and throughout the world. The bitter and determined assault which we have witnessed on the present Administration to compel an enormous issue of Government bonds has not gone unheeded by the American people, nor have the authors of this assault, and those interested in its success, escaped widespread and intelligent observation.

Motive is the surest trail on which to find the perpetrator of a deed, and, tried by this rule, the authors of the money stringency during the last five months, and of the incessant demand for a large increase in our bonded debt, stand plainly revealed. By virtue of a Treasury regulation, rather than by explicit provisions of law, a gold reserve of a hundred millions has been held for years past in the Treasury for the declared purpose of redeeming a branch of the currency which has never yet been presented for redemption. By breaking this reserve, by reducing it below its fixed amount, it was supposed the Secretary of the Treasury would be under immediate legal necessity to issue and sell bonds, with the proceeds of which the gold reserve was to be kept at its maximum.

The attack, therefore, on the head of that column was swift and strong. With intervals of delay for ample and skillful preparation, these attacks have been repeated again and again, and have only slackened in their frequency and force since it has been found that the executive department of the Government can not be coerced in that way.

But the campaign of capitalists seeking a new supply of interest-bearing Government bonds did not confine itself to any one point of assault. While they operated with unrelenting vigor to break down the reserve of gold in the Treasury, and to that extent impair the public credit, they also startled this country and filled the world with the cry that American gold was running away from this silver-blasted country, chased out by silver money, and that there was no way to lure it back except to bait plentifully with Government bonds. It is in this connection also that the Sherman act has been made to do double duty. It has been held to answer not only for the inherent and ineradicable vices which it does possess, but it has been charged with grave offenses in which it has had no part.

Sir, I do not believe for a moment in placing this country on a silver basis any more than on a gold basis. I have never advocated such a policy. The two metals together on a parity and in harmony with each other must constitute the broad and ample specie basis required by the vast and progressive character of American trade and industry. Nor have I the slightest faith in the pretense that our silver coin or our silver certificates have been driving our gold to foreign shores, where our creditors are said to be sitting in fear and trembling lest the silver itself should come, or something worse.

My experience on this subject leads to a totally different conclusion When in 1878 the attempt was made to check the torrent of bankruptcy and ruin occasioned by the demonetization of silver in 1873, and the consequent contraction of currency which followed, there went up such a wail of dismal prophecy in these Halls over the proposed restoration of silver as will never be forgotten. An inspection now of the CONGRESSIONAL RECORD of that date is full of entertainment, and indeed of instruction. It will there be seen how able and learned men can grow eloquent in predicting what never comes to pass: how they can disregard the traditions and the Constitution of their fathers, as well as the teachings of all the ages known to human history.

Much indeed may be learned by recourse to the debates of fifteen years ago on this subject. I could occupy the time of the Senate, hour after hour, in reading the prophetic visions of dire disaster which then appeared to certain distinguished Senators, if the Bland-Allison act, remonetizing silver, and providing for its partial coinage, should become a law. One of the first and most certain evils predicted was the hurried departure of gold from beneath the folds of the American flag; that it would take to itself wings and fly to the uttermost parts of the earth, in order to escape the contamination of base, ignoble silver.

It is true the two metals had been for four thousand years the twins of the financial world, the Gemini of nations, compeers and co-factors in the development, the advancement of the human race; but a new light seemed suddenly to burst upon cer-

tain minds to the effect that gold would no longer abide the companionship of its kindred metal, its old-time, and long-tried ally. The alarming measure, however, was enacted into law, and the believing disciples of false prophets stood gaping in awful anticipation of coming ruin. What was it that did occur?

The Government proceeded in orderly and constitutional methods to coin $24,000,000 per annum of silver money for the use and benefit of the American people, and continued so to do for the next twelve years, during which time the increase—not the decrease, but the increase—of gold in the United States was at the rate of about forty millions a year. At the date of the passage of the Bland-Allison act the estimate of gold money in this country was $230,000,000, and when coinage ceased under that act the estimate was more than $700,000,000. And such was the fulfillment of the prophesies of 1878, and yet I am now expected to believe that the fair and legitimate coinage of silver, its free coinage upon a properly ascertained and determined ratio, will banish all our gold and put us on a single silver basis.

I must be pardoned for believing nothing of the kind. The shipments of gold which have taken place from this country in the last four or five months must be accounted for, to my mind, in a different way. They were a part of the same plan which attempted to sack the Treasury of its gold-reserve fund, to create distrust, fear, agitation, panic, and a withdrawal, as far as possible, of all money in circulation; and all this to be accompanied by a concerted outcry from terror-stricken business circles and from the whole national banking system that nothing can restore public confidence and save the public credit except the issuance of at least three hundred millions of interest-bearing Government bonds.

Sir, I have no desire to assail the national banks, nor any feeling to gratify in doing so. As a general rule, they are under the management and control of gentlemen standing high for ability and integrity. It is the system which I arraign, and not the individuals who conduct it. Eulogies on the national banks as a system of finance are very familiar to us all; they have many merits, some which I desire to avail the country of at this time, as is well known; and yet it may be replied to every word in their praise that the good the banks have done in handling a safe and reliable currency, has come alone from the power of the Government which pervades them, while the evils they accomplish have arisen from the fact that far too much power has been left in the hands of men to tempt their avarice and ambition.

The merits possessed by the national banks are created and upheld, every one of them, by the official hand of the Government, by the bonds on which their notes are issued, by their official engraving, and by a vigilant and efficient administration of their affairs at the hands of the Comptroller of their currency. On the other hand, the unrestricted, unrestrained, and unbridled power which is permitted to the management of these banks, whereby the circulation of money in the hands of the people can be, and often has been, suddenly fluctuated from a prosperous maximum to a stunted and distressful minimum, constitutes a standing and a frightful menace against the safety, the welfare, and the happiness of the great and most useful body of the American people—those who have labor and the products of labor to exchange for money, and who have a right to expect steady and remunerative rates of pay.

The idea here presented is an appalling one. No other government within the boundaries of civilization, as far as I can learn, has ever committed to private parties the power to make money plenty, or money scarce; times easy, or times hard; business prosperity, or business bankruptcy; the power, in fact, to circulate the Government's own currency, or to withhold it from circulation, at such times, and under such circumstances, and in such amounts, as will inure to the benefit of private speculation and personal gain, rather than to the public interests. Yet, such is exactly the terrible power now possessed by those engaged in national banking, and such the power they have called into disastrous action.

If it be asserted and admitted that some of the banks have themselves suffered and fallen by the overthrow of public and private confidence which has taken place, it only adds one more illustration to the well-known fact that a demon of destruction once raised sometimes escapes the control of its masters and turns and rends them. If panic-stricken depositors make sudden and unexpected runs for their money, catching now and then a bank less prepared for such an emergency than its better managed kindred, it is because the policy of the banks has first inspired them with distrust and finally filled them with terror.

In their attempt to force the Government into the attitude of a borrower to escape bankruptcy, the banks have endangered their own credit, and in many instances totally lost the confidence of those who have trusted them most. Without a single trace of unkindness towards them in my heart, still I must say, the consequences be on their own heads. Those who sow to the wind need not complain if they reap at least a portion of the whirlwind, in the destruction of the weaker ones of their own species.

Who has not seen the boast in the great organs of banking capital, that the managers of national banks have such a complete understanding among themselves, such harmony of interests, and such a perfect system of concerted action, that the whole of their overwhelming and destructive power can be brought to bear on the sensitive business nerves of every State in the Union on a week's notice, and that they can bring the Congress of the United States itself a suppliant at their feet. For months past all legitimate business pursuits have staggered as if from a sudden and unexpected blow, and are brought at this time to a confused and bewildered sort of standstill, while wondering how it has all happened and what will happen next.

While in the midst of a fair and reasonable degree of prosperity, the volume of our circulating medium, even while the people were looking at it, suddenly shriveled away, and practically vanished from their sight. As if by some infernal enchantment, money disappeared, as it were, in a single night, and left the people in mourning and deep trouble when the morning came. Have the men of active business, and the toiling millions who suffer most, been tempted in their distress to say that there is no longer any money in this country?

On the contrary, the records show that $2,120,000,000 and more of currency, coined and issued by the Government in various forms, are now in existence. Of this vast amount, it is true, over $500,000,000 are held by virtue of different provisions of law in the Treasury; but, even allowing for this retention, it is made by the books of the Government to appear that something more than $1,500,000,000 were in circulation within the past year and should be in circulation to-day. It is claimed that this aggregate circulation, when estimated per capita, amounts to nearly $24 for each man, woman, and child in the United States.

Never were wilder or more unreliable fictions rehearsed in romance than these estimates of our circulation, when they come to be compared with the hard, realistic experience of the plain masses of the people. Not the exploits of Sinbad, the sailor, nor of Lemuel Gulliver, the traveler, nor the exquisite skill and fancy of the story-teller of the Arabian Nights, can surpass the results sometimes accomplished by what are called, in the irony of history, cold facts. According to the official estimates of money now in circulation, a family of seven—father, mother, and five children—stands entitled to $168 as their per capita proportion, not for one day only, but for every day the year round.

When we reflect how many millions of people there are in this country who never at any one time, nor even during the whole year put together, see or touch that much money, we may well pause a few moments to consider the obstructions which prevent money actually in existence, with authority to circulate, from being found in actual circulation. The trouble is that there is an intermediary, a middleman, between this Government and its own people in the matter of the Government's duty to furnish them with a sound and stable currency. The Government is not in direct and proper contact with its citizens on this subject.

The national banks are between the Government and the people, and in their vaults to-day lie hidden millions and hundreds of millions—not less than two-thirds of the whole amount designated for circulation on the books of the Treasury—held there by the cowardly, unpatriotic fear which has always haunted great earthly possessions; which would rather see the business of the country overwhelmed in ruin than to risk the loss of a hundred dollars loaned on gilt-edged paper.

Can anyone be blind to the fact that the banks have not only and without cause except their own interests, turned their keys on all business prosperity, but that they have also attempted to seize the Government itself by the throat, and to play bully and master towards those highest in authority? Well might the accomplished Senator from South Carolina [Mr. BUTLER], in his very able and instructive speech on this floor in June, 1892, exclaim:

> These complaints of the people are not imaginary. They are well founded and based on a deep-seated cause. Our financial system and policy is defective, unjust, ruinous to large classes of the people. It enables a few centers and a few persons to get possession of the currency and hold it from millions of their fellow-citizens upon their own terms. It enables them to hoard the money of the country, and to say how much of it shall go out and upon what terms. You may say that this will be true under any system, but the financial history of this country does not sustain the proposition. It was never true prior to 1863—when the national-banking system went into operation, and the national Government delegated to a few persons the power to issue the currency for all the people—except such as it reserved to itself the exclusive right to issue.

But, sir, at this point, and in this connection, another great evil, arising from the selfish and greedy instincts of the money power, whether engaged in banking or in other avaricious pur-

suits, demands thoughtful attention. On general principles the contraction of the currency throughout the whole country is an object eagerly sought and a consummation devoutly to be wished, by that limited but powerful class of people who own or control four-fifths of the wealth and nearly the entire volume of the circulating medium of the United States. The greater the scarcity of money in the hands of the many, the greater its power in the hands of the few who have gathered it in and hoarded it away.

In the business world the man who has a thousand dollars will have the best of the man who has only a hundred; the man who has a hundred will dictate to the man who has only ten; while the man with $10 in his pocket will absolutely dominate the man who has no money at all. The power of the millionaire to-day over the property, the labor, and the very lives of the people depends not merely on the great sums in his own coffers, but equally as much, and indeed far more, on the fact that the great industrial classes have scarcely any money at all at this time in their hands and are deprived of every reasonable chance to obtain more.

The two extremes of vast consolidated wealth on one hand and absolute poverty on the other, both very dangerous, not only to each other, but to social safety and to liberty regulated by law, are rapidly culminating in this country. Every proposition here or elsewhere to aid the people in their distress by putting more money in circulation, and within the reach of their daily toil, is always fiercely denounced by those who are interested in minimizing the wages of labor and the exchangeable value of property. Every source of financial relief to the plain people is scanned in certain quarters with hostility, and every dollar which tends to make them independent of the banks, and of usurers and taskmasters, is looked upon with aversion.

Even the pension rolls of the Government, those records sacred to the blood and tears of millions shed for the existence of the American Union, have not escaped determined and vindictive assault. The fact that the amount of money in circulation is largely increased every three months of the year by the payment of pensions, that it is done without the agency of the banks and beyond their control for fluctuation or speculation, has excited the open and bitter opposition of the great money centers from the very beginning of our present pension system.

The charges now made of fraudulent pensions are simply a continuation of what we have heard from the start, and they have the same inspiration as in former years. That frauds are sometimes committed in the Pension Office is undoubtedly true, and they should be investigated and exposed; but the same can be truthfully said of every other office or institution known among men. Would you denounce an entire church and impute rascality to all its members because here and there a hypocrite and knave pollutes the altar and defiles the sacrament of the Lord's Supper by his presence and participation?

Fraud is incident to human affairs, and from which there can be no complete escape; but better far that even a fraudulent pension should be granted than an honest, well-earned, well-merited pension should be denied. It is the question of money, however, and not the question of fraud, which provokes the greatest wrath in certain quarters on the subject of pensions. Who that lived at that time will ever forget the storm of invective which broke on some of our heads because of the passage of the act of January 25, 1879, granting arrears of pensions to disabled soldiers? Speaking on that subject three years later, I said:

> The columns of the leading newspapers of the country have teemed with the most envenomed denunciations of this act and reeked with coarse and ignorant abuse of all who sustained it. It would, indeed, be impossible to exaggerate the tone of malignant animosity which has prevailed, and which more than ever now prevails, on this subject in the most prominent journals, from the north end of New England to the Pacific coast. I can recall but two enactments which have called forth such rancorous literature. The passage of the fugitive slave law and the repeal of the Missouri compromise are the only measures within my recollection which provoked such an explosion of intense wrath as we have heard against the arrears of pensions act. If it had been a measure to disseminate pestilence, breed famine, or provoke war, it could hardly have been stigmatized with greater bitterness. If, instead of being, as it is, a law to fulfill a plain, honest obligation toward those who, in sober fact, bled and died for their Government, it had been a measure to reward highwaymen and enrich pirates, it could not have been assailed in terms of baser meaning than have been used against it and against all who support it.

Sir, it is true that the amount of money carried to the soldiers of the country, by the act paying them arrears, was large and imposing; but I held then, and I hold now, that every dollar paid for pensions does good and not harm; that it is not merely a blessing to the pensioner himself, but also to all the active business interests and laboring classes of the entire country. On the 16th of January, 1882, I used the following language on this floor, and I can do no better than reproduce it now, as the candid expression of my mature convictions:

> The money paid to this blind soldier passed on at once from his hands into a hundred different channels of trade. With some of it he paid for a humble home in which to pass his benighted old age, and in which at last to wake, by the touch of death, with eyesight cleansed, to a brighter morning than earth can ever know. With the remainder of his pension arrears he paid his little debts, and added something to the comfort of those about him. And such is substantially the history of all the money expended under this beneficent law, so basely and so insanely vilified. It goes at once into circulation; it pays debts; it passes from hand to hand; it is not hoarded as coupon-cutters hoard their interest; it makes money plentier among the people where it ought to be plentiest.
>
> Sir, it is dead money which does no good to the people, money which is packed away in bags, crammed into iron vaults, there to corrode and eat into the labor of the people with an immense, never-ceasing, cancerous interest account. Public expenditures which go in that direction are indeed a curse; but not so with money which is alive and active in the daily transactions of life.
>
> But it is in connection with this very idea, and in fact almost solely on account of it, that the principal assaults have been made on the law for the payment of the pension arrears. The leaders of this crusade are inspired with a frenzy of rage at the sight of poor people obtaining any considerable sum of money from the Government, no matter how precious the consideration upon which the payment is based. Money, in the estimation of this class, should not be diffusive or general in its movements among the people; it should be contracted within a narrow circle and exclusive in the bestowal of its benefits on themselves.
>
> But a little while ago they were declaring through the same columns which now denounce our system of pensions that the hard times then upon the country were due to the fact that the laboring classes lived too well; that they had too many luxuries, and that they must learn to regulate their wants according to the cheap wages paid for labor in Europe. And now the great moneyed corporations, and all such as live on the interest of money, are exasperated at the spectacle of money flowing freely among the common people. The scarcity of money is their harvest, and a full circulation is their bane and grief. They feel, therefore, that every dollar expended for pensions is hostile to their interests. The sight of a penniless soldier obtaining a few hundreds of dollars, or thousands, perhaps, fills their sordid souls with fury. On the other hand, the plain people hail such money coming into their midst as a general blessing.

Sir, the payment of pensions in this country has become so important a feature in our financial situation that no apology is needed for the reference I have made to the subject on this occasion. It is clear to my mind that pension money amounting to over $160,000,000 per annum perhaps, and going everywhere, is one of the greatest sources of relief now left to the people in the way of currency, independent of the contracting, retiring power of the banks. There were paid to pensioners in Indiana last year the sum of $11,880,117—an increase to the circulating medium of that State without the aid of which the condition of her trade and business may be imagined, but not adequately described.

The amount of money in circulation in many of the other States has been increased even to a much greater extent than in Indiana by the redistribution, as it were, of the people's own money back into their hands, in the payment of pensions: and there is not a State nor a neighborhood in the American Union which has not felt the relief of this system. For my own part, and speaking for myself, I shall take no step backward on the subject of pensions.

Turning at this point, however, to a more explicit consideration of the motives which govern the national banks in their present policy, I reach the next matter I wish to present and to consider. The banks are entering on their final fight for a prolonged future existence; they are engaged at their Quatre Bras, preliminary to their Waterloo. They intensely realize that the present supply of Government bonds for banking purposes must be very largely increased within the next five years, or they will be forced to commence winding up and retreating from the theater of action on which they have so long appeared.

The American people are steadily engaged from day to day, and from year to year, in paying their national debt as it falls due, and in 1907, only fourteen years hence, the last bond on which the banks have issued their currency will have been redeemed and canceled. But long before these fourteen years expire the amount will be so much reduced by constant payments that the question of the perpetuation of the national banking system will be pressed peremptorily upon us. Indeed, we are face to face with it now, and in view of the recent action of the banks, we can not too soon consider, calmly and frankly, what system the Government will adopt, in the near future, in furnishing a circulating medium to the people.

Is there a friend of the national banks bold enough to announce his belief that the tax paying American people will consent to the continuance, indefinitely, through generations, perhaps through centuries, of an immense interest-bearing bonded debt merely for the sake of upholding such a system as we now have? That is the exact question looming up just before us. Without such a continuing, interest-gathering national debt, with no limit as to duration or time for payment, except as to interest coupons, the national banking system of the United States will pass away forever, and the resources of statesmanship will be called upon to establish another and a different fiscal agency in its place.

I take my stand now against the existence, the increase, or the perpetuation of a national debt for purposes of national banking, and I call upon the millions who toil for their bread, and who constitute the great army of labor, to take notice of this

issue, from this time on. It is an issue that will not down at any man's bidding. On one side is arrayed the most powerful and best organized syndicate of money on the globe, and on the other side the sunburnt masses of productive industry. The end of the contest just now beginning I may not live to see, but I have not a doubt of the result.

The present national banking system, with its acknowledged virtues, which I would take advantage of in the present emergency, as I remarked awhile ago, but with great and grievous faults, will go down, and in its place and stead will come a better, wiser, and safer financial dispensation. The people, I believe, are ready for the change which I think I foresee. May I not be pardoned if I briefly question the future as to what that change is likely to be? Those who desire and expect old things to pass away should have something in lieu to propose, and I am willing to abide the rule.

The political campaign of last year was, in fact, as it was claimed, one of education, but the awakening and teaching of the public mind was not confined alone to any one question. Various branches of learning were taught in that great popular school of polemics. A lesson was given in history, wherein more instruction was imparted on the subject of a past and extinguished system of State banking than the present generation ever before received.

When the Democratic party declared in its national platform for the repeal of the Government tax on the issues of State banks, and on all the currency put in circulation by them, a hue and cry was raised by Republican leaders, as if a public enemy, under arms, was about to invade the country. State banks belong to a former generation, and the subject was a new one for debate, and very fertile in material for the rank imagination of the campaign orator.

The ghost of every dishonest and defunct scheme of bank swindling that ever had its brief day in the United States, and of every short-lived, rotten, wild-cat concern, was invoked from the charnel house of the dead past, with which to alarm the financial souls of men. Smutty printing machines were called into requisition, and did a rushing business in flooding the country with facsimilies of poor, cheap-looking trash which once circulated for a brief space as the notes of a few long since forgotten banks.

In the midst of all this spectacular display, however, there were other and far more important matters of information conveyed to the public mind. Everybody was put upon inquiry, and it was speedily ascertained that no man, woman, or child had ever lost a dollar by the depreciation of the notes of a regularly chartered State bank, or its failure to redeem its currency in gold or silver when called to do so. This, I have been assured on the very highest authority, is true of even the banks of the Southern States when closing their business amidst the opening scenes of the war.

I know it to be true of the State Bank of Indiana—not of those called free banks which were purely individual concerns, but the chartered bank of the State, subject to the control of State authority. This institution, in closing its long and honorable career, after redeeming in specie, or specie equivalents, all its currency that was presented, placed and left on deposit at Indianapolis the sum of $60,000 for the further redemption of such portions of its currency as might yet be in existence and outstanding.

Under proper restrictions and safeguards, therefore, against abuses arising from a general law under which individual banks of issue were permitted, I do not think the people of Indiana would be at all alarmed by the reappearance of a State bank currency, such a currency as the honored name of Hugh McCulloch sanctioned in that State forty and fifty years ago. It was this kind of a circulating medium, resting on a specie basis, and always redeemable, that was driven out of existence by a spurious, insincere method of taxation for the benefit of the national banks. It is impossible for me to conceive the constitutionality of the 10 per cent tax on State bank circulation, even though a majority of the Supreme Court reached such a conclusion.

I can not escape the conviction that the law of the Constitution in the case of Veazy Bank *vs.* Fenno is to be found in the great dissenting opinion delivered by Justices Nelson and Davis. The power of the States to create banks for the issue of a circulating medium, not as legal tender, but resting on a legal-tender basis of gold and silver, has been conceded from the very foundation of this Government. On this point I can not refrain from citing a short passage from the unanswerable opinion to which I have just referred:

> At the time of the adoption of the Constitution there were four State banks in existence and in operation—one in each of the States of Pennsylvania, New York, Massachusetts, and Maryland. The one in Philadelphia had been originally chartered by the Confederation, but subsequently took a charter under the State of Pennsylvania. The framers of the Constitution were therefore familiar with these State banks and the circulation of their paper as money, and were also familiar with the practices of the States that was so common, to issue bills of credit, which were bills issued by the State exclusively on its own credit and intended to circulate as currency, redeemable at a future day. They guarded the people against the evils of this practice of the State government by the provision in the tenth section of the first article:
>
> "That no State shall * * * emit bills of credit," and in the same section guard against any abuse of paper money of the State banks in the following words: "Nor make anything but gold and silver coin a tender in payment of debts." As bills of credit were thus entirely abolished, the paper money of the State banks was the only currency or circulating medium to which this prohibition could have had any application, and was the only currency, except gold and silver, left in the States. The prohibition took from this paper all coercive circulation and left it to stand alone upon the credit of the banks.
>
> It was no longer an irredeemable currency, as the banks were under obligation, including, frequently, that of its stockholders, to redeem their paper in circulation in gold or silver at the counter. The State banks were left in this condition by "the Constitution, untouched by any other provision. As a consequence they were gradually established in most or all of the States, and had not been encroached upon or legislated against, or in any other way interfered with, by acts of Congress, for more than three-quarters of a century—from 1787 to 1864."

The reserved right of the States to provide their people with a circulating medium through the agency of State banks being thus explicitly shown, and always admitted as an incident of domestic State sovereignty, the idea that the Federal Government can constitutionally, by a pretended tax law, paralyze such a power of the States, and render it void and of no effect, is a total contradiction of every sound principle on which the American Union was formed and now rests. When I speak of the act as "pretended tax law," I do so advisedly.

A genuine tax law, to be in harmony with the Constitution, can be enacted for the purpose of revenue only, while the law now in question was never intended for the collection of a single dollar of revenue, and was never administered or executed a single day or hour for such a purpose. The sole purpose of the Federal Government by such legislation was to drive out of existence all State currencies, and to give the entire and lucrative field of finance to the bond-buying, bond-speculating, and bond-holding managers and stockholders of the national banks.

No one, I think, will have the hardihood now to deny this fact. The blow aimed at the currency of the States was administered with deadly aim and force. It was intended to be fatal, and no half-way work marked this high-handed job of Federal usurpation. In addition to the 10 per cent tax on the notes of a State bank, and on the notes of any person or other State bank in its possession and used for circulation, after a certain date there was also authorized and created a tax of 5 per cent per annum on all dividends to State bank stockholders, besides a monthly tax of one twenty-fourth of 1 per cent on all deposits and on the capital of the bank, making an aggregate annual Federal imposition on all State banks of over 16 per cent.

The extinction of life in the banks of the States, and in everything to them appertaining, was as complete and almost as sudden as that which follows the charge of a thousand volts of electricity through the human frame. Once more I recur to the words of wisdom contained in the opinion of the great justices from whom I have already quoted:

> This taxation of the powers and faculties of the State governments which are essential to their sovereignty and to the efficient and independent management and administration of their internal affairs is, for the first time, advanced as an attribute to Federal authority. It finds no support or countenance in the early history of the Government, or in the opinions of the illustrious statesmen who founded it. These statesmen scrupulously abstained from any encroachment upon the reserved rights of the States, and within these limits sustained and supported them as sovereign States.

And now, Mr. President, let us for a few moments suppose that "this taxation of the powers and faculties of the State governments which are essential to their sovereignty and to the efficient and independent management and administration of their internal affairs," has been repealed, and the States once more left free to exercise their clear, unquestioned right to establish banks and provide for the circulation of a constitutional currency. In the event of such action on the part of Congress, should it take place, wherein would lay the danger to the public welfare, and from what quarter would it come?

I do not expect the Government ever to abandon a national currency, though it will abandon the system of national banks; but I do expect at no very distant day that United States notes, such in principle and in fact as are now in existence and in circulation, and have been for thirty years past, their payment guaranteed by the honor of the Government, will supersede all other national money except gold and silver, and that without jar or friction they will circulate in the hands of the people alongside of the well-guarded, safely secured currencies issued by the States, and guaranteed according to the Constitution by both the precious metals.

To my mind, there are no reasons why these two monetary systems may not work in harmony together for the well-being of the American people. There is nothing in the history of the American States to lead me to believe them less capable of cre-

ating and maintaining a sound currency, or less honorable or reliable in the exercise of their legitimate powers under the Constitution, than the Federal Government.

We are far advanced beyond the days when it was possible for a bank of issue to be authorized in any State of the Union without ample and indestructible security and a strict compliance with rigid laws. Business men and business committees today, 2,000 miles apart, are nearer together and better informed about each other, for business purposes, touching the credit of banks, the character of their currency, the value of municipal bonds, and the solvency of individuals than when they were separated by only an hour's walk fifty years ago. The lightning of the telegraph and the still greater mystery of the articulating wires of the telephone have made the world an open book, and we read it through every morning.

There are no hidden things any more, and the faintest attempt of any State in the American Union to establish a banking system on an insecure basis would be known and treated with scorn in every quarter of the business world before a single note of her currency could get ten miles from its place of issue. But the great value of State-bank money is, and ought to be, mainly local. It will increase the home circulation and the home accommodation of every agricultural community on American soil. It will be in use with people who know each other in every respect, and it will stimulate industry in the raising of crops, make trade more active, and the development of plantations and farm lands more rapid and profitable.

And while all these great results, with consequences beyond limit or calculation, are being accomplished by the States in the exercise of one of their greatest and most undoubted prerogatives, the wisest policy as well as the plain duty of the Federal Government will be to issue its own unassailable notes and put them in circulation by calling in and retiring much of its present outstanding currency, and also by the payment of its debts and in meeting its enormous current expenses; to issue them in amounts equal to the requirements of trade as nearly ascertained as possible, bearing within them the breath of national life, honored in every village and hamlet in the American Union, uniform in value from Maine to Alaska, and their faces as well known as the flag wherever flies that emblem of the power and glory of a united and fraternal people.

Those who live to witness the adoption of the policy here outlined will, in my judgment, look upon the safest, strongest, and most beneficial system of finance ever before known in American history. It has in it the elements with which to accomplish the following paramount and indispensable features of all sound financial legislation:

1. A sufficient volume of currency at all times, State and national, on practically a specie basis, guaranteed also by public honor, with which to transact the growing and expanding business developments of the country.

2. The absolute denial and destruction of all power in the hands of individuals, corporations or syndicates to cause fluctuations in the amount of the different currencies in circulation, thus rendering panics and periods of business distress impossible for the future.

3. Every dollar in circulation, whether gold or silver, State bank paper or United States notes, on a strict parity and interchangeable with every other dollar, thus securing to the people the benefits and advantages of both a State currency and a national currency, circulating in harmony and uniformity and performing all the functions of money at home and abroad.

4. The settlement of the vexed question of silver money at once and forever, by authorizing it to form its proportion of the specie basis required by the Constitution of the United States for every chartered State bank in the Union; by recognizing it, as it is recognized by the terms of the Federal Constitution when defining the power of the States to make legal-tender money, thus making the use of silver, coined into money, as imperative as it will be useful to the great body of the people.

5. The total and complete overthrow of the dangerous centralization of the money power now existing at a few money centers and in the hands of a few individuals, by giving to the people of the States the right of home rule on the subject of money, and thereby securing to them a reliable, nonfluctuating home circulation.

Sir, to the foregoing five propositions I will at this time add but one more. A tax upon incomes, carefully adjusted and graded, has always been, to my mind, a most equitable and upright measure in providing Government revenue. While laying taxes on the necessities and wants of laboring men, women, and children, and from which there is no escape for them, justice—eternal, old-fashioned justice—demands that those who have incomes beyond their necessities, and as a surplus over their expenditures, should be required to contribute from their abundance, and at fair rates, to the support of the Government under whose care and protection they have prospered and grown rich.

And now, in the meantime, and in view of the present crisis, full of peril as it is, let the whole people of the United States, of every Commonwealth and of every neighborhood, cast out their fears and abide in an unshaken faith that present disasters will pass away, and be followed, as soon as much-needed reforms can be accomplished, by the unbroken sunlight of prosperity, and that He who determines the destiny of nations will cause the Republic of their fathers to win, and not to lose, in the transcendent mission to which it was dedicated more than a hundred years ago.

The VICE-PRESIDENT. The hour of 2 o'clock having arrived, the Chair lays before the Senate the unfinished business, which will be stated.

The SECRETARY. A resolution reported by Mr. HOAR, from the Committee on Privileges and Elections, as follows:

Resolved, That Lee Mantle is entitled to be admitted to a seat as a Senator from the State of Montana.

Mr. DUBOIS. I ask that the regular order may be laid aside temporarily. I desire to address the Senate on the measure which has been under consideration.

The VICE-PRESIDENT. The Senator from Idaho requests that the pending resolution be laid aside for the present that he may be permitted to address the Senate on Senate bill 570.

Mr. COCKRELL and others. No objection.

The VICE-PRESIDENT. The Chair hears no objection, and the Senator from Idaho will proceed.

Mr. DUBOIS. Mr. President, more than three years ago, when I was a Delegate in Congress from the Territory of Idaho, I commenced a speech in favor of silver in these words:

> The silver question, as we understand it in the West, is a very serious one. With us the contention for its restoration is not one of policy or expediency, but of justice and absolute necessity. We look upon the conspiracy which culminated in the demonetization of silver as the most gigantic robbery of modern times. We think the injury that it has already inflicted upon the nation is more terrible, so far as mere property is concerned, than would have been an exhaustive war with some first-class foreign power. I do not stand here to-day to speak in the interest of silver mines. They can bear the loss that the unrighteous robbery inflicted upon them, but the people at large, and more especially the producers of the East, can not much longer stand up under the shrinkage which has already driven all profit from the farm and shop.

I will allow those remarks to stand as the preface to the observations I have to make to the Senate on the very serious question and condition which we are now called upon to meet. Time has strengthened, not weakened, my opinion.

The current of debate has turned swiftly and sharply at this session of Congress. Those who have opposed free coinage in the past have always insisted that they were bimetallists, notwithstanding the fact that they opposed vehemently every proposition brought forward by the friends of silver which was designed to cause true bimetallism, and ridiculed as the veriest nonsense every effort of the silver men to stop falling prices. They arose in their places, each and every one of them, and proclaimed in loud and plain terms that they were bimetallists and favored the use of both gold and silver as money. During all the discussion (up to this session) I do not recall a single instance when any Senator or Member has avowed himself in favor of gold monometallism.

But lo and behold, all of a sudden a change has occurred upon the face of the bimetallic moon. Silver disappears, and from the great prophet, President Cleveland, down through the ranks to the latest convert in Congress, all are satisfied that it is hopeless to keep up the fight any longer; that our only safety lies in a gold standard. It is a most sudden, strange, and unanimous transformation. They evidently think the time is auspicious to throw off the mask. They must believe that they can shackle the people before they can strike.

I should like it if these honorable Senators who are now so earnest and anxious to fasten a gold standard upon the people of the United States would tell the country from whom they receive their instructions. As I understand the spirit of our Republic the people rule, and the representatives of the people carry out their wishes as expressed in conventions and at the polls. What convention or what vote of the people has instructed Congress to abandon bimetallism and adopt the gold standard? There is not a Senator on this floor who was not elected on a platform which pledged him to bimetallism. Certainly their instructions do not come from the people; for the Republican party and the Democratic party, in their national conventions last summer, declared in favor of bimetallism.

The Populist party declared in favor of gold, silver, and paper, and not for gold alone. No national party, in any convention, at any time in this country has declared in favor of the gold standard, and in my judgment they never will. I most earnestly insist that no representative of the people has a moral right by

his vote to bind the country to gold monometallism on his own hasty judgment. It is a betrayal of the people which will be bitterly resented by them. You were not elected or sent here for that purpose. On the contrary, each and every Senator is bound by every sense of honor to secure and continue forever the use of both gold and silver as money unless otherwise directed by the people. It will not do to resort to the transparent subterfuge that you are not contending for a gold standard, nor will it avail to try to fool the people by saying you will discontinue the purchase and coinage of silver and continue to coin gold, and if this does not bring relief you will return to the coinage of both metals.

I am quite familiar with the line of argument of those who say that they are still in favor of bimetallism. The distinguished Senator from Massachusetts [Mr. HOAR], for whose ability I have the most profound respect and for whose integrity I entertain the highest opinion, told us that there are about $600,000,000 of gold and about $600,000,000 of silver in the country, and if you pass the proposed law you would still be on a bimetallic basis, because the Government would continue to keep the metals on a parity.

The venerable Senator from Vermont [Mr. MORRILL] reiterated this statement, and I have no doubt that every one of our opponents will repeat it, for it is their last straw. But if you now stop the coinage of silver, as silver is lost through abrasion or other causes you come nearer and nearer to a gold standard, and it is simply a question of a short time when you reach it. You are not bimetallists when you repeal the act of 1890. Other countries besides our own float different moneys; they are on the gold standard, and so you will be. You will still outlaw silver. There can be no true bimetallism until you open your mints to the coinage of both gold and silver, until you treat both metals equally under the law. I say I am familiar with their only argument, and it is not worthy of serious consideration and is untenable.

President Cleveland's message, which you heard read in this Chamber on the 8th of this month, closed in these words:

> I earnestly recommend the prompt repeal of the provisions of the act passed July 14, 1890, authorizing the purchase of silver bullion, and that other legislative action may put beyond all doubt or mistake the intention and the ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries.

As a matter of fact no money is universally recognized by all civilized countries. Money, whether it be gold, silver, paper, or what not, is recognized only in the country which makes and supports it. When gold or silver money gets beyond the borders of its own country it is a commodity and is valuable only as such. The President might have been a little more exact in his language in a state paper, but what he meant by "money universally recognized by all civilized countries" was gold. The message could not have been plainer, and those Senators who indorse it indorse a gold standard without equivocation.

It has been admitted time and time over by Senators who helped to pass the act of 1873, which demonetized silver, that they were ignorant of the fact that it did demonetize silver. There was no sentiment in the country at that time for the demonetization of silver, and had the question been discussed and submitted to the people the act of 1873 could not have become a law. All admit this; all agree that the people were cheated and wronged, yet for twenty years they have vainly struggled to undo this wrong.

If in the broad light of day you follow the President's message, repeal the Sherman act, strike down the last prop of silver, and announce that you intend to put this country on a gold basis, double the debts of the producers, double the value of money, and reduce by one-half the products of labor, how long will it take the people to right the wrong and how will they do it? In contemplating financial legislation in this country since 1873 I do not know if they could ever emerge from their thralldom by peaceable and legal methods. It is quite evident that they would get no relief from this Administration unless they secured a two-thirds majority in both branches of Congress.

Prices have been falling in the United States since 1873. Wheat, cotton, corn, oats, all the products of labor and the daily rewards of labor itself have gone down until there is no longer universal prosperity. There has been individual prosperity among those who have fixed incomes and large accumulations of money. It has never been successfully controverted, nor can it be, that silver measures the value of all commodities. While on account of unjust and vicious legislation silver has fluctuated in value as compared with gold, it has yet served as a perfect measure of value of the products of labor.

If you strike it down still further, as contemplated by the President's message, refuse to purchase or to coin it, and make it bring in the market what it is worth to make spoons of, you will take a fearful risk and responsibility. It is a new proposition to put the United States on a single money basis, and before it is done the people should be consulted. They were called upon to decide in regard to the tariff. Their decision does not meet my judgment as to what is for their best interests, but after repeated discussions, conventions, and elections, they decided practically in favor of free trade, and the Democratic party has their indorsement to remodel the tariff so that it shall be a tariff for revenue only.

I believe in the protective doctrine of the Republican party, and think the country will desire a return to it after trying a tariff for revenue only; but no one who believes with me has just cause for complaint because we were beaten, for the issue was fairly made and presented to the people, who in this Republic are and should be the judges. It is not so with this financial question, however. If it should be submitted to a vote of the people whether they would adopt bimetallism or monometallism, nine-tenths of them would decide in favor of bimetallism. I am of the opinion that the monometallists would not carry a single State in the Union.

It is urged that there is a scarcity of money and lack of confidence in the country, which is destroying business of all kinds. While we of the West point to our idle mines and closed stores, the New Englander says that the hum of their factories has ceased; that the thousands of men and women dependent upon them are out of employment; the men of the South aver there is no living price for their cotton; that they can not even get the money to move it in order to keep actual distress away. So the complaint comes from all quarters. None escape; not even the bankers in the cities. The President of the United States gravely tells us to repeal the purchasing clause of the Sherman act, and go home in peace. Having said this to us, he informs the country that his duty is done, and it now remains for the members of Congress to do theirs—whereupon he takes a rest and recreation.

Senators stand up in this Chamber and declare that this era of panic and disaster must be stopped by the immediate repeal of the Sherman act. No one says what is to be done after it is repealed, and no one tells us how its repeal will make more money or restore confidence. Through the Sherman act over $3,000,000 of currency is added to our stock of money each month. The average individual can not see how you will relieve the scarcity of money by stopping the issuance of $3,000,000 each month.

The junior Senator from Massachusetts [Mr. LODGE] did inform us, I think, that the repeal of the Sherman act would restore confidence in London, and that the English money-lenders would then buy up some of our most valuable stocks and bonds, and thus money would flow in. The people in this country who need money most and who have lost confidence are not those who have valuable stocks and bonds to sell.

The gold monometallists, ever since trouble began last spring, have charged all of our ills to the Sherman law, and now they urge that peace will be restored by its repeal. They do not specify how. Perhaps they are loth to prophesy, inasmuch as their prophecies in the early spring are shown to be idle in middle summer. With one accord they proclaimed that gold was leaving us on account of this poor and friendless and fatherless piece of legislation. Gold is now returning, despite the fact that the act is still with us. I do not claim that gold is returning because we still have this law, but I might so assert with as much reason as they insisted that it was leaving us because we had it.

If the monometallists are determined to put us on a gold basis it would be manlier to say so plainly and give their reasons than to thinly disguise their intentions by such weak inventions. They themselves know that the Sherman act is not responsible for the present crisis. If they much longer continue this masquerade they will have to do as the priests of old did. In early days it was customary for the priests to offer up lambs and oxen to appease the wrath of offended deities. The sacrifices were made in the presence of the people, with great pomp, ceremony, and high-flown language.

All went well and solemn for some time, but long before the folly and hypocrisy of the ceremony dawned upon the people the priests had laughed in their sleeves and at the masses. Finally it became such a joke that, to avoid detection, they agreed among themselves that when invoking the Deity to spare them His wrath, they would turn their backs upon one another to avoid laughing at the absurdity of the performance.

The junior Senator from Massachusetts [Mr. LODGE], in his interesting speech the other day, said that there were 300,000 people out of employment in Massachusetts and 3,000,000 in the Northern States, and intimated so that the masses of the people at home would understand him, that this was due to the Sherman act. I think, perhaps, he got his figures a little high; but no matter. He did not say plainly to the Senate that these millions of people were out of employment and in distress on account of the Sherman act, for he was facing us and would have been compelled to laugh. I agree fully with the distinguished

Senator from New Hampshire [Mr. GALLINGER], that the uncertainty as to what the dominant party will do with the tariff is the prime if not the sole cause which blighted the industries of Massachusetts and the Northern States.

The gold monometallists are not very explicit in stating their reasons why they wish to take away the money function of silver. If they were, it would be easier to argue with them. As a rule they content themselves with abusing silver and silver advocates.

I will endeavor briefly to answer some of the objections which they urge against silver as I recall them.

We hear much of the dishonest silver dollar which is worth but 51 or 65 or whatever cents the bullion it contains will sell for. I am pleased to bear witness to the intelligence of the Senate that such nonsense is seldom uttered in this Chamber. A silver dollar will buy as much as a gold dollar and is as highly prized. If, through unjust, unwarranted, persistent, and indefensible legislation, a silver dollar has depreciated in value as compared with a gold dollar, the gold dollar, through this same legislation, is more dishonest than the silver. Just so much as the silver dollar has depreciated, the gold one has appreciated. The silver dollar, as always, most nearly measures the value of commodities. It is the dollar of the farm, the factory, and plantation, and goes hand in hand with the results of labor. Just so much as it is depreciated and is dishonest, just so much is the toiler injured and just so much the gold dollar is appreciated and dishonest and the creditor benefited.

The gold advocates express fear that we can not maintain bimetallism on account of the overproduction of silver. I call their attention to the very exhaustive and carefully prepared statement of the distinguished Senator from Missouri [Mr. VEST], who proved conclusively that when the production of silver exceeded that of gold more than thirty times, silver was worth more than 129.29. Unless silver is legislated against, and when it has been treated equally with gold as a money metal, no matter what the disparity in production between the two, their relative value on the agreed ratio has varied but a trifle.

In addition to the facts presented by the distinguished Senator [Mr. VEST], it must not be overlooked that for centuries gold and silver have been the money metals of the world. Both metals have, in consequence, been struggled for, hoarded, and preserved by the nations of the earth, until now there is an enormous accumulation of each. I do not know that anyone could give the amount of each now in the world. It is known that there is about as much of one as of the other, and that there is somewhere near $4,000,000,000 of each.

The world's output of gold in 1892 was $130,816,627, and of silver $196,605,184. About two-thirds of the gold production is used in the arts, so that but $43,605,542 of the output of 1892 was used for coinage. About one-tenth of the silver production is used in the arts; so, assuming that all of it was brought to the mints which were open for its coinage, there was of the production of 1892 but $176,944,666 coined into money.

In considering the effect of the production of the precious metals on their value you can not overlook the amount of these metals now doing service as money. The product as it is accumulated year by year is added to the general stock, which it can affect only in the slightest degree. The further fact in this connection, that the business of the world is constantly increasing in every avenue of trade and carries with it a demand for more money which is stable and certain, can not be ignored.

Almost all of the known world has been explored and prospected by seekers for the precious metals. It is altogether unlikely that any new worlds remain undiscovered, so that it is a fair assumption that while through improved machinery the gold and silver output may increase some for a few years, it is almost certain that the increase will not be such as to unduly affect prices, when such increase is considered in connection with the uses of gold and silver in the arts and the swelling volume of business resulting from the constantly increasing population.

It has sometimes been urged by the opponents of the free coinage of silver that its cost of production has been so cheapened that its ratio of 16 to 1 to gold should be enlarged, and that it ought not to be worth 1.2929. This charge is usually made by those far removed from the mining countries and who have no practical knowledge on the subject. As a rule they take some of the highest grade and greatest producing mines which are in full operation and base their calculations upon them. The consensus of opinion of those who have studied and followed the business of mining is that it has required and now requires more than a dollar to dig out a dollar's worth of silver.

Be this as it may, for I will admit that it is somewhat conjectural, if their argument is good as applied to silver why is it not equally so as applied to gold? Silver has always been found in conjunction with gold, lead or copper, granite, porphyry, and other refractory substances, so that the process of extracting the silver is and always has been expensive. Nine-tenths of all the gold has been found in the sand and in streams, in the shape of nuggets, and has cost in labor and expense but a trifle as compared with silver.

While it is true that most of the placer mines have been exhausted the fact yet remains that a very respectable percentage of the gold output still comes from placer diggings. That which is found in quartz costs no more in its separation than does silver. I do not think the cost of production is a pertinent argument, but, inasmuch as I have heard it used in this Chamber against silver, I submit, in fairness, that it should also be applied to gold.

The contention of bimetallists that there is not enough gold in the world to serve as a safe basis for money can not be avoided or put aside. The gold-standard men seem to dodge this dilemma. The distinguished Senator from Massachusetts [Mr. HOAR] in his very able and ingenious argument admitted that he was not clear on this point. He tried to save himself in his advocacy of a line of policy which, it seems to me, must put this country on a gold basis, by saying that he would not consent to the passage of any law which would forever close our mints to the free coinage of silver. The doubt in his mind as to the adequacy of gold to serve as a basis was evidently so great that he is not willing to go farther than an experiment.

The output of gold in the United States in 1892 was $33,000,000. The gold product varies but little from year to year, so that we can safely calculate on $33,000,000 for sometime to come as the annual yield. When you refuse to purchase and coin silver, you cut off 40 per cent of this annual yield, for 40 per cent of the gold comes in conjunction with silver. It is a rare thing when a sufficient amount of gold is found in this combination to make it profitable to mine for the gold alone. This will leave your annual gold yield $19,800,000. Two-thirds of this is used in the arts, which leaves but $6,663,333 each year for coinage.

When you stop the coinage of silver gold will be more valuable, and, in consequence, more and not less of it will be used in the arts, leaving even less for coinage. It will not be surprising if all of the $19,800,000 is so used. The more precious gold becomes the more anxious the rich people will be to have it for ornaments, tableware, etc. They will pay more for it in bullion than the owner of it can receive by having it coined, and, in consequence, he will not take it to the mint. But even should no greater amount be used in the arts than at present, does anyone contend that the addition of $6,663,333 a year is a sufficient increase of the money basis to satisfy the demands of our constantly growing business and our ever-increasing population?

I have already adverted to the fact that the world's output of gold in 1892 was $130,816,600, one-third of which, or $43,605,533, was coined, the balance being used in the arts. If $6,663,333 yearly addition to our own money basis is not sufficient for our wants, surely forty-three and one-half millions is not sufficient for the entire civilized world. You will be compelled, almost at once, to institute some other kind of money. What sort will you choose? The silver advocates will never consent to fiat money. They have no patience with those who favor irredeemable paper money. They wish all forms of money based on the precious metals.

There is not enough of gold alone to serve as a safe basis, and all of the honorable Senators who are now striving to put us on a gold standard know it. Is their hostility to silver so great that they prefer to run the risks of fiat money rather than hold to bimetallism, which has been tried and found so successful in this country? By this legislation which you would now enact you strike down silver, which is one-half of our money. When you do that you make gold twice as hard to get as now. It will require twice as much of all products to secure a dollar then as it does now. There can be no cessation in the struggle for money. All the people must have it. The more you curtail it the harder it is to get, and when you contract it to such narrow limits as you propose, such a demand will go up from the people for an enlarging currency as will force recognition.

In my judgment, you should pause now and consider well whether, if at this time you stop the coinage of silver, you will not lay the foundation for such misery and unrest as will result in an agitation among the people the culmination of which will be fiat money.

I am opposed to any change in the ratio. I voice the sentiment of all the representatives of the silver-producing States when I say that "we have inscribed on our standard the old and time-honored ratio of 16 to 1, and will make our fight under that banner".

Our mines are now closed, our business stagnant, and we realize that a ratio of 20 to 1 would make our canons resound once more with the joyful sound of the pick and shovel, would quicken

the arteries of trade and partially restore prosperity, because it would make silver worth about $1 an ounce; but while we may not be versed in the science of finance or the arts and polish of the more civilized and luxurious East, we are a game people who will stand by our friends the wage-earners and the producers of the world, who are making this fight on principle. The proposition to alter the ratio is a compromise of principle.

The legislation of 1873, which demonetized silver, and the persistent attacks which have been made upon it since, have depreciated the value of wheat, cotton, and all the products of labor, and have appreciated the value of gold. A larger ratio means a surrender of a portion of this advantage which has been gained by the bondholders. It means that the depreciation of commodities and the appreciation of securities shall be unalterably fixed upon the people.

Mr. MCPHERSON. Would it interfere with the Senator if I should ask him a question?

Mr. DUBOIS. Not at all.

Mr. MCPHERSON. I do not know but that the information may be contained in a statement which the Senator has already made, and which I did not correctly hear or understand, but do I understand him to say, speaking for the interests which he represents, and, I suppose, the interests of the silver States very largely, that he would not agree to a ratio of 20 to 1?

Mr. DUBOIS. I said that while I live in a silver-producing State, which would be benefited by a ratio of 20 to 1, I and those who live in that section of country would stand by the wage-earners and the producers who are making this fight, not, as even the Senator himself would say, for silver, but for principle.

The gold monometallists are in the habit of prophesying as to the direful results of all silver legislation. Their prophecies have not been fulfilled in the past, and it is likely they will not be in the future. They say that silver can not maintain itself at a ratio of 16 to 1; that it will drive gold out of the country, and put us on a silver basis. How do they know this? It did not do it before 1873, and it is simply a guess on their part that it will now. The bimetallists are willing to stipulate that it will keep its place firmly if you establish the ratio at 16 to 1. They are willing to further stipulate that if it does not, they will then agree to a higher ratio. It is mean and unjust to establish a ratio now, based upon the bullion value of silver as compared with gold.

Gold has been given every opportunity; has had the especial care of legislation, while silver has been battered down and legislated against for twenty years. Now, when silver is weakest, through unjust legislation and at the end of a long struggle, you condemn it for being weak. Remove the restrictions; put it back where it was; give it the sanction of the same laws which you give to gold, and if it does not maintain itself then we will talk to you about increasing the ratio.

Mr. President, I represent, in part, a State which has been a subdivision of the United States for but little over thirty years. Idaho was created a territory in March, 1863, and a State in July, 1890. In this brief time it has given to the world $150,000,000 in gold and some $75,000,000 in silver. It is entitled to some consideration for this contribution. It is peopled with Americans who are your kin. The young, the strong, the brave and ambitious from the New England, the Northern, the Southern, and the Middle-western States make up her citizenship. They have redeemed the deserts, have compelled the reluctant hills to yield up their treasures, and have braved hardships which you know not of, that the world might be enriched. They and their neighbors have laid deep and strong the foundations for mighty commonwealths which will be the pride and bulwark of American institutions in years to come.

When you strike down silver, when you say to the Rocky Mountain region that you will neither purchase nor coin any more of this precious metal, you strike a blow at your kindred which is as cruel as it is unjust. I would say to you that there should be no doubt in your mind as to the wisdom of your action before you commit this deed. You should be very certain that the result will justify the sacrifice. You should remember, also, that all of our supplies except those for food are purchased from you, and that all of our debts are owing to you. Either yourselves or your allies in this legislation own our railroad, State, county, and municipal bonds and other securities. You can not paralyze us without injuring yourselves. We can survive. Men who have conquered the frontier will neither starve nor beg, nor cease to be law-abiding, law-preserving, and patriotic Americans.

I ask leave, Mr. President, to embody as a portion of my remarks some resolutions passed by the State convention held in Idaho a few days ago. I shall not take up the time of the Senate by reading them, but ask that they be made a portion of my remarks. They are worthy of careful perusal.

The PRESIDING OFFICER (Mr. PLATT in the chair). Without objection the request will be agreed to.

The paper referred to is as follows:

AN ADDRESS TO THE PEOPLE.

The committee on resolutions presented the following memorial, which was adopted unanimously:

To the People of the United States:

The National Congress is now assembled in extraordinary session, having been summoned to meet for the purpose of providing a remedy for the extraordinary business conditions which have for weeks convulsed the country. The financial question is the absorbing theme of discussion, and a multitude of plans are being put forth for changing the status of silver in our monetary system. In this crisis of our financial history the people of the State of Idaho, through their duly accredited delegates assembled in State convention, promulgate to the world their abiding belief that no final settlement of this great question can be effected until Congress shall restore the law providing for the free and unlimited coinage of silver, at the ratio to gold of 16 to 1.

In support of this belief we submit the following facts for the consideration of our fellow-citizens, asking that they be carefully weighed by all who desire that the principles of right and justice shall be stamped upon the fiscal legislation of the country. We know we are right, and we believe that every sincere man who will clear his mind of prejudice and examine the subject logically will eventually share our belief upon this all-important issue. The question before the country is whether its business shall be established upon a basis of bimetallism or be finally made to conform to a single gold standard.

GOLD ALONE INSUFFICIENT.

It is very generally admitted that gold alone does not constitute a sufficiently broad basis to sustain the vast structure of credit which represents the trade and industry of the world. This point is so well established that no argument is needed to sustain it; it is voiced all over our Eastern States, and even by the great financial and political leaders of the United Kingdom; and yet, strange as it appears, multitudes of the American people, rendered desperate by a situation which they do not understand, are willing to follow the lead of the bondholding class in the attempt to finally establish the single gold standard in this country.

MOTIVES OF THE MONOMETALLISTS.

Why was the policy of monometallism inaugurated, and what have been its results? It was devised for the purpose of enhancing the value of money and securities. The purchasing power of gold has been appreciated very nearly 100 per cent, and the appreciation has doubled the actual value of the world's thousands of millions of dollars of interest-bearing securities. It has been enormously profitable to the holders of those securities; it has been dreadfully disastrous to all whose labor contributes to the fund from which those securities, principal and interest, are paid.

Here in the West we have been led, by reason of the direct and disastrous effect upon our leading industry, to give this subject that careful thought necessary to arrive at correct conclusions. The people of the East have not given it such thought; they have carelessly accepted the explanation that the price of the product of human labor has declined because of overproduction. That is a monstrous assumption. We tell you prices have shrunk because of the appreciation of basic money, as a result of the application of the principle of monometallism. You will agree with us in this proposition when you have given the subject that independent study and investigation to which its importance entitles it.

ALL VALUES SHRINK.

We want to tell you again, that this rule of monometallism, if it be finally fixed upon us, must apply to all classes of property. Values must all shrink. The value of your lands, the value of your buildings, the value of your factories, the value of your railroads, must all be pared down. You can not escape from it; neither the efforts of financiers nor the intervention of clearing-house associations can prevent the fall. When the process of shrinkage shall have been finished, 75 per cent of our stocks will have been entirely wiped off the board of the exchanges. Thousands of millions of dollars of your investment securities will not be worth as much as the paper upon which they are printed; they represent only an equity; the bondholder comes first, and the value of the property will not be sufficient to more than pay the bond when finally measured by the single gold standard.

BENEFITS OF FREE COINAGE.

Free coinage of silver will enlarge the volume of basic money; it will stop the fall of prices and establish them upon a much higher plane; it will add to the rewards of all who toil; it will increase wages; it will make the burdens of life easier in the homes of the masses; it will lighten the sky of industry; it will make music among the spindles; it will put thanksgiving in the hearts and songs on the lips of millions; it will overturn the bondholders' conspiracy and take the yoke of hopeless poverty from the necks of those who have been ground into the dust beneath the wheels of this juggernaut of gold. Moreover, we want to say to those who own factories that are standing idle, that free and unlimited coinage of silver would at once create a new and almost boundless market for them.

In Mexico and the other Latin-American countries, business has suffered to such an extent that the shelves of the merchants are empty. Free coinage in the United States would at once bring a flood of orders for goods; such fluctuations in exchange would be done away with. This trade would amount to tens of millions of dollars annually; it would permanently turn the general balance of trade in our favor and would oblige Europe to send its balance to us in gold, aye, in gold. While drawing the silver of Mexico we would draw the gold of England, and the bimetallic United States would become the money center of the world.

Our trade with all the silver-using countries would become direct, thus building up our merchant marine.

MR. SEYD'S PROPHECY.

The remarkable prophecy of the French economist, Mr. Ernest Seyd, is well worth quoting in this connection. So far back as 1871, two years before silver was demonetized in the United States, Mr. Seyd used these words: "It is a great mistake to suppose that the adoption of a gold standard of values by other states besides England will be beneficial. It will only lead to the destruction of the money equilibrium hitherto existing and cause a fall in the value of silver, from which England's trade and the Indian silver valuations will suffer more than all other interests greviously. There will be a general decline of properties all over the world.

"The strong doctrinairism existing in England as regards the gold valuation is so blind that when the time of general depression sets in, then will be this special feature: The economic authorities of the country will refuse to listen to the causes here foreshadowed. Every possible attempt will be made to prove that the decline of commerce is due to all sorts of causes and irreconcilable matters. The workingman and his strikes will be the first convenient target. Then speculation and overtrade will have their turn. Many other allegations will be found convenient by the financial writers. The great danger of the time will be that among all this confusion and strife England's supremacy in commerce and manufactures may go backward to

an extent which can not be redressed when the great cause, the demonetization of silver, becomes recognized and the natural remedy is applied."

The last clause expresses the only portion of this prophecy unfulfilled, and clearly presents a way by which the United States may again obtain commercial supremacy.

THE ADVOCATES OF SOUND MONEY.

In advocating this course we claim to be the real conservative champions of sound money. The advocates of the gold standard well know that there is not enough of their favorite metal to sustain the system throughout the world, and yet are so prejudiced against the use of silver that they prefer fiat money as a necessary assistant. We have been on a gold standard since 1873. It has brought stagnation and ruin, and yet, so far from turning to silver to help pull through the trouble, they issued fiat money, good among bankers only, in defiance of the United States statute, which imposes a tax of 10 per cent upon such circulation. The bankers of various cities have already issued $50,000,000 in clearing-house certificates in accordance with this scheme. We condemn this evasion of the law as an attempt to avert the necessity of free coinage by doubtful financial expedients. We earnestly recommend that Congress make certificates issued upon deposit of silver coin full legal tender as the coin so deposited.

Recent events emphasized the fact that the restoration of silver to free, unlimited coinage at a ratio of 16 to 1 is the paramount issue before the American people, and the people of Idaho hereby record their conviction that if Congress shall fail to pass a free-coinage law at this session it will be necessary for all bimetallists, laying all other issues aside, to unite in a political organization whose sole aim shall be to rectify the disastrous error committed in the demonetization act of 1873.

AN AMERICAN POLICY.

There is a very large and respectable class of our fellow-citizens who would be glad to see silver restored, but who do not think the United States could maintain the parity of the two metals in the absence of an international agreement. We would call the attention of all such to a statement made by the late Mr. Blaine, that those have always been most successful in dealing with the financial affairs of our Government who have had the greatest confidence in the resources and credit of the country. We believe the United States is strong enough, and that its wealth and credit are so great that it can decree what the position of silver in the business world is to be. We know that England for eighty-seven years has maintained a fixed value upon gold; we know that Spain fixed the ratio of silver and gold throughout two centuries; we know that the little Kingdom of Portugal at a later date fixed that ratio and long maintained it, and we believe that what England has done with gold and what Spain and Portugal at different times did for silver can now be done by the great United States of America for the latter metal.

We ask that it be tried. We are not asking that a depreciated currency be established. If, under a free-coinage law, the parity of gold and silver should, after a fair trial, fail to be sustained, the people of Idaho would be first to support such other legislation as should be shown to be necessary. Compromises may be offered; we are opposed to any and all compromises. We know that the gold-standard conspirators will try any experiment as a compromise proposition; and we challenge them to try the simple plan of the constitutional free coinage of both metals. We throw down the gauntlet to them; we know that they will not take it up, because they are aware that we are right and that this method would hopelessly wreck all their carefully laid plans; so we appeal to the people of the country, asking them to unite their voices with ours in demanding the adoption of the one plan which the logic of the situation suggests.

NO OVERPRODUCTION OF MONEY.

There are those who fear we might have too much silver, although the same persons would not entertain such a fear in relation to gold. There could be no such thing as too much metallic money. The history of the world proves that those periods which have witnessed the greatest production of the money metal have been the most prosperous that the human race has known. Great production of these metals enriches the arteries of commerce, stimulates every department of human industry, and spreads smiling prosperity among a busy, happy people. But there can be no hope of phenomenal production. The life of a mine is limited. The largest properties become exhausted in a very few years, and new mines come forward now no faster than old producers are closed. The mining territory of this country has been well explored, and but few bonanza districts can remain to be discovered. The production may reach somewhat higher figures under favorable conditions, but it will fluctuate and can not permanently be much larger than during recent years.

A FOREIGN FOE.

In conclusion we would point out the fact that the headquarters of the bondholders' and antisilver conspiracy against the people is in Great Britain. Within a few months the British premier, when interrogated in Parliament upon the attitude of his Government in regard to a larger use of silver, stated that Great Britain would not assent to such a policy. "All the world owed England," he said, and the debts were payable in gold. It might be philanthropic to talk about making payment easier through an enlarged use of silver, but that would not be in harmony with British business principles. So we say to our fellow-citizens, the contest is primarily against a foreign foe; it is in the interest of the homes of the masses of our people; we simply ask of every patriotic citizen that he investigate the subject independently of the influences that his surroundings may throw around him, for we know that such an investigation must, in every instance, lead the inquirer into the ranks of the supporters of constitutional free coinage.

Mr. PALMER. Unless some Senator desires to address the Senate on the pending question of privilege, I ask that it be further postponed in order that I may address the Senate briefly on the financial question which has been under consideration.

The PRESIDING OFFICER. The Senator from Illinois requests that the pending business be further temporarily laid aside in order that he may address the Senate upon the same bill upon which speeches have been made. Is there objection? The Chair hears none, and the Senator from Illinois will proceed.

Mr. PALMER. Mr. President, it has been said on this floor that every Democratic Senator present at the time voted against the passage of the act of July 14, 1890; the Chicago convention in terse and vigorous language denounced the measure and demanded its repeal, and the Presidential candidate, nominated by that convention and elected by the people of the United States, concludes his last message to Congress, saying:

I seriously recommend the prompt repeal of the act passed July 14, 1890, authorizing the purchase of silver bullion, and that other legislative action may put beyond all doubt or mistake the intention and the ability of the Government to fulfill all its pecuniary obligation in money universally recognized by all civilized countries.

Thus it will be seen the act of July 14, 1890, was opposed by all the Democratic Senators when it was passed, was denounced by the Democratic national convention in 1892, and the President, acting in the strictest accordance with the declaration of the convention, impressed with the measureless evils inflicted upon the country by the measure, has convened the Congress, in which the Democratic party has complete ascendency, and urges upon that body the "prompt repeal of the provisions of the act passed July 14, 1890, authorizing the purchase of silver bullion."

This manifest concurrence of Democratic opinion would seem to justify the expectation of the country that the so-called "Sherman act," or at least its objectionable parts, would be repealed at once after the meeting of Congress and the business of the country relieved from evils so forcibly depicted by the President. The expectation of the early repeal of the provisions of the act that authorizes the purchase of silver bullion was, before the meeting of Congress, so firmly fixed in the public mind that the people of the country, who are suffering the evils brought upon them by this vicious legislation, expected that Congress would act at the earliest moment for their relief.

They expected that a Democratic Congress would promptly respond in the spirit of the Democratic platform to the urgent recommendation of a Democratic President and repeal the law so destructive to the public interests and so generally and justly condemned by public opinion. I admit that it was feared by many and predicted by a few that Republican members of Congress, and especially Republican Senators, would in some way labor to embarrass Democrats in their efforts to repeal a measure passed by a Republican Congress and approved by a Republican President; and it was reported that certain Senators, who are considered by the country to be preëminently the champions of the silver interests, had "given out in speeches" that they would resort to all the parliamentary methods allowed by the peculiar rules of this body to delay final action upon the question of repeal. But it is gratifying to find that the conduct of some leading Republican Senators warrant the belief that the fears of the many and the predictions of the few were unfounded.

The junior Senator from Massachusetts, fresh from the other branch of Congress, where he had distinguished himself as a party leader, at an early day in this session proposed the absolute repeal of that part of the act of 1890 which provides for the purchase of silver bullion. The senior Senator from the same State, without defending the act, only justified its passage as necessary to the defeat of another measure which he regarded as far more objectionable, and the distinguished Senator from Ohio, whose name is connected with the act, explains his vote in its favor upon the same grounds, and both of these eminent leaders avow their readiness to vote for the repeal, and there are reasons for believing that a majority of the Republican Senators are ready to coöperate with them in the same end, and the Senators from the so-called silver States have shown no disposition to hinder or obstruct an early consideration of the recommendation of the President.

Mr. President, like the distinguished Senator from Missouri, to whose eloquent speech we listened a few days ago with so much pleasure, I supported the President, and urged others to do so upon the distinct ground that in his letter accepting the nomination offered to him by the Democratic convention, he avowed his devotion to Democratic principles as defined by the party platform, and I maintain, in opposition to the criticisms of the Senator from Missouri, that the recommendations contained in the late message of the President are not only in accordance with the Chicago platform, but practically cover the whole financial policy outlined in the Chicago resolutions.

To make this point clear, I quote from the platform:

We hold to the use of both gold and silver as the standard money of the country and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the market, and in payment of debts and a demand that all paper currency shall be kept at par with and redeemable in such coin.

We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and of fluctuating currency.

And for the same purpose, and to make the comparison easy, I again quote the recommendation of the message:

I seriously recommend the prompt repeal of the act passed July 14, 1890, authorizing the purchase of silver bullion, and that other legislative action may put beyond all doubt or mistake the intention and the ability of the Government to fulfill all its pecuniary obligations in money universally recognized by all civilized countries.

Nothing can be more emphatic or clear, as will appear by the platform, than its denunciation of the Republican legislation

known as the "Sherman act of 1890," and the demand for its repeal is equally emphatic. It was denounced as so fraught with possibilities of danger that all its supporters as well as its author should be anxious for its repeal.

The President, as will be seen, recommends its prompt repeal. The platform further asserts, speaking to the whole Democratic party:

> We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver, without discriminating against either metal, or charge for mintage.

And the President, without reiterating the language of the platform, affirms, in substance, that the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, and, in effect, recommends to Congress such legislation as shall "insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the market and in the payment of debts, and that all paper currency shall be kept at par with and redeemable in such coin." And the President, without specific suggestions as to methods, after recommending the prompt repeal of the act passed July 14, 1890, urges "other legislative action (and he means undoubtedly in the line of the platform) that may put beyond all doubt or mistake the intention and the ability of the Government to fulfill all its pecuniary obligations in money universally recognized by all civilized countries."

It certainly requires no argument to prove that all civilized countries recognize the American dollar unit, of both gold and silver, when of equal intrinsic and exchangeable value and of equal power at all times in the markets and in the payment of debts, and all civilized countries recognize a paper currency at all times kept at par with and redeemable in such coin. As the convention specifically denounced the act of July 14, 1890, as fraught with future danger, the President might well specifically urge its prompt repeal now that the anticipated danger of evil results are realized, and the country may reasonably expect that a Democratic Congress will promptly respond to the Executive recommendation.

Nor can it be ground of just complaint by the supporters of the Chicago platform who are committed to the proposition that "the dollar unit of coinage, of both gold and silver, must be of equal intrinsic and exchangeable value, and of equal power at all times in the markets, and in the payment of debts," that the President submits it to the wisdom of Congress to devise and adopt "legislation that will put beyond all doubt or mistake the intention and the ability of the Government to fulfill all its pecuniary obligations in money universally recognized by all civilized countries."

But the Senator from Missouri says:

> We are told that the repeal of the so-called Sherman act, or the purchasing clause, is all that is necessary at the present conjuncture, and that the clouds will be immediately lifted from the business and financial horizon, and the sun of prosperity again beam on every portion of our land.

It may be that there are some who believe that the repeal of the purchasing clause of the so-called Sherman act is all that is necessary at the present conjuncture—but it is obvious from the language of the message that the President is not one of those who so believe; that he regards the repeal of the purchasing clause as essentially necessary to the return of prosperity is manifest, not only from his specific recommendation that it be promptly repealed, but from the overwhelming proofs he furnishes that the dangers with which it was fraught are now realized, and though the President makes no specific reference to the coinage of silver, it can not fairly be urged by anything said by him in the message that he does not now, as he did in his letter accepting the nomination made at Chicago, hold to the use of both gold and silver as the standard money of the country, and the coinage of both gold and silver without discriminating against either metal, nor does it follow that, because he fails to say one word in regard to bimetallism, he would disapprove of legislation which would provide that the unit of coinage of both metals should be of equal intrinsic value at all times, in the markets, and in the payment of debts; and I will add the expression of opinion that the great majority of the American people would not only approve but would rapturously applaud legislation which would establish and maintain the bimetallism of the Chicago resolutions.

I do not now pause to inquire whether bimetallism as defined by the platform is attainable by either of the methods suggested in that paper, an "international agreement," or the safeguards of legislation, or by a combination of both; but I assume that no loyal adherent to the Chicago platform will consent to the coinage of either gold or silver, unless the dollar unit of coinage of both metals be of equal intrinsic and exchangeable value, and with the equal power of every dollar at all times in the markets and in payment of debts, for it is declared by the platform that this policy is especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and fluctuating currency.

Mr. President, the Senator from Missouri no doubt favors bimetallism and free coinage as defined in the Chicago platform, and I think I may venture to say that he holds to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal, insisting, however, that the dollar unit of coinage of both metals shall be of equal intrinsic and exchangeable value, with the equal power of every dollar at all times in the markets and in payment of debts.

If I am correct in this statement of the views of the Senator from Missouri I most cordially concur with him, and am ready to follow his lead in promoting legislation which will secure that result to the country. Mr. President, the purchasing clause of the Sherman law does not aid the free coinage of silver. I make this statement upon the authority of the distinguished Senator from Missouri, and if anything more was needed to establish the truth of that assertion, it will be developed by the origin, object, and history of the law, and by a reference to the facts which illustrate its influence upon the financial situation of the country.

The act of July 14, 1890, originated in the councils of the Republican party; its object and purpose was to defeat the free coinage of silver upon the then existing ratio. That object and purpose is avowed by the Senator from Ohio, its putative author, and whose name it bears, and his avowal is confirmed by the distinguished Senator from Massachusetts whose means of knowledge are equal to those possessed by the Senator from Ohio himself, but there can be no doubt but that the measure was favored by Senators from the silver-producing States for the reason that it provided for the monthly coinage of two millions of silver dollars until the 1st day of July, 1891, and made perpetual provision for the monthly purchase of four and a half millions of ounces of silver bullion. They abandoned the free coinage of silver, which seems to have been within their reach, for the sake of a market for a large proportion of the silver product of the United States for the preceding year.

Whatever may have been the object of the authors of the act, or the combination of interests that secured its passage, it is the belief of its authors that its passage defeated the measure of free coinage, which was then impending, and I believe that its effect has been to render the coinage of silver upon the bimetallic plan of the Chicago platform exceedingly difficult, if not impossible. Bimetallic coinage is not possible while the purchasing clause of the act of July 14, 1890, remains in force and is executed by the Secretary of the Treasury.

The only power possessed by Congress with respect to the purchase of gold or silver or other metals results from the grant of power to "coin money, regulate the value thereof, and of foreign coins." In the exercise of this power Congress may provide for the purchase of any of the metals used for coinage purposes in whatever form they may be found. Millions of avoirdupois pounds of silver bullion which we can not coin upon a ratio yet ascertained or established, and which from its volume is a menace to the silver market, and is so worthless as a fund for the redemption of the Treasury notes issued for its purchase that, though they are nominally payable in gold or silver coin at the discretion of the Secretary of the Treasury, and made by law a legal tender for all debts, public and private, except when otherwise expressly stipulated in the contract, and are receivable for customs, taxes, and all public dues, and when held by any national banking association may be counted as a part of its lawful reserve, their parity has only been maintained by the established fixed belief in the public mind that no Secretary of the Treasury would dare exercise his discretion to redeem them in silver coin, and yet Senators who voted against the act of 1890, and were then fully impressed with the dangers to the business interests of the country with which it was fraught, and who adhered to the Chicago platform, now refuse to vote for its unconditional repeal.

The reasons given by Senators for their refusal to vote for the repeal are quite as surprising as the refusal itself. The Senator from Missouri, in his speech from which I have already quoted, and the Senator from Arkansas, who uses nearly the same language, and speaking of the act in question, said:

> I am willing to repeal it, but I am not willing to give up the whole silver question with the repeal.

And after an interruption he added:

> I meant to say that, until there is some assurance that we are not to go to a gold standard and we are not giving up the last muniment of silver and leave it without any legislation, we do not propose to take a step which leads to monometallism.

Mr. President, how can the repeal of the act amount to giving up the whole silver question? To whom does the Senator look

for an assurance that we are not to go to the gold standard, and who has authority to give to the Senator such an assurance, and in what sense can the Sherman act be called the last muniment of silver; and if a muniment of silver, what is its value; and as it deals with silver (which until its passage was a money metal) as a mere commodity, how can its repeal be a step which leads to or is in the direction of monometallism?

The passage of the act of July 14, 1890, gave up the whole silver question, as it expressly provided that the coinage of the standard silver dollars should cease on the first day of July, 1891, and that silver bullion should be bought in the open markets without making any specific provisions for its coinage. Under its operation the price of silver advanced to the average ratio to gold of 19.76 in 1890, but it was so ineffectual that in 1893 the ratio to gold increased to the disadvantage of silver to 28.52.

Mr. President, the country is now at the gold standard. There is no use in attempting to disguise this fact. Silver, the only rival of gold as a money metal, was made by the act before us, and is regarded in the world of commerce and trade, as a mere commodity, to be priced in gold. Silver coin now performs but a mere subsidiary office, and can never reach a higher plane of usefulness until the dollar unit of silver be made of equal intrinsic and exchangeable value to the dollar of gold, and be impressed with equal power in the markets and in the payment of debts. In order to this end the act of July 14, 1890, which at once operates to increase the glut of silver and the already overcharged Treasury, and disturbs the silver market by subjecting it to unnatural conditions, must be repealed.

Mr. President, I do not despair of bimetallism as defined in the Chicago platform, but I do believe that in the present state of the silver market it is beyond the power of any finite mind to fix a ratio of silver to gold that will produce that result. The market value of silver bullion is in a state of chronic fluctuation; it is affected by constantly disturbing conditions, of which the continued operations of the act of July 14 is one of the most potent. The country is committed to the present ratio, not only by law, but by the fact that there is a stock of silver coin in the United States estimated on the 1st day of January, 1893, at $492,903,266, all of which would be practically converted into bullion by an alteration of the ratio, for it would be necessary to recoin the silver coined in the Treasury and to redeem that in the possession of the people.

I repeat that it is impossible now, by any agency that has been suggested, to find and fix upon a ratio which will afford or produce the essential conditions of bimetallism, which is that the dollar unit of coinage of both metals possess equal intrinsic and exchangeable value, and the dollar of both metals to possess equal power at all times in the markets and in the payment of debts. The coinage of silver upon any other ratio than one which would certainly produce bimetallism would be but to introduce a new element of uncertainty and confusion which would not only continue but aggravate the condition of financial distress which has not only ruined the silver-producing States but threatens all the industries of the country.

Mr. President, the country is now upon a gold basis, and the values of all property and of all commodities, including as well silver as all the products of the farms and of the factories, are now fixed and regulated by gold.

Mr. President, ours is a country of marvelous resource. It is increasing in population and wealth and power with a rapidity unexampled in the history of nations; and at present, in my opinion, there are but two lines of policies which can offer the least possible hope for escape from our present situation of embarrassament and distress.

One of these lines of policy is to repeal the purchasing clause of the Sherman act, and then by legislative action put beyond all doubt or mistake the intention of the Government to fulfill all its pecuniary obligations in money universally recognized by all civilized countries. This course should be consonant with the character of the great, manly American people. We are not, as might be inferred from some of the speeches made upon this floor, timid mendicants, trembling in the presence of the financial power of England. We are, or will be, when we recover our natural courage, the rivals not only of the little Island so often mentioned, but of the greater Britain which includes so large a portion of the globe.

Mr. President, with commerce unshackeled by useless restrictions, and a mercantile marine which an unshackeled commerce will create, the United States will meet our English rivals in every port and demand and obtain its fair share of the money recognized by all civilized nations.

I once saw my country torn by contending armies; one portion of it desolated by war, and its industrial system overthrown; the other, which represented the existing Government, often defeated and on the very verge of bankruptcy, but never yielding to despair. When it was threatened by the England who is now so much dreaded, with armed intervention and possible dismemberment, still I never faltered in my hope of restored unity, increased national strength, and of a measure of national prosperity unequaled in our previous national life.

I do not now doubt the firmness and courage of my countrymen. They will not consent to take refuge from the financial power of England by the adoption of a mere timid, interterritorial system of coinage, established and enforced by a ruthless law, which, disregarding intrinsic values, isolates them from the world and its commerce, which they hope at no distant day to dominate and control, and will deprive them of the lead in enlightened civilization which they may now fairly claim to hold.

The American people will not now adopt the cast-off systems of India and of the least civilized peoples of the world, and no middle ground is possible.

The gold standard is upon us; bimetallism, as defined by the Chicago platform, is still possible, after all obstructions to its adoption are removed. But we can not now enter upon the doubtful experiment of new ratios. We can relieve the business of the country by resolutely repealing the Sherman act, and in that way withdraw the Treasury from the silver market. We should adhere to the present ratio, and by laws judiciously framed encourage the use of silver coin, and then calmly watch the influence of events upon the relative values of the two metals, ready to take advantage of circumstances, with the hope that by the use of effective means the country will at no distant day reach the point when both gold and silver can be coined and used without discrimination between them, and the dollar unit of both metals be of equal intrinsic and exchangeable value, and at all times possess equal power in the markets and in the payment of debts.

TRANSACTIONS OF NATIONAL BANKS.

Mr. PEFFER. I submit a resolution which I ask may be read and lie on the table for the time being.

The resolution was read, as follows:

Resolved, That the Secretary of the Treasury be directed to inform the Senate—

First. Whether and in what respect the national banks, or any of them, in the cities of Boston, New York, and Philadelphia are being now conducted in violation of law.

Second. Whether said banks are paying depositors' checks promptly in lawful money.

Third. Whether said banks, or any of them, are demanding rates of interest higher than those provided by law for the loan of money or in discounting notes and bills.

Mr. HOAR. Let the resolution go over. I object to its consideration at this time.

The VICE-PRESIDENT. The resolution will go over under the rule.

TOWN SITES IN THE CHEROKEE OUTLET.

Mr. BERRY. I ask the Chair to lay before the Senate at this time the joint resolution passed by the House of Representatives in regard to town sites in the Cherokee Outlet.

The VICE-PRESIDENT laid before the Senate the joint resolution (H. Res. 4) to make the provisions of the act of May 14, 1890, which provides for town-site entries of lands in a portion of what is known as Oklahoma, applicable to the territory known as the "Cherokee Outlet," and to make the provisions of said act applicable to town sites in the "Cherokee Outlet;" which was read twice by its title, and referred to the Committee on Public Lands.

ORDER OF BUSINESS.

The VICE-PRESIDENT. The Senate resumes the consideration of the resolution reported by the Senator from Massachusetts (Mr. HOAR), from the Committee on Privileges and Elections, proposing to admit Lee Mantle to a seat as a Senator from the State of Montana.

Mr. McPHERSON. Do I understand that it is the purpose to proceed this afternoon with the privileged question? I am not aware that any Senator is now ready to speak upon that question. I know that it has the right of way in the Senate, but in case no Senator is ready to speak upon it, I should like to call up the bill reported from the Finance Committee, known as the bank-increase bill. If no Senator is ready to speak on the other question—and no one seems to take the floor at present—I move that the Senate proceed to the consideration of Senate bill 453.

The VICE-PRESIDENT. Does the Senator from New Jersey ask unanimous consent to take up the bill?

Mr. McPHERSON. I ask to again lay aside informally the pending measure, which has been laid aside three or four times, in order to enable Senators to speak upon the bill I propose to call up; but if it is the disposition of any Senator to proceed on the pending measure of seating a Senator in this body, which is a privileged question, of course I can not trespass. Therefore, I ask that the pending question be laid aside for the present, in order that I may call up Senate bill 453, reported by the Senate Committee on Finance.

Mr. GORMAN. Mr. President, at the request of the Senator from Indiana [Mr. VOORHEES], who is not now present, the Senate agreed to permit the postponement of the question of the admission of Mr. Mantle until to-morrow evening at 5 o'clock, with the distinct understanding that it would probably be disposed of at that time to-morrow; that it would require all the time between now and then; that it was the purpose then to press the main question, and that after the disposition of that question we should take up the other important questions pending before the Senate.

I suggest to the Senator that to now postpone the resolution before the Senate would lead to another delay to-morrow afternoon, and I understand one or two Senators are prepared to speak on the contested case to-day.

Mr. MCPHERSON. The Senator will observe, however, that when I gave notice of my intention to call up the bill to which I have referred, I expressly stated that if any Senator was ready to proceed on the question of the contested seat, of course I would not interpose the bill. I supposed, however, that I was carrying out the injunction of the chairman of the committee. In his absence from the Chamber temporarily, I felt that it was enjoined upon me, in case no other subject was before the Senate, to ask for the consideration of the bill reported by him from the Committee on Finance.

I am ready to give way for the continuation at this time of the privileged question before the Senate. If, however, no Senator is ready to proceed, I believe that I shall be carrying out the wish of the chairman of the committee, who, as the organ of the committee, has especial control and charge of the bill, in asking for its consideration.

Mr. PLATT. I expect to speak at some time very briefly on the Lee Mantle resolution, if there be an opportunity, but I could not justify myself in occupying the attention of the Senate when the Senator from New Jersey says he is ready to proceed now with what I conceive to be the most important measure before this Congress. If he is ready to proceed, I shall give way, even if I lose my opportunity to speak on the Lee Mantle resolution.

Mr. MCPHERSON. I am also aware that the Senator from North Carolina [Mr. VANCE], the chairman of the Committee on Privileges and Elections, yesterday morning gave notice that a vote is to be taken upon the pending question Wednesday afternoon.

Mr. VANCE. It was so agreed by unanimous consent.

Mr. MCPHERSON. Yes, unanimous consent was, I think, obtained for that purpose. Now, I suppose it is the intention of the Senate to vote on the question at that time, and it had better be settled, so as to dispose of everything in the way of cumbersome questions before the bank bill is called up. If Senators are ready to proceed upon that question, let them go on; if not, I assume that some Senator is ready to proceed upon the question for which I have asked consideration. In order to get the matter properly before the Senate I move that the pending resolution be laid aside informally in order that we may proceed with the consideration of the bill (S. 453) to provide for the issue of circulating notes to national banks.

The VICE-PRESIDENT. The question is on the motion of the Senator from New Jersey to proceed to the consideration of the bill indicated by him. [Putting the question.] The Chair is in doubt.

Mr. WASHBURN. I demand the yeas and nays.

The yeas and nays were ordered.

Mr. HOAR. It seems hardly worth while to take a vote on a motion which requires unanimous consent for its adoption, I submit to the Senate.

Mr. SHERMAN. It is in order to move to proceed to the consideration of any bill.

Mr. HOAR. That is not the motion. The motion is to lay the pending resolution aside informally, and that requires unanimous consent. The Senator from New Jersey can move to proceed to the consideration of the bill.

The VICE-PRESIDENT. The Chair will state that there is objection to laying aside the resolution informally.

Mr. HOAR. I do not myself object, but I do not want time wasted in calling the yeas and nays on the motion.

Mr. HILL. If no one desires to speak upon the pending question, what becomes of the pending question? Must we wait until to-morrow afternoon at 5 o'clock before we can vote? What are we going to do with the pending question in the meantime? I think the question ought to be disposed of by the Senate. No matter which way the Senate intends to vote upon it, let us dispose of the question.

Mr. CULLOM. To which of the two questions does the Senator refer?

Mr. HILL. I refer to the admission of Mr. Mantle.

Mr. CULLOM. I think that ought to be disposed of, myself.

Mr. HOAR. I understand the Senate has given unanimous consent that the vote shall be taken upon that question Wednesday at 5 o'clock, and that the vote must then be taken unless unanimous consent be given to change the order of the Senate.

Mr. HILL. Suppose nobody desires to speak upon it, what are we to do in the meantime?

Mr. HOAR. I do not see why, if no one desires to speak, the Senate may not lay the matter aside informally.

Mr. GORMAN. As I understand the situation—and I want to be entirely frank about it—unanimous consent was had to take the vote yesterday at 5 o'clock. Then by an agreement of the body the hour was postponed until 5 o'clock to-morrow afternoon to enable Senators to discuss the question who are now prepared to go on. The Senator from Connecticut [Mr. PLATT] has announced that he is prepared. I want to say to the Senator from Connecticut and others that there can not be unanimous consent to postpone the question again after to-morrow at 5 o'clock.

We have reached a point in the discussion and consideration of matters of graver importance where they must take precedence of everything else. Therefore, if there is to be any further discussion on the question of the admission of Mr. Mantle it can go on only between now and to-morrow afternoon at 5 o'clock, when the Senate is to vote, by the unanimous agreement. Hence I suggest to the Senator from Connecticut, and other Senators who are prepared to discuss the question, that this is the only opportunity they will have for unanimous consent upon that subject, and I trust we shall proceed with its consideration.

Mr. HOAR. I should like to inquire of the Senator from Maryland, who is an experienced parliamentarian, if he does not understand that if this matter is displaced now by laying it aside informally by unanimous consent, or by taking up something else by a majority vote, either of which would be in order, still at 5 o'clock to-morrow it will come back again to be voted on?

Mr. GORMAN. So I think, beyond question.

Mr. HOAR. That is the way I understand it. So the only question now before the Senate is whether the Senate will insist on debating this subject, when nobody wants to debate it at this moment, or whether we shall talk about something else. Nothing which can be done, as I understand it, can displace the privileged question from its right to a vote to-morrow at 5 o'clock, except the unanimous consent of the Senate. Of course, if the Senate were to vote to adjourn over to-morrow it could do so, but that would be a violation of our unanimous agreement, and no Senator would vote for it.

Mr. GORMAN. I do not think there is any question about the statement of the Senator from Massachusetts. It is merely a matter of convenience for Senators.

Mr. HOAR. Although I mean to stand by the report of the Committee on Privileges and Elections as faithfully as I can, if any Senator would like to speak on the bank question and not on the privileged question, the latter will not lose the position which it has under the unanimous agreement.

Mr. WASHBURN. I should like to make a parliamentary inquiry, and that is, whether it is in order to move to lay aside the pending resolution and take up a bill. I understood the Senator from New Jersey to make that motion.

Mr. HOAR. Yes; he moved to lay it aside informally.

Mr. MCPHERSON. The Senator is mistaken. He is aware of the fact that on two occasions, to suit the convenience of Senators, the pending privileged question was laid aside informally. The Senator from Idaho [Mr. DUBOIS] made his speech upon the silver question, and the Senator from Illinois [Mr. PALMER] has also done so upon a motion to lay aside the pending question. When the Senator from Illinois took his seat, I extended the invitation long and loud to all Senators, that if they wished to proceed with the privileged question I would make no motion toward taking up the bank bill, as it is called, and as no Senator wished to speak upon the question of privilege, I then moved to take up the bill.

I did not suppose that I was violating any unanimous agreement or anything of the kind. When unanimous consent was not given to take up the bank bill I then moved to take it up. Certainly I was violating no agreement in that motion. Now, if the Senate is ready to proceed with the pending privileged question, well and good. If the Senate is not ready to proceed with it, then I would like to have it proceed with the bank bill, as there are several amendments pending to that bill upon which we can perhaps reach some decision this afternoon, and certain Senators want to speak upon the bill.

Mr. WASHBURN. I understand that no Senator desires to speak to-day on the pending question, and certainly a large majority on this side of the Chamber would like to proceed with the bank bill.

Mr. MCPHERSON. Then I move again that the pending question be laid aside informally, and that we proceed to the consideration of the bill (S. 453) to provide for the issue of circulating notes to national banks.

Mr. HOAR. I understand, though it makes very little difference, that it is not in order to move to lay aside the pending resolution informally; but all the Senator has to do is to move to take up the measure he wants to bring before the Senate, and if that motion carries it accomplishes all he desires.

Mr. McPHERSON. I am not particular as to how it is done.

The VICE-PRESIDENT. The Secretary will read the rule upon which the Chair sustains the motion of the Senator from New Jersey to proceed to the consideration of the bill he has indicated.

The Secretary read as follows:

RULE IX.

ORDER OF BUSINESS.

* * * * * * *

Immediately after the consideration of cases not objected to upon the Calendar is completed, and not later than 2 o'clock, if there shall be no special orders for that time, the Calendar of General Orders shall be taken up and proceeded with in its order, beginning with the first subject on the Calendar next after the last subject disposed of in proceeding with the Calendar; and in such case the following motions shall be in order at any time as privileged motions, save as against a motion to adjourn, or to proceed to the consideration of executive business, or questions of privilege, to wit:

First. A motion to proceed to the consideration of an appropriation or revenue bill.

Second. A motion to proceed to the consideration of any other bill on the Calendar, which motion shall not be open to amendment.

Mr. McPHERSON. In order to simplify the whole matter I move that the Senate proceed to the consideration of the bill (S. 453) to provide for the issue of circulating notes to national banks.

Mr. WASHBURN. On that motion I demand the yeas and nays.

The yeas and nays were ordered.

Mr. VOORHEES. Mr. President——

The VICE-PRESIDENT. Debate is not in order except by unanimous consent. The Chair hears no objection, and the Senator from Indiana will proceed.

Mr. VOORHEES. I understand the matter concerning the seating of a member of this body is a privileged question, and if those who have in charge the right of a Senator to a seat in this body insist on going on with it, that is a matter of the highest privilege, which can not be set aside. Am I right about that?

Mr. HOAR. I understand nobody desires to speak on that question this afternoon, and therefore there will not be any speaking on it to-day. If it is laid aside in accordance with the motion of the Senator from New Jersey it will come back to-morrow; it does not lose anything by going over until to-morrow.

The VICE-PRESIDENT. The Chair will state to the Senator from Indiana that an opportunity has been given Senators to speak on the privileged question to which he refers. None have availed themselves of it, and the Chair entertained the motion of the Senator from New Jersey under the rule which has been read; upon which the yeas and nays have been ordered.

Mr. RANSOM. Pending this little talk about a point of order, I move that the Senate proceed to the consideration of executive business.

Mr. VOORHEES. We had better settle what we have before us. Subject to a privileged question which involves the seating of a member here, I am in favor of going on at once with the matter contemplated by the motion of the Senator from New Jersey, and I shall vote accordingly. I did not understand the situation when I first came in; but I am extremely anxious to transact the business for which we were called here, and the motion of the Senator from New Jersey to proceed to the consideration of the bank bill I shall support.

The VICE PRESIDENT. Does the Senator from North Carolina insist on his motion?

Mr. RANSOM. Yes, I think that is the easiest way to get out of the parliamentary confusion we are in. I move that the Senate proceed to the consideration of executive business.

The VICE-PRESIDENT. Pending the motion of the Senator from New Jersey, the Senator from North Carolina moves that the Senate proceed to the consideration of executive business.

Mr. JONES of Nevada. On that I demand the yeas and nays.

Mr. RANSOM. Pardon me a second. I will withdraw my motion if the Senator from Nevada will withdraw the demand for the yeas and nays. The Senator from Massachusetts [Mr. HOAR] tells me earnestly and seriously that he wishes to make a speech on the bank bill and we all desire to hear him.

The VICE-PRESIDENT. Is there objection to the withdrawal by the Senator from North Carolina of his motion to proceed to the consideration of executive business? The Chair hears none, and the motion is withdrawn.

Mr. VOORHEES. I ought to have stated when I was on my feet before, but neglected to do so, that, subject to a privileged question which has the right of way independent of everything else, I desire to press action upon the matters that brought us together in the dog days of August. I give notice now that if the bank question is to be made the pretext for long debate and delay I shall ask the Senate to sidetrack it for the purpose of considering and acting upon the bill proposing to repeal the Sherman act, which is the reason why we were convoked here on this extraordinary occasion. We had better be frank with each other and understand the situation.

As a matter of course the seat of a member is a privileged question at all times; we need not discuss that: but I give notice now that while I much desire the passage of a bill giving banks the right to increase circulation, there may come a time, it occurs to me, when it is made the pretext for delay, and I shall move to sidetrack it, if I may use such an expression here, for the purpose of going at once to the heart of the situation and considering and acting upon the matter that brought us here at this time.

I want to have it distinctly understood that the committee having charge of the right of a member to a seat on this floor have the precedence over all of us; but subject to that the first duty is action upon the repeal of the Sherman act. However, while waiting, as it were, or while the matter is pending in another branch of Congress, if we can give some relief to the country, partial though it may be, by speedy action on the bill reported from the Finance Committee (which is no more my bill than that of any other member of that committee; it is the bill of the Committee on Finance), I shall be glad to have it done. In fact, I supposed it could be done at once practically without delay.

A similar bill has passed this body three times before, and I suppose it can be passed again. It is not a question whether a man approves national banks or disapproves them. It is a question whether appealing to the powers of the banks, to their cupidity, and to their self-interest, we can make them beneficial to the people of this country at a peculiar period and in a dangerous crisis. If we can, I am in favor of doing it. However, if that is going to occupy the time of the Senate and eat up, as it were, this extra session, to the exclusion of the business we are called here to consider, I give notice now that I shall move to displace it and to take up the bill for the repeal of the act that bears the name of the distinguished Senator from Ohio [Mr. SHERMAN]. I think it is proper we should be frank in the Senate, and this is a frank statement.

Mr. RANSOM. I beg leave to state to the Senator from Indiana that I withdrew the motion to proceed to the consideration of executive business in order to give the Senator from Massachusetts [Mr. HOAR] an opportunity to be heard.

The VICE-PRESIDENT. The Secretary will call the roll on the motion of the Senator from New Jersey [Mr. McPHERSON] that the Senate proceed to the consideration of Senate bill 453.

Mr. TELLER. I have no doubt if the Senator from Massachusetts says he wants to make a speech on the bank bill nobody will object to laying aside the pending resolution. I do not suppose anyone would care to vote against taking up the bank bill after that statement.

Mr. HOAR. If the Senator from Colorado will pardon me one moment, I expect to speak about three minutes upon the question of remitting the tax on State-bank currency, and I expect to do it when that matter comes up in its order. I have not anything to say which would deserve or which I would desire should have the special assignment of the Senate or be a departure from its ordinary course, and I made no such request of the Senate. I said to the Senator from North Carolina [Mr. RANSOM], in a whisper, when he made his motion, "I am ready to speak on this matter when it comes up;" that is all.

Mr. RANSOM. I knew how we all long to hear the Senator from Massachusetts.

Mr. WASHBURN. I wish to inquire if discussion is in order.

The VICE-PRESIDENT. Discussion is not in order except by unanimous consent. No objection has been interposed by any Senator. An objection being interposed, the Secretary will call the roll.

INCREASE OF NATIONAL BANK CIRCULATION.

Mr. ALLEN. There has been so much confusion in the Chamber that I do not understand what we are to vote on.

Mr. VOORHEES. Let the Chair state what we are to vote on.

The VICE-PRESIDENT. The Chair will again state that the pending motion is that of the Senator from New Jersey [Mr. McPHERSON], that the Senate proceed to the consideration of the bill (S. 453) to provide for the issue of circulating notes to national banks. The Secretary will call the roll on agreeing to the motion.

The Secretary proceeded to call the roll.

Mr. VANCE (when Mr. BUTLER'S name was called). The Senator from South Carolina [Mr. BUTLER] has been called home by a domestic affliction, and requested me to state that he is paired with the Senator from Pennsylvania [Mr. CAMERON].

Mr. CAMERON (when his name was called). I am paired with the Senator from South Carolina [Mr. BUTLER] on all ques-

tions during his absence. Not knowing how he would vote on this question, I will withhold my vote. I should vote "yea" if he were here.

Mr. CAREY (when his name was called). I am paired with the junior Senator from South Carolina [Mr. IRBY]. If he were present I should vote "yea." I do not know how he would vote.

Mr. GEORGE (when his name was called). I am paired with the Senator from Oregon [Mr. DOLPH]. If he were present I should vote "nay."

Mr. FRYE (when Mr. HALE'S name was called). My colleague [Mr. HALE] is absent, and is paired with the senior Senator from North Carolina [Mr. RANSOM]. If my colleague were here he would vote "yea."

Mr. HARRIS (when his name was called). I am paired with the Senator from Vermont [Mr. MORRILL], who is necessarily absent. If he were present I should vote "yea."

Mr. SHERMAN (when his name was called). I wish to announce that my colleague [Mr. BRICE] is detained from the Senate by serious illness. I consider myself bound to pair with him upon a question on which I know we differ. As I do not know how he would vote on the pending question I will vote "yea," and simply enter the notice of the absence of my colleague.

Mr. VANCE (when his name was called). I am paired with the Senator from Michigan [Mr. MCMILLAN]. If he were present I should vote "nay."

The roll call was concluded.

Mr. HARRIS. I am informed by the junior Senator from Vermont [Mr. PROCTOR] that his colleague [Mr. MORRILL] would vote "yea," and I therefore record my vote. I vote "yea."

Mr. PUGH. I was requested by the Senator from Georgia [Mr. COLQUITT] to state that he is paired with the Senator from Iowa [Mr. WILSON], and if present would vote "nay."

The result was announced—yeas 40, nays 10; as follows:

YEAS—40.

Allison,	Gray,	McPherson,	Smith,
Blackburn,	Hansbrough,	Manderson,	Squire,
Caffery,	Harris,	Mitchell, Oregon.	Stockbridge,
Chandler,	Hawley,	Murphy,	Turpie,
Cullom,	Higgins,	Pasco,	Vilas,
Davis,	Hill,	Perkins,	Voorhees,
Dixon,	Hoar,	Platt,	Walthall,
Faulkner,	Hunton,	Proctor,	Washburn,
Frye,	Lindsay,	Roach,	White, Cal.
Gorman,	Lodge,	Sherman,	White, La.

NAYS—10.

Allen,	Call,	Mills,	Vest.
Bate,	Coke,	Peffer,	
Berry,	Martin,	Pugh,	

NOT VOTING—35.

Aldrich,	Dolph,	Jones, Nev.	Quay,
Brice,	Dubois,	Kyle,	Ransom,
Butler,	Gallinger,	McMillan,	Shoup,
Camden,	George,	Mitchell, Wis.	Stewart,
Cameron,	Gibson,	Morgan,	Teller,
Carey,	Gordon,	Morrill,	Vance,
Cockrell,	Hale,	Palmer,	Wilson,
Colquitt,	Irby,	Pettigrew,	Wolcott.
Daniel,	Jones, Ark.	Power,	

So the motion was agreed to; and the Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 453) to provide for the issue of circulating notes to national banks, the pending question being on the amendment of Mr. COCKRELL to add to the bill the following as an additional section:

SECTION —. That, upon the delivery and surrender of any of the United States bonds known as the funded loan of 1891, continued at 2 per cent interest and payable at the option of the United States, by the holder and owner thereof to the Secretary of the Treasury, the Secretary of the Treasury shall receive, cancel, and destroy such bond or bonds, and shall issue and deliver in exchange and payment therefor an amount of United States legal-tender notes, commonly known as greenbacks, in the same form and words of said United States notes, equal in amount to the face value of such bond or bonds, with the accrued interest thereon.

Mr. STEWART. Mr. President, I shall have some suggestions to make upon this bill on a future occasion. I now rise to present a judicial precedent for the remarkable speech of the Senator from Indiana [Mr. VOORHEES], which I think sustains his otherwise seemingly contradictory attitude.

During the fifties, when the slavery agitation was at its height in California, a young man from Missouri brought to California, a free State, a negro slave by the name of Archy. Some of Archy's abolition friends procured the issuance of a writ of habeas corpus for the purpose of securing for Archy his liberty. The case was finally taken before Judge Burnett, of the supreme court of California.

The proceedings and decision are contained in the California Report which I now hold in my hand. The case is entitled "*Ex parte* Archy." The learned judge wrote an elaborate opinion, which is fully reported, in which he decided, as a matter of law, that Archy was entitled to his liberty. But he did not stop there. He considered what in the California parlance of that day was called the "raw equity" of the case, and on the "raw equity" he found that the owner of Archy was a young man in feeble health; that he had brought the negro slave to a free State in good faith and in ignorance of the law; and on these considerations he remanded the slave back to his master. The case excited a great deal of interest on account of the political question involved.

Ned Marshall, of Kentucky, then and now of California, on learning of the decision defended it in the strongest possible language as a compromise between the two sections. He said: "The judge has given the law to the North and the nigger to the South, and everybody ought to be satisfied." [Laughter.]

The press throughout the State in numerous editorials concurred in the views of Mr. Marshall, namely, that the law had been given to the North and the "nigger" to the South.

Why should anybody complain of the speech of my friend from Indiana? He has given his speech to the friends of silver and his vote to Lombard and Wall streets. Why should anybody complain? Perhaps other authorities may be found in the books to sustain the doctrine of the Senator from Indiana; but the Archy case is the only judicial decision which has come under my observation which is on "all fours" with the position of the learned Senator.

There is still another matter I wish to notice, which is rather in the nature of a personal explanation. It has been stated here and elsewhere that in a speech in 1874 I advocated the gold standard. In 1874 a financial bill, which was pending, provided for the organization of national gold banks. The people on the Pacific coast desired to organize on a coin basis, and they were willing to put up an investment of $20,000 for the circulation of $100,000, instead of an investment of $10,000, as allowed for currency banks. A bill was reported for that purpose by the chairman of the Committee on Finance, and it was composed of two sections. The first section read as follows:

Associations may be organized in the manner prescribed by this title for the purpose of issuing notes payable in gold; and upon the deposit of any United States bonds bearing interest payable in gold with the Treasurer of the United States, in the manner prescribed for other associations, it shall be lawful for the Comptroller of the Currency to issue to the association making the deposit circulating notes of different denominations, but none of them of less than $5, and not exceeding in amount 80 per cent of the par value of the bonds deposited, which shall express the promise of the association to pay them, upon presentation at the office at which they are issued, in gold coin of the United States, and shall be so redeemable. But no such association shall have a circulation of more than one million of dollars.

The next section provided that—

Every association organized under the preceding section shall at all times keep on hand not less than 25 per cent of its outstanding circulation, in gold or silver coin of the United States; and shall receive at par in the payment of debts the gold notes of every other such association which at the time of such payment is redeeming its circulating notes in gold coin of the United States, and shall be subject to all the provisions of this title: *Provided*, That in applying the same to associations organized for issuing gold notes, the terms "lawful money" and "lawful money of the United States" shall be construed to mean gold or silver coin of the United States; and the circulation of such association shall not be within the limitation of circulation mentioned in this title.

The bill was simply a proposition to issue a currency redeemable in coin instead of a greenback. The notes were redeemable in coin of either gold or silver. They were called gold notes but they were redeemable in either gold or silver coin. When the bill came up, I made some remarks in the Senate in which I explained the desire of the people of the Pacific coast to adopt a specie basis. They were on a specie basis then. No question of the coinage of silver or the demonetization of silver was involved in the proceeding. No mention was made of it, and nothing in the act or in the debate had any squint in that direction. I will read my remarks. I then said:

I do not rise to discuss this bill, but simply to say that I should like to see the provision to permit banking on the gold basis adopted. I think it would be effectual on the Pacific coast. I believe men would undertake to establish banks on the gold basis there. I believe that is the opinion of those most conversant with the question on that coast. I believe a great many persons there are anxious for an opportunity to make this experiment. Of course, banking on a specie basis and issuing paper, there must be much more of paper than there is of gold, or the paper circulation amounts to nothing. That depends upon the confidence the community has in the circulating medium as a matter of course. The gold basis, as I understand, will a good deal affect it any way. It can be sustained in any country only so long as confidence can be kept up in the ability of the banking establishments to redeem.

I have no doubt if the business men of California, Nevada, and Oregon undertake to proceed to establish banks on a gold basis they will be able to float a large amount of these gold notes among the people as a circulating medium. They will not be in the hands of brokers in New York. They are very discreet, and will not go beyond their capacity. They can float some, and I think they will relieve a portion of the gold that might float East. They can certainly float some. I have great confidence that they will not attempt to float more than they can conveniently, so as not to embarrass us. I think they ought to have an opportunity to try that experiment.

I am very confident that they will not go into it rashly, because they are very much attached to a sound currency. I do not think they will be very rash and float more than can be floated with safety. I think some can be floated, and if it can be done elsewhere the experiment there will do no harm. I do not think there is any danger of its being abused or doing harm. I am very anxious that they should have an opportunity to try the experi-

ment and see if they can float some of these notes. It will be for the convenience of the community. I believe there will be great confidence there in a gold note secured in the mode that national-bank notes are secured, with only 10 per cent of notes issued and 100 per cent of bonds behind them.

I think there would be great confidence in such notes, and there would be a disposition on the part of the community to float them. It might work a great deal of good. There is no general disposition on the Pacific coast to adopt the currency at present and there has not been; but there appears to be a feeling in favor of trying this experiment; and as I can see no harm that will be produced by it, I should like the people to have that opportunity.

The object was to adopt a national-bank system and issue gold notes by depositing bonds and receiving 80 per cent of circulation. The notes were redeemable in gold or silver coin. It had no reference to any distinction, nobody at that time knew of any distinction between gold and silver, and no allusion was made to it.

Mr. HOAR. I should like to ask the Senator from Nevada for information if the whole business of the Pacific coast in 1873 and 1874 was not conducted on a go.d basis?

Mr. STEWART. Entirely so, and unfortunately so. I made many speeches against it. It was a great disadvantage to the Pacific coast, because people from the East would not go there and stand the discount; it absolutely kept out immigration and almost all travel for fifteen years while the difference between the money of the East and California remained. The coin basis was established. I was willing at the time they should try the experiment of issuing currency on a specie basis. That is all there was of it. If my critics would make the same effort to inform themselves with regard to the silver question that they do to misrepresent me, they would advocate free coinage. If not, they would at all events be better able to conceal their own ignorance.

Mr. FAULKNER. Mr. President, it is not my purpose in rising at this time to detain the Senate by a discussion of the policy and wisdom of the national banks and their origin, or the policy and wisdom of extending the time of their life. I do not think that either of those questions is involved in the discussion of this bill.

I am heartily in favor of the relief which is proposed to be given by the bill as reported by the committee, and only desire to obtain some information in reference to the amendment submitted by the Senator from Missouri [Mr. COCKRELL]. I think, unless it can be demonstrated before the adoption of the amendment that the relief it will afford will be immediate and considerable, the precedent which it will establish is one which should not be established.

The information I first desire is as to whether I am correct in the understanding that there is about $25,000,000 of those 2 per cent bonds outstanding, and of that $25,000,000, $21,300,000 are already filed with the Secretary of the Treasury, with a view of securing circulation for national banks. Under the first section of this bill that amount of circulation would be increased to the extent of about $2,000,000, so that it would leave only about two and a half millions of those bonds which could be surrendered to the Government and upon which the Treasury notes provided for in the amendment could be issued.

If that is a correct statement of the condition of those 2 per cent bonds, I can not see the advisability of entering into such legislation as is contemplated by the amendment simply for the purpose of procuring an additional circulation of $2,500,000; in other words, I can not appreciate those high business qualities in the proposition suggested by the Senator from Missouri which will change a present demand of the Government as to the payment of these obligations into a demand at any time by the creditor for gold out of the Treasury, which would be the result of the issue of these notes.

I am in favor of the bill as presented by the Committee on Finance, and I am also warmly in favor of the amendment submitted to the bill by the Senator from Maryland [Mr. GORMAN], because I think it is a wise provision. If we are now to give additional privileges to these banks, we should also impose some restrictions which are not now imposed, to limit the right to retire their circulation to the amount stated in the amendment submitted by him. With that exception, I am opposed to the pending bill being delayed by adding a number of amendments to it and discussing them, for the simple reason that if there is anything in the bill, if there is any benefit we can derive from its passage, it is an immediate benefit and no other. I would suggest, unless the purpose is delay, that we try to reach a vote as promptly as possible upon these amendments.

I am in favor of it for the additional reason that it does spread the circulation throughout the entire country. It would give to the national banks of my State, on the amount of bonds already deposited in the Treasury by them to secure circulation, not less than from $70,000 to $80,000. In the financial condition of the industrial enterprises of that State it is very important to get even that small amount of currency.

I know the fact that, unless we relieve this situation as promptly as possible in the State of West Virginia—a State which during the last twenty years has, I suppose, progressed in its industrial prosperity more rapidly than any State either in the Central, Western, or the Eastern sections of our great Republic—unless we relieve the tightness of the money market, which is now universal in the country, three-fourths of the mines of that State will be closed during the month of September, not because there is any want of solvency on the part of the owners of those mines, not because they have not the ability to deposit any amount of security, and the best gilt-edge security, to obtain a sufficient amount of currency in order to pay the ordinary liabilities incident to the working of those mines, but simply because, with all of that, the owners of those mines have gone from city to city and presented to all the great money centers these gilt-edge securities, and they have found it absolutely impossible to secure one dollar of currency to even pay last month's wages of 25,000 men.

That is a fact, within my personal knowledge, and one which I think we ought to consider in a measure of this character, and act upon it as promptly as possible.

Mr. COCKRELL. Mr. President, the funded loan of 1891 now outstanding is $25,364,500. Some $21,000,000 of those bonds are now deposited with the Treasury. Those bonds are to-day selling in the market at 95 cents on the dollar; and the proposition is to allow a $95 bond to be deposited and $100 of circulation taken out, to be loaned by the national banks to the taxpayers of the United States, and at the same time the national banks draw 2 per cent interest upon the bonds.

My proposition is to exchange for these bonds legal-tender greenbacks, if they are desired, save to the taxpayers of the United States $500,000 a year in interest, wipe out an indebtedness of $25,000,000, and let the holders of the bonds have this amount, which will increase the circulation just as much and more than the bill reported from the committee, which would only give 10 per cent upon the present $21,000,000. That amount goes out, and two or three millions more, $500,000 a year is saved, and an indebtedness of $25,000,000 is wiped out of existence.

Mr. FAULKNER. If the Senator from Missouri can demonstrate to me or the Senate that by issuing these greenbacks, $25,000,000 of indebtedness will be wiped out, then I shall vote for his amendment without a minute's hesitation; but I understand that, instead of wiping out the indebtedness, he simply transfers it into a demand obligation upon the Government.

Mr. COCKRELL. Oh, Mr. President——

Mr. HAWLEY. Will the Senator allow me?

The PRESIDING OFFICER (Mr. BERRY in the chair). Does the Senator from Missouri yield to the Senator from Connecticut?

Mr. COCKRELL. In a moment. There is plenty of time for full and fair discussion of this question.

Instead of continuing a bond-bearing interest, we give to the people of the United States $25,000,000 of full legal-tender money, which can be used as money in the payment of every debt and obligation of the country. You can not issue bonds on that. The question is whether the people shall have full legal-tender money in lieu of those bonds, or whether the national banks shall be permitted to retain these bonds, issue dollar for dollar, take $500,000 out of the tax-payers of this country every year, and whether money shall only go to the people percolating through the power of the national banks.

Mr. FAULKNER. If the Senator will permit me, I am really seeking information, and have great confidence in his judgment in this matter; but is there any real difference in the interest the people have as between the uses of a Treasury legal-tender note and a national-bank note as a matter of currency?

Mr. COCKRELL. A great deal of difference.

Mr. FAULKNER. I mean as a matter of currency, not as to the question of interest on the bonds.

Mr. COCKRELL. There is no difference as to the currency simply, but every man who handles a bank note knows he is paying interest upon it in the bond which secures it, and double interest. He has to pay interest to the bank from whom the money is borrowed. Some man is paying interest to a bank on every solitary dollar of national bank notes that are in circulation, and all the people of the United States are paying interest upon all the bonds which secure that money.

Mr. FAULKNER. The Senator will permit me on that point. If he is correct in that view, and if he desires to save interest to the Government, and that is the real motive of the amendment, had he not better make his amendment apply to $25,000,000 of four, or four-and-a-half, or five, or six per cent bonds, if there are any outstanding?

Mr. COCKRELL. There are none of them, as a matter of course. I thought the Senator knew that.

Mr. FAULKNER. Would that not be better than to take the very lowest interest-bearing bonds we have, and apply the amendment to them?

Mr. COCKRELL. Does not the Senator know how many bonds we owe?

Mr. FAULKNER. Yes.

Mr. COCKRELL. Why, then, does he talk about some other bond. This is the only bond the Government has any right to tender payment for; it is the only bond that does not command a premium of 12 per cent. Does the Senator want to go into the market and undertake to buy bonds at 12 per cent premium—for they are worth that, except $64,000,000 of Pacific Railroad bonds, and some of them are due in 1895. They are selling at 103 on the dollar, and they are drawing 6 per cent interest; but they can not be paid now. We have no right to call them in for payment because they are not due, while the 2 per cent bonds are now due.

If we issue this kind of money we shall save to the taxpayers of the United States $500,000 a year, we shall have extinguished an interest-bearing indebtedness of $25,000,000, and give to the people of the country more full legal-tender money than they would get by the bill as it now stands.

Mr. FAULKNER. I ask the Senator whether, as it is legislation that we need in order to secure circulation, we could not make the same proposition as to the other bonds—carry out the principle which governed the last Administration and the present—and pay off those bonds by the voluntary act of the holders of them at an amount which would justify the Government looking to the future redemption of those bonds?

Mr. COCKRELL. That is another question, which does not come up on this, but which may come up before this bill is disposed of. It does not, however, arise now. I hope the Senator will support it when it comes up.

Now I yield to the Senator from Connecticut.

Mr. HAWLEY. I shall wait until the Senator gets through.

Mr. COCKRELL. I am ready to stop at any time. I want to get light on this question. I want to know why it is that Senators are objecting to paying off $25,000,000 of bonds and substituting for them a noninterest bearing obligation.

Mr. HAWLEY. I will tell the Senator as plainly as I can, he would save money by buying at market rates the four-and-a-half per cent. bonds, and he would get a better reduction of interest in that way than by buying the two per cent bonds, would he not? The premium is not extravagant upon the four-and-a-half per cent bonds. If his object is to reduce interest, let him buy the bonds which bear a high rate of interest and are low priced in the market.

I am troubled by another thing. I do not understand exactly what the Senator means by giving out legal tenders for 2 per cent bonds. Have we got $25,000,000 in surplus revenue this year to apply to our bonded debt? I want to know whether we have a surplus revenue. I understand it is the other way, that there is likely to be a deficit; and the Senator proposes to print an additional sum of legal tenders. Is that it?

Mr. COCKRELL. That is it exactly; a new issue of $25,000,000 of legal-tender notes, precisely as the present United States notes have been issued.

Mr. HAWLEY. The Senator proposes to violate the policy of the Government for thirty years in the matter of its debt and to issue a forced loan, compelling the holders of these bonds to take a note without interest. Whatever bonds are offered, as I understand, are to be taken by the Treasury. The Treasury is then to pay in that way for whatever is brought there by the banks for their circulation. It is perfectly obvious that the Senator is proposing to change a debt payable at the will of the Government at the low rate of 2 per cent for a demand note.

There are a good many of us who have had a little experience in changing loans in the last few months. I had a little affair of that kind to negotiate, but I did not attempt to change my long note for a demand note; but that is exactly what the Senator designs to do.

These $25,000,000 of legal-tenders are presentable the day they are issued to these bondholders for gold at the Treasury, if they demand it. The Senator is departing from the absolutely uniform policy of the Government in the matter of these legal-tenders. They were issued during the war as a war necessity; they were payable in gold, and unquestionably the world would not otherwise have touched them. They were receivable for all Government indebtedness, except customs duties. That seems to have troubled some Senators, and I am not sure but the distinguished Senator from Indiana [Mr. VOORHEES] was bothered about it, and thought it was a discrimination.

The reason for it was perfectly obvious. The reason was founded upon absolute necessity; the reason was patriotic. We could not have borrowed of the world the money on our bonds without making the world believe that they were payable in gold. That is an incontrovertible fact. No mere promise of ours that we would get the gold at some time when the bonds were to be paid would have been of any use. We showed the world, by making the distinct provision that customs duties must be paid in gold, that we would have the interest ready, and would probably be ready to pay the principal in gold in due time.

I will not attempt to run over the Supreme Court decision, but the upshot of it was that when the war was over the Supreme Court decided that the issuing in war times of legal tenders was all right, but that it was not legal in time of peace. That is the substance of the decision, that it was a matter in the discretion of a great government to issue in war times a forced loan in paper of that kind.

The Government did adopt, and steadily pursued for years, the policy of reducing the volume of the greenbacks or legal tenders, and when we came to the famous resumption act this provision was inserted:

> And whenever, and so often, as circulating notes shall be issued to any such banking association, so increasing its capital or circulating notes, or so newly organized as aforesaid, it shall be the duty of Secretary of the Treasury to redeem the legal-tender United States notes in excess only of $300,000,000, to the amount of 80 per cent of the sum of national bank notes so issued to any such banking association as aforesaid and to continue such redemption as such circulating notes are issued until there shall be outstanding the sum of $300,000,000 of such legal-tender United States notes, and no more.

That is to say, in extending the circulation of the country $100, we were at the same time reducing $80 by canceling legal tenders in pursuance of the steady and wise policy of the Government to pay off those notes, given in war times under great stress.

Public sentiment finally said, "we will not reduce those legal tenders any more at present; the people like them, and we will stop reducing them."

The clause which I have just read in the resumption act was repealed by public act No. 65, approved March 31, 1878.

In 1878 the greenbacks had got down to $347,000,000. Everybody says $346,000,000, but it is $347,681,016, and there they have stayed to a dollar and a cent ever since.

Mr. TELLER. A million of them were burned at Chicago.

Mr. HAWLEY. It is said $1,000,000 of them were destroyed at Chicago, but their owners could not prove it. There they have stayed from that time until this, and outside of all the kite-flying and imaginary financiers we have from all parts of the West, and some from the East also, the first distinct and respectable proposition to go back to a supposed necessitous war condition and force upon the country a legal-tender bill, a forced loan to change a 2 per cent loan of $25,000,000, payable at the pleasure of the Government, to $25,000,000 of newly-printed paper money, not in war times, and in defiance and entire reversal of thirty years' policy of the Government. That is what the proposition of the Senator is. We might just as well print any other kind of notes.

I asked the Senator the other day a question about what was to come next, and he said it was time enough for that. I said the question was there and then, and it is right here now. You are simply drifting along to a time when it will be thought to be patriotic and wise finance to comfort the people with an enlarged paper circulation and an immense debt. We will have this question argued within two years. We are going to discuss fiat money, and this is the respectable leading step in the direction of a fiat-money discussion. We have no surplus revenue, and no excuse whatever for reducing our bonded debt.

Mr. ALLISON. Mr. President, I have been interested in this discussion and enlightened by the suggestions made by the Senator from West Virginia [Mr. FAULKNER], as also those made by the Senator from Missouri [Mr. COCKRELL]. I understand both Senators to have the object of enlarging the circulating money of our country, which is just now in a state of congestion.

The Senator from West Virginia calls attention to the fact that about twenty-one and a half millions of 2 per cent bonds are now owned by national banks, upon which currency has already been received by them to the extent of 90 per cent. If we add 10 per cent, of course that will give an additional currency of two and a half millions, as stated by the Senator.

Mr. PLATT. How much?

Mr. COCKRELL. Two million one hundred thousand dollars.

Mr. ALLISON. I am speaking now of the addendum proposed by the Senator from Missouri. Under the plan of the original bill, as reported by the Senator from Indiana [Mr. VOORHEES], and so well sustained by him to-day, the additional currency on this $21,000,000 will be about two and a half millions.

The Senator from Missouri, as I understand, proposes to substitute in lieu of that a proposition that the holders of the 2 per cent bonds shall present them to the Treasury and secure greenbacks. There is only one way whereby that can be done under existing law, and that is for them to surrender these bonds to the Comptroller of the Currency and deposit 90 per cent of the value of those bonds in greenbacks for the redemption of the notes.

So the process of the Senator from Missouri will only result

in enlarging the currency, at the best, about two millions and a half, or perhaps three million dollars, and will subject all the national banks, which are scattered about in every part of the country, holding here $100,000 and there $50,000, to a disarrangement of their entire business, in order to get out two or three million dollars more of currency. They will have to come to Washington, deposit their bonds, and then go to another part of the Treasury, get out the greenbacks, and redeposit them there, where they must be held naturally and logically for the redemption of these notes.

In view of the suggestion made by the Senator from Connecticut [Mr. HAWLEY], that here is a great question of public policy, whether or not we shall at this moment, in this stress, properly delineated by the Senator from West Virginia, give immediate relief, the Senator from Missouri, for the sake of adding two or three millions to the currency which is in circulation, proposes to establish a new policy, which has not been seriously suggested, or at least has not been supported since war times, which would disarrange the existing situation of the national banks who hold the 2 per cent bonds.

I submit to my friend from Missouri—and I have high respect and regard for him and for the suggestions he makes—that the game is not worth the candle at this time. At some time hereafter when we get into a debate as to what shall be the future currency of our country, whether it shall be greenbacks or national-bank notes or State bank notes, or all of them, I think it will be a proper and legitimate subject of discussion for us to divide up and debate this question; but it seems to me that in the great pressure which now exists, my friend from Missouri ought to be persuaded—and so far as I can I wish to persuade him—to withdraw this impediment which we now find to the relief proposed, in order that we may get a vote upon the main question, especially as that which he proposes is but a little drop in the bucket, to the extent, at most, of a few million dollars, and which will be absorbed in a single day in the city of New York or elsewhere.

Let us give this substantial relief for the present, and afterwards discuss the question of what shall be the currency of this country. I admit that is a great question, and I want to see it thoroughly debated; but I think it would be wiser and better for us to postpone that discussion until we can reach the question more at large than we possibly can now, if we are to relieve the distress which all seem to agree exists at this time.

Mr. COCKRELL. Mr. President, I knew the Senator could not look me in the eye and make the statement he did without a smile. When the Senator talked about the national banks having to redeem their bonds, and all this and that, and put into the Treasury 90 per cent of the amount which must remain there just as if that amount was to be retired, he turned his back and pleasantly smiled.

Mr. ALLISON. I did not distinctly say that they must remain there, because I know perfectly well the law of 1890; I submit that they come into the consideration of the Treasury as a part of the present debt of the Government, and therefore must remain in great part.

Mr. COCKRELL. If the Senator will examine his words in the RECORD, he will see the impression was evidently left upon the minds of the Senate that this money went into the Treasury and stayed there. The act known as the Sherman act found $55,000,000 of bank-note redemption money in the Treasury, and turned it all over into the Treasury. It was there a separate fund, not a part of the assets of the Treasury. Then it was that every Senator on the other side, including the Senator from Connecticut [Mr. HAWLEY] and the Senator from Iowa [Mr. ALLISON], headed by the distinguished leader from Ohio [Mr. SHERMAN], came in solid phalanx, and said to the national-bank creditors, the holders of these bank notes, "We, the people of the United States, are above suspicion in our standing financially; we will embezzle, we will convert to our own use $55,000,000 of your trust fund, and when you want it, come to us and we will pay it."

That was practically that law. We put into our own pockets the whole amount of it and said to the holders of these $55,000,000 of national-bank notes, "we, the United States, will use this $55,000,000, we will prevent a deficit under this Administration, and when you present the notes we will redeem them." There were $20,000,000 of them outstanding on the 31st of July. If my amendment becomes a law they will be covered into the Treasury and added to the surplus in the Treasury and a double benefit will come from it.

Let us see what the surplus in the Treasury was on the 1st of August by the last financial debt statement:

Gold reserve, $99,202,933.
Net cash balance, $18,684,634.57.

If the old form of debt statement had been observed there would have been a deficit of over $2,000,000, because the $20,364,878.25 of national-bank note redemption fund would have been deducted from it, and that would not have been considered.

My amendment is a simple proposition. It authorizes the issue of $25,000,000 of legal-tender United States notes to be exchanged for that amount of interest-bearing 2 per cent bonds, the bonds to be canceled. The taxpayer is saved thereby $500,000 a year, $25,000,000 will be added to the circulation of the country permanently, and $20,000,000 added to the surplus in the Treasury; yet the Senator from Connecticut says we are departing from the established policy of the Government, and he quotes the law of 1878, which was passed in this body at my instance, prohibiting the further contraction of greenback circulation, and holding it stationary at that sum.

My good friend from Connecticut, I think, ought to remember his own deeds. He opposed the issue of Treasury notes and opposed the issue of greenbacks. Oh, what a horrible crime it would be, now, in the estimation of the Senator from Connecticut, in the year of our Lord 1893, when the country is in ruin because there is not money enough in it to issue $25,000,000 of greenbacks, but in 1890, not three years ago, the distinguished Senator voted to issue over $100,000,000 in United States Treasury notes.

Mr. HAWLEY. With the precious metals behind them.

Mr. COCKRELL. Oh, no; not with silver coin behind them, but with bullion, a mere commodity, merchandise; no better than wheat. The Senator then voted for issuing United States Treasury notes, payable in coin, for the purchase of 4,500,000 ounces of silver bullion every month in the year. It was not a crime then, but now it is a crime when we ask to issue $25,000,000 of noninterest-bearing legal-tender notes for the extinguishment of an obligation of $25,000,000 which bears interest Then there was no harm in it.

Mr. CAREY. Will the Senator from Missouri please answer the question how he proposes to redeem these new notes?

Mr. COCKRELL. Redeem them! Just as we redeemed the $346,000,000 of greenbacks outstanding, which no man, woman, or child wants to have redeemed, or would have redeemed.

Mr. CAREY. Does the Senator propose to increase the gold reserve?

Mr. COCKRELL. There is enough gold in the Treasury now; an abundance. Who has ever presented any greenback for redemption?

Mr. CAREY. That kind of money is being presented to get gold.

Mr. COCKRELL. I beg the Senator's pardon. Silver certificates are being taken as quickly as gold; silver dollars are being taken as quickly as gold dollars. The Senator has not heard of a man, woman, or child on this earth demanding one specified kind of money in preference to another, unless it be some gold shark and Shylock in New York. [Laughter and applause in the galleries.]

The PRESIDING OFFICER. Order must be preserved in the galleries.

Mr. CAREY. I should like to ask the Senator to consider whether it would not be entirely proper to have such legislation as would protect this Government against sharks in case of emergency?

Mr. COCKRELL. There is no danger. The gold reserve can not be exhausted. They have tried it, they have moved heaven and earth to exhaust it, and they ran it down to $89,000,000, but now it has gone back.

Mr. CAREY. Does the Senator know what has driven it back?

Mr. COCKRELL. The Sherman law, as a matter of course, your law, the law you are turning somersaults to get repealed. Your friends say it drove the gold out of the country. Now it is bringing it back. If it drove the gold out of the country, it has brought it back.

Mr. CAREY. How does the Senator know that?

Mr. COCKRELL. How does the Senator know it drove gold out of the country? He knows the Sherman law drove gold out and in the same way it has brought it back, because conditions have not changed.

Mr. CAREY. I wish to ask the Senator from Missouri what is bringing the gold back to this country?

Mr. COCKRELL. The same law under which it went out.

Mr. CAREY. As an actual fact—there is no use to be dishonest about it—the gold which is being brought back to this country is being bought and brought back by the bankers of this country, who are loaning their securities in order to obtain it.

Mr. COCKRELL. How was it taken out? Did we give it away? Does the Senator pretend to say that the people of the United States gave away their gold and it went to Europe? Did not somebody buy it?

Mr. CAREY. No one suggested that the United States gave it away.

Mr. COCKRELL. Then why does the Senator say the gold has been bought and brought back here if it was not bought in the first place to be taken from here?

Mr. CAREY. I say the gold was shipped out of this country and it is now being shipped back, for the simple reason that the banks of this country are taking their best securities, sending them abroad, and getting loans on those securities.

Mr. COCKRELL. The English banks were doing the same thing when they took the gold away from here. It is the difference between tweedle-dum and tweedle-dee. Precisely the same cause which took the gold out of the United States is bringing it back. The Senator says it is the Sherman law. I say that if it was the Sherman law that took the gold out, the Sherman law has brought it back.

Mr. CAREY. I never said anything about the Sherman law. I have not mentioned the Sherman law.

Mr. COCKRELL. I mean those who hold the same view the Senator does.

Mr. TELLER. Will the Senator from Missouri allow me to say a word for the benefit of the Senator from Wyoming?

Mr. COCKRELL. Certainly.

Mr. TELLER. In the spring of 1891 seventy-odd millions of gold went out of this country in four months. I have the authority of the Treasury Department for saying that every dollar of it, except $9,000,000, went out at a premium, which was paid in the city of New York. If the Senator will take the pains to look and see when the gold was going out last March and April, and during last winter, he will find that during all that time, or practically all that time, it went out when the rates of exchange were such that it is morally certain a premium was then paid on it. So, if it is being bought now and coming back, it is coming back under the same law, under the same rule, and under the same conditions that it went abroad.

Mr. COCKRELL. Mr. President, I am astonished, I confess frankly, when the Senator from Wyoming talks about people wanting gold. Does the Senator not know that gold has been taken to the Treasury by people who beg to get silver for it?

Mr. CAREY. I do not deny that that has been done. The Secretary of the Treasury has so reported. But I should now like to ask the Senator from Missouri how it was that at the close of the last session the then prospective Secretary of the Treasury was in a stampede, and the whole Democratic party was in a stampede, to increase the holdings in the Treasury of the United States so far as gold was concerned?

Mr. COCKRELL. That was only a prolongation of the fear which had existed under the Republican Administration. It was the shadow extending over it.

Mr. CAREY. Not so. That was instigated by the incoming Administration. The Senator's party changed about on it.

Mr. COCKRELL. Here is the report of the Secretary of the Treasury of August 17, 1893, showing that gold was brought to the Treasury and offered there for silver. This is not the first time in the history of this country where gold—the precious, cowardly gold—has been brought to the Treasury in exchange for silver. In 1882 and 1883, either seventy-eight or eighty-four millions—I am not certain which——

Mr. TELLER. In 1880 and 1881, commencing in November, 1880, and running on.

Mr. COCKRELL. In 1881 about $80,000,000 of gold were deposited in the Treasury to be exchanged for silver certificates, and that process was continued until the Treasury refused to take any more, just as the present Secretary refused to take gold and give out silver.

Mr. President, the people of the United States know that their greenbacks are money, that they are perfectly good, that they are as good as gold, as good as silver, as good as anything on this earth. Nobody is afraid of them; nobody is going to take them to the Treasury and present them for redemption in order to get gold.

Nobody but a few speculators, who might get together in New York, would attempt such a thing as that. Then, if our Secretary of the Treasury does what is done by the secretary of the treasury of every nation on earth which has gold and silver and where silver is a full legal tender, when notes are brought to the Treasury in order to produce a contraction and a panic, shovel out legal-tender silver dollars to them, there never will be any trouble.

It was the coinage of the standard silver dollar in 1878 which made resumption a fixed fact beyond any question. There was not then gold enough in this country to have prevented a corner being made on it and taking it all out of the Treasury. But when the silver dollars were coined and placed there they were the watch-dogs of the yellow cowardly metal that was back in the rear; and it was known that if a run was made to exhaust the gold and create a premium upon it that they might speculate off of the wreck and ruin of the masses of the people, that the silver would be paid out to them, because we had just then declared it a full legal tender for everything.

It has remained there and it has made a run upon the Treasury in greenbacks impossible. As long as legal-tender silver remains there, there is no danger of a run upon the Treasury. It is the merest imagination; it is a baseless fabric; there is no possibility of it. No man will do it; no combination of men will do it. Now, we come to the simple proposition, and it is not a new thing. The Senator from Connecticut has eased his conscience heretofore by voting for hundreds of millions of United States Treasury notes; and these are just as good.

Mr. CAREY. Will the Senator from Missouri allow me to ask him another question?

Mr. COCKRELL. With pleasure.

Mr. CAREY. I understood the Senator to say a few moments ago that the Government has no right to make any offer for any of these bonds except the extended bonds.

Mr. COCKRELL. Oh, no; I did not say it has no right to make any offer.

Mr. CAREY. The Senator used the term——

Mr. COCKRELL. Practically we have no right, because it might be compulsion. But these bonds are now redeemable at our option, and I think it is but just and right that we should let the holders of the bonds have the greenbacks, add twenty-odd million to the surplus in the Treasury, save $500,000 interest every year, and wipe out $25,000,000 of bonded indebtedness.

Mr. CAREY. I wish to ask the Senator whether he would consider it advisable to pass a law permitting the Secretary of the Treasury to redeem in greenbacks any of the interest-bearing bonds of the United States if they are presented; not to compel the holder—I do not claim that we have any right to do that—but if they are offered to the Secretary of the Treasury would the Senator consider it advisable to permit the Treasury Department to redeem them in greenbacks?

Mr. COCKRELL. I am glad the Senator has asked that question. Yes; we have outstanding now $559,605,250 of 4 per cent bonds, maturing in 1907. If I had my way, I would pass a law providing that the holders of those bonds might come to the Treasury and surrender them, and receive dollar for dollar of the face value and the interest accrued up to that time, when they would make a deposit of a percentage of gold with the bonds to form a reserve.

Mr. CAREY. My friend from Missouri upsets his whole argument now. Only a moment ago he said that we did not need any more gold and do not want it.

Mr. COCKRELL. I do not think it is needed at all.

Mr. CAREY. Now, the Senator says——

Mr. COCKRELL. Wait a moment. I do not think it is needed, but just to stop the senseless howl that would come up from gold monometallists I would provide for an increase of the reserve.

Mr. CAREY. Then it is necessary.

Mr. COCKRELL. Not that it is needed, but simply to check such distinguished gentlemen as my friends from trying to scare the people of this country. That would be the only reason in the world why I would do it. There is no necessity for it. The people would keep that $559,000,000 of currency legal tenders in circulation, and keep it at par with gold—there is no doubt about that—upon our present gold basis. I have not a particle of doubt about it. But in order to allay the idle apprehension and midnight dreams of my distinguished friend from Wyoming and my friend from Ohio I would provide an additional reserve.

Mr. CAREY. How much percentage would the Senator provide?

Mr. COCKRELL. I should think from 15 to 20 per cent.

Mr. CAREY. Why does not the Senator require from 15 to 20 per cent on this other class of bonds?

Mr. COCKRELL. Because we have already got a greater percentage. We have got nearly 30 per cent already.

Mr. CAREY. Does the Senator mean to say that we have 30 per cent of gold to redeem the outstanding greenbacks and other circulation of this country?

Mr. COCKRELL. On $100,000,000 how much is the per cent now?

Mr. CAREY. We have about 4 per cent of actual gold.

Mr. COCKRELL. My good friend is a great mathematician. What is the per cent of $100,000,000 gold on $346,000,000 of greenbacks? If it is not more than 4 per cent I have forgotten my arithmetic. That may be Wyoming arithmetic, but it is not old Ray. [Laughter and applause in the galleries.]

The PRESIDING OFFICER. The Senator from Missouri will suspend a moment. It is the duty of the Chair to notify occupants of the galleries that no applause is permitted. If it is repeated the Chair will direct the galleries to be cleared. The Chair hopes it will not be necessary to call attention to it again. The Senator from Missouri will proceed.

Mr. COCKRELL. Unless some of my friends want to catechise me a little further, I do not know that I have anything more to say just now. I have stated the matter fully, I think.

EXECUTIVE SESSION.

Mr. GORMAN. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After thirteen minutes spent in executive session the doors were reopened, and (at 5 o'clock and 7 minutes p. m.) the Senate adjourned until to-morrow, Wednesday, August 23, 1893, at 12 o'clock m.

NOMINATIONS.

Executive nominations received by the Senate August 22, 1893.

APPRAISER OF MERCHANDISE.

Walter H. Bunn, of New York, to be appraiser of merchandise for the district of New York, in the State of New York, to succeed Marville W. Cooper, resigned.

ASSISTANT APPRAISER OF MERCHANDISE.

R. Loper Baird, of Pennsylvania, to be assistant appraiser of merchandise in the district of Philadelphia, in the State of Pennsylvania, to succeed William Gaw, jr., removed.

COLLECTORS OF CUSTOMS.

James T. Kilbreth, of New York, to be collector of customs for the district of New York, in the State of New York, to succeed Francis Hendricks, resigned.

George S. Weed, of New York, to be collector of customs for the district of Champlain, in the State of New York, to succeed Stephen Moffitt, removed.

SUPERINTENDENT OF MINT, NEW ORLEANS.

Overton Cade, of Louisiana, to be superintendent of the United States mint at New Orleans, in the State of Louisiana, to succeed Andrew W. Smyth, removed.

ASSAYER OF THE MINT, NEW ORLEANS.

R. L. Schroeder, of Louisiana, to be assayer of the mint of the United States at New Orleans, in the State of Louisiana, to succeed Frank F. Claussen, removed.

MELTER AND REFINER OF THE MINT, NEW ORLEANS.

Lewis Guion, of Louisiana, to be melter and refiner of the mint of the United States at New Orleans, in the State of Louisiana, to succeed J. Cecil Legaré, removed.

COINER OF THE MINT, NEW ORLEANS.

H. Gibbs Morgan, of Louisiana, to be coiner of the mint of the United States at New Orleans, in the State of Louisiana, to succeed Arsemus R. Burkdoll, removed.

COLLECTORS OF INTERNAL REVENUE.

William H. Doyle, of Pennsylvania, to be collector of internal revenue for the first district of Pennsylvania, to succeed William H. Brooks, removed.

Edward P. Kearns, of Pennsylvania, to be collector of internal revenue for the twenty-third district of Pennsylvania, to succeed George W. Miller, resigned.

PROMOTIONS IN THE ARMY.

General officer.

Col. William P. Carlin, Fourth Infantry, to be brigadier-general, May 17, 1893, vice Carr, retired from active service.

Medical Department.

Lieut. Col. George M. Sternberg, Deputy Surgeon-General, to be Surgeon-General, with the rank of brigadier-general, May 30, 1893, vice Sutherland, retired from active service.

Pay Department.

Capt. William H. Hamner, Twentieth Infantry, to be paymaster, with the rank of major, May 17, 1893, vice Candee, promoted.

Quartermaster's Department.

First Lieut. Frederick Von Schrader, Twelfth Infantry, to be assistant quartermaster, with the rank of captain, April 24, 1893, vice Williams, promoted.

Medical Department.

Maj. Johnson V. D. Middleton, surgeon, to be deputy surgeon-general, with the rank of lieutenant-colonel, May 8, 1893, vice McClellan, deceased.

Maj. John H. Janeway, surgeon, to be deputy surgeon-general, with the rank of lieutenant-colonel, May 31, 1893, vice Sternberg, appointed surgeon-general.

Capt. Henry S. Turrill, assistant surgeon, to be surgeon, with the rank of major, April 7, 1893, vice Happersett, deceased.

Corps of Engineers.

Lieut. Col. George H. Elliot, to be colonel, May 18, 1893, vice Houston, deceased.

Maj. Amos Stickney to be lieutenant-colonel, May 18, 1893, vice Elliot, promoted.

Capt. Thomas Turtle, to be major, May 18, 1893, vice Stickney, promoted.

First Lieut. Harry F. Hodges, to be captain, May 18, 1893, vice Turtle, promoted.

Second Lieut. William V. Judson, to be first lieutenant, May 18, 1893, vice Hodges, promoted.

Cavalry arm.

Capt. Joseph M. Kelley, Tenth Cavalry, to be major, April 15, 1893, vice Moylan, Tenth Cavalry, retired from active service.

Capt. Thomas C. Lebo, Tenth Cavalry, to be major, July 26, 1893, vice Tupper, Sixth Cavalry, retired from active service.

First Lieut. John Bigelow, jr., Tenth Cavalry, to be captain, April 15, 1893, vice Kelley, Tenth Cavalry, promoted.

First Lieut. Robert D. Read, jr., Tenth Cavalry, to be captain, July 26, 1893, vice Lebo, Tenth Cavalry, promoted.

Second Lieut. Letcher Hardeman, Fourth Cavalry, to be first lieutenant, April 15, 1893, vice Bigelow, Tenth Cavalry, promoted.

Second Lieut. Edmund S. Wright, Ninth Cavalry, to be first lieutenant, June 30, 1893, vice Robertson, First Cavalry, resigned.

Second Lieut. William H. Hay, Third Cavalry, to be first lieutenant, July 21, 1893, vice Clark, Tenth Cavalry, deceased.

Second Lieut. James E. Nolan, Fourth Cavalry, to be first lieutenant, July 26, 1893, vice Read, Tenth Cavalry, promoted.

Artillery arm.

First Lieut. Charles Humphreys, Third Artillery, to be captain, June 30, 1893, vice Knower, Third Artillery, retired from active service.

Second Lieut. Richmond P. Davis, Second Artillery, to be first lieutenant, March 23, 1893, vice Towers, Second Artillery, deceased.

Second Lieut. George O. Squier, Third Artillery, to be first lieutenant, June 30, 1893, vice Humphreys, Third Artillery, promoted.

Infantry arm.

Lieut.-Col. Robert H. Hall, Sixth Infantry, to be colonel, May 18, 1893, vice Carlin, Fourth Infantry, appointed brigadier-general.

Maj. Harry C. Egbert, Seventeenth Infantry, to be lieutenant-colonel, May 18, 1893, vice Hall, Sixth Infantry, promoted.

Capt. William H. Bisbee, Fourth Infantry, to be major, May 18, 1893, vice Egbert, Seventeenth Infantry, promoted.

First Lieut. Henry E. Robinson, Fourth Infantry, to be captain, April 4, 1893, vice Neide, Fourth Infantry, retired from active service.

First Lieut. William W. Wotherspoon, Twelfth Infantry, to be captain, April 28, 1893, vice Hurst, Twelfth Infantry, retired from active service.

First Lieut. Charles W. Mason, Fourth Infantry, to be captain, May 18, 1893, vice Bisbee, Fourth Infantry, promoted.

First Lieut. Arthur Williams, regimental quartermaster Third Infantry, to be captain, May 18, 1893, vice Thompson, Third Infantry, retired from active service.

First Lieut. Stephen Y. Seyburn, Tenth Infantry, to be captain, May 19, 1893, vice Stiles, Tenth Infantry, retired from active service.

First Lieut. Edmund K. Webster, regimental quartermaster Second Infantry, to be captain, July 26, 1893, vice Ames, Second Infantry, retired from active service.

Second Lieut. Frederick C. Kimball, Fifth Infantry, to be first lieutenant, April 4, 1893, vice Robinson, Fourth Infantry, promoted.

Second Lieut. Frank L. Winn, First Infantry, to be first lieutenant, April 28, 1893, vice Von Schrader, Twelfth Infantry, appointed assistant quartermaster.

Second Lieut. Charles C. Ballou, Sixteenth Infantry, to be first lieutenant, April 28, 1893, vice Wotherspoon, Twelfth Infantry, promoted.

Second Lieut. Erneste V. Smith, Third Infantry, to be first lieutenant, May 18, 1893, vice Merriam, Fourth Infantry, retired from active service.

Second Lieut. George B. Duncan, Ninth Infantry, to be first lieutenant, May 18, 1893, vice Mason, Fourth Infantry, promoted.

Second Lieut. Robert C. Williams, Fifteenth Infantry, to be first lieutenant, May 18, 1893, vice Brumback, Second Infantry, resigned.

Second Lieut. Lucius L. Durfee, Seventeenth Infantry, to be first lieutenant, May 19, 1893, vice Seyburn, Tenth Infantry, promoted.

Second Lieut. Charles G. Dwyer, Twenty-first Infantry, to be first lieutenant, May 22, 1893, vice Buttler, Third Infantry, appointed regimental quartermaster.

CONFIRMATIONS.

Executive nominations confirmed by the Senate August 22, 1893.

SURVEYOR-GENERAL OF COLORADO.

Thomas D. Robinson, of Denver, Colo., who was appointed June 15, 1893, during the recess of the Senate, to be surveyor-general of Colorado.

UNITED STATES ATTORNEY.

William C. Perry, of Kansas, to be attorney of the United States for the district of Kansas.

RECEIVER OF PUBLIC MONEYS.

Frank P. Arbuckle, of Denver, Colo., to be receiver of public moneys at Denver, Colo.

REGISTER OF THE LAND OFFICE.

Edwin P. Harman, of Denver, Colo., to be register of the land office at Denver, Colo.

HOUSE OF REPRESENTATIVES.

TUESDAY, *August 22, 1893.*

The House met at 11 a. m. Prayer by the Chaplain, Rev. SAMUEL W. HADDAWAY.

The Journal of yesterday's proceedings was read and approved.

SILVER PURCHASES, TREASURY NOTES.

The SPEAKER laid before the House a letter from the Secretary of the Treasury; which was read, as follows:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., August 19, 1893.

SIR: I have to acknowledge the receipt of the following resolution passed by the House of Representatives on the 16th instant:

"*Resolved*, That the Secretary of the Treasury is hereby respectfully requested to communicate to the House the following information relating to the purchase and coinage of silver under the act of July 14, 1890, entitled 'An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes:'

"First. How many ounces of silver bullion have been purchased, and what has been the highest, lowest, and average market price paid?

"Second. What amount of Treasury notes has been issued in payment of the silver bullion, what amount redeemed, and what amount reissued?

"Third. What amount of Treasury notes has been redeemed in gold coin and what amount in silver coin?

"Fourth. How many standard silver dollars have been coined?

"Fifth. How many ounces of silver bullion are now owned by the Government?"

In reply, I have the honor to state:

First. The number of ounces of silver bullion purchased under the act of July 14, 1890, from August 13, 1890, to August 16, 1893, inclusive, was 161,521,000 fine ounces, costing $150,669,459. The highest price paid was $1.20¼, August 20, 1890, and the lowest price, $0.696, July 24, 1893—average price, $0.9328+

Second. Treasury notes to the amount of $150,115,985 have been issued to date, August 16, 1893, in payment of the silver bullion, and that amount is still outstanding, the redemptions having been replaced by issues, with the exception of $714,636, which have been redeemed in standard silver dollars and retired from circulation since August 3, instant.

Third. Up to August 1, 1893, $49,184,160 in Treasury notes have been redeemed in gold, and since August 3, 1893, $714,636 in Treasury notes have been redeemed in silver dollars, this being the first redemption of these notes in silver.

Fourth. The number of standard silver dollars coined from bullion purchased under the act of July 14, 1890, to August 16, 1893, has been 36,087,185.

Fifth. The number of ounces of silver owned by the Government, purchased under the act of July 14, 1890, on August 16, 1893, was 133,161,375 fine ounces, costing $121,217,677.

Very respectfully,

J. G. CARLISLE, *Secretary.*

Hon. CHARLES F. CRISP,
Speaker, House of Representatives.

Mr. BLAND. Mr. Speaker, I presume that this letter, having been read, will be published in the RECORD.

The SPEAKER. It will be ordered printed in the RECORD, if that is the desire of the House.

Mr. BLAND. And in pamphlet form also.

The SPEAKER. That will also be ordered, if desired. There is no rule on the subject.

Mr. BLAND. I ask unanimous consent that this letter be printed in the RECORD and in document form.

The SPEAKER. Without objection, the letter just read will be printed in the RECORD and also in ordinary document form, and it will lie on the table.

There was no objection.

Mr. BLAND. I presume the usual number will be printed?

The SPEAKER. The usual number.

CALIFORNIA MIDWINTER INTERNATIONAL EXPOSITION.

The SPEAKER laid before the House the bill (S. 50) in aid of the California Midwinter International Exposition; which was read a first and second time.

Mr. LOUD. I ask unanimous consent for the present consideration of this bill.

The bill was read, as follows:

Whereas there will be held in the city and county of San Francisco, State of California, from and after January 1, 1894, an exposition to be known as the California Midwinter International Exposition, in which foreign nations and foreign exhibitors have been invited and have agreed to participate; Therefore,

Be it enacted, etc., That all articles which shall be imported from foreign countries for the sole purpose of exhibition at said exposition, upon which there shall be a tariff or customs duty, shall be admitted free of payment of duty, customs fees, or charges, under such regulations as the Secretary of the Treasury shall prescribe, and all articles which have been imported from foreign countries and which are now on exhibition at the World's Columbian Exposition at Chicago, upon which there is a tariff or customs duty, and which have been heretofore admitted free of payment of duty, customs fees, or charges, may, under regulations prescribed by the Secretary of the Treasury, be removed to the city of San Francisco, in the State of California, for the sole purpose of exhibition at said California Midwinter International Exposition.

SEC. 2. That it shall be lawful at any time during such exposition to sell for delivery at the close of the exposition any of the goods or property imported for and actually on exhibition in the exposition buildings or on its grounds, subject to such regulations for the security of the revenue and for the collection of the import duties as the Secretary of the Treasury shall prescribe: *Provided*, That all such articles when sold or withdrawn for consumption in the United States shall be subject to the duty, if any, imposed upon such articles by the revenue laws in force at the date of the importation; and all penalties prescribed by law shall be applied and enforced against such articles and against the persons who may be guilty of any illegal sale or withdrawal thereof.

SEC. 3. That all of the provisions of public resolution No. 30, entitled "Joint resolution authorizing foreign exhibitors at the World's Columbian Exposition to bring to this country foreign laborers from their respective countries for the purpose of preparing for and making their exhibits," approved August 5, 1892, are hereby extended to and made applicable to said California Midwinter International Exposition to the same extent as if said California Midwinter International Exposition was therein specifically named.

The SPEAKER. Is there objection to the request of the gentleman from California [Mr. LOUD] that this bill be immediately considered?

Mr. BAILEY. I am not inclined to object to the consideration of this bill if the gentleman from California [Mr. LOUD] will give us the assurance that its passage is not to be made a predicate hereafter for asking from the Government an appropriation in aid of this exposition.

Mr. LOUD. It has not been the intention of the city of San Francisco to ask Government aid for this exposition to the extent of one cent; and so far as I am concerned (and I think I can speak for all my colleagues on this floor) we will not ask for one cent of Government appropriation in aid of the exposition.

Mr. BAILEY. That is entirely satisfactory.

Mr. COOMBS. I would like to inquire in reference to this California exposition whether there is to be the same provision of law now applicable to the exposition at Chicago as to the holding of imported goods in bond, under regulations of the Secretary of the Treasury?

Mr. LOUD. The same provision will apply in this case.

There being no objection, the House proceeded to the consideration of the bill; which was ordered to a third reading, read the third time, and passed.

EXCHANGE OF UNITED STATES BONDS FOR TREASURY NOTES.

Mr. JOHNSON of Ohio. Mr. Speaker, I ask that the bill which I send to the Clerk's desk be printed and referred to the Committee on Banking and Currency, with leave to report at any time after the pending special order is disposed of.

The bill was read, as follows:

A bill to permit the exchange of United States bonds for Treasury notes.

Be it enacted, etc., That any holder of bonds of the United States may, after the passage of this act, deposit such bonds at the Treasury of the United States, or at the office of any assistant treasurer of the United States, and receive therefor their face value in Treasury notes of the United States, as described in the act of July 14, 1890. Such bonds shall be held as a special deposit to the credit of the party depositing them, and during the time they are so held shall draw no interest, and shall be returned on the order of the party depositing them on the payment of their face value in United States currency.

SEC. 2. The Secretary of the Treasury shall make such regulations as may be necessary to save to the Government the payment of interest on such bonds during the time they are held as a special deposit, and he is hereby authorized to issue Treasury notes to the amount needed and to provide for the cancellation of an equal amount of such notes on the return of said bonds to their owners, and a sum sufficient to carry into effect the provisions of this act is hereby appropriated out of any money in the Treasury not otherwise appropriated.

SEC. 3. All acts and parts of acts inconsistent with the provisions of this act are hereby repealed.

The SPEAKER. Is there objection to the introduction of this bill as requested by the gentleman from Ohio, and its reference to the Committee on Banking and Currency? The Chair hears none.

The bill (H. R. 2) was accordingly read a first and second time, and referred to the Committee on Banking and Currency.

Mr. JOHNSON of Ohio. The Speaker omitted to put to the House a part of my request, which was that the committee have leave to report this bill at any time after the disposition of the pending special order.

The SPEAKER. Is there objection to that request? The Chair hears none.

Leave was accordingly granted.

TOWN SITE ENTRIES IN CHEROKEE OUTLET.

Mr. McRAE, by unanimous consent, introduced a joint resolution (H. Res. 4) to make the provisions of the act of May 14, 1890, which provides for town-site entries of lands in a portion of what is known as Oklahoma applicable to the territory known as the Cherokee Outlet, and to make the provisions of said act applicable to town sites in the Cherokee Outlet; which was read a first and second time.

Mr. McRAE. I ask unanimous consent for the present consideration of this joint resolution.

The joint resolution was read, as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That all the provisions of an act of Congress, approved May 14, 1890, which provides for town-site entries of lands in a portion of what is known as Oklahoma, be, and the same are hereby, made applicable to the territory known as the Cherokee Outlet, and now a part of the Territory of Oklahoma; and that all acts or parts of acts inconsistent with this joint resolution be, and the same are hereby, repealed.

The SPEAKER. Is there objection to the present consideration of this joint resolution?

Mr. TRACEY. I think we ought not to go into the consideration of any measures of this kind until we get through with the pending special order. I dislike to object.

The SPEAKER. As the Chair understands, the gentleman from New York [Mr. TRACEY] objects.

Mr. McRAE. The passage of this resolution is recommended by the Interior Department; and I hope that the letter of the Commissioner of the General Land Office transmitting the resolution will be read. If, after that, the gentleman from New York objects, he will do so with a full knowledge of the facts. It is no favor to me, but a matter of public importance.

The SPEAKER. Unless the objection is withdrawn——

Mr. TRACEY. I have no objection to the reading of the letter.

The SPEAKER. In the absence of objection, the letter will be read.

The Clerk read as follows:

GENERAL LAND OFFICE, *Washington, August 21, 1893.*

MY DEAR SIR: Inclosed please find draft of joint resolution, which I talked with you about this morning. I have submitted the same to the Secretary and he has approved the same. If necessary the Secretary will so state to the committee. Its passage is recommended, as by a mistake in the drafting of the original act of March 3, 1893, it was inadvertently left out. This resolution should be passed at once, which will really make it a part of the act of March 3, 1893.

Very respectfully yours,

S. W. LAMOREUX, *Commissioner.*

Hon. THOMAS C. McRAE:

Mr. SPRINGER. Will the gentleman from Arkansas explain this proposition?

Mr. McRAE. With the leave of the House, I will.

The act of May 14, 1890, providing for the town-site entries of lands in what is known as Oklahoma, used these words of limitation as to the territory to which it should apply:

The Territory of Oklahoma now [then] open to settlement.

And the act of the last Congress which provided for the opening of the Cherokee Strip makes no provision for the use of this act in that Territory. The Attorney-General has decided that there is no provision of law by which the act of 1890 can be used in that portion of the public lands which is to be opened to settlement within the next month. The Interior Department has no authority to appoint town-site boards in the Strip. It is thought that the Department should have such authority. This resolution makes that act applicable to the public land which will be opened to settlement by proclamation within the next few weeks, so that the necessary boards can be organized and have a uniform town-site law in all of the Territory of Oklahoma.

Mr. FLYNN. Does this provide for the appointment of town-site boards by the Secretary of the Interior?

Mr. McRAE. This makes applicable the provisions of the act of May 14, 1890, to the "strip," which act allows the Secretary to appoint the boards.

Mr. FLYNN. Since the passage of that act the town-site boards have been appointed in Oklahoma by the probate judges. What is the object of this resolution?

Mr. McRAE. This resolution simply makes the act of May 14, 1890, of general application in that Territory. That is all.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas for the present consideration of this joint resolution?

Mr. TRACEY. Mr. Speaker, I do not object, but I will give notice that in future I will object to any discussion being brought before the House pending the argument on the silver bill. We can not get our speakers in now. I withdraw my objection.

There being no further objection, the joint resolution was ordered to a third reading, read the third time, and passed.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted to Mr. SHELL, on account of sickness.

SILVER.

Mr. BRICKNER. Mr. Speaker, this question is to my mind a purely commercial one—a matter of supply and demand. Having been engaged in commercial pursuits for over 40 years, having passed through several periods of commercial depression, and remaining in active business up to the present day, my experience has tended no doubt toward shaping my views on the silver problem. The condition of affairs to-day demands from every Representative upon this floor an expression of opinion on this vital question, and I would be neglectful of my duty to my constitutents and to this House did I fail to make known my sentiments.

It is not my purpose to arraign any party for the enactment of this unfortunate so-called Sherman law. While my vote was cast against it in this House at the time of its passage, and I feared evil results instead of beneficial, as was claimed for it by its framers and advocates, yet I have no right to assail the other side and say they were not sincere at the time in their claims that this law would be of great benefit to the country.

It has proved a grave error, and is now acknowledged so to be by those who were most active in securing and who voted for its passage. A large majority of them will, I am informed, now vote for the repeal of the purchasing clause, and their courage and devotion to the welfare of our common country can not be too highly praised. It is to the honor and glory of this great country that upon such grave questions of national character partisanship is brushed aside and patriotism rules.

Now, Mr. Speaker, I expect we shall all be manly and honest in dealing with this purely commercial question. The country is in sore distress, and it is no time for trifling or quibbling. Commerce is at a standstill. The majority of our workshops are silent, our factories closed, our railways do poor business, mines are shut down, and our harbors are crowded with ships with sails furled. Steamers with their fires out are moored idle and unfruitful at their docks, and sailors are lounging about the great cities in enforced idleness. No fierce fires burn in the rolling mills, and our great furnaces are cold.

Even in the great wheat fields of the Northwest I am told much grain is wasting for the lack of currency to pay the laborers, who would otherwise gather up and thresh a bountiful harvest. Doing business in over twenty States I find the same distress is everywhere—there is no exception—whether you go to the manufacturing States of the East or the grain and cotton raising States of the West and South. And all this at a time when the country's granaries are full to overflowing with the products of the soil.

Now, Mr. Speaker, the men who control these industries, as well as the laborers employed therein, are looking to this Congress for some wholesome legislation. They do not want long-winded speeches, made up largely from extracts taken from old musty books in the library reiterating what some one said ten, twenty, forty, or one hundred years ago. They demand action. If the men who first uttered the sentiments that have been paraded here time and again, since this debate began, as original with the orator could be awakened from their everlasting sleep and hear some of the statesmen of to-day in their endeavor to turn back the dial of time and progress, they would gaze at each other in amazement and say wonderingly: "Are these our posterity?"

The country is suffering, and yet these silver-tongued orators want to feed the unemployed laborers on platforms and theories that may have been suited to a former day and need, but are certainly not applicable to the present situation. They seem unable to comprehend that conditions have changed since then, and that methods of years gone by will not meet the changed and changing conditions of to-day. Are they patriots, or are they trying to prejudice one section of the country against the other, or men in one pursuit against those in others?

Advocates of silver now opposing the repeal of the purchasing clause of the Sherman act, so-called, admit it is bad law and harmful in its effects, and yet nearly every member who opposes repeal now and who was in the Fifty-first Congress condemned it then, and cast his vote against its passage. They now boldly proclaim that unless the House amends the Wilson repeal bill (which amendments I propose to show later on would make matters worse than to leave the Sherman law remain as it is) they

will resist its passage and defeat the repeal of the purchasing clause. They admit the purchase clause is wrong and yet charge that those in favor of its repeal are controlled by Wall street; that Wall street only and its hirelings and dupes are for repeal. I for myself brand that statement as uncalled for and untrue. I am not the dupe of Wall street, neither am I the hireling of the silver kings. Nor do I want class legislation in any form for either.

Mr. Speaker, there are but two questions to consider in this whole matter. How much silver can we float in addition to the amount we already have? And what effect will repeal have on our currency and on the country? If we can float more silver, then let us have more at the same ratio as the silver now in circulation. Let the Secretary of the Treasury be authorized to purchase silver bullion at its market value, or, better still, use the seigniorage bullion now in the Treasury, coin into dollars all that can be paid out to those who will accept them, and stop there. Turn the profits into the United States Treasury and the whole country will have the benefit and not the bullion holders alone. It is my opinion, however, that we can not at this time use to advantage any more silver than we have now. If it were possible to float more silver it would not be necessary to issue certificates to represent it.

It is said repeal of the purchase clause would demonetize silver in this country and reduce the circulating medium about one-half. I can not see how it would do that. The Government has already guaranteed coined dollars to the amount of $58,917,196 and certificates issued upon the coined silver in the Treasury to the amount of $331,019,178, all now in circulation. I will oppose the retirement of this amount of circulating medium should its retirement be attempted.

The condition of the country requires more circulating medium, but we can not pay the premium that would be required to procure it through free coinage. The nonsilver-producing States are not willing to pay the enormous premium the silver States are asking in the proposed amendments to the Wilson bill. In other words, 65,000,000 people are not willing to pay tribute to 1,000,000. It would be far cheaper to pension them all or board them in our most fashionable hotels. When a boy, my father gave me what appeared to be a penny. Its inscription was: "Not one cent for tribute, but millions for defense." That was the principle of patriots in those days. Has that spirit died out in our land?

I have had prepared from the report of the Director of the Mint for 1892, page 51, a table showing the amount of silver produced in the four great silver-producing States of Colorado, Montana, Idaho, and Nevada, which I shall ask leave to print in the RECORD. The table shows the population of those four States according to the census of 1890, and probably does not vary largely from the population of to-day. The table is as follows:

Silver product, in ounces, in 1891, of the four great silver-producing States; also, population in 1890.

State.	Product.	Population.
Colorado	21,160,000	412,198
Montana	16,350,000	132,159
Idaho	4,035,000	84,385
Nevada	2,520,000	45,761
Total	45,065,000	674,503
Total for balance of United States	13,265,000	61,946,757
Total for United States	58,330,000	62,621,260

NOTE.—It may be well to state that of the 13,265,000 ounces of silver produced in the United States outside of the four States named, 11,555,000 ounces were mined in the three Territories of Arizona, New Mexico, and Utah; so but a small fraction of all the silver bullion comes from the remainder of the States and Territories.

From these figures it is easy to ascertain just how much premium the people of the United States would have to pay to the people of these four States every year if we entered upon the free and unlimited coinage of silver at the present ratio. This is based upon the products of 1891; but should a free-coinage bill pass there would be no telling whether this product would be doubled or trebled or quadrupled.

Calculating the value of bullion at to-day's figures, 73 cents, and at its price under free coinage, $1.29, gives us the difference, or premium, called for by free-silver advocates, in each of these States, as follows: Colorado, $11,961,200, or $21.01 for every man, woman, and child in the State. And remember this premium would be paid every year, varying only with the price of bullion and amount produced. Montana's premium would be $9,319,500, or $70.51 per capita each year—nearly three times that of Colorado. Idaho would get $2,319,950 premium, or $27.45 per capita, and Nevada $2,006,400, or $43.84 per capita.

But not all the people in these States are engaged in them in-

ing of precious metals. From the census of 1890 I have again gathered statistics showing the number of people engaged in mining in these States, which includes not only those who dig the metal out of the ground, but also the laborers and mechanics employed above ground. Those who desire to substantiate these figures may find them in the Report on the Mineral Industries of the United States, pages 59 and 60. This table also I should like to have appear in the RECORD.

It is as follows:

Average number employed in gold and silver mining according to census of 1890 in the four great silver-producing States is as follows:

	Above ground.	Below ground.	Total.
COLORADO.			
Foremen	330	396	726
Mechanics	781		781
Miners		9,585	9,585
Laborers	1,505	569	2,074
Boys	16	14	30
Total	2,632	10,564	13,196
IDAHO.			
Foremen	128	163	291
Mechanics	354		354
Miners		2,566	2,566
Laborers	964	318	1,282
Boys	2		2
Total	1,448	3,047	4,495
MONTANA.			
Foremen	96	65	161
Mechanics	207		207
Miners		2,552	2,552
Laborers	2,613	254	2,867
Boys	5	5	10
Total	2,921	2,876	5,797
NEVADA.			
Foremen	83	84	167
Mechanics	261		261
Miners		2,003	2,003
Laborers	779	214	993
Boys	1	1	2
Total	1,124	2,302	3,426
Grand total			27,004

NOTE.—Above figures are taken from Mineral Industries of the United States, pages 59 and 60.

In addition to the 45,065,000 ounces of silver mined by these 27,000 men, the census of 1890 gives the following statistics about the output and value of lead, copper, and gold product in the four States named, as the results of the labor of the same workmen who mined the silver:

LEAD.

States.	Tons.	Value.
Colorado	70,788	$2,100,014
Montana	10,183	456,975
Idaho	23,172	1,042,627
Nevada	1,994	72,653
Total	106,137	3,673,271

COPPER.

States.	Pounds.	Value.
Colorado	1,170,053	Not stated.
Montana	98,222,444	Do.
Idaho	156,490	Do.
Nevada	26,430	Do.
Total	99,575,407	Not stated.

GOLD.

States.	Fine ounces.	Value.
Colorado	169,312	$3,500,000
Montana	169,312	3,500,000
Idaho	96,750	2,000,000
Nevada	145,125	3,000,000
Total	580,499	12,000,000

NOTE.—The above figures are taken from the Mineral Industries of the United States Census of 1890, pages 48, 155, and 163 respectively.

These figures give a still more startling exhibit than the others. Of the 674,503 population in these four States, but a trifle over 4 per cent, or 27,004, are engaged in mining. The other 650,000 really would not get their per capita yearly premium in the event of free coinage, but like the rest of us pay their share over to the ones engaged in the industry. What percentage of the 27,000 are mine owners is hard to tell, but it is safe to say it is not large.

It is also probably safe to say that very few of the real workers in the mines would ever realize any premium after all. It would be gobbled up by their employers—the silver kings. But supposing every one was to get his share, what would it amount to? Why, for Montana the premium would be $1,580.19 each year, and for Colorado, $907.11 each year; for Nevada, $588.88 yearly, and for Idaho, $516.11 a year for every miner in the State.

These figures are based upon the population of 1890 and the product of 1891, but since they were compiled I have been reliably informed the product of 1892 exceeded 75,000,000 ounces, or an increase in production of about thirty per cent over the previous year, unquestionably caused by the enforced purchase on Government account of 4,500,000 ounces per month. So that while the figures I have stated are correct as to 1891, for 1892 they would be much larger.

Let us see what they really are. Now, as is shown in the tables I have presented, the production of silver is confined in a large measure to the four States named, only 13,000,000 ounces out of 58,000,000 ounces being mined in all the other States and Territories—but 22 per cent of the entire output. So we can assume that the proportion will hold good as to the increase. This would make the premium that would be paid to the miners in the several States as follows, presuming, of course, that the number of miners had not varied greatly from 1891:

	Per miner.
Montana	$2,054.24
Colorado	1,179.24
Nevada	765.54
Idaho	670.94

And as the mine owners would appropriate the lion's share, how long would it be before billionaire silver magnates would take the place of the millionaires already made under the present restrictive silver laws? And how long would it be, too, before nearly all the wealth of the country would pass into their hands? Will the American people pay this immense tribute? Dare the members of this House assume the responsibility of placing such a burden upon the people?

Mr. Speaker, silver is a product, the same as gold, copper, iron, coal, wheat, or cotton. By aid of improved machinery it is now more cheaply and rapidly mined than formerly, and the supply has overtaken and passed the demand. The result has been a decline in the market. The same holds good with wheat. This commodity can now be produced for less than half the price possible before the invention of labor-saving machinery and the introduction of improved methods. The same applies to all these products in a greater or less degree.

The law of supply and demand fixes prices. This principle is as unchangeable and as fixed as the north star. There is no government large or strong enough to turn aside the effect of this natural law any more than it could change the course of the sun. It is thought by some people that we can fix the price of our own products. That idea is erroneous. What do we do with our surplus? Do we not depend upon Europe to buy it? Let there be an advance or a decline in the price of cotton, wheat, or silver in Liverpool, London, Paris, or any of the market centers of Europe and its effect is felt in ten minutes in New York, Chicago, St. Louis, in fact, in hundreds of our purchasing markets, and prices are adjusted according to the change.

The seller has invariably to submit to the purchaser. You can not compel a purchaser to buy your products if he does not need them, neither can you make him pay more than the current price without his consent. There may be exceptions sometimes in seasons of great scarcity and exorbitant prices can be obtained, but it is generally of short duration. This applies to all commodities. It applies to money as well as to the products of the soil, the mines, or mills.

I have heard bankers very much abused by some of the speakers on this question.

I have no sympathy with the Shylock, whether he speculates in money or the necessaries of life, or if he be one of the robbers in the several professions; but an honorable banker is entitled to consideration. He is part of the machinery of commerce, and is as necessary to commerce as the driving-wheel to a machine. He is as essential a factor as the merchant or miner. If he is eliminated trade, will suffer and in time the whole machinery of commerce be ruined.

The Government can assume the right to stamp anything and call it money, whether it be gold, silver, rags made into paper, or what not, place its stamp upon it, and compel its citizens to accept the same in payment of debts; but you take our silver-dollar across the borders of our country and try to pass it upon one who has no direct interchange with our people, and he will tell you that your dollar is only worth to him 63 cents, more or less, as the bullion price varies. No one claims we can use our silver dollars abroad for more than bullion value. Our silver-producer ought to take his chances as all other producers do, and sell where the highest price can be obtained, and not come to Congress asking that a market be created for him where more must be paid than the product is worth in the open market.

I am told that a new city in one of our silver-producing States has more millionaires, according to its population, than any city in the world. And yet they come to Congress asking to be made richer still. In the face of all this, we are told that we are the creatures of the gold-bugs. Why should a premium not be given to the grain-raiser, the cotton-planter, the stock-grower, and others as well? No, Mr. Speaker, I can never agree to such legislation.

The amendments proposed providing for free coinage at the ratio of 16, 17, 18, 19, and 20 to 1 would make matters even worse than to leave the Sherman act remain as it is. I understand the strongest fight will be made on the last amendment, the 20 to 1 ratio. Let us see what free coinage at, say, 20 to 1, means; how it affects commerce, and how much it will cost the people, *i. e.*, the Government, to recoin at that ratio the silver dollars we already have. According to the latest obtainable reports from the Treasury Department, we have in round numbers $419,000,000 now in the Treasury and in circulation. The loss, if this is to be recoined at 20 to 1 ratio, will be over $100,000,000.

According to the Treasurer's statement, also, it will require five years' labor, five years' running of the mints, to recoin all our silver dollars into new dollars at the proposed weight. And as the loss would be over $100,000,000, our circulating medium would be contracted that amount, just at a time when we need expansion. We would have the bad end of a barter in a commodity of uncertain value. This new coin would not pass in Europe, for it would be too light, even at the increased weight, to contain one dollar's worth of bullion.

They would serve no better purpose than the 16 to 1 dollar, as the ratio of bullion prices to-day to gold is over 28 to 1.

We would have no use for it in this country, for our people would rather have the paper certificate representing the coin than the coin itself. The effect might be to advance the price of bullion by reason of the Government being compelled to purchase in order to make up the deficiency in weight. The Government could be compelled to buy from the Shylocks (who are, and rightly, too, denounced by the free-silver men), who would surely corner the market if so large an amount of bullion was to be purchased.

They would buy up our silver certificates, and, having cornered the metal in the market, would compel the Government to pay them their own price for it, so as to be able to redeem the certificates with the new and heavier dollar. Now, after all this vast sum has been coined into dollars, no agreement being in operation with other countries as to uniform weight in coinage, silver bullion would go back to present prices or less.

Now I ask, in all candor, have we a right to attempt this? Is it necessary? I certainly say no. It is a dangerous experiment, upon which we have no right to enter, and it is fraught with the possibilities of absolute and permanent injury to the country.

One other point, Mr. Speaker, I wish to touch upon before leaving this part of the subject, and it is in support of my statement that we can not float our silver coin in foreign countries. Last year there was exported twenty-three million dollars' worth of silver bullion and only ninety-four thousand dollars in United States silver dollars, which goes to show that foreigners will not have it for use as a circulating medium.

These are the figures for 1892, as furnished by the Treasury Department. But in 1891 there was imported of foreign and domestic coins over seventeen millions, of which over $6,000,000 was in domestic coin, so that it is apparent all our exported coin is shipped back to us at the very first opportunity. Probably the silver men do not stop to think that our silver dollars can not be used abroad, even as fine bullion is used, for it is one-tenth alloy, and other nations, having a different percentage of alloy, find our coins unfitted for coinage in their own standard; therefore what little gets out of the country soon finds its way back again.

Now, Mr. Speaker, we come to the consideration of the second proposition I laid down at the beginning of my remarks as one of the two into which is resolved the whole silver problem. It is: What effect will the repeal of the purchase clause have on the currency and on the country? The primary effect, of course, will be to stop piling up silver bullion in the Treasury at the rate of 4,500,000 ounces a month. Back of this is the salutary effect of restoring public confidence that has been gradually under-

mined, and now all but destroyed through the distrust created, since the so-called Sherman law went into effect, by the large and continued purchases and constant accumulation of piling up of silver bullion under its provisions. People will know that the policy of depleting their Treasury of gold must cease.

Confidence in commercial lines and among manufacturers will again prevail when our policy shall have ceased to give cause for apprehension at home and abroad, when our finances shall be maintained upon a solid basis, and the Treasury no longer be made the dumping ground for a debased metal of uncertain value. The country can use and has use for the silver heretofore coined and the certificates issued thereon, and it is just and right that their legal-tender quality be kept unimpaired and the parity of our gold and silver coins maintained.

But the free and unlimited coinage of silver can not but injuriously affect the value and usefulness of the amount we already have and also render it impossible for the Government to maintain their parity at this time. Should, however, an international agreement be made at some future time, which I hope is not far distant, then will it be possible to have free coinage of silver, and the parity will take care of itself.

Additional circulating medium is urgently needed, but it must be provided for in some other way than by free coinage of silver under present conditions. Neither will it do to enact into laws hasty, ill-advised, and crude systems of finance and banking. Let us pass this bill repealing the purchase clause of the Sherman act, and thus in a measure restore lost confidence. Then take up the question of amending our banking laws or formulating new ones. Let them be elastic, so the circulating medium can be increased or diminished according to demand, and let it be provided that the liability of bank stockholders to their depositors shall be unlimited, as a guarantee for deposits. Then will the people have renewed faith in the soundness of our financial policy, our currency will be ample in volume and unquestioned in value, and our banks deserving of the fullest confidence.

If our country was a creditor nation, Mr. Speaker, instead of a debtor, it would make but little difference how we legislated or what we had for a circulating medium. But we are a debtor nation. We owe largely to Europe, and are liable at any time to have our securities returned to us and payment demanded, it may be through mistrust or scarcity of money in their own country, and our railway and other bond swill be sent over here and collections enforced when payment is due, working severe hardship in many cases. To some extent this appears to be the situation to-day. Mistrust due to the fear that the Sherman law will remain unrepealed and that this nation is drifting toward a silver standard is largely the cause of the present crisis, and liquidation of our industrial indebtedness held abroad is being enforced to an extent never before known.

As a nation we must have a form of money that will cancel our obligations held in other countries—our bonds must be paid in the money that represents to the holders a standard of value the world over. Were the balance of trade always in our favor we would not need to worry about gold, for the balance of trade would bring it to us without difficulty. But when our crops are short, or we overtrade, or should there be a great stringency in the money market in Europe, then we must be prepared to meet our obligations honestly and in the recognized money of the world.

An individual may be dishonest and not fulfill his obligation. The distress it will bring will be felt and borne only by individuals. But when a nation is dishonest and loses its credit there is no telling where the distress ends. Instances are numerous in the history of the world where nations had not fulfilled their honest obligations, and war, bloodshed, and untold misery ensued. Let us not add a black page of strife and destruction to our nation's history by becoming dishonest, too.

I ask this House in all sincerity to pass the Wilson repeal bill now under consideration. Mark the prediction: Unless it is done ruin and distress will stalk through the country hand in hand, and woe follow after woe in swift succession until we shall all be swallowed up in financial chaos. The peril now threatening the welfare of the country will come full upon us, and disasters multiply a thousandfold. Bread riots, with all their bloody and ghastly results, will strike terror to the hearts of the people in our great cities, and starving mobs will overturn all semblance to law and order in their mad strife for food.

Winter's awful cold will drive thousands upon thousands of the unemployed into the workhouses, prisons, and reformatories, and Necessity will be the recruiting officer that will add hundreds to the ranks of the pauper and criminal classes. Business will be paralyzed, commerce brought to a standstill, and many industries wiped out unless we give some measure of relief.

A great deal has been said by the advocates of free silver depicting the terrible condition of affairs in the great silver States and the distress that prevails among all classes, and especially among miners. The pictures are doubtless not overdrawn, and they are entitled to some measure of relief. It may be noted, however, that all the speakers for the white metal claim this condition is due to the shutting down of mines through fear of repeal of the purchase clause of the Sherman law, and the consequent closing of a great market for their product.

Now, the other side of the picture is still darker, and I think my assertion will be sustained by the observations of many representatives from the nonsilver producing sections of our country, that far more wide-spread and far-reaching in its effects is the apprehension and consequent business stagnation and suffering among our business men and laboring classes that exists everywhere throughout the great manufacturing and industrial States of the Union. And this apprehension is caused by the fear that the nation is drifting toward a silver standard and that the present ruinous policy relating to silver will not be changed for the better, if changed at all. Free silver to them under present conditions means untold misery and suffering.

Of what consequence to the nation is the shutting down of the silver mines of the West and throwing out of work the 27,000 men employed therein compared to the general shutting down of factories, mills, workshops, furnaces, and the great industries of the country, and to the closing to millions of workmen the means of earning their daily bread?

Mr. Speaker, I will not detain the House any longer. I have endeavored to avoid personal allusions in my remarks, and hope they will not be so construed. I am not prejudiced against any industry. I am not an enemy of silver and would be only too glad to see the way clear to use more of it as the money of our country; but that seems to me impossible at this time and be just to all sections and all classes. I hope a sufficient number of the members of this House will look at this question unbiased by prejudice and vote for the pending bill without amendment. [Applause.]

Mr. MALLORY. Mr. Speaker, I regret that this question which is presented for the House to determine is narrowed down to two points, which preclude those who entertain views lying between the two extremes from following out these views to a practical conclusion.

I am free to say, sir, that I am opposed to the unconditional repeal of the Sherman law, and I am also opposed to the coining of silver in this country further, on the basis of 16 to 1; and it has been only after very careful consideration and reflection that I have been able to bring myself to vote affirmatively upon any of the propositions that are presented to the House for its determination.

But, sir, whatever may be the result, whatever may be the conclusion which the wisdom of this body shall bring us to, I must say that under no circumstances, under no conditions, can I bring myself at this time to vote for the unconditional repeal of the purchasing clause of the Sherman act. While disaster may come upon us from other sources, while the predictions of those gentlemen who have told us that financial ruin and disaster that is threatened by further continuance of the coinage of silver may be verified, I do not believe they will bring upon us one tithe of the lasting injury, the inevitable ruin, that an affirmative vote by both bodies of this Congress on the unconditional repeal of the Sherman act would entail upon us.

Sir, we are told that the purchasing clause of the Sherman act is the only obstacle in the way of the rehabilitation of our disordered finances. We are told that the repeal of that act and the consequences resulting therefrom, will restore confidence to the country, and we have heard it predicted on the floor by a number of gentlemen, very able men, who have given the subject much thought and consideration, that the country, by that single action on the part of the House, will be once more launched upon a sea of prosperity and the dark cloud of distress which is now threatening us will be dissipated.

I confess, sir, that I have given the subject very careful examination, and have failed to see in any particular wherein the Sherman act is responsible for all these woes.

I am not here, Mr. Speaker, to defend that measure. I agree with the assertion that it was a makeshift, and would gladly join with the rest of this body in voting for its repeal if I could do so under conditions which I thought would not bring disaster on the country.

I, sir, have given a little investigation, I have said, to the matter, and in looking over the condition of the country for several years past find some facts brought forth by the figures which I have thought may be of possible interest to this body, and possibly throw a little light on the pending question. I have taken the fiscal years of 1890, 1891, and 1892, ending on June 30th of each year, respectively, and find that the balance of trade in these three years was decidedly in favor of the United States. In 1890 the excess of merchandise exported from the United States amounted to $55,983,419.

In 1891 the excess of merchandise amounted to $27,354,088, and

in 1892 it amounted to $188,329,549. The aggregate excess, therefore, of merchandise exported during those three years was $271,667,056.

During that same period, while the balance of trade apparantly was on our side, I find that in 1890 we exported an excess of gold and silver over our imports amounting to $18,172,094.

I find that in 1891 we exported an excess of gold and silver over our imports amounting to $72,685,205.

In 1892, that year of grace in which we were blessed with abundant crops and which brought the excess of our exportations of merchandise over our importations of merchandise up to over $188,000,000, we still had to send out gold and silver in excess of what we exported, to the amount of $11,391,346.

Thus we find that in these three years we exported an excess of gold and silver over our importations, amounting to $102,238,645; and during those three years that I have mentioned, as I have already shown, we exported an excess of merchandise of over $271,000,000.

During those three years I find that in 1890, of gold alone, we exported $4,331,149 in excess of gold imported.

In 1891 we exported $68,121,087 more of gold than we imported. In 1892, that year of grace that I have referred to, wherein we exported of merchandise $188,000,000 more than we imported, I find that our gold imports exceeded our gold exports by $1,474,127 only, making the excess of gold exports over gold imports for those three years $71,178,109.

There, Mr. Speaker, we have presented to us an exhibit which, it seems to me, calls for reflection on the part of those who are contending that the Sherman act is responsible for the present prevailing distress.

Here we find, that in three years—one of those years closing on June 30, 1890, and the Sherman act having been passed July 14, 1890—we find that in those years we were paying out millions and millions more of money than we could possibly take in. We have been doing a business upon a losing basis. It is true it has been a large and thriving business, but at the same time our expenses have been so heavy that when we come to balance our accounts, we find that we have been putting out large quantities more of money than we have taken in.

I do not think there can be any question about the truth of these figures. They are derived from the reports of the Secretary of the Treasury; and if they state the facts correctly, it is surprising that this country has at last reached a point beyond which she can not go?

Is there anything else which accounts for this state of affairs? It seems to me, Mr. Speaker, without trenching upon the forbidden ground of politics, without leaving for any length of time this momentous subject of the finances, if we cast our eyes toward the other field, which has occupied the attention of the people of the United States for many years past; if we examine into the revenue system of this country, which has, by its rules, almost compelled us to do business on a losing basis, we will find that under the pretense of forcing foreign nations to buy from us, it has placed us in a position where we have antagonized every friendly nation on the face of the earth.

I say that to my mind, if this thing is investigated and examined more carefully, we will find that that subject has more to do with the prevailing discontent and distress in this country than anything that the Sherman act has ever done.

Therefore, Mr. Speaker, I claim that I do not see any reason that has been urged by the gentlemen who are advocating this unconsidered, hurried repeal of the Sherman act unconditionally, to influence me to change my views upon this subject, or to vote with them.

But, sir, there are other reasons why I can not vote for this measure. I think it has been conceded that the unconditional repeal of this purchasing clause will serve to contract the currency of this country. I think it has been conceded that it will render it more difficult to pay certain debts at least that are now in existence in this country.

The gentleman from Mississippi [Mr CATCHINGS], who spoke the other day—and who to my mind threw more light upon this subject than has been cast upon it by any speaker in the House—stated that there were exceptions to the application of the measure he advocated to the debtor class of the country. (I do not undertake to quote the gentleman's language, because I have not read his speech, and only heard it.) He said that there was an exception of debts that would be affected by the action proposed by Congress; that long debts, debts having a long time to run before payment, will be materially affected, and that it will be more difficult for the debtor under the new condition of affairs to make a settlement.

I have given an imperfect and hasty examination of some of those debts referred to by the gentleman from Mississippi—the long-standing debts of this country. I have taken the census reports and undertaken to compile a few figures from those interesting documents. I have taken three of the representative agricultural States of the country—Iowa, Illinois, and Kansas.

I have examined into the existing mortgage debt on real estate as was shown by the census on January 1, 1890. I find in the State of Iowa an existing mortgage indebtedness on lands to the amount of $199,034,956. I find that in the State of Illinois, on same date, there existed of recorded mortgage debts $384,299,150. I find that in the State of Kansas, at the same date, there there were recorded $235,485,108 in mortgage indebtedness.

Now, sir, I find further, that in Illinois the mortgage debt averaged per capita $100; in Iowa it averaged per capita $104, and in the State of Kansas the average per capita is the enormous sum of $170.

I find, according to the calculations of the Census Bureau, a system of calculation which I do not vouch for as being correct in all respects, but one which meets the approval of the statisticians of our country, the average life of a mortgage in Iowa is 4.93 years, or practically five years; that in the State of Illinois it is 4.02 years, and in Kansas 3.38 years.

I do not know what the gentleman from Mississippi (Mr. CATCHINGS) or what other gentlemen who agree with him in his views on this subject, mean by a long debt, but it seems to me that a debt that lasts three years—that one who has a mortgage debt for three years can be said to have a long debt hanging over his head. Now, sir, the total for these three States, out of forty-four States in the Union, figures up a total mortgage indebtedness—and when I say mortgage indebtedness, Mr. Speaker, I call attention to the fact that there are not included in this anything but mortgages on real estate, no deeds of trust, nor chattel mortgages, nor anything but a mortgage that is recorded in the clerk's office—I find that the aggregate in these States upon the lands held by the farming class and real estate owners amounts to $818,819,214.

Now, if it is an admitted fact that here in three States of the Union property valued at $818,000,000 (we will say nearly a billion of dollars) is to be radically affected by this legislation (and it is practically admitted by the gentlemen on the other side); if the difficulty in the way of these unfortunate farmers, the men mentioned in our Democratic program, and the men so pathetically referred to in the Democratic platform at Chicago, is to be increased—if we throw in their way in addition to the burdens they have been contending with for the last twenty years another and greater burden, they will be unable to rid themselves of this incubus that is resting on their shoulders, and what can we say to our constituents, what can we say to our friends of the Democratic party?

After making this declaration as to the Sherman act, our platform goes on, and it has been read so often before that I feel a little delicacy in reading it, but I will read this paragraph:

> We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets, and in payment of debt; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

Yet, by the admission of some of the leading gentlemen upon the opposite side of the question here, it is proposed by this legislation to throw in the way of these people whom we profess to protect an almost insurmountable obstacle, and anyone can see how it will be almost impossible for them to throw off the load of debt that is almost crushing them to the earth.

I confess, Mr. Speaker, I have been surprised at the ready acquiescence in this project which has been given to it by some gentlemen who in the past have agreed with me in their views upon this subject. I say "ready acquiescence" because I have seen gentlemen who, without listening to arguments on this floor, before this debate began had already made up their minds and turned their backs upon principles which, until a year ago, they most ostentatiously professed.

It reminds me, Mr. Speaker, of an old colored brother down in my part of the country, who figured more or less conspicuously, in a limited sort of manner, on the banks of the Suwanee River. Old "Uncle Eph." was his name—a most disputatious, contentious, and dogmatical old colored man, who, among the young men of his color, allowed no contradiction or attempt at refutation of any of his assertions. One day one of the young gentlemen of the plantation happened to meet him coming along apparently absorbed in thought, and hailed him and said: "What are you thinking about, Uncle Ephraim?" "Oh," he says, "me and old marse just bin having quite a big argyment down in the old field." "Oh! What about?" "Well, old marse he 'lowed that a open, sandy soil is de bes' for de cultivation of de water-

million." "What did you say?" "Oh, me? I 'lowed that I thought so, too." [Laughter.] And that, Mr. Speaker, seems to be expressive to some extent of the frame of mind of some of our friends upon this floor who last year were so emphatic in their advocacy of the free and unlimited coinage of silver, and who, without any apparent argument having been brought to bear, have suddenly turned and joined with old marse, and say, "I think so, too." [Laughter.]

My time is limited, and I certainly can not do justice to all the various phases of this question as they present themselves. I listened with a great deal of interest the other day to the argument of the distinguished gentleman from Kentucky [Governor MCCREARY] who, by reason of his connection with the International Commission that endeavored to bring about some uniformity of action among the nations of the earth with regard to bimetallism, I inferred was well acquainted with the subject and well qualified to discourse upon its merits.

I listened to him with careful attention, and I heard him proclaim time and again that Great Britain was the only obstacle in the way of an international agreement for a bimetallic currency all over the world. But, after making that declaration, he turns and appeals to this House to join with him in voting to put a stigma upon silver, to join with Great Britain in doing that which she has just done in India, where she has struck silver the most severe blow, perhaps, that it has ever received, crushing it into the dust. He called upon this great country, with its sixty-seven millions of people, to practically demonetize silver and to proclaim to the world that it was the policy of the United States Government to relegate silver to the past, and never again to incorporate it into our standard coins.

There may be something in that argument, Mr. Speaker, but I have failed to see it. In my experience I have encountered men so passionately vindictive that they would lift a fallen enemy from the ground and set him on his feet for the pleasure they took in knocking him down again; but it has remained for the bimetallic single gold standard school of Democrats to illustrate a degree of charity that is too sublimated for my comprehension. They are willing to knock down a friend and trample him in the dust for the tender, devotional pleasure it gives them to set him on his feet again. [Laughter.]

That is practically the position occupied by gentlemen who proclaim their devotion to a bimetallic currency, and who at the same time tell us that now is the time to demonetize silver and to proclaim to the world that we will have nothing more to do with it.

I think, Mr. Speaker, that there are symptoms to which we can not close our eyes, indicating what is to be the result of this vote. I have no idea or hope but that the majority of this House will vote for the unconditional repeal of the Sherman act and stop there. I am sorry, because I believe it portends more to us than any of us can now adequately predict.

I fear it, sir, because I think it is only one link more in the chain which is being welded to separate the two classes of people in this country. There is nothing more dangerous to the future of a republic than disparity in the wealth of its people, and I can see plainly, to my mind at least satisfactorily, that the demonetization of silver means a still wider separation of what are known as the wealthy classes from the laboring and other classes of people in this land.

Under a system of tariff that has built up nabobs, and enabled them to live in a style that rivals the magnificence of royalty, these distinctions have grown and flourished, and now, beyond that, it is proposed to add to the gains which they have accumulated during twenty-odd years past, and to put upon the shoulders of the laboring masses, the toilers, and the delvers the additional burden caused by the appreciation of gold which will necessarily come from adopting the single gold standard in this country.

For these reasons, Mr. Speaker, I shall not make any prognostications. I can only say to my brethren on this floor that while we may be defeated in this first effort, while we may be crushed for the present, still I am hopeful of the intelligence of the people of the United States, and I believe the time will come when the wrong which is about to be perpetrated will be righted, and when we, who represent what I believe to be the sound money policy of the country, will be able to look back upon our record with pride. [Applause.]

[Here the hammer fell.]

Mr. HOPKINS of Illinois. Mr. Speaker, in the message which the President of the United States submitted to Congress at the opening of this session he used this language:

> The existence of an alarming and extraordinary business situation, involving the welfare and prosperity of all our people, has constrained me to call together in extra session the people's representatives in Congress, to the end that through a wise and patriotic exercise of the legislative duty with which they solely are charged present evils may be mitigated and dangers threatening the future may be averted.

And after speaking at some length of the peculiar and forlorn condition in which the country is placed to-day, he said:

> I believe these things are principally chargeable to Congressional legislation touching the purchase and coinage of silver by the General Government.
>
> This legislation is embodied in a statute passed on the 14th day of July, 1890, which was the culmination of much agitation on the subject involved, and which may be considered a truce, after a long struggle, between the advocates of free silver coinage and those intending to be more conservative.

This language of the President clearly indicates what to his mind should be the subject of legislation at this extraordinary session of Congress, and it also expresses the sentiment that party considerations should not enter into the deliberations of either of the great political parties in determining the remedies for the evils portrayed in his message.

I had hoped, Mr. Speaker, that the Democratic party, as represented in this House, would accept of this message in the spirit in which it was given by the Chief Executive, and would embark upon the consideration of the legislation that is proposed to relieve the country from its present financial distress, on broad and patriotic grounds. The Republican Representatives in Congress were ready and willing, and even anxious, to meet their Democratic colleagues, not as partisans, but as patriots, to confer together, and from such conferences to evolve some kind of legislation that would meet the demands of the public in this great emergency, and that would show to the country that in a crisis, such as is now experienced by the people, sectionalism and partisanship would not dominate and control either of these great political organizations.

This wish and hope that I have expressed was indulged in not only by the Republican members of this House, but by the country generally. That we were fated to disappointment is now known to all. On the 11th of this month the gentleman from Missouri [Mr. BLAND] presented the following resolution for adoption in the House:

> *Ordered by the House*, That H. R. No. 1 shall be taken up for immediate consideration and considered for fourteen days. During such consideration night sessions may be held, for debate only, at the request of either side. The daily sessions to commence at 11 a. m. and continue until 5 p. m. Eleven days of the debate on the bill to be given to general debate under the rules of the last House regulating general debate, the time to be equally divided between the two sides as the Speaker may determine. The last three days of debate may be devoted to the consideration of the bill and the amendments herein provided for, under the usual five-minute rule of the House, as in Committee of the Whole House. General leave to print is hereby granted.
>
> Order of amendments: The vote shall be taken first on an amendment providing for the free coinage of silver at the present ratio. If that fails, then a separate vote to be had on a similar amendment proposing a ratio of 17 to 1; if that fails, on one proposing a ratio of 18 to 1; if that fails, on one proposing a ratio of 19 to 1; if that fails, on one proposing a ratio of 20 to 1. If the above amendments fail, it shall be in order to offer an amendment reviving the act of the 28th of February, 1878, restoring the standard silver dollar, commonly known as the Bland-Allison act; the vote then to be taken on the engrossment and third reading of the bill as amended, or on the bill itself if all amendments shall have been voted down, and on the final passage of the bill without other intervening motions.

This resolution was the result of a conference or caucus between the Democratic members of the House representing the extremes on the silver question. No Republican member had any voice or vote in determining any of the propositions embodied in the resolution which I have just had read at the Clerk's desk. It is the result of Democratic partisan consideration. When it was presented and its passage demanded by the Democratic Representative having it in charge, by authority of the caucus of the party, various members on our side protested against its adoption because they believed, as we all believed, that, in a great emergency like this, no Representative should be limited to either of the extremes presented in this resolution.

I say either of the extremes, because the bill itself calls for a repeal of the purchasing clause of what is known as the Sherman law unconditionally, and without any legislation accompanying it tending to the increase or expansion of the currency of this country to meet the wants of a constantly increasing population and a constantly increasing volume of business, while the amendments which are proposed in the resolution limit the vote to the free coinage of silver upon some ratio varying from 1 to 16 to 1 to 20, not one of these ratios being in accordance with the commercial difference that to-day exists between the two metals.

Republicans have a right, Mr. Speaker, to be justly indignant, as they are, at the treatment which has been accorded them by their Democratic colleagues on this floor in forcing the adoption of this resolution, and the consequent limitation of the consideration of this great question, which is affecting every section of our common country, without any privilege of suggesting any amendment, or embodying any proposition in the way of a substitute, that in the judgment of the Republican members of this House will aid in lifting this pall from the business of the country.

No political advantage can be gained by such partisanship. The people of this country are too intelligent, and their attention is directed too strongly to the consideration of this question

in Congress now to be misled by any of these limitations which have been imposed upon the representatives of the people in this resolution on which we are called to vote on the 28th of this month. What they demand now is legislation that will relieve the country from its present stagnation of business. They wish to see legislation that will restore confidence to the business men and to the manufacturers in this country. They wish to see the wheels of industry again started, the factories thrown open and the unemployed men who are to-day crying for bread or for work, given their old employment, with the remunerative wages to which they have been accustomed during the many years that the Republican party has been in control of this country.

What is the remedy that is offered by Mr. BLAND of Missouri and the majority of the Democratic party as represented on this floor? It is the free and unlimited coinage of silver on a ratio of 16 to 1, or some ratio intermediate between that and 20 to 1, including the latter number; and in case of the failure of any of these propositions to receive the indorsement of this House then the proposition is to reënact what is denominated the Bland bill of 1878.

These, and these alone, are the propositions which are presented by the members of the Democratic party, as represented on this floor, as a panacea for the ills under which the country is suffering. It will require, Mr. Speaker, more than the faith of the early Christians for any person to believe that a remedy can be found in the adoption of any of them. When they are subjected to cold analysis, in the light of historical facts, they fail utterly in furnishing the relief that is needed by the people of this country.

I have noticed in all the speeches that have been made by the friends of the white metal that they are more powerful in declamation than logical in reasoning, and that glittering generalities are substituted for substantial reasons to lead the public to a silver basis. Each speaker who has followed Mr. BLAND, the great apostle of free silver in this country, on that side of the question has prefaced his remarks with a statement that he is a bimetallist, and has assumed, without any reason therefor, that those who are not prepared to adopt any of these ratios submitted in this resolution under consideration are enemies of bimetallism, if indeed they do not belong to that despised class denominated by our Populist friends "the Gold Bugs of Wall street."

Bimetallism can not be had in this country by arbitrary legislative enactment. The commerce and trade of the world can not be commanded or changed by the American Congress alone. It would be as easy to change the flow of water over the Falls of Niagara by bill in Congress as to create practical bimetallism of the two metals—gold and silver—in this country by legislative enactment, without taking into consideration the commercial value of the two metals and their condition and use in the other civilized countries of the world.

These so-called friends of free silver are misleading the people, if not themselves also, when they insist that the adoption of any one of the ratios proposed in the pending resolution will restore practical bimetallism in the United States. They say with truth that gold and silver are recognized in the Constitution as the money metals, and that in 1792 we established bimetallism in this country by recognizing both gold and silver at a certain fineness on the ratio of 15 ounces of silver to 1 ounce of gold, and that from that day to 1873 we were committed by acts of Congress to bimetallism.

In all these statements, Mr. Speaker, I find myself traveling the same road with the so-called friends of free and unlimited coinage of silver. These are historical facts that are known even to the school children of this country, but it is equally well known that never for three consecutive days, from the adoption of the ratio of 15 ounces of silver to 1 ounce of gold in the laws of 1792, up to the present time, have these two metals traveled in company upon the ratio fixed by law. The commercial values of gold and silver have invariably controlled their legal value, and the enactments of Congress upon this subject have been a dead letter.

Whenever legislation interferes with the natural laws of trade it becomes inoperative. You can no more fix and determine by legislation adopted in this Congress the relative value of the two metals than you can change and modify the laws of nature. The laws of trade and commerce are as inexorable as the law of gravitation.

These principles were well known to the founders of the Republic, and it was for that reason that Robert Morris, the great financier of the Revolution, was opposed to the double standard. He believed from the wide experience that he had had in financial matters, and from the profound study which he had given the subject, that the two metals, gold and silver, could not by legislation be held at a certain ratio for any length of time, and hence in his discussion on the adoption of the laws relative to this subject, and the establishment of a standard of value and medium of exchange, he favored one metal.

It is true at that time he favored the silver metal. And why? Because at that time silver was used as a standard of value in all civilized nations of the world. It was before the discovery of gold in California and Australia, and before gold had become the standard of value of the great civilized nations, as it is to-day.

Alexander Hamilton himself, while recommending, as he did in his celebrated report to Congress, the adoption of the bimetallic theory, did it with grave doubts and many misgivings. He saw with almost prophetic eye, that if the ratio established by law of the two metals did not conform strictly with the commercial value of the two metals, that it would be utterly impossible to have them interchangeable in the channels of trade in this country on the ratio fixed by act of Congress. He stated, and it is a well-known fact, a fact that will not be disputed by any intelligent member of this House, that he held to the belief that if but one metal should be adopted as the standard of value and the medium of exchange, that metal should be gold, because of its less variable value.

What is the result, Mr. Speaker, of the adoption of bimetallism in this country at the ratio of 15 ounces of silver to 1 ounce of gold? The records from the Treasury Department, together with standard financial works treating of this subject, show clearly that the two metals never for one day traveled in company under that ratio. Gold was undervalued, and refused to keep company with her white brother.

At that time the legal ratio between the two metals in France and other European countries was 15½ grains of silver to 1 grain of gold, and hence the silver that was coined drove out of the channels of trade the yellow metal, and we were practically a monometallist country on a silver basis from 1792 up to a revision of these laws, under the leadership of the great Senator from Missouri, Thomas H. Benton, who, in 1834, secured a change of ratio, making 16 ounces of silver the legal equivalent of 1 ounce of gold.

This ratio did not conform to the commercial difference in the two metals, but at this time England had established the gold basis for her standard, and gold was coming into more general use as the great money metal of the world. The country at the time of this change felt the need of more gold in the channels of trade in the American States, and this change in the ratio was for the purpose of inducing gold to leave foreign countries and seek our shores for investment. By the establishment of this ratio of 16 ounces of silver to 1 of gold, silver was undervalued, and it, in its turn, refused to circulate as a money metal on that ratio with the yellow metal.

The commercial difference of the two metals at this time was only 3 cents on a dollar. In other words, a silver dollar, on this ratio, was worth 3 cents more, intrinsically, than a gold dollar, and this difference was sufficient to send it abroad for investment, and leave gold as the sole metal for trade and commerce in this country. The mints of the United States were open equally to both metals on this ratio; yet, as a matter of fact, silver was practically unknown as a money in use. Whatever was coined at the mints was immediately shipped to other countries, and there melted into bullion and sold at its market value.

At this time, Mr. Speaker, there was no cry raised in favor of this white metal. By the establishment of this ratio this country was placed upon a gold monometallic basis as firmly and as securely as it would have been had silver been demonetized. Gold was the standard of value and our only medium of exchange, and was the circulating medium of this country up to the time of the outbreak of the civil war and the issue of Treasury notes such as are now known as the greenback.

The crime of the demonetization of silver, if crime it be, antedated the legislation of 1873. It is true that up to the revision of our coinage laws in 1873 the silver dollar was known upon our statute books, but it was practically demonetized, as I have before said, in 1834, when the ratio of the two metals was changed, and the legislation of 1873 was but recording what commerce and trade had already done for this white metal.

On the ratio established in 1834 between the two metals, of 16 ounces of silver to 1 ounce of gold, the legal value of an ounce of silver is $1.29. Under the old ratio that was established in 1792, of 15 ounces of silver to 1 ounce of gold, the ratio was fixed upon the basis of silver being worth $1.38 an ounce. At this time, as I have already said, all of the civilized countries of the world had their mints open to the free and unlimited coinage of silver; and yet, Mr. Speaker, because the legal ratio fixed in 1792 of 15 ounces of silver to 1 ounce of gold did not correspond with the commercial ratio, the two metals refused to circulate together; they varied in their commercial value from year to year, but slightly, it is true, but in a sufficient amount to drive silver from our shores and cause it to seek investment, not as the coin of our country, but as bullion, in foreign markets.

In 1819 the commercial value of an ounce of silver was $1.35. This, you will see, was within 3 cents of par, or the legal value fixed upon an ounce of silver when bimetallism was established in this country.

Now, bear in mind the fact that the mints of all the civilized nations were open at this time to the free and unlimited coinage of silver; bear in mind, also, the fact that every country in the then known world was using silver as a money metal, and yet, with a 3 per cent difference between the commercial and the legal ratio, the friends of silver were unable to bring it to par with gold, and unable to keep it in the channels of trade.

In view of these facts, which are as plain and clear to the members of this House as the king's highway, I ask in the name of common sense, I ask in the name of justice to the great laboring masses of this country, I ask in the name of the great producing classes of this country, when to-day there is a difference of more than 57 per cent between the legal and the commercial value of an ounce of silver, and it has been demonetized in all the civilized countries of the world, how is it possible for the friends of silver to hope that by the reëstablishment of the free and unlimited coinage of silver at the ratio of 16 to 1, as proposed in the pending amendment now under consideration, it will come to par, and that an ounce of silver, which can now be purchased in the market for 72 cents, by a stroke of the Congressional pen can be made of the value of $1.29?

The very statement of the proposition is its best refutation. As well might you say that an act of Congress would cause the waters of the Mississippi to stop their flow, or the rocks of the Sierras to burst asunder at Congressional dictation, as to contend that under present conditions the reëstablishment of the free and unlimited coinage of silver in this country, on the ratio proposed, will bring the commercial value of silver up to its legal value.

Let us consider for a moment, if you please, Mr. Speaker, this subject a little further in order to demonstrate the utter absurdity of the position of the so-called friends of bimetallism who advocate the free and unlimited coinage of silver on any of the ratios that are proposed in the pending amendments. There are in the world in round figures $4,000,000,000 worth of silver. This to-day is worth about 72 cents an ounce.

Now, these free-silver advocates, the followers and supporters of Mr. BLAND of Missouri, in their efforts to force this legislation upon Congress, and its results upon the people of this country, tell us that by the very magic of free coinage by the United States, standing separate and alone from all the other civilized nations of the world, it is going to raise this $4,000,000,000 worth of silver from 72 cents an ounce to $1.29 an ounce. In other words, that by the enactment of this proposed amendment for the reëstablishment of the free and unlimited coinage of silver in this country on the ratio of 16 to 1 they are going to add a value of more than $1,500,000,000 worth to the world's supply of silver.

Was ever a more astounding proposition presented to any legislative body or to any intelligent, sane men? Does not the simple rehearsal of these facts demonstrate to those who are least familiar with this subject the fact that the position they assume is utterly untenable, and that if it were carried out it would instantly put this country upon a silver basis and would drive the six hundred and odd millions of dollars of gold that are now in circulation in this country into safe-deposit vaults, and to other secret places where trade and commerce would know it no more forever?

Mr. Speaker, it does not lie with the gentlemen who are advocating the free and unlimited coinage of silver upon this ratio, or even upon any of the ratios that are suggested in the amendments, to claim that those who are opposed to their propositions are the enemies of bimetallism in the United States. These men, while they are professing to be desirous of carrying out the provisions of the Constitution and the principles of the early fathers in establishing and maintaining the two metals at a parity, know when they make these professions, that if their propositions are adopted that this country will become a monometallic and not a bimetallic country, and that it will be a silver monometallic and not a gold monometallic country.

I have not the time nor the inclination to stop here and portray to the members of this House or the country the direful results that would follow from their successful efforts in this session of Congress. The first result would be to contract the currency to the amount of the six hundred and odd millions of gold which are now in circulation.

We are to-day, Mr. Speaker, experiencing the sad results of a contraction of the currency. This legislation, instead of proving a relief, would still further aggravate the disease that it seeks to remedy. Whenever this country substitutes a silver for a gold basis our stocks and bonds and other obligations held in European countries will be immediately sent over here for liquidation, and what we are now experiencing in the way of a practical cessation of all business will become complete, and this country would go into general bankruptcy.

I shall take no time to demonstrate the impracticability of adopting either of the other ratios proposed in the pending amendments. Neither of them conforms to the commercial ratio between the two metals. The commercial ratio, as shown by the report of the Director of the Mint, dated August 1, 1893, is as 1 to 28.52. How long that ratio will remain it is impossible for any man to state.

If the legal and commercial ratio should be made identical in this legislation by the adoption of 28.52 of silver to one ounce of gold, a week after the adoption of the law the commercial ratio would be different. The report which I hold in my hand, made by the Director of the Mint on the 1st of this month, shows that there has been a steady decline in silver since 1873, and that it has been more rapid since 1890 to the present date than for any like period in the history of our country.

Some gentlemen may say that this decline is attributable to the demonetization of silver in 1873; but I would ask all such to bear in mind the facts which I have stated already, that the demonetization of 1873 was only recording in a legal way what had been practically a commercial demonetization of silver for a period of nearly forty years prior to that date.

The chief reason, in my judgment, that silver has steadily declined in value is the fact that during this period its annual production in this country has more than doubled, and its use as a money metal has been destroyed in the leading countries of Europe. In 1871 Germany suspended the free coinage of silver and adopted a single gold standard. In 1873 the German Empire provided for the retirement of silver coins in circulation and the sale of its silver bullion. This threw about $140,000,000 of silver bullion upon the market and still further depressed the market price of silver.

France also, in 1873, by a Treasury order limited the amount of silver to be accepted; and in 1874 silver was demonetized in Sweden and Norway. In 1875 Holland suspended free coinage of silver and established a gold standard. In 1876 France discontinued the further coinage of silver, and Russia, in the same year, suspended free coinage of silver and adopted the gold standard; and in the same year Spain, by her royal decree, stopped the further coinage of silver.

In 1892 Austria-Hungary adopted the single gold standard and discontinued the use of the white metal as a money metal. Then in 1893, just previous to the assembling of the members of Congress in this extra session, India, the great silver country of the world, suspended the free coinage of silver.

Under these circumstances it requires no metaphysical arguments and no philosophizing to show to the people of this country that silver has constantly and steadily fallen in its commercial value in the great countries of the world; and these facts, too, must demonstrate to all alike the utter futility of any effort upon the part of this Congress or any subsequent Congress, while the other countries which I have just named maintain a gold standard, to attempt to establish free and unlimited coinage of silver in this country on any ratio whatever

It is a practical impossibility, and, as I have said, the men who advocate it upon this floor or in any other place, in the limits of our broad Republic, are not the friends of bimetallism, but for selfish motives, or from misguided reason, they have adopted this theory with the knowledge, unless they are blind to all the facts, that the adoption of it upon any ratio whatever will place the greatest Republic of all times upon the silver basis of our sister Republics in Central and South America.

Mr. Speaker, I would not be representing the intelligence of my district were I to vote, under these conditions, for any of the amendments proposed by the honorable member from Missouri [Mr. BLAND]. Not only, sir, would I be misrepresenting the intelligence and the interests of my immediate constituency, but, in my judgment, I would be false to the best interests of our common country if I yielded to any of the seductive arguments which have been portrayed in such eloquent terms by members who have spoken on that side of the question, and vote in favor of any one of the propositions which they present. This is a crisis which calls for intelligent action; not only intelligent action, but for prompt action, if we would benefit our country in this its hour of commercial peril.

The reasons in part assigned for my objection to the indorsement of any of these ratios for the free and unlimited coinage of silver lead me also, Mr. Speaker, to vote against the proposition, which is suggested in the last amendment of the gentleman from Missouri, for the reënactment of the so-called Bland-Allison act of 1878. That act, Mr. Speaker, provides for the purchase by the Government each month of not less than $2,000,000 worth of silver and not more than $4,000,000 of silver bullion for

coinage into silver dollars, at a rate of 412½ grains of standard silver or 371¼ of fine silver for each dollar.

It was left in the discretion of the Secretary of the Treasury, between these limits, to determine the amount of silver bullion that should be purchased under that act from month to month. It was upon the statute books of our country until the enactment of the so-called Sherman law on the 14th day of July, 1890. That it was a menace to the continuance of our maintaining our paper currency and silver on an equality with our gold currency is evidenced by the letter of President Cleveland, in 1885, to Gen. Warner of Ohio, a letter which has become somewhat celebrated in the consideration of the silver question, and which affirmed, in substance, that the continuation of that act upon the statute books would lead this country to a silver basis.

This agitation, Mr. Speaker, of the silver question was begun by the opponents of the resumption of specie payments, which, under the act of 1875, was to take place on the 1st day of January, 1879. It was, in one sense, a demand for more money. That demand for more money first found expression in what is called the inflation bill, which was passed by both Houses of Congress in 1874, and was subsequently vetoed by President Grant.

When the friends of an inflated currency were foiled in their attempt by our great military chieftain, who was then the President of the United States, they took up the subject of the demonetization of silver under the act of 1873, which agitation continued with varying success until 1878, when, as a compromise with the friends of free and unlimited coinage of silver, the Bland-Allison act was proposed, and finally enacted into a law. It never met the hearty approval of the able financiers of the country, but was then regarded and has since been treated as a temporary makeshift between the advocates of sound money on the one hand and the inflationists on the other.

There was nothing in this act, Mr. Speaker, when it became a law, that pledged this country to maintain the silver dollars which were to be coined under that act at a parity with gold, and that is one of the reasons why President Cleveland, as early as 1885, believed that it was a pernicious law, and that the continued coinage of silver dollars under that act would drive gold to foreign countries and place us upon a silver basis.

The much-abused Sherman law, in my judgment, is in many respects preferable to the adoption of the proposed amendment for the reënactment of the so-called Bland-Allison act; because, while it authorizes the Secretary of the Treasury to purchase 4,500,000 ounces of silver per month, and issue silver certificates for the market value of this bullion, it also pledges the property and the credit of the Government to maintain these silver certificates at a parity with gold.

And it is that pledge, and that pledge alone, which has been faithfully carried out by each Republican Secretary of the Treasury, which, in my judgment, has enabled this Government to maintain this vast sum of silver dollars and silver certificates at a parity with gold. You divorce these silver dollars and silver certificates from gold, and allow them to circulate upon their own merits without the pledge of the Government's property and its credit to maintain them at a parity with gold, and they would sink instantly to their commercial value.

At the present price of silver more silver dollars would be coined under the Bland-Allison act per month than would be by the purchase of silver bullion under the Sherman act of 1890. As I have already shown, under the Bland-Allison act the Secretary of the Treasury is to purchase not less than $2,000,000 worth of silver per month and coin the same into dollars. At the present price of silver, which I estimate at 72 cents per ounce, $2,000,000 worth would produce $3,685,714, while 4,500,000 ounces of silver at the same price cost only $3,150,000.

Thus you see that the purchase of silver under the act which it is proposed to repeal, at the present price, is $515,714 a month less than would be coined under the so-called Bland-Allison bill. Under the present condition of the Treasury the reënactment of the law of 1878 would put us upon a silver basis as quickly as the enactment of a free, unlimited coinage bill on any of the ratios suggested in the pending amendments. Indeed, Mr. Speaker, the facts and figures which I have here presented furnish a sufficient reason, for me at least, to vote against all of the propositions that are contained in the proposed amendments to the pending bill for the repeal of the purchasing clause of the Sherman act.

This leads me to a consideration of that act. I remember well the discussion which took place in this Hall, and in the Senate, which resulted in this legislation. My friend from Missouri [Mr. BLAND] was then contending, as he is now, for the free and unlimited coinage of silver. His party associates then were not, as now, divided upon this question. We then had a Republican President, and men who to-day on that side of the House denounce the free and unlimited coinage of silver as a menace to the maintenance of our commercial prosperity, were then agreed to follow him in his efforts to secure legislation of this kind.

Whether since that time, by a careful study of this subject, they have abandoned the heresies which they then professed to believe in, or whether they permitted partisanship and their desire to embarrass the Republican party to control their voices and votes, I shall leave to them to say. In the discussion of this question at present I shall not stop to indulge in any partisan debate or to array unnecessarily the Democratic party for its peculiar position upon this question in the years that have gone. The impending crisis is too grave and the necessity for prompt action too great to stop in the midst of this effort to relieve the country from this condition to indulge in crimination or recrimination.

It is due to the facts of history, however, to state that by an almost united vote the Democratic members of the House of Representatives voted for the free and unlimited coinage of silver on the ratio as proposed in the first of the pending amendments. It had passed the Senate by a combination between the Democratic Senators and the Republican Senators from the silver States. The Republican members of the then House of Representatives believed then, as they believe now, that the true interests of this country would be imperiled if such a bill were enacted into law, and they refused to approve of the bill that was sent to the House from the Senate and sent a substitute to the Senate therefor.

This resulted, as those who are familiar with legislation will understand, in a conference committee, composed of a certain number of members selected by the House and another number selected by the Senate. After mature deliberation it was deemed by a majority of this conference committee that this act, as it is now found on the statute book, would be better for a temporary measure than to adopt the then Democratic idea of free and unlimited coinage. No man who had favored this measure believed that it was to long remain on our statute books.

The hope was then indulged that time and experience would lead a sufficient number of Democratic Representatives and Senators to understand that the prosperity of our country must depend upon sound financial legislation, and that under the facts that exist in the world to-day regarding silver it would be utterly impossible for us to maintain it at any ratio on a parity with gold, and these considerations would induce them to desist from their efforts to secure the legislation that has always been championed by Mr. BLAND of Missouri.

That hope, Mr. Speaker, has been partly realized by the firm stand that has been taken by President Cleveland upon this question. Many members of this House who three short years ago were loud in their declamation in favor of the free and unlimited coinage of silver are now arrayed on the conservative side, under the leadership of their President, a position which has been held for so many years alone by the Republican party.

I am not one of those, however, Mr. Speaker, who are willing to confess that nothing but unmixed evil has followed from the adoption of the Sherman law. That legislation, as I have shown, was an improvement over the legislation that was given to the country in 1878, known as the Bland-Allison law. The question may arise, then, why should I vote for the repeal of the purchasing clause? The answer, to my mind, is clear and simple. The President of the United States, by his message to Congress, has said, in substance, that he is unable to maintain the parity between the two metals because of the constantly increasing amount of silver that is stored in the Treasury under this law.

There is no doubt in my mind that the attitude of his party as a free and unlimited silver-coinage party has added to the complications of this question. The people of Europe who have been in the habit of purchasing our bonds and stocks have seen a party placed in power by the votes of the people whose cardinal principle for many years upon the financial question has been the free and unlimited coinage of this white metal, and with this legislation upon the statute book, and that party in power, they have felt that the President himself would not be able to control his party on this subject, and the result has been an effort upon their part to dispose of all obligations in this country that might by legislation be required to be paid in silver instead of being paid in gold.

The President's message to Congress, as it is interpreted by the Republicans, is an appeal to them to come to his aid and assist him in reëstablishing the finances of this country upon the stable basis upon which they had been maintained for more than a generation by the Republican party, and as lovers of our country we are willing to respond by our voices and votes, and repeal this clause, thus placing it beyond the power of this Democratic political organization, committed to the free and unlimited coinage of silver, to destroy the equality between the metals as they have been maintained under Republican administration.

Not only that, Mr. Speaker, but the bill by which we repeal

the purchasing clause of the act of July 14, 1890, reaffirms a determination upon the part of this Government to maintain the two metals at a parity. We have a vast amount of coined silver dollars and a large amount of silver certificates, aggregating in round numbers six hundred million dollars. Those silver dollars and those silver certificates must be maintained at their par value. This bill, as I have said, pledges the property and the credit of the Government to that policy.

I am reminded, however, by gentlemen who sit around me, that the repeal of the purchasing clause of this Sherman law as is proposed under the pending resolution gives no legislation for the future of silver, and leaves us without an expanding circulating medium to meet the wants of the country.

I appreciate that to its full extent, Mr. Speaker, and am one who believes that this country should have legislation that will utilize both of these metals for the benefit of the people. It will not do after the Republican party, through its members in the House and the Senate, have aided in securing the repeal of the purchasing clause of the act of July 14, 1890, thus enabling the President of the United States to maintain our present volume of silver and silver certificates at a parity with gold, for him and his party to stop there.

The people of this country expect the President and the Democratic party, by proper legislation, to present some scheme of finance that will utilize these metals, and will furnish to the country a sufficient supply of money to meet the wants of trade and commerce; and if they fail in that the people will condemn them as false to the interests that they pledged themselves to protect and maintain when they were placed in power.

Now, sir, had this resolution that has been adopted here not limited us to the amendments upon which I have spoken, I should have been glad for one to have suggested proper and germane amendments to this bill looking to an increased circulation, expanding and elastic in its character, to meet the wants of a constantly increasing population in this country, and the needs of a growing commerce and trade. My views might not meet with the approval of all this House, but a discussion along this line would certainly lead to the adoption of some proposition that would meet the requirements of this occasion.

As I have said, Mr. Speaker, the great cry that is made by the friends of the free and unlimited coinage of silver in this country is that if it is treated simply as a commodity, and its money qualities taken away from it or limited or impaired in any manner, that the people will suffer because of a scarcity of a circulating medium, and have argued with a good deal of justness that the prices of all commodities will fall if there is a contraction in the standard of value and medium of exchange.

In my judgment their objections can be met by legislation that will continue the gold dollar as established by the law of February 12, 1873, as the unit of value of the United States. Instead of from this date coining gold at the mints, I would use the gold bullion as a basis for the issuing of gold certificates. That could be managed, Mr. Speaker, in this manner: Whenever the holder of gold bullion in an amount of $100 or more should deposit that in the Treasury of the United States, or at any mint or assay office, that the Secretary of the Treasury might designate the depositor should receive, instead of gold coins therefor, registered Treasury notes, of such denominations as the Secretary of the Treasury might designate, called Treasury notes, for an equal amount to the number of dollars of the bullion deposited.

Upon these notes I would have certified by the Secretary of the Treasury that there had been deposited in the Treasury of the United States an amount of gold equal to $100, or the amount that the depositor had placed in the Treasury of the United States, and then have the notes certify that they are redeemable in an amount of gold equal to $100, or whatever was deposited, on demand of the holder thereof.

I would treat silver in precisely the same way, and whenever the holder of silver bullion in quantities aggregating a hundred dollars' worth or more deposits that bullion with the Treasurer of the United States, or at any assay office of the United States that might be designated by the Secretary of the Treasury, I would permit him to receive therefor a Treasury note certifying that the depositor had left in the Treasury of the United States an amount of silver equal to $100, or whatever sum the silver bullion was worth according to our standard of value on the day of its deposit, and then have that silver note certified by the Secretary of the Treasury that it is redeemable in an amount of silver equal to $100 or whatever amount was deposited at the time it was issued, on the demand of the holder thereof.

You will see, Mr. Speaker, from this that neither the gold nor the silver certificate is redeemable in any number of dollars, or at any specified time. The unit of value in this country, as fixed by the law of 1873, is the gold dollar of 23.22 grains of pure gold; and these gold and silver certificates would be measured in the market by that unit of value. Under this plan, as it seems to me, properly elaborated and carried out by well-considered legislation, both of the great money metals can be utilized by the Government of the United States to furnish a suitable and elastic and constantly increasing currency to the people of this country.

There is no danger under legislation of this kind of a silver certificate depreciating in the market—that would be utterly impossible. It would be as valuable in the markets of Europe as a gold certificate. It would be as valuable in any section of the United States as the gold certificate. Why? Because it evidences upon its face that it is good for a quantity of silver equal to its face value.

I would make these certificates legal tenders for all public and private debts.

Under this system, as I have said, there can be no question but what those silver certificates would circulate as money in the country as readily as gold coin or gold certificates.

In this manner the product of the American mines can be utilized for the benefit of the whole country, and at the same time the certificates that are issued upon bullion that is deposited with the Treasurer of the United States will circulate in New England or through the Middle States or in any section of the country as well as the greenback of to-day or as gold coin.

It has been demonstrated, Mr. Speaker, I think, by experience, that gold and silver coins do not circulate among the people. They seek places of deposit in our banks and subtreasuries, and there is a demand among the people for a paper money. It is more convenient. It is easier to handle. It is cheaper to transport from one point to another, and in every respect, almost, the people of this country have shown that they prefer this kind of money, where they can be satisfied that it is as good as gold coin. And when they are assured that back of each one of these certificates there is gold or silver bullion of sufficient quantities, so that that bond can be taken to the Treasury of the United States, or any of our subtreasuries, and redeemed at its par value, there will be no question about the people of this country receiving it in all the channels of trade.

If a bill could be prepared and passed in this Congress, embodying this idea, it could be elaborated, Mr. Speaker, so as to meet any objections arising from the fluctuations in value of either of the metals. I shall not take the time here to demonstrate to the House and the country how that can be done. From the study I have given this subject, and from the opinions of the men who are well versed in the science of finance, this is one of the most feasible plans that can be adopted by the people of this country to utilize both gold and silver as money.

By the adoption of this we shall avoid all the troubles and inconveniences and hardships of a single gold standard, that have been so picturesquely and so eloquently portrayed to the people of this country by the gentleman favoring the free and unlimited coinage of silver. By the adoption of this method we will also escape the equally dangerous ground of placing this country upon the single silver standard, and thus from a monetary standpoint place us on a par with the second-class powers of the earth.

No friend of either of the metals can object to a method of the character here suggested, because it takes the metal that he specially favors and utilizes it to the full extent of the needs of the Government. It makes no distinction between gold and silver, but treats both alike.

I am confident, Mr. Speaker, that with the growing demands for paper circulating medium in this country and a standard of deferred payments, that the time will come when gold and silver will have to be treated in the form here suggested, and a paper money based upon the intrinsic value of these metals will take their place; and it seems to me now is the proper time for Congress to consider this great question. Early action is called for, not only by the President of the United States, but by the people.

The picture of the condition of this country, as portrayed in the message of President Cleveland, is one that should challenge the attention of every thoughtful man. It is in such marked contrast to the condition of this country as presented by President Harrison in his last annual message that I can not refrain from quoting a few of the opening sentences in the last message to Congress from that Executive:

> In submitting my annual message to Congress I have great satisfaction in being able to say that the general conditions affecting the commercial and industrial interests of the United States are in the highest degree favorable. A comparison of the existing conditions with those of the most favored period in the history of the country will, I believe, show that so high a degree of prosperity and so general a diffusion of the comforts of life were never before enjoyed by our people. * * * There never has been a time in our history when work was so abundant or when wages were as high, whether measured by the currency in which they are paid or by their power to supply the necessaries and comforts of life.

This, Mr. Speaker, was the condition of the people of this country under the last Republican Administration, and has been

the condition of the people practically for nearly a generation, during which period the Republican party has been in actual continuous control of the Government.

I trust, Mr. Speaker, that by wise and conservative action the President of the United States will be enabled to restore to the people of this country the happy, contented, and successful condition that they were in under the last Republican Administration. The Republicans, certainly in this great emergency, will rally to his support, and whenever he indicates, by message or otherwise, that owing to divisions in his own party, or for other causes, he needs the support of the Republican party to protect the best interests and welfare of our people, he will find them unitedly and patriotically responsive to his call.

[Mr. LANE withholds his remarks for revision. See Appendix.]

Mr. NEWLANDS. Mr. Speaker, I am the sole representative on this floor of the State of Nevada, a State which has suffered more than any other portion of the Union from the discriminating legislation against silver. I am also the sole representative on this floor of my party. The people in Nevada, recognizing the fact that the platforms of both the old parties were intended to mean one thing in the East and another thing in the West, and feeling assured from the record of the candidates that the election of either meant disaster to the cause of bimetallism, formed an independent organization, called the Silver party of Nevada.

Their hope was that the contest between the two old parties would be a close one, and that the independent vote of the silver States, united with the third-party vote elsewhere, would hold the balance of power in the electoral college and would either secure the election of a new candidate favorable to the silver cause, or secure from one of the existing candidates substantial concessions to that cause. The overwhelming victory of the Democratic party in States hitherto uniformly Republican rendered that hope futile; but their expectations were realized and are realized to-day, so far as the party platforms are concerned; for we find members in this House construing these party platforms in different ways, according to the interests of their section, their locality, or their individual views of the monetary question, without regard to party discipline or the unity of party faith.

I, therefore, can not take a partisan view of this subject. There are no members of my party here whom I can call to task for straying from the straight path, and I certainly can not call to task the members of other parties for recreancy, for that is a right which belongs only to those of the true faith.

I shall take simply a general view, in the interest of this entire country, taking it for granted that an enlightened self-interest will determine the action of this country as it does that of individuals.

There are two aspects to this question, one the industrial and the other the financial, and you will pardon me if I refer to the industrial aspect first, as it concerns the progress, the development, and the destiny of that great section of the country which I represent, and as the determination of this question is freighted with either beneficence or disaster to it.

But, whether we consider the industrial or financial aspect of this question, it is necessary to bear in mind the relation of this country to other countries so far as its material interests are concerned; for the rule obtains, in national as well as individual affairs, that life is a struggle for existence in which individual effort for individual success and advancement leads to the highest development of the race and of the world.

So far as the relations of debtor and creditor and the ownership and production of the precious metals are concerned, England and the United States may be taken as the two representative nations of the world. England is the greatest creditor nation; the United States is the greatest debtor nation. England is the greatest owner of the accumulated gold of the world. The United States is one of the greatest owners of accumulated silver. England, through its African discoveries, is fast becoming the greatest producer of gold. The United States is the greatest producer of silver. They are the only money metals sanctioned through the ages by custom and law.

Both metals depend for their value upon an artificial demand created by law. The laws of the various countries giving each the privilege of coinage at the government mints, providing for the weight and fineness of the coins, and declaring them a legal tender for debt, create the use of and the demand for these metals, and give them their value, and to the extent that the laws shall deny either of these metals recognition, to that extent the demand for and the value of such metal is diminished.

Leaving out the financial view of the question, it is self-evident that, if America is the greatest owner and producer of silver and England the greatest owner and producer of gold, the legislation of this country, so far as it affects the question at all, should be in favor of silver rather than gold, for silver mining sustains the life of six States, in whole or in part, and three Territories. It is the vital industry of one-third of the area of our entire country, constituting the field of exploit, of endeavor, and of hope.

It is true silver mining is not the only industry in that region; but all the other industries are built upon and dependent on it. Silver mining stands at the base of every industry in that region. I deal in no exaggeration when I make that statement. It is true we have other industries—lead, copper, and coal mining, commerce, banking, and transportation—but you will find that they are all allied to and dependent upon this great industry. In lead mining, silver is a by-product, and often constitutes the only element of profit.

So also, but in a more limited degree, in copper mining. Coal mining is prosecuted, not with a view of supplying distant markets already supplied with coal, such as Illinois, Ohio, and Pennsylvania, but for the purpose of supplying the smelters, the population of the mining camps, and the cities and towns dependent upon them, and also for the purpose of supplying the motive power for the transportation of that region.

Agriculture is pursued not for the purpose of seeking distant markets—transportation would be too expensive for that—but for the supply of the local markets of the mining regions. The lands there are not moistened from the heavens as in the East. Artificial irrigation is necessary and vast irrigation schemes, involving large expenditure, necessitating the storage of water in the mountains for the period of drought and its transportation through long and expensive canals over vast areas of what had been an arid waste, have been inaugurated and carried out for the purpose of reclaiming that country from the desert. The farmers of the Mississippi and Ohio valleys little know under what difficulties and at what expense agriculture is pursued in the intermountain region.

What will become of this vast interest when silver mining and the kindred industries are destroyed? What will become of the commerce of that region, having its sources of supply in the great commercial cities of the East and West, dependent upon local industries for its support, realizing great profits out of the most generous markets in the world; for it is well known that the most liberal market is the mining market? All the expenditures are on a liberal scale, and a mining community will spend much more per capita for supplies, for transportation, for all the necessities, conveniences, and comforts of life than any other community of a like population.

The transportation companies in this great region are also dependent upon silver mining. Did you ever reflect how many hundreds and thousands of miles of railroads have been built for the purpose of tapping the silver mines? All the transportation companies have endeavored to reach them directly or by extensions and branches, all the transcontinental railroads are dependent upon silver mining and the allied industries for their traffic—the Northern Pacific, the Union Pacific, the Central Pacific, the Oregon Short Line, the Great Northern, the Colorado Midland, the Atchison, Topeka and Santa Fe—the transcontinental business of these roads gives little profit because of the keenness of competition. It is the local transportation in the mining regions which is profitable. The only exception to this rule is the Southern Pacific, which is entrenched in and draws its support from the rich and fertile valleys of California, yielding, as they do, products of such high value as to sustain high rates of transportation. The capital stock and bonds of these railroads are owned largely in the money centers of the East.

The money centers of New York, Boston, and Philadelphia have a direct monetary interest in the prosperity of that section. I recall that several months ago I saw it stated in the papers that Mr. Villard, of the Northern Pacific, was present with others during the last Congress, urging the repeal of the Sherman act. I wondered whether the newspapers had correctly reported the fact. I could not believe that the president of that great railroad, passing through Montana, Idaho, and eastern Oregon, more dependent upon silver mining for its business than upon any other industry, gaining more profit from it than from its through transcontinental business, which is subject to extensive competition, could be here directly antagonizing that sustaining industry.

Upon inquiry I found that he represented not the stockholders, but the German bondholders, who were insistent that this country should be kept on a gold monometallic basis. Their position was that of a man holding a gold mortgage upon a silver mine, and yet they were aiding in the destruction of the very industry which stood at the basis of their bonds and gave them value.

So it is you will find throughout these monetary centers of the East—men largely interested in these great transcontinental railroads who do not know the danger which threatens their property in the destruction of silver mining. I remember when I heard that Mr. Villard was advocating the repeal of the Sherman act, I predicted that within sixty days after the repeal of that act the Northern Pacific would be in the hands of a receiver. That prediction has been prematurely vindicated. That road is already the victim of the decline in silver caused by the action of India, and is now in the hands of a receiver. The market value of the stock and bonds on the mileage of railroads actually located in the mining regions amounts to between six hundred and a thousand million of dollars. All these transcontinental or intermountain roads running throughout that country with the exception referred to will be in the hands of a receiver within sixty days after silver mining is suppressed by legislation.

You can not strike a great interest and predominating industry

of any section of the country without involving other sections. The East has a great monetary and proprietary interest in the West, a greater monetary interest than the West itself. The people of the mining region are the workers employed mainly by Eastern capital. You will find in Denver, built up by Eastern capital, magnificent buildings owned by Eastern capital, a building owned by the Equitable Insurance Company of New York which has cost between $1,000,000 and $2,000,000, and others of equal character; and yet you propose to destroy the industry, the development, and the civilization of that great region, comprising one-third of our country, and to bring additional disaster to Eastern stock markets and capital.

Ah, you say, it will not be destroyed; but I have already shown you that all the industries there are allied to silver mining, and depend upon it—lead mining, copper mining, commerce, agriculture, transportation—and after you destroy those what is there left? What is there left for that region but a return to the arid waste from which capital and civilization have wrested it?

Now, if this were the only feature of the case to be considered, I think that we all, as Americans, would agree that the great industries of that vast region should be sustained. But we are told that the industrial view of the question is a narrow one; that finance knows no boundaries of section, State, or nation; that the entire civilized world is drifting to gold; that it is fashionable to adopt the gold standard, and that we, the greatest nation of the world—I have heard that vainglorious expression very often in this debate—must be in fashion.

Let us consider that. Let us consider where our financial interest lies and ascertain whether it does not lie with our industrial interest. And here comes in the distinction between debtor and creditor nations. England is the representative of the creditor nations and is herself the greatest creditor nation in the world. She has swept the seas with her commerce, has made gain from every nation in every part of the globe, and has taken it home in the shape of gold, and loaned it to the nations of the world upon gold-bearing obligations. She has her tentacles upon every nation. She owes none but her own peple, while every nation owes her.

America, on the contrary, is the greatest debtor nation of the world. She needs such large quantities of money for the development of this great country that she can not produce enough to satisfy the demand. Hence she has to borrow from other countries and she has borrowed largely from England upon bond obligations, national and State, and upon the obligations of private corporations and individuals. It is estimated that those obligations amount to about $4,000,000,000, and yet we have in this country only $600,000,000 of gold to respond with, and only $1,500,000,000 of all kinds of money.

England, then, is the great creditor nation, America the great debtor nation. England is the greatest owner and producer of gold, America the greatest owner and producer of silver. And when we bear in mind that silver is the only metallic competitor of gold, the only metal which has been dignified through the ages with gold as one of the precious metals, I ask whether it is our policy to discredit that silver, to destroy its value, to increase the value of English gold by the destruction of its only competitor, American silver?

I wish to indulge in no declamation whatever against England. I admire the power and wisdom of that great people, infinitely more powerful, infinitely more wise than we, because they exercise their power in international affairs, and they are wise enough to legislate in their own interest, and not in the interest of other countries. [Applause.] Self-interest constitutes the prevailing motive of the governmental and political action of that great nation, while we are spending our energies in building up other nations, in appreciating the value of their accumulations and their productions and neglecting our own.

But we have another interest in this question, and that is connected with Mexico, which lies next to us. Mexico has been built up and developed by American capital, and you will find that the basis of every industry there is silver mining. It has promoted the building of railroads throughout that entire region, which are largely owned and controlled by Americans. President Diaz, the Gen. Grant of that country, has pursued a most liberal policy, and has welcomed Americans, and the country has witnessed an unprecedented development.

We have in it a monetary and a proprietory interest. Now what do we propose to do with that country? To sink its only currency to 25 cents on the dollar, to destroy the value of the product upon which its interests are based, to destroy the value of the product upon which the value of the transportation interests of that country, which are owned by us, are based. We propose to repeal the Sherman act. We propose to withdraw from silver the prop of "the greatest nation in the world," so our friends on this floor tell us. And yet, Mr. Speaker, it is a question with me whether we are the greatest nation in the world. We are constantly asserting it on this floor, but England is acting it. We deal in assertion; they deal in action.

We propose to destroy silver, for it will be destroyed by this action. If, under the influence of progressive adverse legislation, silver has fallen from $1.29 an ounce to 73 cents an ounce, I ask where will it fall after America has struck the final blow, and how, then, will you be able to restore it? Silver will then be simply the material in which promises to pay gold are written. We say that we will keep in circulation in this country this vast amount of silver, five or six hundred millions, but it will be simply the material in which promises to pay gold are written, and would it not be cheaper to write those promises on paper.

Where will we, then, get the gold with which to do our business? We may rest assured that we can not remain satisfied with only a hundred millions in our Treasury. We shall have to issue the bonds of this country and draw in more gold and thereby increase further the value of England's gold and diminish the value of American products. And when we have got that gold it will be subject to be withdrawn at any time when the desire or the caprice may seize England; so that we shall be in the position of a debtor on "call," responsive to the demand of his creditor at any time and liable to have his securities sacrificed.

We will place ourselves in the merciless grasp of the gold contraction, destructive not only of the value of silver but of the value of all our products—wheat, cotton, and all the products of labor—destructive even of the value of labor itself, for its unions can not withstand the withering effects of poverty and distress.

What are the lessons of the past twenty years as to the effect of monetary contraction? We have been through three monetary panics during that period—the monetary panic of 1873, that of 1890, and the present panic.

Toward the close of the war we had added to our population by the surrender at Appomattox 12,000,000 of people without a currency; yet we started at that time and destroyed the greenbacks, the only currency of the country, and at the same time we took steps toward the resumption of specie payments, which meant resumption in coin, either gold or silver. And though nature, as if intending a special benefaction, had exposed its riches in the silver mines of the West, we passed laws denying our people access to them. That legislation denying us the right to resort to the silver mines for one of the precious metals of the world, and the legislation diminishing the greenback currency, the only currency in use when our population had been increased in the manner I have described, started the panic of 1873. And you all know the distress, the insolvencies, the bankruptcies of the period from 1873 to 1878.

Again, in 1890, England had some difficulty with her debtors in the Argentine Republic, for all those debtors who have promised to pay in gold are coming to bankruptcy. The English bank reserves had fallen low, not because England had not an abundance of money but because she had loaned her money to other nations of the world and could not quickly recall it. She looked around, surveyed the field to see which one of the debtor nations of the world could best respond to her demand; and she fixed upon America.

Within a period of five months she called from us between eighty millions and ninety millions of dollars, constituting one-fifteenth of the currency of this country. The withdrawal of ninety millions of dollars from this country almost landed it upon the shore of bankruptcy. The banks of New York were in suspension; they issued clearing-house certificates which were taken as money, though under the law they were not legal tender; a wave of contraction swept across the country, and it was only the return of the gold, by reason of the sale of our products to Europe, that saved us from universal bankruptcy.

During the present year, when Mr. Cleveland was about to come into power, when the metropolitan press of New York, aiding the banks of that city, saw a favorable opportunity of forcing the repeal of the Sherman act, the newspapers of that city, particularly the New York Herald, the New York Times, and the New York Evening Post, joined in a clamor for its repeal, predicting every kind of calamity if it should not be repealed immediately.

A single issue of the New York Herald would embrace five or six editorials to every column, italicized and double-leaded, calling attention, in the most inflammatory and alarming language, to the danger of the situation, stating that our gold would be exported, that our foreign investors would lose confidence and sell their securities, that we were drifting on a silver basis, that our gold reserve was in danger, that our savings-bank depositors would meet with loss, that our dollar was a 58-cent dollar—editorials well calculated to excite alarm both at home and abroad. Those papers were read in England, and the owners of our securities there, thinking there was something in this senseless clamor, commenced to send their securities to this country for sale. They changed what was a natural drain from this country abroad, in the first part of the year, into a forced demand. Then came the withdrawal of deposits from the banks, and so England's withdrawal of eighty or ninety million dollars from this country has placed it in its present condition, involving the sacrifice of every kind of property, aggregating hundreds of millions—wheat, cotton, all the products of labor.

And now to-day, having sold their securities in this country two or three or four months ago, those same English investors are taking those securities back at 30 cents below what they sold them for, and so the English gold is being coaxed back by the sacrifice of American securities and products.

This presents an object lesson of what our condition will be when our financial dependence upon England becomes further assured, subject as we will be to her call whenever caprice or disaster may prompt her. We shall be subject to the storms that sweep every one of her financial seas—whether in India or South America or in Africa. We shall be obliged to sacrifice our securities and products in order to pay her back whenever she calls for her gold. If she disapproves of our policy she can withdraw her gold; if we contemplate war she can arrest prompt and decisive action; if aggression upon her part arouses us to appeal to the god of battles she can paralyze our energies upon the very threshold of war. Is it wise or patriotic to so place ourselves in the power of our great rival?

Do you say that these bonds are time bonds, and that immediate payment can not be demanded? That is true; but England can at any time force their liquidation by putting them upon the American market, and we will be obliged to absorb them. There are too many and too vast values dependent here upon the maintenance of the price of those bonds to permit us to allow their value to be sacrificed.

Now, we all admit that we must go to England for our gold. The total gold product of the country is, I believe, only $30,000,000 per annum; and one-half of that will be lost when silver mining is destroyed. We must go to England for our gold. We are in debt upon call. We shall have to store a large amount in order to be prepared to respond to every disaster that may affect that country, or to her forced demand in case of caprice, disapproval, or war.

But it is said that credit is a good thing, that there is no need of a large per capita, that credit satisfies all the demands of money. This may be true of a creditor nation, but it is never true of a debtor nation. Gentlemen refer to the per capita of England or Germany as being somewhat less than ours. That means simply that the actual coin in either of those countries is somewhat less per capita than in ours. But those countries, when the bank reserve falls below a normal standard, can recoup, can restore their reserve by calling upon the debtor nations, the nations that owe them money, whilst we have no debtor nations upon which to call. We must, therefore, preserve a larger amount of money subject to call.

Now I ask what is the lesson of the panics to which I have referred; three panics within twenty years? Why, sir, the lesson is that in all cases the volume of money here has been too small. The lesson is that the metallic money of the world is not sufficient for its demands; and this has always been proved by the existence of a large amount of paper money uncovered either by gold or silver. One-third of the world's money to-day consists of paper money not covered either by gold or silver. Yet we propose to destroy one-half of the metallic money.

We, who have suffered in this way, propose to join England as a creditor nation in a crusade against the only resource, the only salvation of the debtor nations of the world.

I ask, Mr. Speaker, where will we get gold? Austria is clamoring for gold. She has got about a hundred or a hundred and twenty-five of the one hundred and eighty millions she desires. She has been looting our Treasury in order to secure what she has. Almost all of her gold bears the stamp of the American eagle. We are the only country on earth that has not protected its gold. If Austria should go to Germany and attempt to get it, the great Imperial Bank says, "No; we have no gold for export." If she goes to France, with its seven hundred millions of silver circulating side by side with an equal quantity of gold, and presents to the Bank of France a note or check and asks to be paid in gold, it would not be given for such a purpose.

France exercises the option which we ought to exercise for the protection of her gold. If the Bank of France has a surplus of gold and desires to pay it out on check against it or in the redemption of its notes it does so. If not convenient, it pays in silver. But yet we hear no talk there about a 5-franc piece being worth only 3 francs. Suppose the great press of the city of Paris should unite in a clamor against the coinage of that country, such as has disgraced the metropolitan press of this country for some time past. Suppose they declared that the 5-franc piece was worth only 3 francs, and dinned in the ears of the people the danger of its silver currency. I would like to know how long France could resist a monetary panic? Ah, but before that exigency could arrive the editors of the papers would be behind the bars serving a sentence for sedition. [Applause.]

Look also, Mr. Speaker, at the condition of Russia. She has accumulated 500,000,000 of gold, and see how she protects it. She puts it in the war chest, locks it up for emergency, and issues against it fiat money, paper money, which circulates at par or nearly so. No one can get gold for the paper money of Russia; but we—the greatest nation in the world, the most powerful nation in the world, the wisest nation in the world (so our song goes)—allow our Treasury to be looted by every foreign speculator who so desires, by the failure to exercise the option which the law and the contract give us.

Why, a year ago we heard the announcement that a firm of New York bankers had presented $1,000,000 of Treasury notes, payable in terms in either gold or silver, to the United States Treasury for redemption in gold, and the Treasury determined it must pay gold. What did it mean? It meant that the Rothschilds, in connection with the great syndicate of bankers in Paris, Berlin, and Vienna, who control the finances of the great nations of Europe, were preparing to undertake changing Austria from a silver to a gold basis.

This syndicate of bankers who held Austria's silver bonds were preparing to arrange for their funding in gold bonds. The profits can be imagined. Silver bonds bought at a discount exchanged for gold bonds taken at a discount, with all the probabilities of a great rise in value. But where could they get the gold for the reserve fund necessary for the adoption of the gold standard?

They knew that England would not give it, for the Bank of England would raise the rate of discount. They knew that the Imperial Bank of Germany would not let them have the gold. Neither could they expect to get it from the Bank of France, and therefore they fastened on the country, protected by a similar option under the law, and made a test case by presenting $1,000,000 of United States Treasury notes, and then having ascertained that they could take the gold out of our Treasury, they entered into a binding contract which proposed to place Austria on a gold basis. And behold the result—our gold has gone to Austria and we are on the shores of bankruptcy.

Now, Mr. Speaker, if we go on a gold basis we will have to be wiser than we have been. We will have to pull the gold here and lock it up in our war chests and surround it with sentinels, and issue against it fiat money; or else we will have to go to fiat money alone, for when we destroy one-half of the money of ultimate redemption, metallic money is doomed in this country. I say that the consequences of this act are too awful to be contemplated in their effect upon our own values, upon our own securities, upon our own products, upon that vast mining region now threatened with depopulation, upon the country at large.

The civilization of the future depends upon the restoration of silver, and if we withdraw our support it may be lost forever. I do not believe in the specious suggestion that we now give silver its final blow and kill it in the hope that international action will resurrect it. I believe rather in nursing what remains of life in the hope that health and vigor may be restored. The task has grown in difficulty as time has advanced. We the greatest silver-producing nation in the world, we the greatest debtor nation of the world, we who required both gold and silver for the resumption of specie payments closed our mints against the product of our mines, in February, 1873, and proposed to throw it on the world for absorption.

Germany responded by demonetizing silver within two months after. France and the Latin Union, finding that Germany was pouring into their mints her accumulated silver coin, and that the United States was pouring into their mints the products of her mines, closed their mints finally about 1876. The Latin Union abandoned silver reluctantly, and yet during that period of agitation in this country the metropolitan press and the bankers in the money centers prevented its restoration. When the Bland act was passed it would have been easy.

The task would have been easy in 1890 when silver had the great sustaining power of India, which absorbed one-third of the product of the world. It is of course made more difficult now. But let the support which America affords be withdrawn and silver is destroyed and lost, and there is no hope of international bimetallism. We had the assurance of that in the language of Sir William Harcourt, chancellor of the English exchequer, the other day, when he said that the action of India was the death of bimetallism.

If my time permits, I hope to dwell upon the importance of America assuming courageous leadership on this subject, and as she was the first great nation, within the last half century, to demonetize silver so she should be the first to restore it. I should like to present my views upon the prospect of international bimetallism, as well as to this alleged danger of silver monometallism and with reference also to the unification of our currency and the retirement of the five or six kinds of paper money now in existence and the substitution in their place of one form of United States Treasury note, payable in coin and backed by ample reserves in both gold and silver in the Treasury.

But before doing so I wish to express my regret that Congress has allowed itself at this time of public danger and excitement, when imagination and alarm are enthroned and reason is unseated, to enter upon the discussion and consideration of a great subject requiring careful consideration and deliberate action. It would be better in my judgment to immediately take hold of some measure that would relieve the situation. But the controlling minds in this attack on silver have insisted that the existing panic should be made use of as a weapon for its destruction and they will not allow the consideration of any remedial measure.

We are suffering now from the want of legal-tender money, and the only thing to do is by prompt action to provide the people with money which will take the place of the money exported and hoarded, under provisions which will automatically force its retirement when the emergency is over. Such an increase of money could be easily made by legislation which would not contain the word gold or silver in it. Remember that the settlement of the silver question now either by the repeal of the Sherman act or by an act providing for the free coinage of silver will not give the full and adequate relief

which the situation demands. The repeal of the Sherman act will not restore the confidence of those who are now hoarding money.

This debate will instruct them that we are about to enter upon a period of contraction greater than any ever yet experienced, and the people will know that at such times the value of money increases and, just as when property is high people hold on to property and resist offers of purchase, so when money is scarce and correspondingly high they will clutch their money in the hope that the future may bring them better bargains. On the other hand, the free coinage of silver would add to the circulation of this country only $5,000,000 or $6,000,000 per annum, a sum entirely inadequate to meet the contraction caused by export and hoarding. I hope that at some stage in these proceedings instead of engaging in a Greco-Roman contest over this silver question, whose determination either way will not bring immediate relief to the country, we will enter upon the consideration of some emergency remedial legislation that will meet the requirements of the pending crisis.

The SPEAKER *pro tempore* (Mr. TARSNEY in the chair). The time of the gentleman has expired.

Mr. MONEY. I ask unanimous consent that the gentleman have leave to continue his remarks without limit. That courtesy has been extended to others, and I have been very much interested in the gentleman's remarks.

The SPEAKER *pro tempore*. Is there objection to the request that the gentleman's time be extended without limit, until he shall have completed his remarks?

Mr. TRACEY. How much extension is asked?

The SPEAKER *pro tempore*. Without limit.

Mr. TRACEY. I shall have to object to that.

The SPEAKER *pro tempore*. The gentleman from Indiana [Mr. BYNUM] is recognized.

Mr. BYNUM. Mr. Speaker, I am free to confess that I assume to address the House on the measure under consideration with some degree of diffidence. Having entertained and expressed views different from those I shall present to-day, I deem it but just to myself as well as my constituents, especially those who still believe that the free coinage of silver would be a great blessing to the country, to give the reasons that shall control my vote.

The condition of the country, as stated by the President in his message, is in many respects without a parallel. With an abundant harvest; free from pestilence; at peace with all nations; our manufactories spreading over the country; our railroads penetrating every corner, and our wealth rapidly increasing, we find ourselves in the midst of a panic the like of which we never before experienced.

There must be some cause, or combination of causes, some one of which was a prime factor in producing this disastrous condition of affairs.

Unquestionably a great majority of all classes believe that the silver law enacted on the 14th of July, 1890, is responsible for the evils with which we are afflicted. In order to discuss this measure to the comprehension of those not familiar with its provisions, I shall briefly outline its main features. It requires the Secretary of the Treasury to purchase 4,500,000 ounces of silver bullion at the market price each month, and issue in payment therefor Treasury notes. These notes are made a legal tender and are redeemable in gold or silver coin, at the discretion of the Secretary.

The authors of this measure were of the opinion that to enlarge our purchases of silver bullion would increase the demand, and thereby appreciate its price. The monetary value of an ounce of silver being $1.29, while its commercial value was only $1.05, our silver dollar was intrinsically worth but 81 cents.

The results of the operation of the act of 1890, called the Sherman law, were directly opposite to what was anticipated by its friends. With the exception of a sudden and, no doubt, speculative rise immediately after its passage, the price of silver has gone steadily down. The average price per ounce in 1890 was $1.05; in 1891, 99 cents; in 1892, 87½ cents, and in July last, 72½ cents. Up to July 1 last the Government, under the provisions of this law, had purchased 156,575,000 ounces of silver and issued in payment therefor Treasury notes to the amount of $147,215,000.

The constant fall in the price of silver bullion, notwithstanding the large purchases by the Government, began to excite apprehension in the minds of financiers. The rising volume of silver bullion, being stored away, unless coined by the Government into money would result in a great loss.

Had the Secretary of the Treasury been required to dispose of the bullion on hand on the 1st day of July last it would have brought at the market price but $114,828,500. To have redeemed the obligations of the Government outstanding therefor would have required the Secretary to have taken from the revenues the sum of $32,390,500; in brief, by the constant fall in the price of silver bullion the Government was loosing, under the operations of the Sherman law, over $10,000,000 a year. During the operation of this law, whether as a result of the same, I shall not now attempt to prove, gold was being exported in large sums. From July 1, 1890, to January 1, 1891, our net exports of gold amounted to $624,771. In 1891 they aggregated $33,885,571, and in 1892 they reached $58,570,536. During the present year to July 1, they were $70,815,096.

Thus we see that during the existence of the present law our net loss of gold has been $164,098,975. This was not the only alarming symptom. The gold reserve in the Treasury on the 1st of August, 1890, two weeks after the passage of this measure, was $184,092,075. One hundred million dollars of this sum had been treated as a reserve for the security and redemption of the greenback notes. The excess of the total reserve, above the one hundred millions, was known as the free gold in the Treasury, subject to whatever use the Secretary might have for it in the due administration of his department. The reserve began to diminish until the free gold was about exhausted. We finally reached the limit and the Secretary was driven to encroach upon the hundred millions in order to meet the demands and preserve the credit and standing of the Government. On the 1st of the present month, of the $184,092,075 of gold in the Treasury on August 1, 1890, there remained but $95,485,413.

Under such conditions it was but natural that our own as well as the people of other countries holding our securities should become alarmed lest they would be compelled to take payment in depreciated silver money. It was natural that American securities should begin to return home in anticipation of a collapse; and that our own people should begin to hoard gold in anticipation that the same would soon go to a premium.

While this was going on the channels through which the Treasury received its supply of gold were running lower and lower. In July, 1890, there was paid into the Treasury, through the custom-house at New York $17,173,016. Of this sum 95 per cent was paid in gold certificates. In July, 1891, the payments aggregated $11,303,169, of which 2 per cent was in gold coin, 14.9 per cent in gold certificates, 44.6 per cent in United States notes, and 28.9 per cent in Treasury notes, issued under the provisions of the Sherman law.

In July, 1892, the payments amounted to $12,295,908, of which 1 per cent was in gold coin, 13.8 in gold certificates, 28.4 in United States notes, and 42.2 in Treasury notes. In June, 1893, the payments reached the sum of $18,068,600, not a cent of which was paid in gold coin or gold certificates.

Thus the supply was cut off, and the stock on hand rapidly being exhausted. The Secretary of the Treasury was powerless to do anything. The law required him to maintain the parity between our gold and silver coin and to do this it was essential that he should redeem the Treasury notes in whatever character of money the holders demanded. To have refused to do so would have been an acknowledgment that one was preferable to the other, one more valuable than the other—an admission the Government could not afford to make. To have refused payment in gold would have been to put gold to a premium and increased the excitement and aggravated the stringency.

In my judgment the Secretary, Mr. Carlisle, during the ordeal through which he has conducted the financial affairs of the Government, has not only sustained his high reputation, but has achieved a name that will compare favorably in history with those of the great men who have preceded him. That there was a great pressure to force an issue of gold-bearing bonds there can be no question. To have issued bonds would simply have been a restoration of the reserve by enlarging the demands to be made upon it.

It is not surprising, therefore, that the Sherman law has no friends; that it has been disowned by its reputed father. Every person condemns it as wrong in principle and vicious in practice. The singular fact, however, is that while the friends of free coinage admit that it has worked great harm, they insist that it must remain in force unless something is adopted in its stead. The only excuse assigned for its maintenance is that it increases the volume of money and keeps down the appreciation of gold.

We have already seen that since its enactment $164,0.8,974 in gold has been driven out of the country. Nor is this all, during the same period the circulation of national banks was reduced $7,370,623, making a reduction in the volume of money in circulation of $171,469,597.

The entire amount of Treasury notes issued under the provisions of this act to August 1, 1893, was only $148,286,234, showing a net reduction in circulation during its existence, if there had been no accessions from other sources, of $23,183,249. Why, then, should this measure, productive of such dangers, be maintained a single day? Why should it be used as a club to drive the representatives of the people into the adoption of some other measure which their judgments do not approve? [Applause.]

We have witnessed its operation for three years. It has failed to meet the approbation of anyone. It is condemned not only as pernicious, but as dangerous. It has not only failed to arrest

the fall in the price of silver bullion, but has driven from our shores more than $170,000,000 in gold. It has reduced the circulation of the people nearly $25,000,000. It has closed the channels of the Treasury to the further ingress of gold. It has pulled down the pillars of credit that support and sustain our trade and commerce. It has frightened all classes and driven into hiding every character of money, including its own offspring, and yet we are told that we must wait till we get something better in the way of affirmative legislation before it can be repealed.

The cry of distress comes from every quarter. Business is at a standstill, factories closed, labor idle, but no helping hand is to be extended by those who favor free coinage. While the country is prostrate, helpless, and unable to resist, they propose to dose it with their remedies or let it suffer for fear that when restored it will reject their treatment. We who favor unconditional repeal have been warned again and again that if we support the measure that we will lose our seats on this floor.

It may be that there are those here whose sole ambitions are to be returned, and are ready to sacrifice their convictions upon great questions to secure the same, but I scorn to believe it. My confidence is not unbounded, but I am loth to believe a single vote, for or against this measure, will be cast from such base and unprincipled motives. These threats, if not in bad taste, are exceedingly untimely. The people are excited. They feel that something is radically wrong, and they are in a frame of mind that should not be inflamed or misguided. The time has come when cant and subterfuge must be driven from the councils of men and nations, and reason and judgment enthroned in the minds and in the hearts of the people. [Applause.]

Gentlemen who are demanding that something shall be enacted in the place of the Sherman law know that that can not be done now. They know it is unconditional repeal or nothing. If they succeed in grafting upon the measure for repeal a single one of their proposed amendments they know that the same can not be enacted into a law. Your alternative, therefore, is to accept repeal or nothing, and upon that issue you must return and answer to your people.

If this measure should fail, you gentlemen who will have defeated it can return to your constituents and say to them that you knew they were in desperate straits; that the Sherman law was a bad measure; that it had shaken confidence until there was not a sufficient amount of money in circulation to carry on the business, but that you thought it best to keep it on the statutes till you could get what you wanted.

Go home to your merchants who are unable to make collections to meet maturing bills, and say to them that you knew they were being pressed, but you could not secure just what you wanted, and that they will have to bear it the best they can. Go back to the farmers, who are unable to market their wheat at any price, and tell them that you admit there was and is great stringency in money; that the repeal of the Sherman law would probably have relieved the situation, but that you feared that if that was done you would be unable to get something in its stead in the future.

Go to the idle workingmen, against whom the doors of the mills and factories have been closed because their managers could neither collect nor borrow a sufficient sum to meet their pay rolls, and tell them that you knew they and their families were suffering, but that you felt it was better for them to bear their afflictions till your views should be incorporated into a new law, and if they do not denounce your conduct in words of condemnation, bitter and burning, I am mistaken in their character and temper.

Mr. Speaker, I might conclude and submit the question at this point, but my argument would be incomplete without a discussion of the amendments proposed by the gentleman from Missouri [Mr. BLAND]. The substitute offered by him proposes that the mints of the Government shall be opened to the free coinage of silver, first, at a ratio of 16 to 1; if that should be voted down, then at 17 to 1; if that should fail, then at 18 to 1; if that should be defeated, then at 19 to 1, and if that should not be successful, then at 20 to 1, and if the above amendments should be defeated, that the Bland-Allison law, in force from 1878 to 1890, be voted upon.

As has already been argued in this debate, the number of different ratios proposed by the gentleman from Missouri is a full surrender of his position. Why is the ratio of 20 to 1 any better than that of 16 to 1? If the Government can maintain one it can maintain the other at a parity!

At the average price of silver bullion during 1892 the commercial value of the silver dollar at the ratio of 16 to 1 was 65 cents; at the ratio of 17 to 1 it would have been 69 cents; at the ratio of 18 to 1, 73 cents; at 19 to 1, 77 cents, and at 20 to 1, 81 cents. I do not give these as exactly correct, but approximately so. Could we safely open our mints to the free coinage of silver at any of these ratios?

It requires no argument to demonstrate that one of three results would inevitably follow the moment we did so: Either the commercial value of silver bullion would rise to its monetary value, the monetary value would fall to the commercial value, or one would go up and the other down until they came together. The instant the silver dollar and the bullion contained in it became convertible at the pleasure of the holder, they necessarily would command the same price. This, then, is the important question to be considered.

In order to logically present the question, it will become necessary for me to repeat in some measure facts and arguments which have already been presented.

By the act of 1793, first establishing a mint and providing for the coinage of both gold and silver, our fathers adopted the ratio of 15 to 1. There was considerable discussion as to the correct ratio between the two metals, but from the best evidence that could be obtained this was ascertained as about correct.

For one hundred years prior to that time there had been a remarkable stability of the ratio between the two metals, silver never having risen to 14.14, except during the year 1760, or fallen below 15.50 but once, and that in 1702. Shortly after the ratio was fixed at 15 to 1, within the next three years, silver fell to the ratio of 15.65.

It is a striking fact that silver never, since our mint was first established, has reached the ratio it then had. The slight fall in the value of silver destroyed the parity. Gold was worth more than its coinage value; not very much—only 3 or 4 cents—but enough to make it profitable to export it. Our gold, therefore, left the country. Recognizing the fact that gold was undervalued by the act of 1793, and that so long as that measure was continued in force it would be impossible for us to retain any gold in circulation, in 1834 the ratio was changed by Congress to 16 to 1. At that time the true ratio was 15.73, so that by the latter act silver was slightly undervalued, and the result was the very opposite—gold coming from abroad, while silver took flight.

A mistake was made in the act of 1834 in making our subsidiary coins contain equal proportions of the silver in a dollar. There was as much profit in exporting the minor coins as there was in shipping away our silver dollars, and although nearly all of our silver coin was in fractional pieces, the people were left without small change. So, in 1853 the quantity of silver in the subsidiary coins was reduced, so that a loss, instead of a profit, would be incurred by exporting them.

From the action of Congress in 1834 in purposely undervaluing silver, and in 1853 overvaluing our subsidiary coins, we are driven to the conclusion that our fathers purposely adopted the gold standard in 1834. That we were upon that standard from that time until the suspension of specie payments during the war there can be no controversy. The silver dollar, about which we have heard so much, was practically no part of our circulation up to 1873. From the time we first opened the mint to 1873 there was coined but 8,031,000 silver dollars, while there was coined $137,000,000 of minor coins and $852,214,507 in gold.

When the question of a change of ratio was under consideration in the Senate Mr. Benton said:

He did not think it necessary to discant and expatiate upon the merits and advantages of a gold currency. These advantages had been too well known from the earliest ages of the world to be a subject of discussion in the nineteenth century; but, as it was the policy of the paper system to disparage that metal, and as that system in its forty years reign over the American people had nearly destroyed a knowledge of that currency, he would briefly enumerate its leading and prominent advantages.

1. It had an intrinsic value, which gave it currency all over the world, to the full amount of that value, without regard to laws or circumstances.
2. It had a uniformity of value, which made it the safest standard of value of property which the wisdom of man had ever yet discovered.
3. Its portability, which made it easy for the traveler to carry it about with him.
4. Its indestructibility, which made it the safest money the people could keep in the houses.
5. Its inherent purity, which made it the hardest money to be counterfeited, and the easiest to be detected, and, therefore, the safest money for the people to handle.
6. Its superiority over all other money, which gave to its possessor the choice and command of all other money.
7. Its power over exchanges; gold being the currency which contributes most to the equalization of exchange, and keeping down the rate of exchange to the lowest and most uniform point.
8. Its power over the paper money; gold being the natural enemy of that system, and, with fair play, able to hold it in check.
9. It is a constitutional currency, and the people have a right to demand it for their currency as long as the present Constitution is permitted to exist.

Not only was gold recognized as the standard from 1834 to 1860, but it was so recognized after the war and even after the act of 1873, about which so much has been said. On the 11th of February, 1874, Senator STEWART of Nevada said:

I want the standard gold, and no paper money not redeemable in gold; no paper money the value of which is not ascertained; no paper money that will organize a gold board to speculate in it.

On the 20th of the same month, on a resolution to instruct the Committee on Finance to report a bill providing for the convertibility of the Treasury notes into gold coin or bonds, he said:

By this process we shall come to a specie basis, and when the laboring man receives a dollar it will have the purchasing power of a dollar, and he will not be called upon to do what is impossible for him or the producing classes to do, figure upon the exchanges, figure upon the fluctuations, figure upon the gambling in New York, but he will know what his money is worth. Gold is the universal standard of the world. Everybody knows what a dollar in gold is worth.

On the 1st of April of the same year, Senator JONES, of the same State, said:

Does this Congress mean now to leave entirely out of view and discard forever a standard of value? Did any country ever accumulate wealth, achieve greatness, or attain a high civilization without such a standard? And what but gold can be that standard? What other thing on earth possesses the requisite qualities? Gold is the articulation of commerce. It is the most potent agent of civilization. It is gold that has lifted the nations from barbarism. So exact a measure is it of human effort that when it is exclusively used as a money it teaches the very habit of honesty. It neither deals in nor tolerates false pretenses. It can not lie. It keeps its promises to the rich and poor alike.

Mr. Speaker, if the slight undervaluation in 1793, not more than 3 or 4 cents on the dollar, drove gold out of the country prior to the act of 1834, and the latter drove silver out afterwards, what might we expect if we should open our mints to the free coinage of both metals at a ratio that would undervalue gold at from 23 to 52 per cent, when the people of the civilized world are on the alert for opportunities of speculation and advised as to markets and quotations in every financial center on the globe on the morning of the succeeding day?

We are told, however, that silver has not fallen in value, but that gold has risen, and that if we will but open our mints to the free coinage of silver, as we have to gold, that silver will again take up its position by the side of gold. Silver, it is said, has appreciably fallen in price because it has been under fire for twenty years. There is some force in this argument. No doubt if silver had not been demonetized by so many nations it would not have reached its present low price. Eleven nations, I believe, have closed their mints to the free coinage of silver since 1873. But what difference does this make? They will not open them at our bidding, and we are powerless to compel them to do so.

We must face the facts as they exist, not as they ought to be, or as we would like to have them. No one who has read the debates of the Brussels conference but has come to the conclusion that all efforts at international bimetallism under present conditions will fail. It is patent that Great Britain is satisfied with her monetary system, and that no other European nation will unite in any agreement to which she is not a party. It is further evident that none of the European governments will change their monetary systems unless it be toward a more perfect gold standard. Whatever action, therefore, we may take we must take alone.

Can we, without the aid and coöperation of other nations, carry this great burden? The coinage values of the world's product of gold and silver from 1873 to 1892, inclusive, were as follows:

Years.	Gold.	Silver.
1873	$96,200,000	$81,800,000
1874	90,750,000	71,500,000
1875	97,500,000	86,500,000
1876	103,700,000	87,600,000
1877	114,000,000	81,000,000
1878	119,000,000	95,000,000
1879	109,000,000	96,000,000
1880	106,500,000	96,700,000
1881	103,000,000	102,000,000
1882	102,000,000	111,800,000
1883	95,400,000	115,300,000
1884	101,700,000	105,500,000
1885	108,400,000	118,500,000
1886	106,000,000	120,600,000
1887	105,775,000	124,281,000
1888	110,197,000	140,706,090
1889	123,489,000	162,159,000
1890	113,149,600	172,234,500
1891	120,578,800	187,733,000
1892	130,816,600	196,605,200

It will be seen from the foregoing table that while there has been a large increase in the production of both metals; that of silver has more than doubled in the last twenty years. Silver has not only suffered because of the large increase in the production of gold and its own relegation to the position of token money by the civilized nations of the world, but because of the enormous increase in its own production.

In view of the fact that all civilized nations have closed their mints to the free coinage of silver; in view of the great increase in its production, and in view of the recent action of the Government of India, heretofore the largest consumer of silver, could we for one moment uphold, much less appreciate the price of silver by opening our mints to free coinage, even at the ratio of 20 to 1. It may be asked, if we could open our mints to free coinage at any ratio? I answer emphatically, No, not under present conditions.

With the mints of all the great commercial nations of the world closed to free coinage; with a redundancy in many parts of the world, and with a rapidly increasing production, I unhesitatingly say we could fix upon no ratio that would give stability to the price of silver, so that it could be used independently as a standard or measurement of values.

The moment we opened our mints to free coinage to the products of the world a wild rush would be made upon us by the people of all the gold-standard nations and a veritable scramble would ensue in the contest to get possession of some of our gold before it was all exhausted. There would pour in upon us in one year more silver than our mints could coin in ten. What would be the result? Does any one seriously believe that silver under such circumstances would rise in price? In my judgment it would be the worst blow that could be given to silver.

Mr. Speaker, for the sake of argument I will suppose for a moment that my reasoning is fallacious and that my conclusions are erroneous; that silver will not go down, but that with our mints open to it freely its commercial value will go up from 73 cents an ounce, its present price, to $1.29, its parity or monetary value. In brief, I will suppose that after we shall have adopted free coinage the silver dollar will contain 100 cents' worth of silver bullion. Would the farmers of the country derive any benefit from this change? Would the workingman be in any better condition? Their dollar in silver would be just what it is now; worth no more nor no less. What advantage would it be to any class except the silver producers? They alone would reap the profit.

It may be interesting to the farmers of the country to know what profits the silver producers have been making during the last few years while they have been striving to keep their taxes paid and make ends meet. The Daily mine in Utah in 1891 paid in dividends $450,000. The Ontario mine in the same Territory and year paid in dividends $900,000. The Granite mine in Montana in 1892 paid in dividends $1,020,000. The Barrier Range (Broken Hills mines) in New South Wales last year paid dividends to the amount of $5,805,000. That the farmers may get a more perfect knowledge of the profits enjoyed by the "silver kings," I will give the results of an investigation made by the Director of the Mint in 1887 as to the cost of production of an ounce of silver.

From estimates from 155 mines, producing 43 per cent of the domestic product, it was ascertained that the cost of production was 52.4 cents per ounce. What advantage will it be to the farmers and wage-workers of the country to pay to the producers of silver, in the way of products and toil, $1.29 per ounce for silver that they can now purchase for 73 cents and which costs the producers but 52 cents? It may be answered that that will not be the result. If the theory of those who favor free coinage be correct, that silver will rise in value, it is exactly what will be the result.

While I do not think for a moment that silver will rise in value, I have presented this to show how untenable is the position of the free-coinage advocates and how fallacious their arguments.

That the result of free coinage would be that the value of the silver dollar, now at a parity with gold, would drop to its commercial value, now about 56 cents, I have not the least doubt. There is not a government in the world to-day where the mints are open to the free coinage of silver that the coin is worth more than the bullion it contains.

This was true in India before she closed her mints. Mexico has free coinage of both gold and silver; her silver dollar contains 6 grains more of silver than ours, and yet to-day you can buy Mexican dollars in New York at 59½ cents a piece and pay for them with our own silver coins.

The free coinage of silver means here, as it has everywhere, silver monometallism. Of all the enemies of bimetallism none are laboring so industriously and earnestly to destroy it as the advocates of free coinage. It can result in nothing else.

The gentleman from Nebraska [Mr. BRYAN] in eloquent terms portrayed the glorious results that would accrue to the debt-ridden farmers of the West and the unemployed wage-workers of the whole country when we shall have reached the silver standard. The mistake the gentleman makes, slight though somewhat serious, is in assuming that we would have a standard. There would be no more stability in the price of silver than there is now. When we reach that blissful state it would be necessary for every man with a silver dollar in his pocket to daily ascertain, if he could, what it was worth. As well said by Senator STEWART, the producing classes do not want "to figure upon the exchanges, figure upon the fluctuations, figure upon the gambling in New York," to ascertain the value of their money.

Let us investigate for a moment and see what the real condition of the farmers and the wage-workers will be when the gentleman's silver millennium is reached. I will suppose that next year, and I hope my supposition will come true, Providence will smile upon the people of Nebraska; that rains will descend in copious showers and at seasonable times; that the storms and cyclones will be confined within their caves; that the grasshoppers will not come to devour their fair fields; that their crops will be so abundant that the sun at his zenith will stop and linger in admiration and wonder a moment on his ceaseless course to the Pacific; yea, more, I will suppose that the farmers of the whole country have been similarly blessed, and that the yield of wheat will be 600,000,000 of bushels.

Four hundred millions will amply supply the home demand; where will the other 200,000,000 bushels find a market? In the gold standard countries of Europe!

Tariff reformer as he is, I presume that the gentleman from Nebraska has not neglected to impress upon the minds of his constituents that the market for the surplus regulates the price at home. The glories of that silver standard are rapidly disappearing. The constituents of the gentleman from Nebraska would still be in the clutches of the "gold bugs."

This is not all; if the transaction ended here the results might not be so serious, but look to the final outcome. We are upon a silver basis. The price of wheat in Europe will be fixed upon a gold basis; exchange will rise and fall in this country as the price of silver falls or rises. Here will be a new element of uncertainty, which will enter into trade. The buyers, knowing this fact, and that there will likely be a fall in the value of their exchange by the time their deal is perfected, will not only calculate against the farmer the risks of handling his wheat or his cotton, but they will also calculate against him a sufficient amount to insure against any risk of loss in money.

The producers will have to bear all the risks and burdens of a fluctuating standard. No nation, as Senator JONES aptly said, "will ever accumulate wealth without an invariable standard."

It was stated by one of the presidents of one of the great produce exchanges of the country that margins were so close that 1 penny a bushel often determined the source of supply of millions of bushels of grain, and yet with our great and growing commerce, we here have seriously presented to us a proposition that will throw into trade an element of uncertainty against which no man can calculate. To abandon the standard fixed by the great commercial nations of the world is to demoralize and damage our trade beyond comprehension.

Mr. Speaker, there is another class to which I desire to address a few thoughts—the wage-workers of the country. I have received petitions from some of the assemblies in my State protesting against the repeal of the Sherman law and requesting me to support free coinage. My relations with organized labor has been close, The laboring men of my district have always given me a loyal support, and I know that they believe I would not knowingly cast a vote that would in the slightest degree oppress or harm them. Whatever else may have fallen in price as compared with gold, it is an acknowledged fact that wages have not only been maintained, but have increased. It is not, therefore, to be reasonably assumed that under any circumstances there will be an increase in the rates of wages.

How then will the workingmen be affected? To my own satisfaction, and I believe to the satisfaction of every unbiased mind, I have demonstrated that the only effect of free coinage will be a fall in the value of our standard. A fall in the value of the money in which the workingman receives his wages is in effect a reduction of his pay. If silver money should fall to the commercial value of silver bullion it would result in the reduction of the purchasing power of the workingman's dollar nearly one-half. Believing that I could not cast a vote that would so directly and injuriously affect the laboring classes, I shall follow the dictates of my judgment. [Applause.]

Mr. Speaker, it requires no stretch of imagination to see, at a glance, that by the free coinage of silver the whole machinery of trade, of commerce, and of exchange, domestic as well as foreign, because they are so intimately interwoven as to be inseparable, would be thrown into such inextricable confusion and disorder as to completely paralyze all our industries and destroy our prosperity. Think but a moment of the result, and the mind recoils at the conception. This great country, with her matchless resources, inhabited by the most enlightened and progressive people on earth, with a commerce, domestic and foreign, surpassing the wildest dreams of her pioneers, deliberately abandoning the measurement of values recognized by all the civilized nations of the world and chaining herself to the systems of those still lingering in the shades of barbarism.

There is another question which deserves our serious consideration before we take this leap into darkness. A fall in the value of our money, a reduction in the standard of values means a deficiency in the revenues of the Government of at least $100,000,000. We have outstanding large obligations payable in gold; these must be met according to the terms of the contract, and to do so would require us to raise the additional sum necessary to purchase gold at whatever premium it might command over silver money.

Not only would we need more money for this purpose, but the rise, apparently, in the price of products required to equip and maintain the different departments, especially the War and Navy, would call for an increased amount, and it is safe to say there would be needed not less than one hundred million more. The revenues of the Government are now barely sufficient to meet our expenditures. If we are to open the doors of our Mints to free silver, we may bid farewell to any reduction of taxes, but prepare to seek additional sources of revenue. This is the very question that drove India to close her mints against free coinage; her money had depreciated until she was no longer able to meet her expenditures, a large part being payable in gold.

The friends of repeal have been charged with being the representatives of the moneyed powers and "gold-bugs" of Europe. It has been said that a conspiracy has been formed to "down" silver. The gentleman from Missouri [Mr. BLAND] was heard to raise his voice in the far-off West when India closed her mints. He was certain that the British Government had forced India to the extremity, and that the Congress of the United States would be the next subject of her attack. Unfortunately for Mr. BLAND'S assumption, it turns out that India wanted to close her mints against silver, but Great Britain would not permit it.

What reasons Great Britain may have for desiring that we should cease coining silver has not been explained. What advantages would accrue to her have not been stated. We have heard nothing but the bare assertion of the fact. Great Britain produces neither silver nor gold in quantities worth mentioning. Her entire product in ten years, I venture, would not amount to a half million dollars. She is upon the gold standard, and has been there for three-quarters of a century. She is content with her monetary system, and is apparently indifferent as to what other nations may do. She pays all of her obligations in gold, notwithstanding the balance of trade is nearly five hundred millions of dollars against her every year.

Why should we fear the gold standard? Above all nations on the face of the earth we should be benefited by it if any would. We produced last year $33,000,000 in gold, and coined in the same period $34,787,222. During the past one hundred years we produced $1,969,693,945 in gold, a sum greater than one-half of the world's supply of gold coin at the present time. If Great Britain and Germany, which practically produce no gold whatever, can adhere to the gold standard, why can not the United States, that produces one-fourth of the world's supply. Not only do we produce gold enough to supply ourselves, but over all nations we produce an abundance of supplies that draw gold from the farthest corners of the earth.

The products of our farms, our breadstuffs and provisions, will command gold when nothing else will secure it. The balance of trade in our favor against Great Britain is more than three hundred millions every year. England and Ireland paid to our farmers in 1891 over two hundred millions of dollars in gold for breadstuffs and provisions. Great Britain has an interest in the result of our action, but we are not her servants; that distinction is enjoyed by others.

In the Brussels conference her delegates had but one proposition to offer, and that was that the European nations should purchase £5,000,000 in silver for five years if the United States would continue to purchase 54,000,000 ounces annually. She was willing to go down into her pocket and assist in purchasing between thirty and forty million ounces of silver if we would but continue the operations of the Sherman law for the same period. It was a shrewd proposition. Her representatives no doubt calculated that if they could get us into an agreement for five years they would at the end of that time have all our gold, including the balance of the reserve in the Treasury. We not only repel the insinuation but denounce the action of the advocates of free silver with striving to accomplish what the British Government would give a handsome bonus to have done.

It has been argued that the Democratic platform of the last national convention declared in favor of the free coinage of silver, and that the President and his supporters were untrue to their pledges. It is the right of each and every Democrat to construe the platform for himself, and in doing so I acknowledge no authority save my own judgment and conscience. The platform favors the use of both gold and silver as money, but demands that they must be of equal intrinsic and exchangeable value. The convention voted down an amendment proposed by Mr. Patterson, of Colorado, to insert the word "free" before the word coinage. The convention, if it had favored free coinage at all hazards, could easily have said so in a few words.

Whatever may have been the intentions of the convention, there was one act it performed which removed all doubt, and that was the nomination of Mr. Cleveland on the first ballot by a two-thirds vote. His oft-repeated statements, his well-known views, his bold and courageous declarations in the presence of the most alluring temptation placed a construction upon that platform, and thereafter no one could have been deceived. If there is one principle in the Democratic creed for which the party has stood firmly through the storms of criticism and defeat over and above all others, it is the one in favor of sound money.

Mr. Speaker, gentlemen upon the other side of this question, apparently, through the whole of this debate have been unable to distinguish the difference between the gold standard and gold monometallism. Great Britain has a gold standard, but maintains $100,000,000 of silver money, and coins from eight to ten millions every year. Germany has the gold standard, but maintains $100,000,000 of full and $100,000,000 of limited tender silver. France maintains the gold standard with $700,000,000 of silver.

There is not a nation on earth with a gold standard but what has more or less silver to supply the needs of its people in domestic trade. This cry about destroying silver is all sham. There is a large and useful field for silver, and no warfare is being made upon it. We are told that there is not enough gold in the world to supply the different nations with sufficient money upon which to transact their business. Most assuredly there is not, nor could the business be transacted with gold if there was a superabundance. But there is plenty of gold by which to fix and measure values and adjust the balances between nations. Were it not for the clearing houses in our great cities, the exchanges there could not be transacted with any kind of money, much less gold, to say nothing about silver. They wholly ignore the fact that a standard must first be established; that after that is done an indefinite number of aids and substitutes may be used as measures.

The gold standard does not mean that gold alone shall be used, but that all measures must conform to that standard; silver, paper, drafts, checks, clearing-house certificates, or any other device may be used, but they must be used in such a way as to give exact measure by the standard. We who are contending for the preservation of the gold standard do so because it is the most stable that has ever been discovered and because all the civilized nations of the world have adopted it. I am in favor of the use of all the silver that we can coin and maintain at a parity with gold, of providing for the issue of all the currency that can be floated at par, but not another dollar.

I have no faith in that character of prosperity which comes with cheap money. Money to be of value to the people, to protect the weak against the strong, must honestly measure the results of human toil. I fully agree that the medium of exchange should be ample to enable the people, at the least cost and in the briefest time, to exchange their productions, but an oversupply of money stimulates wild speculations, unsettles credit, and, sooner or later, brings on a collapse.

In my opinion there is not a scarcity of money in the country to-day. We have transacted a much greater commerce and enjoyed the highest prosperity with far less money than we have in circulation now. Our exchanges are made upon a different basis from those of other nations. We could not do business as France does with her $40 per capita. We have been driven to the use of greater conveniences. Necessarily ours is largely a system of credits based on confidence, hence the greater the importance that we should at all times and under all circumstances maintain a true standard of value.

I have been amused during this debate at the remarks of some gentlemen who have so indignantly scorned the idea that our standard of values should conform to that of the civilized nations of the world. We are a free and independent nation, they say, and therefore should cut loose from the monarchies of the Old World and establish one of our own. We can do this, but it would be well to know that our parachute is in good working order before we try the experiment.

Mr. Speaker, I am not a pessimist, but I look into the future with some forebodings. The minds of the people in many sections seemed to have been turned from the paths of true wisdom. The seeds of paternalism that have been sown broadcast through the land seem to have taken a firm hold in some localities. From every quarter comes the cry, "What is Congress going to do for the people?"

The belief that Congress, by legislation, can produce unlimited wealth, and distribute the same among the people, seems to prevail in every quarter. There is but one way in which a nation can become rich and her people prosperous, and that is by the productions of toil and not by the inflation of values by enlarging the volume of money. We should do our duty fearlessly and the people must do the rest. [Applause.]

Mr. HEPBURN. Mr. Speaker, this debate presents some novel features. It presents some gentlemen in new characters and playing new rôles. There are some gentlemen of this House, more noted perhaps for their intenseness of party love, of party zeal, than anything else, who are now assuming a condition of absolute nonpartisanship and urging all other men, especially Republicans, to get into that same happy frame of mind, notably a gentleman who has recently taken his seat [Mr. BYNUM], who tells us that "the time has now come when cant and subterfuge should be driven from this Hall, and patriotism be permitted to take its place."

Are we to understand that in the esteem of that gentleman, in his experiences, cant has been the rule, and that now he is turning over a new leaf? Or does he, as a measure persuasive, to induce his opponents to adopt the new régime of nonpartisanship, suggest to them that heretofore they have been indulging in cant and in the hypocrisy of partisanship? A lecture of that kind seems strange to those who have memories and who remember a scene in which a distinguished member of this House marched down the aisle, shaking with violence his fist in the face of the organ of this House, its Speaker, and denouncing him in all of the bitterest terms of vituperative declamation; a man conducting himself so that the censure of the House was placed upon him because of the extreme, indecent partisanship that he then was manifesting.

It is noticeable, Mr. Speaker, that those who most exhort Republicans to rise above party and aid the monometallists of the Administration to repeal the Sherman law, are those who on all occasions are most intense and indecent in their assaults upon everything that Republicans hold to be most sacred in their creed; those who are least fair to their opponents and who most strenuously labor for party advantage. They are partisans always, save now, when they want Republican votes. The President exhorts us to sink party, and then, setting us an example—showing us how the thing ought to be done—proceeds to shift responsibility justly belonging to his own party and throw it upon the shoulders of Republicans, where it does not belong. Intensely partisan in his nonpartisanship, he seeks to utilize a condition of public distress and by its use persuade Republicans in aiding his party to take the first step toward the permanent disuse of silver as one of the money metals of this country. Note, if you please, Mr. Speaker, the unfair and partisan methods adopted by the majority in the presentation of this question.

It is known that there is vital difference of opinion between the wings of the Democratic party, but for the purposes of a vote agreement is reached by them. The free-silver wing is placated by permitting a vote on six propositions. Five propositions as to ratio, and the Bland-Allison bill, are to be voted on to appease that wing and to suppress filibustering. Then follows the vote on the repeal bill. This is all agreed to among themselves by these patriots who sink all partisanship in their godly efforts to secure the nation's good. But what do they offer to the Republicans who are abjured to be patriotic and come up to the help of the Democracy? Why, sir, they bind them hand and foot by the tyranny of the previous question, and refuse them the poor privilege of making one single amendment—not one amendment can any man on this side of the House secure a vote upon. We are invited to take your propositions of relief and that only. You want "the patriotism" of our votes, and not "the patriotism" of our suggestion. Do you think, gentlemen, that we can be patriotic in our votes, and that we can not be in the plans we might offer to relieve the distress? Many of my colleagues on this side of the chamber have plans to offer—amendments to offer—but by the tyranny of your previous question you debar us from this and tell us that while you want us to be patriotic, yet we must exemplify that virtue on your lines, and in manner that you prescribe.

In this great emergency why did you not treat us as copatriots? Why did you not invite us upon terms of equality to aid in relief measures, giving us the opportunity to suggest method and remedy? But, no; this did not serve your purpose. You thought by this cant and twaddle about our being nonpartisan and patriotic you could cajole certain Republicans to vote with you, thus making good the loss of votes the silver Democrats would not furnish, and in this way start the Cleveland party on its march toward a single gold standard and aid it in its effort to destroy silver as one of the precious metals.

I am sick and tired, for my part, of all this nauseating talk about nonpartisanship. I am a Republican because I believe Republicanism to be right to-day as in other days. I am a Republican because I believe in the doctrines announced in its platform as the best of all theories and principles to carry this Government and the people to the highest mark of civilization and their greatest good; and I am not to be driven from these ideas and from the doctrines of my party because it suits some man's purposes now to urge aid from the Republican party. I believe I am most patriotic when I adhere closest to the doctrines of my party. I know of no sufficient reason why this extraordinary action, the repeal of the act of 1890, should be taken.

I remember that the Democratic convention when it last assembled had no words in its platform pledging the party to the repeal of this measure that it is now said must be repealed in order to avert the direst of all disasters. In its last national convention the Dem-

ocratic party contented itself with this deliverance upon the subject: "We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift fraught with possibilities of danger in the future, which should make all of its supporters as well as its author anxious for its speedy repeal." This is all. No pledge for its repeal; no declaration that it has done harm—simply the rhetorical flourish, that it is "fraught with possibilities of danger." And yet when this declaration was made the Sherman law had been in operation nearly two years, and nearly one hundred millions of Treasury notes had been issued under its provisions. Four national conventions met last summer, and no one of them thought to pledge itself to the repeal of this law.

We know that the Republican party, with that measure in force for two years, bringing as I believe benediction and beneficence to this land, had no word of rebuke; but, on the contrary, impliedly indorsed it. It and every measure of the then administration received the approval of that convention of more than 800 Republicans, representing all parts of the party and every section of this land. It was approved; and the measure that is now suggested as a precursor of another—the establishment of a single money standard of gold—was condemned by every Republican there assembled. [Applause.]

If there was any one utterance plainer than all others made by that convention it was the declaration that the Republican party of this country was in "favor of gold and silver as standard money." Those were the words used—"standard money." [Applause.] That money "proclaimed by authority as the measure of value," and when anyone asks me to follow his leadership, be he Democrat or be he Republican, and vote for the repeal of this act, a vote here proclaimed on every hand to be the first step toward the discarding of silver as a standard money, I want to ask him where does he get his authority to reform the Republican platform and the party. [Applause].

In view of the extraordinary absence of partisanship certain Democrats are talking so much about, I want to call attention to the remarks made by my friend from Louisiana [Mr. BLANCHARD] the other day. I regret that he is not at this moment in his seat. He was assuming to give the history of the passage of the act of 1873, that is said to have demonetized silver—that act of "great iniquity" as we sometimes hear it called. The gentleman gave its history. He traced it down into the hands of the conference committee, and then he tells us that "by the surreptitious," and I understood him to say "fraudulent," but I find in looking at his revised remarks I was in error, and that he did not say it was fraudulent; but "by the surreptitious action of six men the important words, eleven in number, were injected into that law, which gave it all of its harmful and pernicious characteristics," and made it demonetize silver. These words are:

> And no deposit of silver for other coinage shall be received.

The gentleman tell us that in the 21st section of the act the interlineation of these words, with the knowledge of no other men in this land save six, this great crime against the nation and the age was perpetrated; and he tells us this in the face of the fact that the 15th section of the act was unchanged, and that section provided that "the silver coins of the United States shall be a trade dollar, a half dollar, a quarter dollar, a dime."

And then he tells us this in the face of the further fact that the seventeenth section was not changed by the committee of conference, which reads:

> That no coins, either of gold or silver or minor coinage, shall hereafter be issued from the Mint other than those of the denominations, standards, and weights herein set forth.

He makes this declaration of surreptitious crime in the face of that other fact that section 15, unchanged by the committee, provided "that silver hereafter shall be legal tender only in sums of $5."

What becomes of the force and value of that charge in the presence of these other broad declarations with regard to the office that silver is hereafter to accomplish in the financial economy of the United States?

This is only important because it ought to stop forever this rot and trash about the surreptitious character and the fraudulent character of that legislation, and because when charges of that kind are made by gentlemen against a great political party they are not in the best possible position to urge nonpartisanship. They say they want to allay strife, contention, zeal for party, and then charge their adversaries with the gravest of crimes.

Mr. Speaker, nine months ago the condition of this country, while perhaps not what every man would have desired, was certainly in a most prosperous condition. The labor field was well filled, and there were places everywhere where the toiling men of this land could receive a fair wage. There were no idle mills; there were no fireless forges; there were no silent looms; there were no untilled fields. Everywhere the business of the country was satisfactory in the main to those who were engaged in its conduct.

About nine months ago there was an announcement made. It was announced that for the first time in very many years the Democratic party would have an opportunity of making good its promises and establish as the law of the land the theories of its platform. It was the belief of men everywhere that when the Democratic party announced that there was to be a radical change in the industrial system of the country that there were to be very radical changes in the revenue laws of the country, that the tariff of 1890, the McKinley tariff, was to be repealed, that those men who made the declarations, with authority, were honest of purpose and meant what they said.

Immediately, over all this land, there came paralysis. The mills stopped; the fire of the forges died out; everywhere there was a swarming multitude of idlers clamoring for labor but finding no places in the great labor field. Its changed condition was the legitimate result of that menace to the interests of this country that the Democratic party, with purposes such as it had announced, will always present when it is found to be in power. [Applause on the Republican side.] Gentlemen, there is no escape from this. You had declared there was no warrant in the Constitution for any element of protection to the industries of this country. If you were honest men you meant what you said when you declared that the McKinley bill, the sum of all infamies, should be repealed if the people trusted you with power.

They have done that. They have placed you in the situation where you said you would exert yourselves as legislators on these lines. It is true that we in the North did not have much belief in the sincerity of the Northern wing of the Democratic party, but we did believe in the integrity, no matter how we might have doubted the wisdom, of the Southern wing. We believed that you gentlemen of the South had Constitutional convictions. You had given earnest of it in the past. In support of views that you announced as your Constitutional convictions you had risked all that honorable men could risk.

We knew that, and when you said that, in your judgment, there was an inhibition upon every man who had sworn to support the Constitution of the United States from engaging in legislation that would stimulate and protect the industries of this land we believed you meant it, and so did the manufacturers. Hence, after you came into power—controlling the Executive and Congress—as soon as contracts then existing on the part of the manufacturers were filled, as soon as existing obligations expired, came the difficulties of inaction, because men of business could not be apprised of what lay in the future. Wool, in the country where I live, fell in price from 22 cents a little while before to 10 cents, and there was a general business paralysis all over the country.

This condition must be disastrous for the Democratic party. But the President of the United States, with an adroitness that was wonderful, a political skill and sagacity that mark him as the great Democratic politician of his age, determined to shift the responsibility from the Democratic party to the one that had just ceased to be in power, and he discovered that the evils under which the country groaned from the dangers of Democratic legislation were not, in fact, attributable to that cause, but existed because the Republican party, three years ago, had passed the Sherman bill. [Laughter.]

And, Mr. Speaker, strange to say, there are within the sound of my voice Republicans who have extolled upon the stump every provision of that law, who have called it beneficent in all its operations, who have pointed to it with pride as the only method known to legislation whereby there could be that increase of the circulating medium which was necessary to keep pace with the growth of population and business—there are, I say, such Republicans here who propose to aid the President in this shifting process of legerdemain designed to place the responsibility upon Republican shoulders, who propose to aid that attempt by voting "aye," a confession that the Sherman act contains in itself all the iniquities that the Democrats in their enthusiasm have charged that it does.

They tell us that we should vote for the repeal of this law because the whole country clamors for it, because the business interests of the country demand it. Gentlemen, where are the petitions that have been sent to your desks from the people of this country demanding the repeal of the Sherman law? I am not disposed to take aught from the importance of the place that boards of trade and banking associations and chambers of commerce hold in our business economies. I recognize them as essential to the successful conduct of business upon our methods. I have no assault to make upon the gentlemen who compose them. They are necessary factors in the general business of the country and have their legitimate place. But they are not of first importance. They are not "the people," and they may have interests opposed to the true interests of the great mass of the people. They are as selfish as other men, and often intent upon securing legislative measures that confer special benefits upon themselves that are not shared in by all of the people.

And I want to remind you, gentlemen, that boards of trade and chambers of commerce and bankers' associations do not do the real business of this land. Their business begins where the great business of production ends. [Applause.] They simply levy toll upon that which the real business men of this country create. [Applause.] They are necessary, but they are not all. The banks, for purposes of their own, desire the repeal of this act. I have known but few bankers who were not monometallists. They are nearly all such. They see that the President of the United States is one.

They remember his letter to Mr. Warner eight years ago, in which he took grounds against silver coinage. They remember his first message to the Congress, and his letter of last summer, and his recent message. In all, he is the enemy of silver, and they can now recall the closing sentence of this last message, in which he urges the repeal of the Sherman law and hopes "other legislative action may put beyond all doubt or mistake the intention and ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries." They know that this money is gold. They know that all of the earnest friends of the Administration who have spoken in this debate tell us that the repeal of the Sherman act is the first step to the demonetization of silver, and they know that the act for the repeal and their declarations and arguments in favor of a single gold standard should be construed together.

They believe that now is the favored time when this great "step in advance," as they call it, can most successfully be undertaken. The men who compose the boards of trade and chambers of commerce are creatures of the banks. They are the borrowers. When they find that accommodations no longer come, and when they are gravely told by the bankers, who are supposed to be financiers, that the reason why they can not have discounts is the presence of this obnoxious law upon the statute book, and that the only way of securing relief and new accommodation lies in the direction of carrying this repeal, they pass at once the resolutions that are prepared for them, and which, later, find their way to our desks. Then, too, the great metropolitan press, representing home interests, the interests of the men who support them, assume to speak for the country, and to say that the people make a demand for the repeal of this law.

There are 2,000,000 of people in the State of Iowa, but I know of only one of my colleagues who has received a letter or petition requiring or asking him to vote for this measure. In the district in which I live there are more than 180,000 people; agriculturists, all of them. There is not an important manufacturing industry in the whole district. And yet, Mr. Speaker, not one word has been said to me in all of the days while at home I was inquiring, nor has anything come to me here in the shape of a petition, asking me to vote for this repeal. I believe sir, there is no such public opinion as is asserted demanding this action.

But they tell us that it is "absolutely necessary to repeal this law in order to restore the confidence of the people." The confidence of the people in what? Not in the money that you propose to strike down. What is there in all the varieties of money that we have that equals in all the elements of value this same derided Treasury note of 1890? Behind that Treasury note lies the pledge of a nation, never dishonored, that its notes shall be redeemed in coin, and, as the Secretary of the Treasury has interpreted his duty, it is redeemed in gold. In addition to that, and behind it, it has, as a collateral, its bullion value in silver. What other money have you got that is as good? Not the greenback. It has but $100,000,000 in gold to redeem $346,000,000. Not the silver certificate. It is just the promise to return a silver dollar. But the Treasury note of 1890 has the same pledge for its redemption that the greenback has, and in addition, its full value in bullion silver. It is the best form of money that we have.

There is no distrust of that money on the part of the people. Time and again your attention has been called here to the fact that a day or two ago it was selling at a premium in the markets of New York for gold. No matter what the cause may be, there is something in the way of evidence in that fact. It shows that the people who are pledged to its redemption have not lost faith in their pledges or in their power. There is no trouble with the money.

The distinguished gentleman from Ohio [Mr. HARTER] a few days ago gave the true key to the whole difficulty. In extolling the beneficent action of the banks he told us that we had $24 per capita of money furnished by the Government, but the banks by their processes and their methods had enlarged that volume until there was $72 per capita in circulation among the people. Twenty-four dollars of it was the cash capital on which business was done—it was supplied by the Government; $48 of $72 per capita was the credit capital supplied by the banks—the debts of the banks, and on which they were doing business. The want of confidence is not in the money of the Government, it is in this substitute for money furnished by the banks. [Applause.] There is where the trouble is, gentlemen—not with the Treasury notes.

Gentlemen tell us that the presence of this Treasury note of 1890 is a menace to the money interests of the country; that it drives the gold out of circulation. How is that? Every dollar of our Treasury notes, treated as they are to-day by the Secretary of the Treasury—redeemed at the pleasure of the holder in gold—is in effect a gold dollar added to the circulation. Does the presence of a newly issued gold dollar drive out the present gold dollar? Will the dollar that we have become alarmed because its brother is brought up as a reënforcement to stand side by side with it in the battle of commerce? To my mind there is an absurdity about this that only needs to be stated in order to show its folly.

I believe, Mr. Speaker, that this law has been beneficial in its operation at all times and that it is not harmful to-day. A million and a half is added to the population of the United States every twelve months. The business of this country increases rapidly every twelve months. Ever since 1861 there has been a demand for the addition of about $63,000,000 annually to the circulation. To the four hundred and forty-odd million dollars that we had in 1861 we have made such additions that now we have in the Treasury and in circulation more than twenty-three hundred million dollars. There has been since 1861 an average increase of about $63,000,000 each year. This increase is necessary for the future. If you repeal the Sherman act how do you propose to get it?

There is not a law upon the statute books, save the Sherman act, that enables you to get more. You can not have more silver certificates. You can not have more gold certificates, because the tendency is to decrease them. You can not have more greenbacks, because of the pledge of the nation. You can not have more national bank notes under present legislation, because the period for ultimate redemption of the bonds grows so near. The only hope of meeting this demand for an increase of currency, as the statutes are framed to-day, is in the maintenance intact of this much-abused act of 1890. It gives us more of circulation. It gives us a most desirable circulation. It gives us the best form of money that we have. It is our only hope for expansion.

A gentleman who recently spoke on this floor announced as one of the reasons why this act should be repealed that under its operation there was a constant exodus of gold from this country. Does he assume that this act has aught to do with that? I remember that from 1849 to 1860 more than $600,000,000 of gold fled from our shores to other lands. Why? Because the balances of trade were against us; because we were a debtor nation and because we paid in gold, not because gold was then the only standard, but because commerce so elected. No Sherman act was in existence then, gentlemen; but there was a free-trade tariff; and it gave the balances against us and made it necessary for us to ship something that other nations would accept in payment, and that was gold. These balances are against us now.

A gentleman quoted a little while ago from the Treasury a statement to show that the balance was in our favor. Seemingly this is so; but that is the custom-house balance from which he read, that is made up from the aggregate of the invoices of incoming merchandise on the one hand and the aggregate of manifests of outgoing vessels on the other hand. It simply shows the custom-house transactions of this country. To that aggregate of invoices it is necessary you should add the undervaluations of the port of New York, estimated at from twenty-five million to forty million dollars each year. In addition you must add the sum that represents the cost of foreign travel of this country. The year before last 99,000 cabin passengers landed at the port of New York. Ninety thousand of them were American citizens. It is estimated that each one of these in journeying abroad expends a thousand dollars, making an aggregate of $90,000,000 more which you must add to that balance against us.

You must remember that the foreign commerce of this country is carried on in foreign bottoms—all but 12 per cent. Its cost is estimated at from $130,000,000 to $200,000,000. Eighty-eight per cent of either sum (whichever may be correct) must be added in order that you may find what the true balances are. Then to these sums you must add interest and dividends every year paid to foreigners. I undertake to say that in no year during the last fifty has the true balance, taking into account all transactions between ourselves and foreign nations, ever been in favor of the United States.

This simple fact does away with the value of all illustrations drawn from England, from France, from Germany, for our guidance. They are creditor nations; they can have whatever money they choose. All that is needed in such a country to give efficiency to money is to give it the legal-tender quality. They have no balances to settle beyond the jurisdiction of their own laws where the preferences of other persons must be heard. They are the dictators; and so they can make whatever money they please. This is important here for the purpose of suggesting that this vast fund of illustration given to us for Godly example perhaps is not so valuable as in the minds of some gentlemen it may seem.

The true way for us to solve this financial question, gentlemen, is to compel, by wise, judicious legislation, the balances of trade to be in our favor. [Applause.] That will do it. I hear gentlemen who seem to think that this financial question is important above all others inveighing against the only means within our power to effectuate that which they assert they want. Let us buy less abroad; let us patronize less the labor fields of other lands, and more our own.

Let us by judicious measures increase the merchant marine of this country and conduct our own foreign commerce and thus save more than $100,000,000 each year. Let us encourage by proper methods, by subsidies or bounties, the production of all the sugar that we need and save $130,000,000 to our own people. [Applause.] Let us pursue such courses and secure the industrial independence of America, and then all the other things that you gentlemen have been extolling as most desirable, and praying to God that you may have, will be given to you. It will not be absolutely necessary that you should then resort to prayer, because you could help yourselves; and the Allwise One encourages and commends this self-help. [Laughter.]

Mr. Speaker, I have heard with very great regret gentlemen on

this side of the House, whose opinions I have regarded as valuable, and whose example I wanted to follow, indulging in a line of discussion which seems to me, for them at least, is unwise. There is no party that has ever lived that contains multitudes of men but which, in order to secure unity of action and maintain the purpose of the organization, does not need the coercive or cohesive influences of party declarations. [Applause.] I want to suggest to gentlemen who have much at stake, because of party lines and party declarations, as well as party aspirations—I want to suggest to these gentlemen the impolicy of weakening the cords of cohesion found in the platforms that bind us together. [Applause.] I want it to be remembered that while it may be of interest to you just now to lose sight of party declarations on the money question, that there are coming up other questions; and you ought not, and you can not afford later on, to let other men exercise the same discretion and set at naught the declarations of the party that you are exercising in the present case. [Applause.]

The declarations of the Republican party in favor of the protective system are no stronger, they are no less subject to hypercriticism, and to the possibilities of interpretation, than are the declarations with regard to the double standard. We believe in them as a party in their entirety. We mean to stand by them in all their parts, and it appears to some of us most unwise and unseemly, where there may be such advantage to all, when all are observed, that men should take upon themselves to set aside a part that is just as dear to the Western heart as any in the entire declaration to be found, from first to last, in the platform. [Applause.]

We are here, Mr. Speaker, asked by the President of the United States by voting for the repeal of the act of 1890, to cast a vote of want of confidence in Republican statesmanship and Republican methods. I will not do it. [Applause.] We are asked to admit by a vote in this House, when all we have said in the way of prophecy is now fulfilled; when all that we said would come upon this country, when the Democratic party armed with the full power of the Government and the authority of the people has happened, and we are asked to say that these prophecies are not true, but are requested to declare by our action here that all of the evils that the country now labors under come solely from the Sherman law—from Republican legislation. I repeat, I will not do it. I do not believe it to be true.

I may as well state now that the Democratic party has either to go back upon its pledges with reference to the tariff made a year ago or else it is going to bid farewell to the prosperity of this land. And I want to hold you gentlemen to that issue. You took it upon yourselves and I don't propose, so far as my humble voice is concerned, to allow you by any kind of legerdemain or political trickery to get away from the issue as you presented it and the conditions as they are. [Applause.]

The Republican party has taken its position on the question of the free coinage of silver. It has said that it was in favor of the use of the two metals as money and that it would pledge itself to maintain them at a parity that now exists. But it proposes to do so in a statesmanlike way; and I for one desire that there shall be no variation from that purpose. It proposes that through an international convention an agreement is to be secured from the nations of the earth controlling in this matter that will fix the question without possibility of disturbance. How is it possible, gentlemen, you who have said that two standards can not exist—how is it possible for your pet theory to be true when all the nations of the earth use them in commercial transactions within their borders and jurisdiction? What becomes of your theory? Many gentlemen have referred to the situation prior to 1834 and subsequent to 1834, and the experiences of those periods—that gold and silver could not be kept in uniform value.

They forget that at first we adopted a ratio of 15 to 1 while the European ratio was 15½ to 1, and that when we made a change it was to 16 to 1. First we valued gold too highly, and then went as far in the other direction. We had not then attempted to secure this object through international agreement. That was the reason that there was this fluctuation once in favor of gold and once in favor of silver. Had other nations agreed there would have been no trouble. And now, in the midst of the pendency of these negotiations, while we are asking others to come to our position we are invited to change radically that position and assume another. Let us wait until after we have made every honest effort to secure bimetallism by means of international agreement. I want both gold and silver. I want them at the parity of 16 to 1. But I do not want to complicate the present situation. I want the Brussels conference to have time to act. Mr. Speaker, in my judgment this Administration has shown its hostility at all times to the use of silver.

When the Administration came into power there was in the vaults of the Treasury two hundred and seventeen millions of gold—one hundred and three millions of redemption fund and one hundred and fourteen millions on which gold certificates had been issued. Ah, says one, but that gold must remain there. Why? Simply because of the statutory direction to the Secretary of the Treasury to retain it; not because of the existence of a contract between the depositor and the Government of the United States that it shall remain. And, gentlemen, a resolution passed in the last hour of the last Congress repealing that clause of the law would have placed in the hands of the Secretary of the Treasury two hundred and seventeen millions of gold for immediate use in redemptions; more than one-third of all the gold in the United States and more than one-fifteenth part of all the gold in the world.

That same resolution might have placed in his hands more than $300,000,000 of silver. Here was the astonishing spectacle of this administration coming into power with more than $500,000,000 of coin in its vaults, each the equivalent of the other—more coin than any government in this world has ever owned at one time—and yet pleading the baby act, and crying about its inability to meet the obligations of the Government, when there was no obligation of this Government outstanding, save the gold certificates, that might not have been met with either form of that money.

Ah, but, says the objector, if the Secretary had paid out silver we would at once have been placed upon a silver basis and gold would have gone to a premium. Who would have paid a premium for gold, when the Secretary of the Treasury had $217,000,000 of gold with which to flood the market at any moment? Men buy gold and pay a premium to make money. They do not pay a premium for it when they know that to-morrow it may be given without price to their neighbor in the ordinary current payments of the Treasury.

But the President saw fit to say that he would maintain the parity by the use of gold alone and by degradation of the other metal, by declaring in advance that silver was unfit for use and by the sole use of the gold. This was like the athlete who would start out to give strength alike to the muscles of both of his arms by tying one of them securely to his person.

Mr. OUTHWAITE. Will the gentleman yield for a question?

Mr. HEPBURN. If I was right sure that I knew what that question was, and that I could answer it with great credit to myself and with perilous discomfiture to my friend, I would; but as I am not advised as to the nature of the question I will decline to yield.

The SPEAKER. The gentleman declines to yield.

Mr. HEPBURN. I want to be courteous to my friend, and I will listen to the question.

Mr. OUTHWAITE. I want to ask you whether it would not be repudiation for this House to pass a resolution permitting the Secretary of the Treasury to use for any other purpose whatever the gold which is in the Treasury for the redemption of Treasury gold certificates?

Mr. HEPBURN. Undoubtedly it would not, and the question put by the gentleman shows me that he has never read that act. [Laughter and applause on the Republican side.] There is no sentence in it that has the semblance of a contract. All that the creditor can demand is dollars of gold when he presents his certificates. His gold is not kept as a special deposit, and it is not a special deposit. Every dollar of gold goes into the general gold fund of the Treasury Department—that is, that general account. One man's gold is not specially held for his payment, or for return to him. He is entitled to gold dollars, but not to any particular or specific dollars.

Mr. OUTHWAITE. Why did not Secretary Foster apply that gold in such a way instead of proposing to sell bonds?

Mr. HEPBURN. I don't know. Secretary Foster is an Ohio man, and perhaps you know more about him than I do. [Applause and laughter on the Republican side.]

Mr. OUTHWAITE. He is an Ohio man, but he belongs in your class of people, your party.

Mr. HEPBURN. I heard it suggested the other day by a friend of mine in whom I have great confidence generally, that while he did not believe the repeal of this act would result in any benefit, in any certain benefit, yet he proposed to vote for it; that, operating as a possible opiate, it might do some good. I think that is not wise. It is too much like putting the plaster on the well leg, it seemed to me, a kind of remedial effort that I did not want to follow him in. [Laughter.]

I believe that this repeal ought not to be had. I believe that neither one of the amendments providing for the free coinage of silver ought to be adopted. But I do not care to argue that question now. I want the situation of silver to remain unchanged until we know the result of the international conference. Certainly, at this time, while we are striving to secure an agreement between the nations upon propositions that have been made by us and have not yet been acted upon, I am not willing to change the status in any way until we know of failure; and then I am willing to do those things that are within the limits of judicious conduct, that will give to us the two metals on the best terms possible for all to perform the same kindly office for the commerce of this country that for more than a hundred years they have been able to perform. [Applause.]

[Here the hammer fell.]

Mr. JONES. Mr. Speaker, the pending proposition to repeal unconditionally the purchasing clause of the Sherman act is, in my judgment, fraught with the gravest peril to the American people. Nothing short of this deep-seated conviction would induce me to occupy the attention of the House, at this late stage in the discussion, with a brief statement of some of the reasons which satisfy my mind that no more vicious and unjustifiable

measure than this, considering the ultimate object had in view by those who are behind it, has been seriously considered by Congress within the present century.

We have been told that the exceptionally heavy exportation of gold during the first six months of the present year is the result of the pernicious effects of the Sherman law, and that the apprehension, whether well founded or not, that the Government will not be able to maintain its silver currency at a parity with gold if the Sherman law is longer kept upon our statute books, has brought upon us the monetary crisis which has of late enveloped the country and paralyzed its business interests.

In other words, that the monthly purchase of 4,500,000 ounces of silver by the Government and the issuance of coin certificates to the amount of the market value of that silver in payment thereof is driving gold out of the country, and has so shaken the confidence of the people in the ability of their Government to meet its obligations that a wild panic has seized upon them for which the unconditional and immediate repeal of the Sherman law is the only panacea.

Mr. Speaker, with the utmost respect for those who may have been imposed upon by these baseless assumptions and who have honestly accepted them as true, I shall endeavor to demonstrate from figures that are incontestible and facts that are indisputable that there is no earthly connection between these shipments of gold and the much-denounced Sherman law.

The Sherman law has now been on trial a little over three years, and under its operations $180,000,000, in round numbers, have been added to our circulating medium, every dollar of which is of full legal tender, and as good as any other dollar in our currency. To be entirely accurate—for varying statements have been made upon this floor and elsewhere—the Government has coined 36,087,185 standard dollars and issued coin notes to the amount of $148,286,348, there being in actual circulation of these notes $143,774,138.

According to a calculation made by the Director of the Mint, taking the depreciated value of silver bullion on the 17th day of this month as its true value, about which I shall presently have something to say, the Government has lost on its silver purchases under the Sherman act just $33,387,108. Admitting this to be a fair calculation, does anybody believe that the total destruction of that amount of the currency of this great country could possibly shake the confidence of any sane man in the ability of this Government to meet its obligations? Does anybody believe that such a loss, if real, could have had the effect of driving gold abroad? A government whose income is half a billion of dollars a year and which gives away in charities two-fifths of that amount could hardly be embarrassed by the loss of eleven millions a year for any number of years.

The Sherman bill was approved on the 14th of July, 1890, and the gold export movement, as everybody knows, commenced more than two years prior to that date. Although we lost by exportation $87,506,463 in gold during the fiscal year ending June 30, 1893, the bulk of that amount has gone abroad since January 1, and in the preceding year, when the Sherman law was in like full force, the excess of our exports over our imports of gold was only $495,873. If the Sherman law drove gold abroad in the fiscal year 1892-'93, why did not the same cause produce like effects in that of 1891-'92?

But under the operation of the Bland law of 1878, denounced as a more vicious piece of silver legislation, and more menacing to the business interests of the country than even the Sherman act, by the very people who are now laying all of the present business depression at the doors of that act, and in almost the same breath—for they dread its restoration more than they do a continuance of the Sherman law—the Government coined 378,166,793 standard dollars, all of which, either in that form or in the shape of silver certificates, is practically in circulation to-day.

Was the effect of the Bland law to drive gold out of the country? So far from it, during the period from June 30, 1878, to June 30, 1890, there was imported into this country $186,088,510 more of gold than was exported during that period. If it be just to charge the Sherman bill with the gold that has been sent abroad since its passage, must not the Bland act be given credit for bringing to our shores the far larger sum?

It seems to me, Mr. Speaker, that this is logical. But again, for the first fifteen days of this month the importations of gold have exceeded the exportations to the amount of $16,250,000, and by the end of the month may reach $25,000,000 or more. How is this turn in the golden tide to be accounted for? Shall we set it down to the credit of the Sherman law? We are still purchasing silver bullion and increasing the circulating medium by issuing notes against it, and the silver dollar is daily becoming more and more dishonest in the estimation of those who seek to debase it, and who yet belie their words by paying a premium for it.

I can not, in the time allotted me, Mr. Speaker, enumerate the causes that have led to the unusual exportation of gold during the first half of this year. For the purposes of my contention it is enough to know that the Sherman law was not one of them. But reasons in abundance are not far to seek, and it is not necessary to go back more than a few months to find them.

I may instance the bank failures in Australia, which caused a rude shock throughout the financial world, when England, the largest holder of American securities, threw large quantities of them upon the market, thus drawing from us gold that otherwise would have remained here. Austria, as all know, has recently undertaken to refund her debt and to go to a gold basis. To do this required a large amount of gold, and she has necessarily drawn heavily upon our supply.

India, at the dictation of Great Britain, has been driven to suspend the coinage of silver on private account, and the enemies of silver have not been slow to seize upon that fact as a weapon with which to beat down the market value of silver and to still further appreciate the value of gold. But in my opinion, Mr. Speaker, the McKinley bill, that iniquity of iniquities, that crowning piece of Republican robber-legislation, which the people by an overwhelming majority condemned at the polls, and the repeal of which they then were told and believed would be speedily accomplished once the Democratic party was in full control of the Government, is far more responsible than all these causes combined for the recent ebb in the golden stream as well as the stagnation of trade and commerce, the depression of agriculture, and the want and distress that has been entailed upon labor.

It may be said that the McKinley bill became a law three years ago and that it would have earlier affected, if at all, the exportation of gold; but, Mr. Speaker, we must remember that our enormous exportations of breadstuffs served to postpone the day when the balance of trade should be against this country, and that we have suffered from that cause alone to the extent of $50,000,000 during the past year.

I might go on almost indefinitely and regale this House with the forbidding story of the many failures and suspensions that have inflicted inestimable loss and injury upon the legitimate business interests of this country, but I forbear. The Reading disaster, the whisky, cordage, and other trust failures have added immensely to the financial woes that have afflicted the country and involved in the blackest ruin thousands of innocent victims.

But, Mr. Speaker, it must be apparent to every unprejudiced and dispassionate mind that the present deplorable condition of our monetary affairs is due to a great extent to the determined and persistent attempt of the money power to dictate the financial policy of our Government. This has been most aptly described as the rich man's panic. If the people have lost confidence and withdrawn their hard-earned savings, or such of them as they have been permitted to withdraw from the banks, it is because the banks have by their wicked attacks upon the people's money created that want of confidence.

But, Mr. Speaker, these attacks have proved a veritable boomerang; they have recoiled upon their inventors. Instead of precipitating a run upon the Treasury, they have awakened in the minds of the people a deep distrust in the banks themselves, which the sequel has unfortunately proven in many cases was only too well founded. Instead of driving gold to a premium, they have placed a premium upon all money—silver as well as gold—and to-day the dishonest silver dollar can not be procured, save at a premium, by the very men whose insatiable greed and unconquerable lust for money have hurled the country into the throes of a financial panic and involved thousands of their fellowmen in disaster and ruin.

The Rand-McNally Bankers' Monthly, for August, exclaims in pitiful tones:

> In 1873 it was the toiler's panic; this is the rich man's turn.

Will the unconditional repeal of the Sherman law give the relief that even the bankers must now desire? Will aggravating a famine relieve hunger, as has been said upon this floor? That there is a scarcity of money must be apparent to everybody, although some people even now profess not to believe it. The workingman who discounts his employer's duebills in order to secure the cash with which to supply the daily needs of his family is thus taught by a sad experience what before he had never appreciated, and the bank president, whose doors are besieged by a howling mob demanding the money which belongs to the panic-stricken depositors and which they can not rescue from the iron safes in which it is securely locked, may never have, and doubtless never will, experience the terrible pangs of actual, biting hunger, but he at least has a realizing sense of what a money famine means.

According to the last Treasury statement the total amount of money in circulation in the United States on the 1st of August,

1893, was $1,611,099,017. This amount would make the circulation per capita $24.02. As a matter of fact, it is much less; for when the Treasury officials speak of the money in circulation they mean the general stock of money less the amount held in the Treasury, which is, of course, misleading, and must be, accurately speaking, incorrect; for bank reserves and the contents of safety boxes can in no sense be said to be in circulation. France, the freest country upon the globe from panics and other monetary disturbances, has a per capita circulation twice as large as our own, and she has a silver circulation of $700,000,000, which she easily maintains at a parity with gold, and that, too, at a ratio of 15½ to 1.

The total silver currency of the United States is, in round numbers, $625,000,000, including standard dollars, subsidiary silver, silver certificates, and coin notes. With twice the population and three times the resources, commerce and trade of France, we are told that we can not maintain an equal amount of silver currency at par with gold, even at the greater ratio of 16 to 1. It seems to me, Mr. Speaker, that the bare statement of such a proposition carries with it its own refutation, and is a reflection upon the American people.

It is impossible to speak accurately, but it is within reasonable bounds to say that prior to the civil war there was at least half as much silver in circulation here as there is to-day. We often hear it stated that free coinage of silver had practically ceased when the demonetization act of 1873 was passed, and that only $8,045,838 had up to that time been coined. Let us examine this matter, Mr. Speaker.

The reports of the Director of the Mint show that in addition to the eight million of standard dollars coined, there was coined from 1792 to 1853 of full legal-tender fractional silver $76,735,015. From 1853 to 1873 there was coined $60,361,032, which, however, was not of full legal-tender quality, except in small sums, since it had become necessary to lessen its weight in order to keep it at home, a process which might perhaps be applied with advantage to our present gold coinage.

But these sums by no means represent the silver in circulation prior to 1873. Everybody knows that previous to the late war Spanish milled dollars and Mexican dollars circulated more freely than any other money, and that the Mexican dollar was by law a legal tender up to 1857. It is also an indisputable fact that the Mexican dollar continued in general circulation up to and through the war, and it was received in Texas and the Southwestern States up to ten years ago.

Mr. Speaker, I venture the assertion that when we take into consideration the vast amount of our annual productions, our prodigious wealth, and the enormous volume of our interstate commerce, the country was better supplied, according to its then needs, with silver currency before 1873 than it has ever been since.

With the war our stock of gold and silver vanished, and the act of 1873 was deliberately planned to prevent the acquisition of silver currency to supply the place of that lost. The unconditional repeal of the Sherman law means that this country is to be hereafter on an exclusively gold basis. It means that henceforth monometallism is to be the fixed policy of the United States, as it has long been of creditor England, unless the people, reduced to want and goaded to desperation by the merciless exactions of a moneyed aristocracy, whose greed is insatiable, throw off the intolerable yoke of oppression and secure through revolution what their representatives have denied to them.

The total amount of money in the civilized world at present is placed at $3,582,605,000 in gold, $4,052,700,000 in full and limited tender silver, and $2,635,873,000 in paper. The world's production of gold in the year 1892 was $130,817,000, larger by several millions than that of any other previous year since 1857. It is needless to say that the gold of the whole world is totally inadequate to do the business of the United Kingdom, France, Germany, and the United States, which countries now hold the bulk of it.

They tell us that if we will only discontinue the coinage of silver that gold will come in to take its place. From whence, pray, will it come? England, Scotland, and Ireland have only $550,000,000; less by more than fifty millions our present supply. Germany, also on a gold basis, has less than we have, and Austria-Hungary, which is desperately striving to adopt the single gold standard, has only $40,000,000 of gold with which to accomplish that financial feat. Her needs have already served to largely reduce our stock. The average yearly production of gold for the past hundred years has been $56,339,080. There is no prospect of any future increase, and the larger part of what is mined will be consumed in the arts and in the uses of dentistry.

With these facts before our eyes, Mr. Speaker, I ask again, can we afford to debase and to destroy the money value of the only metal that can supply the monetary needs of the world? There is none too much of both metals produced in the world, the total production of each for the past century being, gold, $5,653,968,000, and silver, $5,104,941,000. Mark how nearly together the production of these two precious metals has remained, and that, measured in dollars, the production of gold has been larger than that of silver.

Who can doubt but that silver as well as gold was created to supply that medium of exchange by which every other product of human exertion and industry shall be measured? To demonetize either of these metals, which by the consent and usage of mankind regulate the volume of the world's money, is to destroy one-half of the money now in existence; and when you blot out one-half of the money of the world you double the purchasing power of the other half. To do this is to cheapen by just one-half the price of property and labor. This is a proposition that can not be successfully disputed. The effect of the unholy war that has been waged against silver has not, as one might imagine, depreciated silver; it has merely appreciated gold. Every product of human industry and skill has shared the fate of silver.

Just as silver has gone down in the scale of prices, in the same proportion the products of labor have been cheapened. This is no baseless theory, no wild figment of the imagination. In 1872, the year before silver was demonetized, its market value was greater by 3 cents an ounce than its mint value, and that year the average price of a bushel of wheat was $1.47. From that day to the present moment silver has declined in value, and each year there has been a corresponding decline in the price of wheat, until to-day silver is worth only 70 cents an ounce and wheat 69 cents a bushel. When they started upon the down grade the year following—a year that will long be memorable in the financial history of America—silver was worth $1.29 an ounce and wheat $1.31 a bushel. Every honest and intelligent man knows that this was no mere coincidence.

But we are told that whilst the free coinage of silver will make money more plentiful it will also cheapen it. Granted; but cheap money does not mean dishonest money. It does mean higher and better prices: it does mean that the products of the farm shall command higher prices and that the wages of the laborer shall be correspondingly increased. Dear money means cheap products and cheap labor. The scarcity of money is always indicative of falling prices, and the reverse is equally true.

If you repeal unconditionally the Sherman law—and that is the naked proposition of Wall street—you will not only put an abrupt stop to all increase in the volume of your currency, but you will utterly degrade silver; you will drive it down further and further in value, and you may depend upon it that wheat and corn and tobacco, and every other product of the farm and factory, will keep pace with its downward, and deathward march.

This may not be the immediate effect of repeal. It will, however, be the inevitable and certain result. We who stand here and declare that we will resist the perpetration of this crime are denounced as the advocates of fiat money and a "dishonest dollar." But the bankers, with few exceptions, in and out of Congress, the men who pretend to believe only in money that possesses intrinsic value, are demanding the passage of an act authorizing the issue and sale of from $150,000,000 to $300,000,000 of gold bonds.

The credit of the Government is strong enough to float its bonds upon the markets of the world, but not strong enough to maintain its silver currency at a parity with its gold currency! The silver in every dollar coined by the Government, we are told, is only worth 60 cents as measured in gold, and that therefore it is "a dishonest 60-cent dollar;" but when it receives the stamp and impress of the Government it has behind it at least 60 per cent of intrinsic value and only 40 per cent rests upon the faith and credit of the Government. The bonds that we are asked to issue and sell for the purpose of increasing our currency and placing us upon a gold basis will have nothing behind them but the bare faith of the Government.

Mr. Speaker, I believe in "an honest dollar," and I pray that the time may speedily come when there will be none other in our currency. The only "dishonest dollar" is the gold dollar. Through legislation its value has been greatly appreciated, until the purchasing power of gold, as I have shown, has actually been doubled.

I favor the repeal of the Sherman law, and I shall vote to repeal it by a substitute that will provide for the free coinage of silver at a ratio of 16 to 1. I believe that the remonetization of silver will make its market value equal to its present mint value, and that the market value of wheat and corn and labor will be correspondingly increased. I believe that this Government is strong enough and rich enough to maintain gold and silver at a parity at the present ratio, even as against the rest of the world.

Great Britain, through her dependencies, produces four times as much gold as she does silver, whilst we produce nearly double as much silver as we do gold. Why, then, should England domi-

nate the policy of the United States as she does that of wretched India? It is to her interest to cheapen silver; it is to ours to protect it. Practically the only currency that India possesses is silver. The cheaper England can purchase silver, the more Indian wheat she can buy, and the more cheap Indian wheat there is brought into competition with that produced by the American farmer, the more wretched will his condition become.

I have shown from official figures that more gold than silver has been produced within the last hundred years, according to the money value of each at the present ratio between the two; in other words, that not more than 16 ounces of silver have been produced for every ounce of gold produced, and if the production continues relatively the same, no sound reason for a change of ratio can be adduced. If in the future twenty times as much of silver as of gold should be produced through any considerable period, then it will be time enough to change the ratio to 20 to 1. An increase of ratio does not necessarily involve the recoinage of the silver now in circulation.

If the $346,681,016 United States notes, or greenbacks, now in circulation can be maintained at a par with the gold dollar, with only a gold reserve fund of $100,000,000 behind them, then surely we need apprehend nothing for our present silver currency. Besides, the repeal measure we are now considering does not propose either to retire or to recoin the present silver dollar, but on the contrary, proposes to maintain by law its parity with gold. It takes more than the addition of a few grains of silver to give to a silver dollar the purchasing power of a hundred cents. It requires the stamp and superscription of the Government to do that. We can each of us remember when the trade dollar, with more grains of silver in it than the standard dollar, was worth only 85 cents.

I have said, Mr. Speaker, that I wished to see the Sherman law repealed, and I repeat it. It was not passed to promote free coinage, but to serve as a stumbling-block in its path until the enemies of silver the world over could rally their forces and strengthen the conspiracy hatched twenty-five years ago to strike down silver. I thank Heaven that no Democrat in either House of Congress voted for it.

It was the last expiring act in that financial legislation of the Republican party which began with the credit-sustaining act of 1869, through which the bondholders robbed the people of $1,120,000,000, and which had well-nigh bankrupted the Government and had brought want and destitution into the homes of the producing and laboring classes, when the Democratic party came into power on the 4th day of March. Having served the purpose for which it was designed, I trust it may now prove a stumbling-block in the way of a single gold standard.

Those who stand with me would remove it in the interest of the great mass of struggling humanity; those who are on the other side of this question would remove it at the dictation of the money power and to subserve the interests of greed and avarice. It is not difficult to predict on which side our Republican friends will array themselves.

I appeal to my Democratic associates to take the side of toiling, down-trodden, helpless humanity. The bankers can take care of themselves, we are told upon high authority, and I believe it. Gold and silver have constituted the money of the world for six thousand years. Every national Democratic platform that I have read has declared in favor of the use of both metals and upon equal terms. Some gentlemen who will vote for unconditional repeal, and who do not wish their Democracy questioned, pretend to find in the Chicago platform warrant for such course. I do not read that instrument in that way. It is idle to talk of "holding to the use of both gold and silver as the standard of money," and voting to make one the only standard.

It is worse than idle to talk of resorting again to international conference. Five times have we done so, and to-day we are vastly further from an agreement than ever before. But there are other gentlemen here who, though elected as Democrats, yet hold their own judgments in higher esteem than that of their party, and who have more faith in their own wisdom than in the aggregate wisdom of a Democratic convention. One of them boldly declares that he will not be bound by the glittering catchwords of platforms, and another has affirmed that he wrote and ran upon his own platform. I give them both credit for honesty and candor.

If absolute bimetallism is ever to be the policy of this Government Congress must make it so. It has the ability and power to do it—has it the courage and patriotism? Neglect not the opportunity now presented, I beseech you, for if you do silver is doomed. It is the knowledge born of this fact that has encouraged the despoilers of mankind to concentrate all of their powerful forces in the one mighty effort which we are to-day witnessing within these Halls. Tighter and tighter is becoming the grasp which the money power has laid upon the nation's throat, and year by year the power of resistance on the part of the people is becoming weaker and weaker. Upon every succeeding Congress a stronger hold is being exerted.

In 1878 the unequal contest waged in behalf of the wealth producers and the wage-earners of our land was almost won, but twelve years later, instead of the promised enfranchisement of silver, the Sherman law was thrust bodily down the unwilling throats of a long-suffering and patient people. If now the slight barrier which bars, to some extent at least, the way of greed and avarice is broken down, I tremble at the thought of the dire results that must inevitably follow.

Starvation is already stalking abroad in the land, and the heartrending cries of countless thousands of unemployed men and women are hourly borne in upon us from the fields and shops of the West. But greed, insatiable greed, hath neither ear nor conscience. Desolation and ruin are impending. Despondency and actual want have entered many a happy home, and the darkest gloom pervades many once prosperous sections of our beautiful land.

Mr. Speaker, as I reflect upon the perils that environ us upon every side, and behold the helplessness of my people, I realize as never before the truth of the words of that great apostle of Democracy, Thomas Jefferson, that "banks are more dangerous than standing armies." [Loud applause.]

Mr. ABBOTT. Mr. Speaker, an opportunity was tendered me in the early part of this debate to address the House on the pending bill, but, being unable to do so at the time on account of illness resulting from a severe cold, I avail myself of the privilege extended to all members by order of the House to print in the RECORD the remarks I would have made.

I am not vain enough to suppose that they will change the opinion of any member of this body on the important subject now under discussion, but I feel that it is a duty I owe to those whom I have the honor to represent, as well as to myself, to place my views before the country.

By the act of February 12, 1873, silver was demonetized. I deem it unnecessary to recur to the facts and circumstances connected with the passage of that most infamous act. President Grant and Speaker Blaine afterwards declared that they did not know, when they signed the bill, that it contained provisions which demonetized silver.

It seems that months had elapsed, even before many members of Congress knew what had been done. As soon as it became generally known that silver had been demonetized and half of the metallic currency had been destroyed, the voice of the people—especially of the laboring and producing classes—came in thunder tones from every part of the country demanding the restoration of silver. Members of Congress, of both of the great political parties, were elected, pledged to the restoration of silver as a money metal.

In obedience to that demand, seventeen years ago the battle was begun in this Hall by the Democratic representatives of the people against the gold combination of this country and Europe. The battle raged fierce and bitter until it culminated in what is generally known as the Bland-Allison compromise act of 1878, by which not less than two nor more than four millions of silver dollars should be coined per month. Under that act about $425,000,000 have been placed in circulation and are now in the hands of the people, either in the form of silver dollars or silver certificates.

During that great contest that eloquent and distinguished statesman who now holds the portfolio of the Treasury Department, Mr. Carlisle, in referring to the ruin and disaster which would follow the permanent destruction of silver as a money metal, said:

> I know the world's stock of precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate, indeed, if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry.
>
> According to my view on the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age. The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilence, and famine that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly, at the same moment would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money in the world.

This eloquent and forceful language only voiced the unspoken sentiment of the producing and laboring clases. While they approved of the compromise made, they were aware that it gave them only partial relief. They were not fully satisfied with results, and therefore urged their representatives to renew the fight and never cease the struggle until the citadel of the enemies of silver should be stormed and captured and gold and silver placed on an equality.

Unfortunately, however, for the country and silver, the great

contest at the polls in 1888 resulted in the temporary defeat of the friends of silver and the placing of all the branches of the Government in the hands of the Republican party—the party that demonetized silver in 1873, passed the Sherman act of 1890, and will now vote to strangle its offspring.

The act of 1890 repealed the Bland-Allison act of 1878, and provided that the Secretary of the Treasury should purchase 4,500,000 ounces of silver at the market price, in payment of which he is required to issue Treasury coin notes, which notes may be redeemed in either gold or silver, at the discretion of the Secretary of the Treasury. Something more than $146,000,000 of these Treasury notes have been issued and put in circulation.

I have now given a very brief statement of the silver legislation since 1873.

The President has thought proper to call us together in extraordinary session and has asked us in his message to repeal the silver-purchasing clause of the Sherman law, attributing, as I understand the message, the distrust and fear existing in banking and commercial circles as well as the money stringency to the Sherman act.

With due deference to the President, it seems to me to be our duty, as well as his, to ascertain the true cause or causes which have led us to the impending financial crisis, and to discover the proper remedy to be applied to remove the causes, restore confidence, and reëstablish a healthy condition of business and trade.

We see from the papers that the same financial troubles that exist here exist in England and in all the European states, as well as in India and other Eastern countries. Certainly the Sherman law can not be so far-reaching in its effects as to produce these results.

Why, Mr. Speaker, we have had in circulation for more than fifteen years $346,000,000 of Treasury notes, usually called greenbacks, based on $100,000,000 of gold deposit, and for nearly the same time $330,000,000 of silver certificates, based on silver deposits. These currencies have not produced a panic! How, then, can it be possible for the issuance, during the past three years, of $146,000,000 of Treasury coin notes, based on silver purchases and redeemable in either gold or silver, at the pleasure of the Secretary of the Treasury, to create a panic, disturb business relations, and produce a stringency or scarcity of coinage?

This proposition seems to me to be so illogical as to be unworthy of serious consideration. The amount of coin Treasury notes issued under the Sherman act is so insignificant when compared with the whole amount of money in and outside of the Treasury that it seems almost absurd that anyone would ascribe the present financial depression and money stringency to such a cause.

If these notes were to be called in and canceled, thus reducing the volume of money in circulation, I can see very well why the banks might complain of hard times and the scarcity of money; but when they go to swell the volume of currency and add to the amount of the circulation, to say that they produce a scarcity is equivalent to saying that one added to five makes four.

But we are told by some gold bugs that it is not because of the $4,000,000 which are monthly added to our circulation under the Sherman law, that has produced the scare and uneasiness which have caused the depression and influenced depositors to withdraw their deposits from the banks and put the money in hiding places, but because if the Sherman act is not repealed it will eventually lead to the free coinage of silver and the establishment of silver as the standard of value. This sort of argument, Mr. Speaker, exposes the whole secret. It is a fight for gold and against silver.

But it will be remembered that such was not the declared purpose of those who favored and supported the Sherman bill when it passed this House in 1890. We knew then that its supporters did not intend to advance the cause of silver, but to destroy it. It is well known that it was a "cowardly makeshift" resorted to to prevent the passage of a free coinage bill.

Nearly every Democratic member of Congress voted against that bill. They charged then the friends of that measure with the deliberate purpose and "intention of destroying silver and preventing its future coinage," for, by the terms of the bill, the further coinage of silver after July 1, 1891, was left to the discretion of the Secretary of the Treasury, who was known to be hostile to that metal.

The truth of the charges then made against the supporters of the Sherman bill are being verified to-day. They have turned against their own offspring and are holding it up to the world as a great monstrosity, and charging it with all the woes and evils which now threaten the business of the country.

Mr. Speaker, while I do not intend to defend this child of the opponents of silver, I do not believe that it is in anywise responsible for the fear and distrust now existing in commercial circles.

I voted against that bill because it repealed the only silver-coinage act on our statute books. I voted against it because I thought it would delay the passage of a free-coinage bill and because I thought it would eventually result in contracting our currency by destroying silver, which is the basis of one-half of our currency, which is now sought to be done.

I am aware that the unconditional repeal of the Sherman law will not affect the silver already coined or the Treasury notes issued under this law, but it will stop the coinage of any more silver in future and the issuance of any more Treasury notes based on silver. The question then arises, how can the Government increase the supply of currency to meet the rapidly increasing business and commerce of the country? If this law be unconditionally repealed, there are left only two ways by which the supply of currency can be increased—one is by the yearly product of the gold mines and the other is by issuing and selling bonds—unless we repeal the tax on State banks and look to the States to supply the demand.

The Director of the Mint shows, in his last report, that the gold product of this country for the calendar year 1892 was only $33,000,000—$175,000 less than for the year 1891. That during that year $16,000,000 were used in the industrial arts, by jewelers, dentists, and plate-makers. Thus it will be seen that we can not rely on the output of the mines to supply the increasing demand for money after deducting the amount consumed in the arts. It follows, then, as a matter of course, that the Government must issue and sell bonds to get money to meet the demands of industry.

Now, I think I have arrived at a point from which the depression and distrust in business circles may be explained. The Sherman law has evidently had nothing more to do with present conditions than the laws of the Medes and Persians.

From a careful study of the subject I firmly believe that there exists a conspiracy, entered into by the money powers of this country and Europe, to destroy silver as money and force an issue of interest-bearing bonds; and to this end they have created doubt and fear in the minds of the people in almost every part of the country as to results which will follow the refusal of Congress to repeal the Sherman law and destroy silver as money.

In support of this opinion, I desire to refer to the fact that boards of trade, banking houses, and wholesale merchants of New York and other great cities have flooded every part of the country with their printed and typewritten letters, inveighing in bitter terms against said act, and predicting dire calamities to the business interests of the country if said act is not unconditionally repealed.

I do not think that I would exaggerate to say that I have received five hundred letters, sent out alone by one firm of dry goods merchants of the city of New York, and which were sent to me by constituents, who felt alarmed at the representations made therein of a threatened crisis if the Sherman law was not unconditionally repealed. These letters, which are merely duplicates, appeal to the party addressed to use his influence with his Senators and Representatives to immediately vote for the repeal of the law, and indirectly suggest that the proper solution of the matter is to issue bonds, payable in gold, with which to buy gold from abroad.

It is a fact which no one can deny, that these letters which have filled the mails and flooded the country for the past four months have created distrust and fear among the people, as well as retail dealers and country bankers. Many of these people have not had the facilities for, or the time to study the questions involved, and consequently they became alarmed and began to hoard their money, when in truth there was no cause for fear. If they would have reflected for a moment they would have understood that these representations were made for selfish motives—to make money by destroying silver, thus increasing the value of their gold. It is not surprising, however, that distrust should exist in the country, and that depositors in banks should withdraw their money and hoard it, when the daily mails informed them that a crisis was impending.

The way I interpret the signs of the times is, New York undertook to scare the people and force them to demand of their representatives in Congress the repeal of the Sherman law and the demonetization of silver. They have succeeded in scaring the people, who in self-defense have raided the banks and forced them to pay a premium for cash, whether of silver or gold or of greenbacks. My sympathy is with the depositors, but I do not have the slightest sympathy with the banks in this fight. They have brought it on themselves. They "sowed the wind, and have reaped (and are reaping) the whirlwind."

My opinion is they did not expect to force a crisis, but they gave the people such a fright they could not stay the tide that

set in against them. I hold them responsible for the existing condition of things, believing they brought it about for no other reason than to secure the demonetization of silver and the issuance of gold bonds.

We are told by the friends of gold that a large volume of currency is not necessary to do the business of the country—that over 90 per cent of all the business is done on the credit system by checks and drafts. This may be so, and in commercial circles it is a convenient method of transacting business, but when confidence is broken down, when the country becomes panic-stricken, as it is to-day, the check system is a failure.

It requires a visible circulating medium, actual cash to meet the demands of the times. Messrs. Chisholm & Co., bankers and brokers, Broadway, New York, in their circular letter of August 14, say there is a currency famine in that city, that the silver dollar is at a premium. So, we see it is performing its functions as money in that great city where it is despised, and if the impending crisis be averted it will, in my opinion, be due to the silver dollar and the currency based on it.

The Government must preserve a larger volume of currency to meet such an emergency as exists to-day and prevent a combination of bankers and bondholders from bringing ruin and disaster upon the country by the destruction of silver as attempted by this bill.

I contend that the only way a reliable and stable currency can be established and maintained is to reënact in substance the coinage laws which were in force before the demonetization of silver in 1873, and provide that the holders of either coin may deposit the same and in lieu thereof receive Treasury coin notes, such as are now issued under the Sherman law, and make it compulsory on the Secretary of the Treasury, when such notes are presented for redemption to pay the same out of that coin, whether silver or gold, which may be in excess of the other at the time the notes may be presented.

By the enactment of such a law as I have outlined a parity of the two metals would necessarily be preserved, as the holder of the notes could not dictate the coin in which they would be redeemed and, therefore, these semiannual raids on the Treasury to secure gold would be stopped.

Mr. St. John, president of the Mercantile National Bank, of New York, gave the proper solution of the trouble when he said:

> If the United States will provide itself a monetary system it will be found that there are inducements enough for the outside world to trade with us to make our system satisfactory to all concerned.

To talk of "money universally recognized by all civilized countries" is a solecism and utterly meaningless.

Everybody knows that gold and silver coins, as well as paper currency, are money, in the proper meaning of that word, only in the country where the coins are stamped or the paper issued. The coins of no civilized or uncivilized country are money outside of the limits of their own country. They may have value, but it is merely a commodity value like that of wheat or cotton.

I think that the time has come when Congress should legislate for the people of our own country and not for the outside world.

Twice in our history we have declared and maintained our independence of Great Britain, but it seems, after all, that we are to become the slaves of the gold jugglers of London; and what is most surprising to me is that Democratic statesmen will rise on the floor of this House and endeavor to maintain the financial supremacy of England, the greatest creditor nation on earth and into whose coffers more than $500,000,000 annually flow from other nations which are her debtors.

England, Germany, and France, as well as all other nations of the world, have established their own financial systems. They regulate, by law, the coinage of the metals and their value, and the issuance of paper currency to suit themselves. They do not consult each other or the people of any other nation. Then, why should we, who claim to be the freest, the greatest, and most enlightened people of earth, shape our financial system to please the kingly governments of Europe, and thereby pauperize the masses of our people?

France, which occupies a territory less in extent than the State which I in part represent, in the face of all the gold nations of Europe maintains her $700,000,000 of silver at the ratio of 15½ to 1. With a population nearly double that of France, with natural advantages and resources infinitely superior, why we can not maintain a silver circulation, or currency based on silver, equal to that of France is incomprehensible to me, especially so when our ratio is 16 to 1.

The Director of the Mint, in his report for the calendar year 1890, shows that the total amount of silver coin of the world, outside of the United States, is in round numbers $3,340,000,000. If the whole amount of this silver was brought to this country and coined into dollars at the existing ratio it would be less than $50 per capita, estimating our population to be 70,000,000.

But, Mr. Speaker, I do not see how anyone can honestly believe that any considerable amount of foreign silver would be imported into this country. Certainly France would not part with her $700,000,000, which is on a parity with gold at 15½ to 1, and coin it at our mints at 16 to 1, or at a higher ratio. Nor would India and other Eastern countries bring their $2,000,000,000 of silver to this country to be coined at a greater ratio than their own, which is 15 to 1.

This war on silver does not spring from a belief that such would be the case, and no one knows it better than the bankers themselves.

The simple, plain truth is, that within the next fourteen years all the Government bonds will have matured, and will be paid off and canceled unless some provision be made for refunding them, or for the issue of new bonds. When the bonds, which are deposited in the Treasury to secure the national-bank notes, mature and are paid off and canceled, the banks go with them, as their life depends on the length of time the bonds run. Their fight against silver is not because they fear the free coinage of silver will produce a redundancy of currency, but because it will render unnecessary the further issuance of bonds.

This fight by the banks against silver means a fight against the people, a fight for more bonds, a fight for their own existence, a fight for dear life, for they know that their death is inevitable within fourteen years unless new life is given them by the issuance of more bonds. They denounce Treasury notes which are based on the credit and good faith of the Government and also on gold and silver, yet they demand bonds, bearing interest, which rest solely on the good faith of the Government.

By this nefarious scheme they tax the people to pay interest on the bonds, and charge them usurious interest on a loan of their notes.

The gold bugs and bankers on the other hand charge the friends of free coinage with a desire to force upon the country a dishonest dollar, a 70-cent dollar. This charge is not only misleading, but absolutely false, as I will show. The coined silver dollar will purchase to-day in any part of the United States as much as the gold dollar. It commands as high a premium in the markets as gold and is as earnestly sought after by all classes. But they say silver bullion has declined in all the markets of the world, and it is now only worth 70 cents as compared with gold. This is true; but any one capable of reasoning from cause to effect readily understands why this is so.

The money powers which have dominated and controlled the financial legislation of Europe and, for the past thirty years, of this country have resorted to all known methods to debase and destroy silver as a money metal. They have been, year by year, strengthening their forces, and if they gain the great battle now being fought they will have accomplished their purpose, and silver will go still lower for a time.

It is remarkable, almost phenomenal, that silver has maintained itself as well as it has against the combined gold powers of this country and Europe. The only explanation is that silver is the money of the people. They want it, they demand it, and will never cease to fight for it until their victorious banner floats aloft from the national Capitol.

The reason that silver bullion has depreciated in value is because the principal use to which it has heretofore been applied has been destroyed.

Gold is used in the fine arts and for coining money free. When silver was thus used it was at a premium above gold, but since unfriendly legislation has denied it mintage, and thus destroyed its principal use, it has necessarily depreciated, as there is no demand for it except in the arts; but if the Bland substitute to the bill now pending should become a law, that very moment silver at 16 to 1 would be equal to gold.

The value of everything depends on the use to which it is applied. This was illustrated by the eloquent and distinguished gentleman from Pennsylvania [Mr. SIBLEY], whose speech is not yet published, who said if it were possible for the Government to close all the wheat mills of the country and prevent the further grinding of wheat into flour its principal use would be destroyed, and therefore of no value except for forage.

When the gold bugs talk of the intrinsic value of gold as a fixed, inflexible, unchangeable value, they talk of a myth or something that never existed, and never will, as a fact.

There can not be an intrinsic or inherent value in anything independent of its use. Corn, cotton, wheat, and bacon have intrinsic exchangeable values as well as gold and silver; but the value of each depends on the demand for its use. All values are comparative and must necessarily be so.

When the wheat and cotton crops are short and insufficient to supply the demand, their relative value to gold is increased; but when these crops are superabundant and the supply greater than the demand, their relative value to gold is diminished. So, therefore, the value of gold, intrinsic and otherwise, depends

on the amount it will buy, or its purchasing power. Suppose that Congress and the other nations of Europe should destroy gold as a money metal and prevent its future mintage, as they are trying to do with silver; every one knows that it would immediately decline in value, as its purchasing power would be destroyed. It would cease to be a medium of exchange, and consequently its value would depend on the demand for its use in the arts.

It seems to me to be impertinent and in bad taste for bankers and gold-holders, who have secured the debasement of silver by questionable methods, to now come before Congress and the country and assert that, because silver bullion is below gold bullion, we should not coin it at the existing ratio, because it would be a dishonest dollar. Let us pause a moment and inquire on which side of this question stands the dishonest dollar. Was it honest to destroy the silver dollar in 1873, when it was at a premium of 3 per cent above gold?

After the money quality of silver was destroyed, was it honest for the Secretary of the Treasury, Mr. SHERMAN, to receive $80,000,000 gold deposit for silver certificates?

Was it honest treatment of silver, after this question had been settled at the polls by the people who elected Representatives from both of the great political parties pledged to the restoration of silver, for an unfriendly President and Senate to force an unsatisfactory compromise limiting its coinage, as was done in 1878?

After its coinage was suspended by the act of 1890, is it honest to contend that the silver dollar is a dishonest dollar because its bullion value is less than that of gold?

Treat silver as gold and it will be its companion and its equal. Take one of your horses, abuse him, maltreat him, turn him out on the commons to gather his food, will he be as useful, as serviceable, and as salable as his well-fed companion whom you protect from cold, hunger, and want?

The fact is, the silver dollar is the only honest dollar this country ever had, and I may go further and say that the bullion value of the silver dollar, though beset with enemies on every hand, is still an honest dollar. This statement, I know, will not be accepted by the gold bullionaires, but I will establish its truth by incontrovertible evidence. I appeal to the farmers, the producing classes in every part of the country, to bear witness to the fact, that the bullion value of a silver dollar will buy as much or more of the products of the farm than it ever did before.

By an examination of the following table, compiled from the official reports by the Bureau of Statistics and the Directors of the Mint, the truth of my proposition will be shown.

I used this table and substantially the same argument I now make in a speech I delivered in Congress March 23, 1892. I have added to the table then used the bullion value of the silver dollar for the years named.

Anyone doubting the correctness of the table can find its verification by referring to page 8, Bureau of Statistics, Foreign Commerce, for the year 1891, and Director of Mint Report on Production of Metals for 1890, page 223, and for 1892, page 30.

Year.	In the home markets.			Bullion value silver dollar.	Silver per fine ounce.*
	Cotton per pound.	Corn per bushel.	Wheat per bushel.		
	Cents.	*Cents.*			
1872	19.3	70	$1.47	$1.03	$1.32
1873	18.8	62	1.31	1.00	1.29
1874	15.4	72	1.43	.98	1.27
1875	15.0	85	1.13	.96	1.24
1876	12.9	67	1.24	.89	1.15
1877	11.8	54	1.17	.92	1.20
1878	11.1	56	1.34	.89	1.15
1879	9.9	47	1.07	.86	1.12
1880	11.5	54	1.25	.88	1.14
1881	11.4	55	1.11	.88	1.13
1882	11.4	67	1.19	.87	1.13
1883	10.8	68	1.13	.85	1.11
1884	10.5	61	1.07	.86	1.11
1885	10.6	54	.86	.82	1.06
1886	9.9	50	.87	.70	.90
1887	9.5	48	.89	.75	.97
1888	9.8	55	.85	.72	.93
1889	9.9	47	.90	.72	.93
1890	10.2	49	.83	.80	1.04
1891	6.9	41	.85	.76	.90
1892				.67	

*The coinage value of an ounce of pure silver is $1.29.

As silver depreciated in value a corresponding decrease in the value of farm products followed, as shown by the above table.

It will be further seen from the above table that in 1873 the value of the bullion in a silver dollar was of the value of $1. It was then on a parity with gold. Cotton was then worth over 18 cents a pound. Therefore the bullion value of a silver dollar would buy 5¼ pounds of cotton, about 1⅔ bushels of corn, and about two-thirds of 1 bushel of wheat.

In 1880 the bullion value of a silver dollar had dropped down to 88 cents; still it bought as much or more of the products of the farm than in 1873. It bought about 7¼ pounds of cotton, 1¼ bushels of corn, and a fraction over two-thirds of a bushel of wheat. The bullion in the silver dollar again went down. In 1885 it was 82 cents. It bought, however, nearly 8 pounds of cotton, 1½ bushels of corn, and 1 bushel of wheat, lacking 4 cents. The bullion value continued to drop and with it all farm products. The bullion value of the silver dollar in 1891 was 76 cents. Still, at this value, it bought 12½ pounds of cotton, nearly 2 bushels of corn, and nearly 1 bushel of wheat.

By a simple calculation it can be seen that during all the years from 1872 to 1892, as the bullion value of silver as compared with gold declined, the farm products also declined in nearly the same proportion. This shows that silver is a better measure of value of the products of labor than gold. In other words, it is an honest dollar. It is gold that is the dishonest dollar, as by corrupt legislation it has been made to buy more of the product of labor than it did when it was on a parity with silver, to which free coinage would again bring it. It is just as accurate to call the gold dollar a 155-cent dollar as to call the silver dollar a 70-cent dollars. As before stated, all values are comparative.

The relative value of silver and farm products have been nearly uniform. It is not silver that has depreciated, but it is gold that has appreciated. To repeal the Sherman law without restoring the coinage of silver establishes the single gold standard, which means to still further reduce the value of silver and the products of the farms, the shops, and the mines.

Heretofore Democratic orators have justly and truthfully denounced the high protective tariff laws, especially the McKinley law, as legal robbery, because they taxed the great masses for the benefit of the few. Is it any less robbery to strike down half the money of the people, and thereby enable the gold-holder to purchase the products of labor at half their value?

How the representatives of honest laboring people can vote to do this is not plain to me. Nor is it plain to me how Democrats and Republicans can stand on the declarations of principles contained in their respective platforms, as both declared for bimetallism, and vote to do this.

The Democratic party is by its declaration of principles committed to bimetallism. It declared in its platform of 1880 that it was in favor of "honest money, consisting of gold and silver, and paper convertible into coin on demand."

The Democratic platform of 1884, on which Mr. Cleveland was elected, as well as a Democratic House, declared that—

> We believe in honest money, the gold and silver coinage of the Constitution, and a circulating medium convertible into such money without loss.

In 1888, when the Democratic platform, made no specific reference to money, but only reaffirmed the previous platform, the party was defeated.

In 1892, when the party boldly spoke out in favor of the use of both gold and silver as the standard money of the country, the party was again successful. Here is what the platform says. After denouncing the Sherman law and demanding its repeal, it says:

> We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discrimination against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in the payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

I repeat, therefore, that the Democratic party is committed to the free use of both gold and silver. It is as well known now as it was fifteen years ago, or as it will be known fifteen years hence, that we can never secure bimetallism as long as we allow Europe to dictate our financial policy. If we expect "an international agreement" to be tendered to us on a golden plate we will be mistaken.

We must force Europe to respect our financial system, as it is dependent on us, to a great extent, for the material for bread and clothing. Whenever we establish a sensible financial system based on bimetallism and will cease to make war on silver we will have all the "safe goods" necessary to maintain the parity of the metals. We never hear any talk of an international agreement to restore a parity of the metals until an effort is made to remonetize silver, but the moment such an effort is made a howl is raised about an international adjustment.

Our domestic commerce is about fifteen times as great as our foreign commerce. Why, then, do we permit one-fifteenth of the business of the country to control the whole and dictate what shall be our medium of exchange?

If the Bland substitute be voted down, and the Wilson bill to repeal the Sherman law be passed, I see nothing but ruin and bankruptcy for the people of the South and West. We will be left in the hands of merciless bankers and gold holders.

While I do not now intend to express any opinion in regard to the establishment of State banks, I think the 10 per cent tax on such banks should be repealed, and the question left to the people of the States to determine what they will do.

The States are sovereign, and Congress has no constitutional power by taxation to prevent the States from supplying their people with a medium of exchange when Congress fails to do so.

LEAVE OF ABSENCE.

By unanimous consent leave of absence was granted to Mr. ABBOTT, until Monday next, on account of sickness.

CHANGE OF HOUR OF MEETING.

Mr. TRACEY. Mr. Speaker, I ask unanimous consent that the session to-morrow morning may commence at 10 o'clock, instead of 11.

The SPEAKER. The gentleman from New York asks unanimous consent that to-morrow morning the session may commence at 10 o'clock, instead of 11. The Chair will state that the gentleman from Pennsylvania [Mr. CHARLES W. STONE] is willing to occupy the floor, beginning at 10 o'clock in the morning. So that, if there be no objection, the session in the morning will begin at 10 o'clock. [After a pause.] The Chair hears no objection.

Mr. TRACEY. Mr. Speaker, it is suggested by some gentlemen on my left that during the remainder of the week the sessions had better commence at 10 o'clock.

The SPEAKER. If there be no objection, the session, then, for the remainder of the week will begin at 10 o'clock. [After a pause.] The Chair hears none. It being nearly the hour for recess, without objection, the Chair will now declare the House in recess until 8 o'clock this evening, the evening session to be devoted to debate on the pending bill only, and the gentleman from Tennessee [Mr. RICHARDSON] will discharge the duties of the Chair.

Accordingly the House (at 4 o'clock and 55 minutes p. m.) was declared in recess.

EVENING SESSION.

The recess having expired, the House, at 8 o'clock p. m., resumed its session (Mr. RICHARDSON of Tennessee in the chair as Speaker *pro tempore*).

SILVER.

The House resumed the consideration of the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. ELLIS, of Kentucky. Mr. Speaker, There appears to be no conflict of opinion that some pernicious influence is seriously affecting the business and financial interests of the country. It is equally agreed that this malady, whatever it may be, has spread to almost every community and threatens, unless speedily arrested, to culminate in the bankruptcy and ruin of many enterprises and industries upon which the country largely depends for prosperity. If we were to look abroad we would discover, I think, conditions quite similar to those which affect our own domestic affairs. But it is with reference to our own interests, and with a view of arresting evils that pervail at home, as far as that may be done by mere legislative enactment, that this body has been convened in extraordinary session.

The good temper which has prevailed throughout this discussion justifies the belief that this body, without reference to political bias, is in a frame of mind to deal with the question submitted to it in the manner best calculated to relieve not only the business interests of the country from what appears to be a perilous situation, but in a manner that will be best calculated to benefit all classes and to benefit them all alike.

Although entertaining strong convictions and fixed opinions of my own, I do not hesitate to say that I am both willing and anxious to concede much of my own individual judgment in order to meet in a spirit of fair and just compromise the views and opinions of those who may differ from me as to what the true financial policy of the United States should be. I am all the more willing to do this that the purpose for which this body was assembled may be accomplished, and that whatever relief is to result from our action may be promptly granted.

It is assumed by the advocates of the bill introduced by the gentleman from West Virginia [Mr. WILSON], the object of which is to repeal the purchase clause of the so-called Sherman act, that our present financial stringency and business depression is due exclusively to the operation of that law. While I do not concur in that view, but dissent from it in the most unqualified manner, and while I find no trouble in believing that the Sherman law has had very little to do with bringing about the situation from which we desire to be relieved, I am quite ready to coöperate with those who seek its repeal, if any fair or reasonable substitute providing for the continued use of silver is adopted in its stead.

Believing silver, equally with gold should be treated as a money of ultimate payment—a legal tender for every debt, public and private, and that gold and silver ought to be coined at the present ratio of 16 to 1, I am still willing to agree with those who do not share that opinion, on some other ratio—on any ratio that will make and keep the silver dollar as good as the gold dollar. But while being willing to make the concessions already indicated, I may state here and now with all the emphasis I possess that I can not, under any state of case, support the pending measure, unless some amendment authorizing the future coinage of silver is now engrafted upon that bill.

The bill before us and which will pass into the legislative history of the country as the Wilson bill, while it looks on its face as innocent and as genuine as its author, will be far more reaching in its consequences, if it succeed, than might at first blush be supposed. Its passage means more than the simple repeal of the purchase clause of the Sherman act. If that were all it meant, and if that were the only effect it would have on the financial affairs of the country, its passage would not be calculated to provoke serious opposition in any quarter. But that is not what it means. It means to strike out bimetallism; it means an outright abandonment of the double standard, a system to which the Government has adhered for a century; a system which has the sanction of many centuries.

When the Wilson bill becomes a law this Government will be on a single gold basis; we will as effectively and as completely have demonetized silver as England did more than fifty years ago, and as Germany did twenty years ago. No such proposition as that can have my support or sanction, and while it is no part of my purpose to question the motives or challenge the good faith of others, I can not refrain from expressing the belief that the gentleman from Missouri [Mr. BLAND] was entirely accurate the other day when he said, in his speech, that the members of this House who voted for any proposition having for its purpose the demonetization of silver, especially those representing agricultural districts in the South and West, would have abundant leisure to study the financial question at home after their present commissions had expired. If the object of the pending measure is not to change our system from a bimetallic to that of a monometallic system and to discontinue the future use of silver as a coin of ultimate payment, what valid reason exists why some suitable provision for the future coinage and use of silver should not be inserted into the bill; why should the bill not be perfected so as to settle once and for all the financial question, at least so far as we are concerned.

The Sherman law repealed the Bland act, or so much of it as required the monthly purchase and coinage of not less than $2,000,000 or more than $4,000,000 of silver per month. If we are going now to repeal the only law which provides for the use of silver in any form, ought we not, at the same time, to provide by suitable legislation for its future coinage if the use of silver is to be further continued? With those who criticise the Sherman law I have no controversy; I was among the number who voted against its passage; but bad as I believe that law to be, vicious in principle, as I am quite sure it is, it is the last fragment left of bimetallism in this country, or more properly speaking, it is the last obstruction that stands in the way of those who are bent upon the destruction of silver and the establishment of a single standard of gold.

Under the present law we have been able to add something like $4,000,000 monthly to our volume of currency, and while bimetallists are in no manner responsible for the presence of the Sherman law on our statute book, they can not afford, in order to get rid of it, to vote for a bill that demonetizes silver and establishes a single standard of gold, as the present bill proposes to do. But we are invited to support this bill and to trust to the future for such silver legislation as may be proper and necessary. This is advice which no prudent man, who conscientiously believes that this country needs all the gold and silver it has or can get as its circulating medium, would be likely to heed.

When the bill under consideration becomes a law, if it ever does, the last hope of bimetallism for many years to come in this country will be gone, and we had as well understand and appreciate that fact now; and those professing to be the friends of bimetallism who vote for this measure, much as they may dislike to do so, must assume the responsibility of having demonetized silver and of placing our monetary system in line with England and Germany, whose systems are a single standard of gold. For no man who reads this bill can doubt, for a moment, what its effect on silver will be; in fact it seems to have been conceded throughout this discussion that the purpose of the bill is to discontinue the further coinage and use of silver as a standard money of the country.

Though believing that this country is amply able to maintain the two metals on a parity at the present ratio of 16 to 1, and while believing that the best interests of all classes of people demand the adoption of that policy if it shall be insisted that ratio can not be maintained, I am ready, as already observed, to agree upon some other ratio which would "insure the maintenance of the parity of the two metals and the equal power of every dollar at all

times in the markets and in payment of debts." But if all propositions to agree upon a fair and just ratio are rejected by the advocates of the pending measure and all efforts of compromise refused, I am unable to perceive how the friends of bimetallism can do otherwise than conclude that the fixed purpose of those who oppose the use of silver as a legal-tender money is to cast it out as a base metal no longer worthy of a place in our financial system. Believing such to be the object of the bill, convinced that its passage would accomplish the results I have indicated, it can never become a law with my sanction nor by my vote.

I had supposed, Mr. Speaker, when my colleague [Governor McCREARY] arose to address the House the other day that he would adhere to the position he had uniformly occupied here and elsewhere. I had always regarded him not only a friend of the coinage of silver, but one of the ablest defenders of the bimetallic standard; and you may imagine my surprise, Mr Speaker, when my colleague declared that he had so far lost faith in the doctrine of bimetallism that he was unwilling to vote for the further coinage of silver.

Mr. McCREARY, of Kentucky. Will my friend allow me to interrupt him?

The SPEAKER *pro tempore*. Does the gentleman from Kentucky yield?

Mr. ELLIS of Kentucky. I do, of course.

Mr. McCREARY of Kentucky. The gentleman is mistaken in saying that I have lost faith in bimetallism or changed the position that I had taken before. In 1884, in this House, I voted to stand upon the Bland-Allison act, which required the coinage of not less than $2,000,000 worth of silver per month nor more than $4,000,000 worth per month. That is the way I voted in 1884. I stated distinctly on last Saturday that I was a bimetallist; that I believed in the double standard; that I believed in gold and silver, and the proposition now for the free coinage of silver, in my opinion, when all the countries of Europe had demonetized silver or suspended its coinage, and India, had closed her mints, it was not advisable for us at this time. If we adopt free coinage of silver now, there is danger of leading to a silver basis, and I am opposed to coming to a silver basis because I am in favor of gold and silver both.

I wish to call attention to the fact that a gold and silver commission, consisting of twelve able men, was appointed to look into the change that had taken place in the relative values of silver and gold, and into the question of bimetallism, and that, after that commission in England, consisting of six bimetallists and six monometallists, had considered the subject, they reported that—

Neither metal alone exists in sufficient quantities to serve as a sole standard without causing such a change in the level of prices as to amount to a financial and commercial revolution.

No settlement of the difficulty is, however, possible without international action. The remedy we suggest is essentially international in its character, and its details must be settled in concert with the other powers concerned. The essential features of the agreement to be arrived at are:

Free coinage of both metals into legal-tender money.

The fixing of a ratio at which the coins of either metal shall be available for the payment of all debts at the option of the debtor.

Mr. ELLIS of Kentucky. Mr. Speaker, I certainly have no desire to misrepresent the position of my friend or to do him the slightest injustice. But he has announced his purpose to vote for this bill which discontinues the coinage of silver and to vote against the amendments offered by the gentleman from Missouri [Mr. BLAND]; that is his present position, and it is, I insist, hostile to silver. My colleague says he voted for the Bland-Allison act, but that act was repealed in 1890, and one of the pending amendments proposes, if all propositions for free coinage are defeated, to substitute the Bland-Allison act for the present law, and my colleague will vote against that. I fail to discover anything friendly to silver in that position. On the contrary, it is precisely the position occupied by those who do not hesitate to say that they are opposed to bimetallism and in favor of a single gold standard.

Mr. McCREARY. When we pass the bill now pending it will not change in any respect the $700,000,000 of gold that we have in the United States or the $600,000,000 of silver, or any of the other currencies. In other words, when we pass the bill known as the Wilson bill we still leave gold dollars and silver dollars and Treasury notes and other money exactly as they are now, neither reduced in value nor impaired in legal-tender quality. On the contrary, the bill pledges that we will maintain the legal-tender quality of the silver in the United States, and that we will preserve the parity of gold and silver.

I desire to make the further statement that conditions have changed.

Mr. ELLIS of Kentucky. Will my friend mention the changes, especially the changes that have taken place since 1892, when our party pledged itself to the free coinage of both gold and silver?

Mr. McCREARY. In 1884 the whole product of the world's silver was only $90,000,000. The world's product of silver last year was $190,000,000. The product of silver in the United States in 1884 was $40,000,000. Last year the product was $75,000,000. Now, I hold that as the product last year of the world's silver has more than doubled, and as the product of silver in the United States has about doubled, and as all those countries that bought silver from us have either suspended its coinage or demonetized it, there is now no market for our silver, and, therefore, if we adopt free coinage the silver of the United States and of the world at large will come to our mints, and the result will be that we shall be put upon a silver basis, which I am opposed to.

I want to say again that I am as much the friend of silver now as I ever was. I am in favor of both gold and silver, and, while I know that my friend from Kentucky [Mr. ELLIS] is honest and sincere in his views, I know that I am as honest and as sincere as he is. I believe that the path I marked out, or tried to mark out, when I addressed the House last Saturday is the true one. I believe that in order to have free coinage of silver we must have an international agreement, or several of the leading nations of the world must agree upon free coinage at the same ratio and then it may be established and maintained. I believe that the United States with France and the countries that constitute the Latin Union can maintain that system, and whenever they agree to it then we shall have free coinage.

In 1884 I was in favor of coining $2,000,000 of silver monthly and I am now in favor of coining this amount monthly. I believe that unemployed labor, shrinkage in values, closed banks, depressed condition of trade, and the hard times prevailing all over the country demand the repeal of the purchasing clause of the Sherman act. We should do this quickly.

Mr. ELLIS. Mr. Speaker, my colleague fails to point out wherein conditions have changed, but seems to have unlimited faith that an international conference can alone solve this financial problem for us, he evidently has no faith in the ability of Congress to do it. If an international conference is my colleague's only hope for the free coinage of silver, it is a hope which he will never realize unless this country takes the initiative, which it is able to do and ought to do, as I will try to show before I conclude.

Mr. McCREARY. How many of your colleagues are with you in your present position?

The SPEAKER *pro tempore*. Does the gentleman yield to his colleague?

Mr. ELLIS. I decline to yield further, but will reply to the inquiry of my friend by saying that I do not know how many of my colleagues stand with me on this question now, but I do know that ever since I have been a member of this body, all of my colleagues on this side of the House have uniformly voted for the free coinage of silver whenever that proposition has been submitted; and much as I would regret to part company with them now I am prepared to do it if they vote for this bill.

I have seen nothing in supposed changed conditions that would authorize me now to cast my vote for any proposition having for its purpose the demonetization of silver, and glad as I always am to be able to agree with my colleagues I can not afford to agree with them when to do so I am required to surrender a principle which I believe is right. I am glad I have the courage to stand for what I believe to be right, even though I should be obliged to part company with all my colleagues.

I am content to trust my course in this matter to the manhood and patriotism of my people, absolutely sure that they will justify it. [Loud applause.]

WHY SHOULD SILVER BE DEMONETIZED?

What fact has transpired, or what change in condition demands that the further use of silver, as money, should cease? Just a little more than a year ago it was the unanimous judgment of the Democratic party assembled in national convention that silver, equally with gold, was a valuable money metal, and as such entitled to coinage on equal terms with gold. I have not heard of any change in the situation since, that would either justify or excuse the Democratic majority of this House now, if it should disregard the solemn pledges and promises made in its party's platform last year.

One of the reasons assigned by my colleague and those who think with him why we ought to abandon the further use of silver seems to be based on the belief that the United States can not maintain bimetallism except as the coöperation of the countries of Europe can be first obtained, and that an attempt to do so would result in putting this country on a silver basis. The gentleman from Tennessee [Mr. PATTERSON] in his remarks the other day assumed the rôle of a prophet, and predicted that if we attempted to maintain bimetallism the result would be that our gold "would take wings and fly away." If he had examined the record he would have discovered that precisely the same prophecy was indulged in by those who opposed the passage of the Bland-Allison act, of 1878. They said then that the coinage of fifty millions of silver dollars would have the effect to drive all the gold out of the country.

There was coined under the Bland act about $378,000,000, and yet our gold failed to seek more favored clime; on the contrary we steadily accumulated gold. From $312,199,979, the amount of gold on hand in this country at the passage of the Bland act, it increased until, on the 1st day of January, 1889, according to the report of the Director of the Mint, the amount of gold, coin and bullion, in the United States was $704,608,169, an increase of $392,408,190, in ten years. The average annual product of gold in the United States since 1878, excluding the amount used in the arts, is estimated at $20,000,000. It thus appears that under the operation of the Bland law, we not only kept

at home all the gold we produced, but got from other countries about $152,408,190 in addition to the amount we produced.

The gentleman from Tennessee, and those who agree with him now, must rely on something more trustworthy than prophecies which have already been demonstrated to be false if they expect to convince the judgment of others. Of course, it is the height of folly to attempt to maintain silver and gold at a parity as long as the former metal is deprived of the monetary functions accorded to gold. While gold is protected by the Government and as long as silver is boycotted and outlawed, the most hopeful bimetallist would hardly expect that the parity of the two metals could be maintained at any ratio.

This discrimination in favor of one and against the other metal is precisely what bimetallists complain of; what they insist upon is that both gold and silver shall be placed upon an equal footing before the law, and until that is done there can be no reasonable hope that the silver dollar will be equal in its commercial value to the coin value of a dollar in gold. But with a fair and equal chance, silver, if its past history proves anything, would at once come into use as money in the true sense and would prove as efficient and as powerful in quickening the pulse of commerce as gold. It would set in motion as many wheels, turn as many spindles, and move as many bushels of corn and wheat, as many bales of cotton, and give as much employment to labor dollar for dollar as gold.

Recent declines in the market value of silver bullion are also pointed out as additional evidence of the folly of any further attempt to maintain the parity between silver and gold. But those who rely upon this circumstance as justifying the character of legislation proposed by this bill ought not to overlook the fact that these declines in the market value of silver bullion are largely, if not exclusively, due to the unfriendly and discriminating character of the legislation which deprives silver of its function as a money of ultimate payment; for it must be remembered that under the present law silver is no longer money in fact, but only the representative of gold. But those who insist upon the use of silver claim and what they are justified in insisting upon is that if silver is restored to its legal-tender status and made by law a coin of ultimate redemption its commercial value would become its coin value, and that value would be equal to the commercial or coin value of gold.

It has been repeatedly stated here that any attempt on the part of this Government to maintain bimetallism and to keep silver at a parity with gold would require the United States to take all the surplus silver which other nations would certainly bring to our mints; and while professing great solicitude for silver and sincerely desiring to continue its use, these gentlemen tell us that the only hope for bimetallism is an international monetary conference, which may or may not be held at some indefinite period in the future, and that in the meantime the only wise policy we can adopt is to discontinue altogether the use of silver and join with the countries of Europe in a general scramble for gold. If gentlemen are in earnest about the use of silver and candidly believe an international conference is the only channel through which we may reasonably hope to reach a satisfactory solution to the financial problem, I ask them whether or not, as the speediest and surest means of bringing about such a conference, it is not incumbent on us to take the initiative and thus demonstrate in good faith our attachment to bimetallism and our purpose to maintain it by at once entering upon that policy.

How can we, having a larger interest in the silver question than any other nation, reasonably expect to secure the coöperation of others in the use of silver money as long as we refuse its free use ourselves? We must first make an honest effort by placing silver on an equal footing with gold before we can consistently ask other people to adopt a similar policy. Until we do this it is idle to talk about solving this problem by an international monetary conference. When we have acted in the matter ourselves other nations will be glad to treat with us.

In support of the correctness of this I cite the following:

A recent speech of Lord Balfour's, late prime minister of England, indicates clearly that other nations are hoping for our action in this direction. Surely we, who have a stronger interest than any other nation in sustaining the value of silver, ought to take the initiative in our own behalf. An international monetary conference can only be asked for with self-respect when the United States shall have shown other nations that she has the courage to act for herself in her own interest before asking their coöperation to help her help herself.

It is a trite old adage that "He who would be free himself must strike the blow." But we have appeared in three international monetary conferences as a party self-maimed; committed to an illogical policy of duplicity; asking help to steer toward a harbor of financial safety, after having sailed away from it of our own volition, and while continuing to sail away from it. No ability of our delegates, exceptionally able as they were, could extricate our Government from the humiliating position they occupied in such conferences. American ears have tingled with shame to hear from foreign representatives—"If your Government believes in bimetallism, why does not your Government vote for it and adopt it? None so much interested as yourselves in doing it."

But whether we secure the desired coöperation of others or not, this country is able to maintain bimetallism without the aid of outside influence, and this is the opinion of many of the ablest economists and best financiers of the country. Being able to do so, a refusal on our part to at least make an honest effort in that direction indicates either a fixed purpose on the part of the Government to abandon bimetallism, or exhibits an absence of that independent spirit which has always characterized us as a nation. In the first place, all the dread apprehensions of those who profess to believe that an avalanche of Europe's silver would bury us beneath its ruin are without foundation. Those who express or entertain such fears are in dread of evils that will never occur.

The stock of foreign silver consists almost exclusively of coin and circulates freely at home, while silver abroad is coined at a less ratio with gold than it is here. To melt all this silver into bullion and bring it here to be recoined would entail ruinous loss on its owners, which fact is in itself a sufficient guaranty that none of Europe's silver would seek recoinage at our mints, if we should now throw them open to the world. Mr. William P. St. John, president of the Mercantile National Bank of New York, a gentleman of great learning and financial ability, discussing this very question in an address to the American Bankers' Association at New Orleans, 1891, clearly demonstrated how groundless were the fears of those who believed a flood of foreign silver would deluge us, should we establish bimetallism. He said:

Europe's only stock of silver is her money. Europe's primary silver money is the unlimited legal-tender equivalent of her gold. As such it circulates in settlement of every day's transactions. As such it constitutes a liberal share of the coin reserves which Europe's great banks accumulate for the liquidation of their vast liabilities, including the redemption of their circulating notes. This European standard coin values silver at 259.91 grains to the dollar. Our mints exact 371.25 grains of pure silver for our standard dollar. Thus, 11.34 grains would be Europe's first sacrifice, with loss of weight and transportation costs additional, in every dollar for dollar exchange of Europe's standard silver coin for ours. Or, more intelligibly: Europe's silver money which circulates at home at 100 cents would recoin at our free mints into less than 97 cents.

Next, if Europe's pursuit is presumed to be our gold, let it be understood that equally free coinage for gold and silver is only a promise of gold coin for gold, and of silver coin for silver. Therefore in order to obtain our gold for silver Europeans must bargain with the owners of our gold, after the recoining of their silver into our standard silver dollars. In this contemplation, and in words now memorable: "Unless the Yankee has lost his quick scent of danger and forgotten his cunning * * * probably before the swiftest ocean greyhound could land her silver cargo in New York, the last gold dollar within reach would be hidden safely away * * * to be brought out only by a *high premium* on gold." Upon experience of high premiums on gold in the United States, 10 per cent would appear to be moderate, as a high premium. Add 10 per cent, as premium on gold, to over 3 per cent lost in the exchange of silver at our mints, and 13 per cent will be the premium first cost which Europe is to contemplate. Thirteen per cent of $1,100,000,000, or $143,000,000, will be Europe's sacrifice in contemplation, therefore, if she will thus exchange her silver for our gold.

If Europeans are to pursue our gold so ardently, our proposed measure, if enacted, will enable our Secretary of the Treasury to defeat them. He need only follow the course by which the Bank of France maintains the parity of their gold and silver coins acceptably in France. He need only exercise the option we propose for him, and redeem the United States notes in silver only, refusing gold, upon every slightest proof that foreign silver money threatens our reopened mints.

But unless these Europeans differ altogether from Americans, they will not make the estimated necessary sacrifice, or any sacrifice at all, in order to exchange their equivalent silver money for our gold. Yet, if I may tax your patience with details, note further:

England will not seek our reopened mints with her coined silver, all of it subsidiary coin. She has increased its volume recently, to the profit of her Government, substituting silver coin for light-weight gold half sovereigns. This English subsidiary coin values silver at 348.3 grains to the dollar. One hundred cents of it would, therefore, yield only 93.8 cents of our standard silver coin.

Germany does not threaten our mints with silver. She too is minting subsidiary coin. Her only other stock of silver are thaler pieces, in all about $107,000,000. These silver thalers are unlimited legal tender in Germany at about the French valuation of silver; at which 100 cents would recoin into less than 97 cents at our free mints. About $55,300,000 of these silver thalers, together with about $118,400,000 gold, constituted the legal-tender coin reserves of Germany's Imperial Bank at a recent date. When Germany sold silver it had been received as a part of a vast indemnity from France during 1871 to 1873. All except about $5,000,000 of it, *i. e.*, about 85,200,000 ounces, was sold before the end of 1879. The remaining sales, in driblets, were made to clean up. Within two years after Germany's selling was completed it was reported that Bismarck sighed, repiningly, that "gold has become as scarce as a coverlet too scant for two persons, so that each must struggle for a share."

Spain does not threaten us with her silver. The Bank of Spain, whose charter was extended last July for thirty years, was then authorized to enlarge her issue of circulating notes to the gross sum of $300,000,000, but under the requirement that her coin reserves are to be maintained strictly at not less than 25 per cent. Spain is now coining full legal-tender silver liberally, at the French ratio, on Government account. One hundred cents of it would recoin into less than 97 cents of our standard money.

The Netherlands and Belgium reported recently the following reserves of coin in bank: Netherlands, $29,800,000 of silver, with $17,700,000 in gold; Belgium, $7,200,000 of silver, with $14,500,000 of gold. Switzerland is not feared. Her difficulty is to keep a sufficiency of both gold and silver at home, as against the natural gravitation of both toward France in trade. Belgium suffers similarly in less degree.

Italy does not threaten us with silver. Her treasury and banks combined, showed a total stock of silver barely exceeding $20,300,000, while her stock of gold exceeds $88,200,000. The sum of her notes outstanding exceeding $283,000,000. In 1883, under an act of 1881, Italy sold bonds for gold and silver, and redeemed with both a total of $107,000,000 of her notes. Failing thereafter to complete her note redemption, or to maintain sufficient coin reserves to assure redemptions on demand, she has subsequently continued under a suspension of specie payments. She will need all her gold and silver, and more of both, in order to resume.

Austria-Hungary has been suspected of desiring to sell her silver. For answer, note that, while we are usually debtor to Austria in trade, Austria is invariably debtor to India. Her settlements range between $9,000,000 and $16,000,000 for a year. Yet Austria does not recoin her suspected "surplus silver" in British India; but settles in the equivalent of gold by purchasing council bills in London or kindred gold exchange. A recent press dispatch reported: "There is little prospect of the speedy establishment of a gold currency in Austria-Hungary. Dr. Steinbeck, the new Austrian finance minister, is opposed to any course that would tend to weaken or impair the confidence of trade."

The altogether safer dismissal of our fear of Austria's silver, however, is her financial condition reported recently as follows: Her bank's resources, against all its vast liabilities, were $27,300,000 of gold with $81,500,000 of silver. Her total note issues were $229,500,000. No pretense is made of redeeming these paper is-

sues on demand. They are accepted for Government revenues, and are legal tender for private debts.

Russia is not threatening us with silver. A million dollars will cover her accumulated stock of silver; $162,300,000 was her recently reported stock of gold. And Russia does not pretend to redeem her $807,300,000 of rouble paper in either coin.

Lastly, France does not threaten us with silver. And yet the estimated sum of silver in bank and afloat in France exceeds $700,000,000, together with $900,000,000 gold. Her population is almost stationary at about 38,000,000. Her traders establish such relations to the foreigner that France is the accumulator of the money metals among nations generally, in her international trade. Unless M. Leon Say has blundered, France has adopted "a waiting policy * * * being committed to the bimetallic standard." France can afford to wait and contentedly permit her merchants to establish title to foreign gold. If, by our legislation, supported by the aid assured us elsewhere, the United States enhances the market price of silver to a parity of value for the gold and silver contained in our gold and silver dollars, the inducement to continue a waiting policy on the part of France is made to disappear. The act of France will dictate the policy of her neighbors.

* * * * * * *

The stock of silver in the Bank of France has occasioned some concern. About $25,000,000 of it is Italian coin and about $20,000,000 is Belgian coin. Circulating in France by treaty it is accepted as French money, but is subject to demand upon Belgium and Italy, at the end of any year, for the redemption of it in gold at par. Our mints can not attract it at a discount; a discount of 3.05 per cent, and loss in weight additional. The total stock of silver in the Bank of France approaches $251,300,000. Her stock of gold exceeds $262,900,000. But if reasons, not evident, exist to necessitate the exchange of silver for gold by this Bank of France, or by the French people generally (the Government owns no silver), India's mints are open to their silver money at a premium. As remarked, 137.8 cents is India's mint price per ounce, and 129.3 cents is our mint price (stated in terms of our primary money).

France, too, is debtor in trade with India, invariably. Sometimes, to an amount exceeding $40,000,000 for the year. During this current year, 1891, due to her short crop of wheat, France may establish a trade-debt to India exceeding $50,000,000, or $5,000,000 more than the total sum of Belgian and Italian silver in the bank of France.

But the entire stock of silver in the Bank of France is money. As such it is not governed as bullion is, by market price. As unlimited legal-tender money, it is as serviceable to that bank as her stock of gold is for the liquidation of vast liabilities. It has been accumulated to constitute, together with her gold, the coin reserves maintained to assure the liquidation of her liabilities, including redemptions of her circulating notes. Thus available for the liquidation of her debts at par, her stock of silver is not a burden but a buttress to the bank of France. With her total sum of circulating notes exceeding $609,000,000, and a total stock of silver barely exceeding $251,200,000, and all this silver applicable to redemptions of these notes at par, the Bank of France is not more concerned about the "bullion value" of her "lawful-money" silver, than the national banks of the United States are concerned about the paper value of United States legal-tender notes.

A vain search, therefore: The impending flood of Europe's silver at our mints!

But if imagination is still unsatisfied that Europe's silver will not denude us of our gold, recollect that Europe's money is deficient by 3.05 per cent for an exchange with us of silver coin for silver coin. Remember, too, that Europe's silver circulates in coin, and her coin is old. It will therefore shrink importantly in melting. The very moderate total shrinkage of 5 per cent of $1,100,000,000 of Europe's silver would contract her currency by $55,000,000. Think of this minimum contraction of her currency as Europe's entirely voluntary sacrifice in rejecting silver to obtain our gold. Remember that this sum exceeds by $25,000,000 the entire world's aggregate annual increase of money, if gold is the only acceptable coin. Allot to Europeans about as little sagacity as we modestly accord ourselves. And, finally, if I mistake not, "The Impending Avalanche of Europe's Silver" will rank, hereafter, with "Alibaba and The Forty Thieves."

But assume, for the sake of argument, that all the silver of Europe, in the case of reopening our mints, should pour in upon us, what would be the result if we got it all? It is estimated that all the silver of the world, reckoned on the ratio at which it is coined here, is worth $3,800,000,000. The population of the United States at present estimate is about 67,000,000, so that if all the silver, saved from the minings of all ages were suddenly turned loose upon us it would be only about $54.28 per capita, just about the amount of money constantly in use in France. But the business of the countries of Europe can not be carried on without silver, and I do not suppose that even the most timid would estimate the amount of silver which could possibly come in any event at over one-half of that which is held abroad, but there is no foundation for the belief that any of it would come.

Whenever it is enacted by law that 371¼ grains of pure silver shall command $1 at our mints we insure the use of that metal in our rapidly developing domestic trade, which is by far of more importance to us than our foreign trade, and this domestic use of our silver, it is confidently asserted by those who are in a position to know, would maintain the money parity of our gold and silver permanently. It is a familiar doctrine in which the highest authorities all agree, that the value of money does not depend upon the intrinsic value of the material of which it is composed. This fact understood and appreciated, much of the confusion that exists and much of the argument against the coinage of silver, on account of its alleged depreciated intrinsic value, is disposed of.

The value of money, as such, is not in the metal, but in the stamp.

"The logic of the situation and the reasoning of all the leading authorities on money lead irresistibly to the conclusion that its value does not reside in the metal, but in the stamp; in other words, on the legal-tender functions imposed on that material. It is an order for services." (Speech of Hon. JOHN P. JONES.)

Another high authority defines money as follows:

Money by itself * * * has value only by law and not by nature; so that a change of convention between those who use it is sufficient to deprive it of all its value and power to satisfy all our wants.

Another authority of recognized ability defines money as follows:

Anything which freely circulates from hand to hand as a common acceptable medium of exchange in any country, is in such country money, even though it cease to be such, or to possess any value in passing into another country. In a word, an article is determined to be money by reason of the performance by it of certain functions without regard to its form or substance.

If the foregoing definitions of money correctly define it, both debtors and creditors ought to be satisfied that silver money, equally with gold, if placed upon the same basis, would be "good money." Creditors who insist that their obligations should be paid in "the best money" would at least find no room to complain that they were not paid in the money of the contract, for both gold and silver being a legal tender the one would be as good as the other and neither a cheap or a bad money.

It has also been suggested in the course of this discussion that the increased production of silver has rendered it impossible to further maintain the parity between gold and silver. We have already seen that mere intrinsic value is not the standard by which good money is measured. But the increased yield of our silver mines furnish no grounds for the apprehension that we would have an overstock of money if we coined and put into circulation every dollar of silver and gold bullion our mines yield. The increased production of the mines has not been in advance of the increase in population and business, an increasing population and developing business enterprises demand a corresponding increase in the volume of money.

When population and business are taken into account, it will be found that there is no foundation for the much talked of overproduction of silver, as illustrating this I quote from a paper recently prepared by Mr. St. John, of New York, in which the subject of overproduction of silver is exhaustively discussed and disposed of.

ALLEGED EXCESSIVE PRODUCTION OF SILVER.

Indisputable records prohibit the assumption of an excessive production of silver in the world. The entire world's coinage of silver during any period of five years, counting our Treasury absorption as coinage, has exceeded by average the annual production of silver. For the five years ending with 1889 the average annual coinage of silver has exceeded the annual production of silver by $30,700,000. In 1889 the production exceeded the coinage; but in 1890 (for which I have not figures) our required Treasury absorption was enlarged. The world's records thus manifest a recoinage of foreign moneys by one or more nations, for which a sufficient explanation is India's and China's absorption of Mexican dollars.

Estimates, too moderate to be disputed, of the world's annual gross requirement of silver by average of the five years ending 1889 (ending 1890 for India), are as follows—all at our coin value:

Art consumption in Europe and the United States	$32,500,000
Art and money use of silver in China, Japan, Ceylon, and Africa	17,000,000
Retained at home, of their annual production, by Mexico, Central and South America, exceeding	8,000,000
Spain and Austria's full-tender and subsidiary, and the subsidiary coinage of the other continental states	12,500,000
British India's net absorption, exceeding	35,000,000
United States mint absorption prior to 1890, about	32,500,000
World's average annual requirement of silver prior to our purchase act of 1890	137,500,000
Increase of United States requirement now 54,000,000 ounces, coin value $70,000,000, less $32,500,000	38,500,000
Total average requirement	176,000,000
World's greatest annual production of record	165,000,000
Average shortage of annual production of silver for present requirement	11,000,000

This present yearly excess of gross requirement over the largest production of silver in the world seems to be verified by the record of the United States imports and exports of silver for 1891. During the nine months to October 1, our exports of silver have exceeded our imports of silver by $5,526,846. It seems further to be confirmed by the year's decrease of about $7,000,000 in the supply of silver bullion accumulated in New York. The New York accumulation of silver had been caused by fluctuations in the price occasioned by speculations upon the predicted legislation, and was greatest in amount before the act of 1890 became a law.

Although the present relative production of gold and silver is in great disproportion, the disproportion is nothing like so great as it has been at various periods in the past; and experience has shown that the two metals can be maintained at a parity when the yield of each more widely differs than at present. The yield of silver today in proportion to the yield of gold is about 23 to 1. In 1803 and thereabouts the yield of silver was 50½ times the production of gold, and at that time we had no difficulty in keeping gold and silver at a parity at even a less ratio than the present.

As to the cheapened cost of producing silver it is hardly necessary to add anything further on that subject, except to say that the cost of production of a money metal is not and never was a material factor in determining a correct opinion on the subject. If either gold or silver could be produced in unlimited quantities, at a moderate cost, then the cost of production would cut an important figure, but with the fact of a limited production of the two metals admitted, the relation of supply to demand and not the cost of production will always govern the market value of both metals. This is the settled judgment of those who have bestowed the carefulest consideration on the subject.

CAN THE UNITED STATES MAINTAIN BIMETALLISM WITHOUT THE CO-OPERATION OF OTHER COUNTRIES?

I do not hesitate to express my entire confidence in the ability of this Government to inaugurate and successfully maintain its own financial system regardless of what other countries may do. Richer and more powerful than any other civilized nation it is the sheerest nonsense to argue that we are, so far as our financial system is concerned, at the mercy of the shrewd and selfish governments of Europe. Such an admission is enough to touch the pride of any

man calling himself an American citizen. As illustrative somewhat of the opinion which others have of our ability to adopt and maintain our own independent financial system, I quote the following extract from Sir D. Barbour, British financial secretary of India, in his official report for 1891–'92:

No doubt the people of the United States are warned in some quarters that the adoption of free coinage for silver would lead to the loss of their gold (reduce us to a silver standard) and end in financial ruin. But the same authorities not infrequently warn India that her prosperity depends on her retaining the silver standard. I know no reason why such different results in the case of the two countries should spring from the same cause. * * * The foreign trade of the United States is but a small fraction of its total trade, and there is no nation in the world that is more independent of the foreigner.

France has been often referred to in this discussion and her financial system much discussed. In support of the contention that we are amply able to adopt a financial policy of our own, the following extract, setting forth the success with which France independently of all other nations successfully provided for both the coinage of silver and gold, is not without interest:

During the sixty-nine years following 1803, while the mint laws of all nations differed independently, the mint law of France provided equally unrestricted coinage for the world's spare gold and silver, valuing the silver required for our dollar at 103 cents in gold. In the sixty-nine years $1,447,329,208 of gold coin and $917,735,863 of silver 5-franc pieces were emitted from her mints. By voluntary act of the owners of gold and silver France thus obtained so great a volume of coined money in circulation that embarrassments were not possible from occasional flights of either metal in settlements of her international trade. Thus in the period 1811 to 1820, while the world's aggregate production of gold and silver showed 75 per cent silver, $110,907,676 of gold and $149,752,376 of silver were coined in France. (In the world's present aggregate production of the money metals only 59 per cent is silver.) During 1841 to 1850, with the aggregate production showing 48 per cent silver and 52 per cent gold, only $35,157,480 of gold with $175,845,263 of silver were coined. In 1866 to 1870, with production showing 31 per cent silver and 69 per cent gold, $227,777,130 of gold and $51,954,842 of silver were coined.

A conspicuously noteworthy result of such an automatic operation of her mints, under the equally unrestricted coinage law of France, was that in the face of widely varying proportions in the world's relative production of gold and silver, the relative market price of both was thereby maintained at an average of between 1 to 15.48 and 1 to 15.80, her mint valuation being 1 to 15.50. Thus effectually by France alone, the value possessed by either metal in its scarcity was bestowed upon the other in abundance, by decree. Such were the means and the achievements by which France "put a dollar's worth of silver in the dollar," and for sixty-nine years maintained it independently at 100 cents.

With this historic experience of France, who was not producing either gold or silver, for the assurance of the United States—we producing now about 40 per cent of the world's annual output of silver and over $30,000,000 worth of gold a year—I venture to predict success to the United States if we imitate her example.

What France has so successfully accomplished the United States should not hesitate to attempt. It is an example on which we can rely; a precedent we can not safely afford to ignore. Already we have had too much tinkering with the silver question. To prevent its complete restoration as a money metal, the creditor class, without regard to the interests or rights of debtors, have succeeded in blocking the way for years with mere makeshifts and experiments. The demand now comes from those who have toiled much and sacrificed much for the complete restoration of silver to its rightful place in our monetary system and from which it has been excluded for twenty years. It will not do to redeem a part only of the pledge contained in the Chicago platform and ignore the rest.

It will not do to simply repeal the purchasing clause of the Sherman act, which is demanded by banks and commercial industries, and refuse to keep the promise made to those who toil in the shops, in the mines, and on the farms. We ought to redeem the whole promise in good faith, and no time so fitting in which to do that as the present. I represent a constituency largely engaged in agriculture, a constituency as intelligent and patriotic as any represented on this floor. In their name and on their behalf I protest against the passage of this bill which, while proposing a repeal of the Sherman act, not only fails to provide for the further coinage of silver on equal terms with gold, but which strikes it from our system as unfit for further use and as unworthy of a place in our financial system. [Applause.]

[Mr. MCKAIG withholds his remarks for revision. See Appendix.]

Mr. COOPER of Texas. Mr. Speaker, in the opening prayer of the Reverend Chaplain-elect of this House he said: "That this body had assembled in extraordinary session, had devolved upon them extraordinary duties, and had assumed extraordinary responsibilities."

The Chief Magistrate in his message advised us that "an extraordinary business situation, involving the welfare and prosperity of all our people, had constrained him to call us together."

For days, upon the floor of this House, I have listened to extraordinary men, logically and illogically, but always learnedly and eloquently, discuss the situation and offer a solution for the vexed problem that has presented itself for our consideration. The conditions that confront us are, indeed, alarming, and demand the wisdom, sagacity, and patriotism of this body. We find business stagnated, finances congested, values declined, confidence gone, and bankruptcy, ruin, and distress fast following each other; and an epidemic of doubt and distrust pervading every section, every vocation and business pursuit in this country.

There can be no effect without a preceding cause. The philosphy of present conditions must be inquired into, and the cause must be ascertained, if possible; and, when made known, it is the unconditional duty of this body to immediately remove the cause, if it is within the province or power of national legislation so to do. If the disease with which the country is to-day afflicted is beyond the reach of legislative remedies, then there is no balm, save in the virtue, integrity, industry, and patriotism of our citizens, and in these remedies I have much confidence. [Applause.]

The remedy prescribed by the pending bill I do not believe can effect the result hoped for by its friends unless it acted upon the principle of the medical practitioner who prescribed medicine that would throw his patient into fits, a remedy for which he had a certain cure. [Laughter.] This remedy, I fear, will throw this nation into such convulsions that it will linger long upon a bed of sickness, if dissolution does not eventually occur.

The importance of the question can not be overrated. In its ramification its tendrils touch every interest of industry in this country, and seductively tempts and plays with every avaricious and selfish passion that, as individuals, we possess. It is a question upon which patriots may divide, and I approach its discussion and the mention of objections to the pending bill with trepidation and some doubt. I confess that my education and experience have not been in that line that should prepare me to speak authoritatively or prophetically upon questions of finance, and I concede that a partiality for bimetallism, superinduced by association, as well as the logic of truth, may cause me to unwittingly resolve every doubt in favor of the free coinage of gold and silver.

Reading the Constitution according to its print and letter, and construing it according to the teachings of the masters of the political school to which I belong, I find no express command that gold or silver should be coined, or that the coinage of either or both is inhibited; but I do find that our Constitution recognizes both metals of equal dignity and equal standard, and that, following and in obedience to or conformity with the Constitution, both metals went to our mints free until 1873; and I further find that if we are to put a construction by implication or intendment upon that instrument, and infer what its framers contemplated, we could fairly say, and prove it by the almost contemporaneous actions of the builders of the instrument, that they intended no discrimination between gold and silver in the coinage of currency for this country.

I am warranted in this conclusion because the Constitution expressly says that "no State shall make anything but gold and silver coin a tender in payment of debts," and expressly reserves the right to "coin money and regulate the value thereof." Following these declarations expressed in the Constitution in 1792, but a short while after its promulgation and adoption, Congress passed an act establishing a mint and regulating the coin of the United States, and this act provides for the free coinage of both gold and silver, and so continued the free coinage laws upon our statutes until 1873, when silver was outlawed and debased.

To place a different construction upon the language and meaning of the Constitution would imply and argue the possibility of a conflict of power and authority between the States and the United States. By the Constitution the States may make silver a legal tender in payment of debts, and if Congress destroys the money-bearing capacity of silver, and inhibits its use in a debt-paying capacity, it follows as a consequence that the provision of the Constitution would be meaningless and of no effect.

Therefore, am I not borne out in the assumption that gold and silver is the money of the Constitution, and was so intended by the builders of that sacred instrument? In my legislative action, at its shrine I first bow; by its commands and injunctions I expect to be directed. I revere the memory of those enlightened men who constructed it, and believe that inspiration controlled the pen that wrote it, and it shall be the cloud by day and star by night that shall direct my vote and voice in this assembly. [Applause.]

Next, most persuasive in affecting my action on pending legislation is the combined wisdom of the party to which I belong, expressed in their political pronunciamentos and party platforms. The pending question is one which should rise above partisan politics and sectional bias, and be considered only from an American patriotic standpoint. It is a policy, not necessarily a political principle, that is involved; and I am willing to surrender my partisan bias, save only that, all things being equal, the wisdom of the party with which I am aligned shall turn the scales in favor of my political bias.

Since this question has played a part in the history, policy, and political agitation of this country, the Democratic party has champanioned and advocated the free coinage of silver. Our recent national Democratic platform demands, in letter and spirit, "the coinage of both gold and silver, without discriminating against either metal." The Democratic platform of the

State from which I hail demands the free and unlimited coinage of gold and silver on the ratio of 16 to 1.

In my canvass before the people of my district for nomination and election, I stood squarely and unequivocally upon these platforms, and gave to the people no uncertain expression as to my position on the free coinage of gold and siver; and, relying upon these platforms and my declarations from the hustings, the people chose me as their servant, and I would be faithless and recreant to duty as an honest servant if I failed or refused to obey the behests of my party and my sovereign—the people.

It is now claimed by some of the Democrats on this floor that the free-silver plank in the national platform is ambiguous and is a conditional and not an absolute free-coinage plank. In my canvass I interpreted it differently, and proclaimed it certainly as a free-coinage demand; and if it is susceptible of a construction now placed upon it by my Democratic friends who differ with me, I could not yield obedience to their construction, because my State has made no equivocal declaration touching this matter, and where there is a conflict of opinion or authority my duty is a plain, as well as a pleasant one, to stand by the wishes and commands of my own State and my own people.

I know that the platform demands that both metals be of "equal intrinsic and exchangeable value," to be adjusted through international agreement or legislative safeguards. The construction that I place upon the platform makes the repeal of the Sherman law and the free coinage of gold and silver handmaids compatible and capable of ripening into consistent laws. The construction placed upon it by Democratic adversaries makes the platform antagonistic, incompatible, and incapable of ripening into consistent laws. They know this, and acting under the law of the survival of the fittest, and believing the repeal of the Sherman law is the fittest, they are giving succor to that at the expense of free coinage of silver, and, I believe, the substantial interest of the people.

But, Mr. Speaker, eliminating all constitutional and partisan objections to the proposition, let us consider it from a just, equitable, and humanitarian standpoint, and test its value and soundness in the crucible of common sense, reason, and experience, and weigh it in the balance of justice. We know that money is a measure of value, a medium of exchange, and it is the equivalent of the thing for which it is given. It performs the further important office of being the representative of the basis of all credit, and credit is but the postponement of the delivery of things exchanged. If the value of money declines or increases, all contracts for future delivery are changed, and this change affects the debtor and creditor corresponding with the value and volume of the money of the country.

A contraction of the currency of the country injuriously affects the debtor class, and an expansion of the money of the country injuriously affects the creditor class. To adopt the single gold standard will contract the currency (the purchasing and debt-paying medium of exchange) from 20 to 50 per cent, and, this being done, it follows as the natural sequence that the debtor will have his burden increased from 20 to 50 per cent and the creditor will receive from the debtor from 20 to 50 per cent more than was stipulated in the contract creating the debt.

To adopt the bimetallic free-coinage standard the creditor can not be so injuriously affected, because by so doing the volume of money can not be so violently expanded. The bowels of the earth and the hillsides can not yield the bullion for coinage as rapidly as it can be destroyed and struck down by legislative action after having been coined.

But, for argument's sake, suppose the demonetization of silver or the free coinage of silver should equally affect the debtor and creditor, as the one or the other may be done, then the result of such action, unavoidable, however, would result for the benefit of a class, and, to that extent, would be class legislation; and, if class legislation is the only result that will be attained from any legislation on this subject, then what class of our fellow-citizens shall be the beneficiary of our action? Men become creditors always for the hope of profit or benefit. They become debtors sometimes for the hope of profit; but the rule is, they become debtors from necessity or through untoward and adventitious circumstances.

While it has been asserted upon the floor of this House that the poor and middle class are the creditor class in this country and that they will be the sufferers by the free coinage of silver, my experience and observation do not bear out this assertion. In the section from which I hail nineteen-twentieths of the poor are debtors, and there is not one out of a hundred that has deposits in savings banks; and I believe this condition of affairs will be found to exist in all the Southern States.

A large proportion of my constituents are agriculturists, and among that class of citizens are rarely found political or social agitators. The anarchist and communist find no encouragement there. The confusion and corruption of mercenary and selfish political agitation does not exist among them. Their bosom at all times is the lodgment of virtue and patriotism. Their allegiance to their country; their cheerful support of their government; their patient and uncomplaining endurance of its burdens, and their heroic defense of its institutions, is a record that may be read in all history. They have been taught, and they have heretofore believed, that this is a "government for the people."

As a class, they are the largest element of our population, and are the producers of more surplus products than any other calling, and are the most numerous debtors of any other class of our citizens, and especially are they so in the South at this season of the year; and whenever and wherever I have talked with them on this subject I have found nine out of ten in favor of free coinage. They will not have the currency of this country contracted if they can prevent it. Their cribs are now bursting with corn; soon their sheds will be filled with bales of cotton. The willing hands of industry have filled this land with plenty, yet distress is everywhere. Would you add to misery another pain? Will you not stay the hand that gives the hurt?

The total outstanding indebtedness of the United States on the 1st day of December, 1890, was $1,549,296,120, a per capita indebtedness of $24.70. The total indebtedness of the States and Territories in 1890, as shown by the Census reports, was $1,135,210,442, a per capita indebtedness of $18.13. I have no means of ascertaining the indebtedness of individuals and private corporations in this country; but I think I can safely assume that, in the aggregate, it will equal, if not exceed, the indebtedness of the States and Territories, and I will place it at $1,135,210,442. Add to this the mortgage debt of this country, which amounts to over $2,500,000,000 (and remember this mortgage debt is principally upon the homes and farms of this country), and you may realize and appreciate the burdens that are upon the shoulders of the people of this country.

To recapitulate:

Debt of United States Government in 1890	$1,549,296,120
Debt of States and Territories in 1890	1,135,210,442
Mortgage debt of United States	2,500,000,000
Individuals and corporations (estimated)	1,135,210,442
Total	6,319,717,004

Per capita, about $100.

As hereinbefore stated (and I think it will be conceded), the demonetization of silver would increase the value of gold not less than 20 per cent, and, possibly, as much as 50 per cent. I will, therefore, make an estimate upon the basis that the value of gold will be increased 25 per cent, and I think this low estimate will be accepted as conservative. An increase of 25 per cent on the indebtedness that I have heretofore stated will increase that indebtedness the sum of $1,579,929,251; that is to say, that at the value of gold and silver now in relation to commodities, it will take in value $1,579,929,251 more of commodities to pay said indebtedness than it can now be paid with.

Upon whom will this increased burden most heavily fall? Upon the money lenders? No. Upon the bankers? No. Upon those who are so circumstanced that they need not work upon a rainy day? No. It will fall upon the brawn and sinew of this country, the yeomanry of our land. The debt owing by the United States must be paid by the citizens, and how? By a system of unjust taxation. By a tax that is neither equitable nor uniform, a tax that is vicious in its methods and its exactions levied upon the consumers of this country.

The wealth of this country is protected by the valor and patriotism of all the citizens; but it yields no tribute to the United States to liquidate the debt incurred for its care and protection. The balance of the indebtedness is paid by the skill, industry, and sweat of the face of the people of this country; and, my Democratic friends, I again invite you to listen to the voice of your party, and I conjure you to heed its commands. I find in our national platform the following:

THE MORTGAGE BURDEN.

We call the attention of thoughtful Americans to the fact that after thirty years of restrictive taxes against the importation of foreign wealth in exchange for our agricultural surplus, the homes and farms of the country have become burdened with a real estate mortgage debt of over $2,500,000,000, exclusive of all other forms of indebtedness; that in one of the chief agricultural States of the West there appears a real estate mortgage debt averaging $165 per capita of the total population; and that similar conditions and tendencies are shown to exist in other agricultural exporting States. We denounce a policy which fosters no industry so much as it does that of the sheriff.

If you contract the currency of this country you abridge the means and opportunity to satisfy this indebtedness, and you indeed foster the sheriff's industry.

My friends from New England and the Eastern States, this indebtedness is largely due to you. My people are remotely, if not immediately, your debtors. You built our railroads, opened

our highways, constructed our factories, and started the wheels of mechanical and manufacturing industries in the South. When the briers cumbered our grounds, and our fields were waste places, and lone chimneys stood like monuments to mark the places, where once were happy homes, you came with your money and lent it to us.

With this money we rebuilded and removed the briers that cumbered the waste places, felled the virgin forests, and opened new fields of production. This money is still due you. We have only paid the interest and renewed our note. Will you vote to increase the principal and compound the interest upon us? Will you produce bankruptcy and ruin, and kill the goose that has been laying the golden egg? If so, your support of a measure that will contract the currency of this country will tend to do it.

Aside from the immediate injury that will result from the contraction of the currency by the demonetization of silver, an injury equally as hurtful, but one step remote, will ensue. When silver is stricken down to a commodity there will not remain sufficient coin to meet the demands of commerce and the business of the world. The population of the world to-day is estimated at 1,218,000,000 people, and the amount of gold is estimated at $3,632,600,000, about $2.99 per capita; and this estimate of the quantity of gold in the world, we have no assurance approximates accuracy, and the probability and better opinion is that it is overestimated.

If this gold is equally distributed throughout the world, will it be sufficient to do the business of the world on, or will it furnish a sufficient basis upon which the business of the world can be carried by exchange or otherwise? Strike from the population of the world the people of the countries that have no commercial relations with the balance of the world, and have no productive industries and follow no productive pursuits, and you have remaining a population of about 800,000,000 people. Distribute the gold of the world among these people, and it will be inadequate to supply the demands of commerce and trade.

Our population is increasing at the rate of about 2 per cent annually, and our gold production that has been minted into money for the past twenty years has annually increased about 1½ per cent. Basing our opinion on the belief that the same ratio of increase will continue in the future, we find that our gold diggings are not keeping pace with our increase in population, and there not being sufficient gold in the world for the needs of commerce and business, and gold relatively decreasing as compared with our increase in population, consequently the value of gold must increase and commodities must correspondingly decrease. And, as commodities in general are but the result of labor, then the toiling masses can not be remunerated for their energy, industry, and skill, and as the hands move forward on the dial of time, such a monetary system will undoubtedly make servants of the children of freemen, unless revolution should turn back the hand that now points to such a destiny. [Applause.]

Mr. Speaker, it is urged upon this floor that by the laws of evolution the destiny of silver is fixed, and that neither man nor human agencies can prevent its being discarded as a money metal by the enlightened nations of this globe. If, in this country, such a change must come, will not some economic scientist, some political seer, some monetary evolutionist, devise some means by which the hurt to the debtor may be averted? I believe I would be willing to experiment with the single gold standard if the bimetallic system would be continued and the volume of money permitted to increase *pari passu* with the increase in population, until all existing contracts had been performed and discharged, and let all new contracts for future payments be based upon the single gold standard.

One of the chief virtues that the gold monometallists claim for their system is, that it will give a fixed and stable standard of value. In all contracts for future payment, justice is only attained when the purchasing power of the money paid the creditor by the debtor is of the same value as at the making of the contract. Will the single gold standard produce such a condition or cause such a result? I deny it. Gold is only money in the country in which it is coined or by law adopted. Elsewhere it is a commodity.

There is no universal money, and there can be no more invariable standard of value in gold than in both gold and silver; and, possibly, the variance will be as great in the one as in the other, for the consequences are dependent upon future conditions and circumstances. Gold possesses no attributes that make it sacred and invariable in value. When it is plentiful, it is cheap; when it is scarce, it is high. It is controlled by the same laws that govern other commodities, and varies and changes in value according to the forces that operate upon it.

This proposition is borne out by the experience of our own country within the last half century. When the gold mines of California were discovered and opened up, gold became plentiful, and more gold could be purchased with our products and commodities than could have been done before that, when gold was scarce. It is probable, and I think nearer the truth, that the standard becomes more uniform and stable under the bimetallic than the monometallic system.

Prof. Laughlin, a strong gold monometallist and an author on this question of distinguished ability, said "that the intimate connection of the two metals causes reflex changes upon each other;" though he further says, in the same connection, "that the action of silver upon gold is not the same as the action of gold upon silver." But his concession that the two metals cause reflex changes upon each other argues that a more certain and uniform standard of value can be obtained by the bimetallic than monometallic system.

There is much force in the argument that the two metals act as a balance wheel one for the other. They are handmaids, fixed by nature for joint and separate medium of exchange, and, when both are not actually on duty, one stands guard as a reserve, while the other fights the battles, and so they alternate in action as prejudice, bias, or circumstances may determine, and, by so doing, they preserve their joint and separate strength and unity.

It is asserted by those who favor the single gold standard that the object and effect of the free coinage of silver is, and will be, to enable the debtor to scale his debt, and to cheat and defraud his creditor, and that it is dishonest legislation. Can it not, with equal force, propriety, and truth, be asserted that to strike down silver as money and contract the currency of this country is a desire and effort on the part of the creditors to enhance the value of their debts and assets, and, by law, wring from the debtor payment of a larger sum than is due by the contract? Can you find excuse for such action? Maybe you can.

Nearly two thousand years ago that Christman said: "To him that hath shall be given, and to him that hath not shall be taken away even that which he hath." Strike down silver and you fulfill this inspired statement.

Mr. Speaker, the weight and force of the argument of the gold monometallist is: 1 That the free coinage of silver will drive gold out of this country; (2) that the United States can not force the other countries of the world to adopt bimetallism. If perchance free coinage of silver would drive gold out of circulation, where would it drive it? It would drive it into the vaults of the banks of this country, where it would act as a reserve fund and basis upon which the business of this country is done, and by doing this the basis of our credit would be expanded with stability.

For three-quarters of a century we had bimetallism, and periodically the metals slightly alternated in purchasing value; but whenever this occurred and there was a displacement of the metals there was not a contraction of the currency. The one would temporarily serve and perform one function of money, while the other would perform another equally as important function, and the two metals are peculiarly suited to perform functions joint, separate, and variant.

Small transactions constitute the great bulk of the dealings, trade, and transactions of mankind, and silver is specially suited for this purpose; and these small transactions, when aggregated, compose more volume than all the banks, and demands the actual tangible use of more money than all the banks. It is the poor man's money, and the poor are largely in the majority in this country, and the inspired man said the poor will always be with us.

Can gold ever leave us as long as the balance of trade is in our favor? What the gold advocates here have been pleased to call the enlightened nations of the earth, such as England, Germany, Austria, Portugal, and others contiguous to them, single gold standard people, can not increase their agricultural productions one acre or one bushel. They can not feed their own people from their own soil. They are fed by us, by India, and other nations. They live by sending us articles of manufacture made from our raw material. Their people must eat or die. We need not dress in "purple and fine linen."

The world's product of gold last year was $130,816,000, and the world's product of silver was $196,000,000. Our exports of agricultural, manufactured, and other products from this country for the year ending June 30, 1892, was $1,075,814,429, more than three times as much as all the gold and silver produced in all the world. For the same year we imported $897,057,000 worth of merchandise and miscellaneous matter.

The difference between our exports and imports was $216,227,032. So the balance of trade was in our favor, and for that year it would have taken about two-thirds of all the metal, gold and silver, produced in the entire world to pay for our surplus products, and there lacked in gold over $86,000,000 being enough to pay for our surplus products. While in the last, and some other years, the balance in our favor has been less, there is no cause to believe or suspect that future ages will change the balance of trade against us. Our resources are seeming almost inexhaust-

ible. Our vast territory has a soil rich and productive. Buried beneath its surface and bursting from its hillsides are the greatest variety of the richest minerals. Standing and growing within our extended confines are vast virgin forests of the finest timber. On our immense plains vast herds of cattle grow fat without cost, and within these limits are millions of honest toilers, plowing the fields, delving in the mines, turning the spindles, and revolving the wheels of all character of industry.

With such resources, such industrious people, and abundant products, is it possible that by the free coinage of gold and silver gold will be driven out of this country? Such a suggestion is fatuitous, illusory, and improbable.

Again, history gives us a precedent upon which we can safely base a conclusion. France has been carrying for years seven hundred to nine hundred million dollars of silver, and her gold has annually increased, and her money metals, gold and silver, upon a ratio of 15½ to 1, has been maintained at a parity. Silver did not and could not drive gold out of France, and I do not believe it will drive it out of this country. Next, Mr. Speaker, can the United States force the other countries of the world to adopt bimetallism? This is problematical and experimental, and can not be determined until it is tried; but I assume the affirmative. The future may be forecast by the events of the past.

In 1816 England demonetized silver and adopted the single gold standard. Anterior thereto all the commercial nations of the world, by law, recognized silver as money. Fifty-seven years after England had demonetized silver the United States outlawed the white metal. Following close on this act of the United States, many of the other nations of the earth actually or virtually demonetized silver. They either prohibited or suspended its free coinage.

Now, if it took England over fifty-seven years to induce or force the other commercial nations to adopt or follow her system of monometallism, and the United States by her action could drive into line so many other nations in so short a time, it certainly strongly argues the power of the United States over the nations of the world; and if she has the power to produce such results by the policy she has recently adopted, does it not follow that if she returns to the system of bimetallism, with her growing industries and wonderful resources and her commercial prestige, can she not force the other countries to reverse their policy, and stand side by side with her? [Applause.]

Now, let us follow this argument to its logical conclusion from the premises laid down by the monometallist. They say that a half a century ago no nation of any commercial importance had adopted the single gold standard, and that England, then the monarch of all commercial nations, launched out upon this uncertain sea, and by force of her commercial power, coupled with her ingenuity, brought almost all the commercial nations of the world to the actual or virtual single gold standard, and that such nations now being opposed to bimetallism, the United States can not return to it without an international agreement.

What has been done may be done again; and what one nation has accomplished another may accomplish, conditions being similar. If this be true, the United States, standing upon the commanding height she does, possessed of the forces, active and reserve, that she has, and being in the front rank of nations, can not she do for silver what it is claimed England has done for gold? Since silver was demonetized in this country, the gold countries of Europe, with England in the lead, to gratify their cupidity and greed, have turned their battering-rams upon the walls of bimetallism in America, and to-day the temper of this Congress indicates that they will be victorious. But if the fight is lost this year, the serried ranks and solid phalanx of the American people will be found in line of march later on, and the voice of the people will order a charge that monometallism can not withstand.

If the little sea-girt isle on the eastern shore of the Atlantic Ocean can accomplish so much, what might not the United States do if she had the courage to try? Representatives of America, behold the picture that is presented to us to-day: The United States again petitioning and supplicating at the throne of England, begging Europe for conferences and concessions! Such obsequious and servile conduct is enough to make the cheek of an American mantle with shame. [Applause.] It is enough to make the ashes of Henry and Washington and the patriots of the Revolution cry out from their hollow tombs.

This Government that placed the Goddess of Liberty upon her high perch, holding the scales of justice in equal poise; this Government that smote the rock of the science of government and let the living waters of equal rights, personal liberty, and national independence fill the channels that flowed to all the nations of the earth; this Government that traced power to its lodgment and found it in the voice of the people, now begging tottering monarchies to suffer it to adopt a financial policy. American manhood must be waning and our national independence and institutions fast decaying.

"Gresham's Law" has been held up to us to show the consequences that will follow bimetallism. The philosophy of the law, I predict, will find no application in this country with bimetallism. Money, monetary transactions, and speculative greed regularly obey no law and follow no rule. It is constantly affected by extraneous causes and changing conditions and forces. Money follows no fixed orbit. Like the erratic comet, it defies law and order. The bankers of the United States, if they desired, by concert of action could place silver at a premium in the face of any law. The eloquent financial economist from New York [Mr. HENDRIX] said that—

> The banks of New York were now holding up the financial system of this Government by the neck.

I fear this is too true, and it may be that if the banks would loose their hands from the neck of our financial system this Government would breathe easier and this agitation would not have occurred. If the banks of New York are temporarily holding up the financial system of this Government, suppose the banks of the world should surrender their patriotism to their greed, then, indeed, would the future be cloudy with calamitous consequences.

Upon the question under discussion we daily have the opinions and advice of hundreds of successful and distinguished financiers throughout the United States. Bankers, boards of trade, chambers of commerce, *et id genus*, are earnestly importuning us to follow the English policy, and by so doing they say that we can still the troubled waters, speak peace to the dissatisfied and disturbed, restore confidence to the doubters, heal the financial afflictions, avert dangers, and restore prosperity to this country. This is a desideratum wished for and prayed for by every member of this body and every patriot within the confines of this Government.

I have an exalted respect for these people and their opinions. I am unwilling to believe that they are prompted by selfish and mercenary motives. They are a great, useful, and important factor in the country, and are American patriots and liberty-loving people. But they possess no peculiar prescience and are gifted with no superior sight-seeing into the future, and are not authorized and accredited prophets.

In the past they have made glaring mistakes, and their prophecies have not been fulfilled. When we were in the throes of a fratricidal strife, and a financial policy and system were inaugurated to carry on the momentous contention, the financial system then adopted and followed by the Government was condemned and derided by this same class of our citizens, and the direst prophecies as to its consequences and effect were then made. Time developed that they were in error, and were not good counselors.

Fourteen years after the close of the unfortunate struggle another financial policy was inaugurated by this Government. We found ourselves with seven hundred millions of paper currency—promises to pay—that were depreciated in value. By one stroke of the legislative pen we lifted this vast quantity of paper from its degraded bed and placed it on a parity with gold and silver, and did so with a depleted Treasury, or an apparent insufficient coin reserve. Like the other policy, we did this in the face of the adverse opinion of the financiers of the world; in the face of predictions and prophecies of chambers of commerce, boards of trade, and bankers' associations. We did it without the advice or aid of England, and we did it without international conferences or agreements.

Mr. Speaker, we are in the midst of a distressing panic. Like Coleridge's ancient mariner, who found "water, water everywhere, nor any drop to drink," we find money, money everywhere, nor any dime can get. In the South we are hungering for markets of money to purchase our surplus products, that we may pay our matured debts or exchange it again for the necessaries and comforts of life. If this money agitation has produced this panic, our duty to our country is to at once remove the cause. But I can not admit that the cause, mediately or immediately, rests solely with this.

I do not believe any man can trace this panic to any single cause. Money panics of momentous proportions and disastrous results may arise from the slightest circumstances. Money is timid and is easily affrighted, and the slightest disturbance affects its most remote limit. Like the ocean's calm, a pebble dropped in the center of its surface produces a wave that touches the farthest shore; so a financial agitation once began may swell in volume until its force wastes itself upon the immeasurable sea of time.

It is charged that the position of the bimetallist tends towards class legislation, and is for the protection of silver, and that we are undertaking to pass a law for the especial benefit of silver mines and silver money. The reverse of this statement is more

nearly true. It is gold and gold owners that are asking for protection. Our law would be equal and uniform upon all the people of this country, while your law would strike down a large part of the people and a large part of the wealth and industries of this country.

The silver States are an integral part of this Union, and have rights, and vested rights. A few years ago, the now silver mines were rock-ribbed hills and barren wastes. Our people went there, and they underwent privations and hardships to develop that country. By their self-denials, courage, and energy, millions have been added to the wealth of this country, and thousands of our laborers have found renumerative employment. The wealth they produced percolated all avenues and flowed to all the States. The corn, wheat, and cotton alike shared the benefits of this development. And now it is undertaken to be said that this energy shall be wasted, these industries and investments destroyed, and their prospective growth in wealth shut off. I can not go with the advocates of such a policy, because it is protective and sectional legislation, and is not just and right.

The gentleman from Ohio [Mr. HARTER] points us to the single gold standard nations, as the progressive, enlightened, and prosperous nations of the globe, and relegates the bimetallist to the pagan and heathen nations of the earth. He may be right; but the question is, what is progress, prosperity, and enlightenment? When the scales of paganism and heathenism dropped from the eyes of England in 1819, and she adopted the single gold standard, she had 165,000 land owners; now she has 30,000 land owners. This may be enlightenment, progress, and prosperity for her people, but I can not so understand it, and I am unwilling to believe it

You take away from the people their debt-paying money, abridge their opportunities to lift the mortgages from their farms and homes, and you do it that they may become civilized, enlightened, and prosperous. What a travesty upon justice and what a commentary on enlightened humanity. In 1873 the light of prosperity went out from the homes of the agriculturists of this country. If you would again wreath their brow with the smiles of prosperity, again restore to them that which was wrongfully taken from them in 1873. [Applause.]

Mr. Speaker, in conclusion, I say that the Democratic party demands the repeal of the Sherman law and the enactment of a law establishing the free coinage of gold and silver. The Constitution contemplates the existence of such law; justice demands it; humanity demands it, and the American people demand it. Gold and silver have been the universal money of the world as far back as history or tradition carry us. Silver was the money of Abraham, and Solomon "made gold and silver plenteous in Jerusalem."

History records no country on the face of this globe to have pained or perished because they had too much gold or silver, or too much gold and silver. Gold will not leave us. Untrammel our commerce with other nations, break down the barrier raised by a vicious protective tariff, then our whitened sails will empty our bursting granaries into the laps of the hungry nations of the earth, and our fleecy staple will thread the spindles and feed the looms of the factories of all countries, and be the warp and woof of the wear of all people, and gold and silver will be our pay. [Applause.]

Mr. DE FOREST. Mr. Speaker, that there should be any opposition from any source whatever to the repeal of the silver-purchasing clause of the Sherman act under existing circumstances is, to me, the subject of profound astonishment.

The necessity for that repeal is so clearly written on the face of public distress, the demand for it is so distinctly heard in the voice of general calamity, that it would seem that no partisan rancor, no individual hobby, no speculative theory, no merely selfish personal scheme or sectional interest would dare to obstruct it by the slightest obstacle or the least delay.

The cry for this relief comes up to us not so much from the rich and powerful; not so much from the brokers and the bankers and the capitalists, whose names and occupations are harped upon here by the opponents of repeal as though in justification of their conduct; not so much from them as from the humble poor, from the worthy and industrious masses, upon whose patient shoulders are upheld the pillars of all our material progress and prosperity; from those men and women to whom the cessation of industrial activity through the operations of this Sherman law means the loss of employment, the sacrifice of hard-earned savings, the extinguishment of fondly cherished hopes—yea even cold, hunger, and nakedness, and all that penury implies.,

Not from the ranks of any one occupation, not from any particular section, but from all pursuits and from every quarter of our territory the cry comes up to save these suffering countrymen of ours from a winter of unparalleled misery, not by any mere gratuity, not by any extraordinary or unconstitutional expedient, but by a simple act of justice, by rescinding a law that ought never to have been enacted, that almost every one admits to be loaded with disaster, and that hardly any one to-day seriously attempts to justify.

In response to this appeal the President has convened us in this special session of Congress for this special purpose. All the vast business interests of the Union, tottering on the verge of destruction, believing that from us and by this means alone they can be rescued, are imploringly holding out their hands for succor. Why should it not be granted immediately, unconditionally, without hesitation, and without debate?

But, sir, we find there is opposition, and what are the reasons assigned for it? Does any one question the vicious character of the silver-purchasing law or the disastrous consequences that have resulted and are now resulting from it?

No one, I had almost said; but I do remember that the honorable, learned, and eloquent gentleman who first from the State of Louisiana the other day addressed the House upon this subject seemed to be contending that the Sherman act has not been so much as the least factor among the causes of the present crisis.

What—

Said he—

has the Sherman law to do with this condition of affairs? If men had been alarmed—

He argues—

by the legislation known as the Sherman act, and by the purchases of silver made under it, they would have gone to the Treasury with those silver certificates, those obligations of the Government, and demanded that universal money which the friends of the pending bill seem to be so fond of. There would have been a run upon the Treasury instead of upon the private banking institutions of the country.

But does not the honorable gentleman very well know that this is precisely what has occurred? Does he not know, is it not a matter of record, is it not laid before us in the message of the President itself, that there has been a run upon the Treasury, and of that exact character? That of the fifty-four million of silver certificates issued by the Government in the period between the 1st of May, 1892, and the 1st of July, 1893, $49,000,000 have in fact been presented to the Government for payment and have, in fact, been paid in that same universal money, so far depleting the Treasury and impairing the ability of the nation to meet its ultimate obligations?

The argument of the honorable gentleman appears to refute itself. It seems to resolve itself into a conclusion predicated upon a false hypothesis. The testimony of all experience is against him. The testimony of the financial and business judgment of the world, based upon practical tests, and springing from wide observation and long familarity with the subject, is against him; and, sir, in the light of all the evidence that comes to us from far and near, from high and low, from every rank and condition of life, I think I am justified in the assertion that in his skeptical interrogatory, "What has the Sherman act to do with it?" the honorable gentleman from Louisiana stands almost unsupported and alone. Now, is there anything in this law that commends it to our particular affection, that ought to prevent or postpone its abrogation?

I have listened patiently to hear some suggestion to that effect, but none has been presented. No one appears to be willing to befriend the act. The Democrats in Congress all voted solidly against it. Our Republican friends who contrived it and passed it now with commendable contrition acknowledge the error and stand ready so far as in them lies to make all suitable reparation. The Democratic party throughout the country has denounced it and promised its repeal. The boards of trade and exchange, the bureaus of commerce, the foremost men in financial, commercial, and manufacturing circles condemn it, the whole body of our laboring population, whether artisan or agricultural, arraign it as one of the chief causes, if not the only cause, of the present widespread, far-reaching, and ruinous monetary stringency. Why, then, should it not be repealed?

But opposition there is, and it comes in the form of proposed substitutes, containing provisions that no friend of sound finance or of fair dealing in public or private transactions can, from our standpoint, for a single moment favorably consider—provisions that, instead of quieting distrust, creating confidence, and reviving business activity, would in our judgment but aggravate and prolong the very evils we are seeking to escape.

There shall be no repeal of the silver-purchasing clause of the Sherman act, they tell us, unless we will consent to the free and unlimited coinage of silver at ratios ranging from 16 to 1 to 20 to 1. And we are told that the principles and pledges of the Democratic party require it.

Again and again, sir, upon this floor during this debate and in the discussion of the silver question in the last Congress, have we listened to this and similar assertions, made by honorable gentlemen with great persistency, great emphasis, and all apparent sincerity. It is even intimated that our unwillingness to

concur in that proposition amounts to a species of party treason, which will ere long bring down upon our devoted heads the scathing wrath of disappointed and indignant constituents. "To vote for the repeal," they say, "and to refuse to vote for these substitutes is in violation of the pledges of the Chicago platform."

Now, what, sir, do these assertions amount to, and how much truth is there in them? Why, the platform is easily understood. It is clear, positive, and unambiguous, and I undertake to say—and say it without the slightest fear of successful contradiction—that there is not a syllable of the pending bill that is inconsistent with, and not in direct pursuance of, that platform, and that there is not a single substitute for that bill offered here that is not directly in conflict with that platform and with all the principles, doctrines, and traditions of the Democratic party.

Let us us see if this is not so. The bill repeals the silver-purchasing clause of the Sherman act, which the platform denounces and promises to repeal. The substitutes propose free coinage of silver at ratios not exceeding 20 to 1. The platform contains no such doctrine and no such promise. The platform, on the contrary, while declaring in favor of the free and equal coinage of silver with gold as the money of the country, at the same time and with equal emphasis declares that it shall be done only upon a ratio which coincides with the commercial value of the metals.

Now, it is a fact which no gentleman can fail to know, which no gentleman who is not disposed to quarrel with the laws of gravity or the axioms of mathematics will attempt to controvert; a fact as well established and as well understood as the existence of the building in which we are assembled, that not one of the ratios of coinage in any of these proposed substitutes expresses or fairly approximates to the commercial value of the metal.

There is not one of these proposed ratios that would give us (in the language of the platform) "a dollar unit of both metals of equal intrinsic and interchangeable value."

If the advocates of these substitutes were so concerned as they profess to be about the platform and the fulfillment of its pledges they would have offered us something themselves that would have complied with that platform, and that would not have been, as all these propositions that they have given us are, in distinct and flagrant violation of those solemn pledges.

What then, sir, I again inquire, is the motive that underlies this opposition? Gentlemen tell us with an air of great virtue and philanthropy that they desire to make money cheaper? But why do they desire it? What patriotic, humane, or honorable object is to be subserved by making money cheaper? If the phrase means anything it means that the dollar these gentlemen are praying for would have a smaller purchasing power than a dollar to-day; that it would take more of the silver to purchase a given amount of any other commodity than it takes to-day; that more weight of coin should be required to conduct the same commercial transaction than it required to-day.

If a man has a horse to sell which at the present value of silver dollars is worth $100 to-day, and he desires to purchase with the proceeds of that sale a reaping machine which also is at the present price of silver dollars worth $100. These gentlemen would so legislate that it should require $200 in silver to effect the same exchange. That is cheap money. The man would then sell the same horse and would obtain the same machine, the only difference being that in the latter case he has the inestimable privilege of handling twice the quantity of silver. [Laughter].

If there would be any advantage in such a change, by precisely the same process of reasoning it would be an advantage to go back to barbarous usages and again adopt the ponderous and inconvenient media of exchange which were employed in the very infancy of society. [Applause].

It is utterly inconceivable to me that any constituency represented on this floor can fail to perceive that for all legitimate uses and for all honest purposes preciousness rather than cheapness is desirable in a circulating medium, and that so long as enough is in use to answer the purposes of commerce the more valuable the money is, the more economical, the more convenient, and every way better it is both for those who use it and the government that provides it.

Now, then, the gentlemen who ask for cheaper money do not, I think, contend that we have not enough already issued to meet all the usual requirements of business. The present stringency is not due to any deficiency in the volume of our currency, but to a paralysis that has fallen upon its circulation, a paralysis that no increase of that volume would relieve, but rather aggregate; a paralysis that owes its origin to a distrust occasioned by the improvident issuance of currency under the Sherman act. That the volume under normal conditions is now, as it has been in the past, adequate for all commercial purposes I do not think is seriously questioned.

No, sir, this demand for cheap money does not arise from any feeling that the necessary exchanges of commerce can not be effected safely and conveniently with the amount now on hand; it does not arise from any belief that either the people or the Government are made any richer or more prosperous by being obliged to employ a larger bulk and weight of coin in the same business transactions. Not at all, sir, but when we have looked the matter all over and have heard all that can be said, the invocations and the imprecations, the prayers and the tears, the graphic and the touching portrayal of the contest between riches and poverty, and of the conspiracy of Wall street and Lombard street, it all comes down to this, that the advocates of free coinage at the various ratios proposed desire cheaper money for debtors to discharge their obligations in, cheaper money in order that those who owe may free themselves from the claims of their creditors by the payment of less than is honestly due.

That appears to be the laudable object which elicits all this eloquence, which stands in the way of the relief that the country sorely needs, that legitimate industry on every hand is perishing for want of, and that we have been summoned here to furnish.

The advocates of cheap money have chosen the means best adapted to their purpose. They say they will have the Sherman law or free coinage of silver at ratios not higher than 20 to 1.

There is no doubt that either course, if followed out, would give them cheap money. Let the Sherman law continue in force without amendment and we shall soon have a 60 or perhaps a 50 cent dollar for the accommodation of these unfortunate debtors; or, on the other hand, let free coinage of silver be established at any of the ratios proposed, and a currency will speedily be produced sufficiently depreciated and debased to answer the expectations and gladden the hearts of all who have borrowed money and prefer not to pay it.

No argument is needed to establish these propositions. Any intelligent student of political economy is well aware of their truth; and certainly no argument is needed in this debate when the gentlemen who oppose us, with all their knowledge of the subject and with their consummate ability in adapting the means to the end for the accomplishment of their cherished purpose, and with the object of cheap money and the shielding of the debtor as against the creditor, openly avowed, have deliberately chosen for that purpose the continuance of the silver-purchasing law as it now stands or free coinage at the ratios proposed.

This, then, is the situation and such is the issue; and, sir, it is somewhat astonishing as well as amusing to listen to the floods of denunciation poured out upon the creditor class, as though the possession of property and the ability to furnish capital to those who need it, especially with the expectation of repayment, were an unpardonable crime against society. [Laughter.]

The holders of Government bonds appear to be the object of special detestation. The original purchasers of those bonds, most of whom are now under the sod and most of the survivors of whom have long since parted with all the interest they ever had in those obligations, are paraded before our vision as though in actual being they now stood at the Treasury like so many Shylocks demanding their pounds of flesh. It is said that they paid for those bonds in a depreciated currency and that Congress, by subsequent legislation, arbitrarily enhanced their value.

I shall not attempt to discuss the justice of that transaction. If such discussion had any relevancy to the present issue it might with some reason be said that those original bonds were issued by the Government in an hour of supreme peril, when no human intelligence could foresee the end of the awful contest for the prosecution of which the money was imperatively needed, and that the men who in that great national emergency stood in the breach and furnished the funds for the preservation of the Union were, perhaps, in the hour of victory, not entirely unworthy of some favorable recognition. But whether it were right or wrong, just or unjust, it has no bearing upon the present inquiry.

It must be remembered that these bonds are negotiable instruments; that their ownership is changing every hour; that long since all Congressional action upon them, long since the credit of the Government was solemnly pledged to their ultimate redemption in gold or its equivalent, and their market value was thus established at the figures that have since prevailed, they have passed from hand to hand at established quotations; they have been purchased by charitable and humane institutions; they have been selected by trustees and guardians of the fatherless and the dependent; and the debt-repudiator, who fancies that by the creation of cheap money these obligations of the Government can be scaled down, must not forget, and he must not expect the people of the country to forget, that it is upon the funds of such deserving institutions and the slender patrimony of such defenseless persons that he is proposing to lay the hand of wanton confiscation. [Applause.]

I have heard honorable gentlemen here descanting somewhat at length on the alleged grinding and avaricious propensities of the people of my section of the country.

New England and the adjoining territory seem to be regarded by them with particular aversion.

Well, sir, so far as I know, whatever success we have attained has not been due to accident or assistance. We have enjoyed no extraordinary natural advantages. We have not the spreading prairies of the West, with their inexhaustible fertility, which the settlers in that quarter have had bestowed upon them for a nominal consideration. We have not the mines of gold and silver with their incalcuable treasures. The founders of New England came over a stormy sea to an inhospitable shore, and there, amid the dreary and dangerous surroundings of a wintry wilderness and a savage foe, they kindled those beacon fires of liberty that have enlightened the world and laid the foundation and devised the formulas for those institutions of freedom that have preserved and transmitted its practical fruits to all succeeding generations.

By hard labor and frugal living their children have wrought out from what seemed most unpromising conditions some moderate degree of material prosperity. Not so much by the aid of horse-power and improved mechanical appliances, which are poorly adapted to uneven surfaces, as by strained muscles and stiffened bones and hardened hands, the rugged hillsides have been subdued to the uses of agriculture. The returns of this labor they have economically, but wisely, administered. The church and the schoolhouse have never been forgotten. Highways and bridges have been adequately provided, the poor have been furnished with necessary support, and the laws have been fairly and decently executed without the aid of mobs.

And after all this has been accomplished some little money has, in many cases, been laid up as a provision against reverses of fortune or the infirmities of age. The people of the West have borrowed these savings for the improvement of the farms that the Government has given them, borrowed them when they were as good as gold, used them to very great advantage, and now the cheap-money crusaders are proposing that they shall pay it back to us in a currency worth 60 cents on a dollar.

Mr. BRYAN. I want to ask the gentleman from Connecticut what reasons he gives for the greater increase in the proportion of wealth in the New England States during the last ten years than in the Western States? Does he attribute it——

Mr. DE FOREST. I have not assigned any.

Mr. BRYAN. Will the gentleman be kind enough to assign a reason?

Mr. DE FOREST. That is a matter of opinion.

Mr. BRYAN. Is it the greater industry and greater frugality of the people?

Mr. DE FOREST. I do not wish to enter into a discussion of that kind. I might have my opinion about it.

Mr. BRYAN. Will the gentleman please state it?

Mr. DE FOREST. That is a question of industry and frugality; it is a question of good management, too.

We have another class of alleged wicked men in New England, men who to-day by the thousands are walking the streets of my city and other manufacturing centers, out of employment for want of the relief which this Congress is asked to give them by the repeal of this silver-purchasing statute, men who at the benches of our workshop have patiently toiled from morning till night, year in and year out, supporting their families, educating their children, discharging faithfully all the duties of good citizenship, and who by self-denial and prudent management have been enabled to deposit in the savings banks small sums of money to their credit. Every dollar of it was as good as gold when placed there. Every dollar of it represents honest toil.

Every dollar of it stands for some pleasure sacrificed for which it might have been expended, and every dollar of it will be needed when the rainy day comes round. The cheap money crusaders are proposing that when the hour of necessity arrives these depositors shall receive their money back in a currency worth 60 cents on a dollar.

We also have people in New England who have not been so prosperous. There is many a farmer who, with all his efforts, has not been able to keep even with the world, and who perhaps in his declining years is haunted by the specter of mortgages upon his property. We have many in other walks of life who have been overtaken by misfortune and find themselves in debt.

The inconvenience, the apprehension, the discomfort of that thraldom I have no doubt are as keenly felt by them as though they resided in Kansas or Nebraska; but, sir, I am proud to say that I do not know of a man within the confines of my district, nor have I heard of one in all New England who would not hang his head in shame and feel that he was dishonored by his Representative in Congress if he heard that he advocated or voted for a law that would defraud a public or a private creditor out of 40 per cent or 30 per cent or any portion whatever of his just dues.

When warned by honorable gentlemen that we shall hear from our constituents to our disadvantage unless we vote for cheap money, I am proud to say, sir, that, so far as I know, I have no such constituents; and, sir, if there is one lurking anywhere in the dark, sharpening the knife of his vengeance because of my course upon this question, I improve the present opportunity here and now publicly to notify him that I do not desire his vote.

But, sir, there is another influence in the opposition to the repeal of this silver-purchasing law; an influence that moves in the dark and conceals its selfish designs under a profession of regard for the down-trodden masses and the general welfare: an influence that, vociferously declaiming against the demands and encroachments of the money power, is itself the most grasping and the most unscrupulous of all the agencies and forces that power has brought to bear in recent years on Federal legislation.

I refer, sir, to the vast, consolidated, organized, indefatigable, ever-watchful and ever-active forces of the silver-mining interests of America; a power that has flooded the mails with its preposterous literature and filled the land with its emissaries; that has laid its potent hand on primaries and conventions, on the organization of Territories, the admission of States, and the choice of legislators; and that, surrounding and pervading the walls of this Capitol to-day, is seeking again, as it has sought—and not unsuccessfully sought—in the past, to lead the lawmaking department of this Republic an humble tributary to its avarice.

It asks the Government to continue its purchases of silver, not that it is needed for purposes of coinage; not but that we already have on hand tons upon tons of it which we can not use and upon which we have already lost many millions of dollars, not that anyone believes it to be needed for any public use whatever, but only to help out these gentlemen in their private speculations, to furnish them a market which they otherwise would not have, to pay them a price which they otherwise could not obtain, and to add, at the general expense, to the stupendous fortunes which they have already acquired a larger increment than the laws of trade and production would justly entitle them to.

This is a power to-day that lays its murderous hand upon the throat of honest industry, and that in response to all the prayers of the people, and the patriotic call of the President, and the effort that is made by the friends of this repeal to save the whole country from financial ruin, says: "No; we will not consent. Banks may fail, factories may close, the wheels of commerce may stand still, the revenues of charity and dependence may be cut off, homes may be sold at the auction block, the products of the farm may mold in the fields, labor may starve in the streets, and incalculable loss and misery invade and shake the whole framework of society before the Government shall be allowed to withdraw for a single hour the bounty which we have already so long enjoyed."

This was the threat that was given out almost from the day the President issued his message. It is the threat which here in Congress at the present time, too cunning to disclose its real object, is seeking to accomplish its aim under other more humane and plausible pretenses.

Shall we yield to this impudent demand? Not, sir, I conceive, unless we are deaf to all suggestions of reason, blind to all considerations of justice, and recreant to every trust.

I do not know in the platform or principles of what party the silver-mining interest will pretend to discover the promise of its claim, this proposition that the powers of the State should be exercised for purely private purposes.

It may be Populistic, I am sorry to say that I think it is Republican, but one thing I am certain of, it is not Democratic. Very sure I am that the shades of Jefferson and Jackson, to whom such eloquent and pathetic allusions have been made, would find themselves shuddering with a strange surprise if invoked to subscribe to any such doctrine as that. It will not be found in the Chicago platform. It will not be found in any authorized declaration of Democratic belief, it will not be discovered in the teachings of the illustrious founders of the party.

Democracy stands for simplicity in public affairs. It insists that the powers of the state shall be confined within the narrowest possible limits and exercised only for strictly public purposes. Bounties, subsidies, class legislation, governmental favoritism of every kind it uniformly denounces as hostile to the spirit and foreign to the purpose of free institutions. It holds that these truths were the inspirations of our independence, the keynote of our declaration and our Constitution, the vertiable foundation stone of this grand structure of our civil liberty.

In the neglect of these truths it sees the pathway of national decadence, public functions indefinitely multiplied and extended,

the continuous growth of the office-holding army, the strife for party supremacy a thousandfold intensified, the danger of its tyrannous exercise a thousandfold increased, and, finally, upon the ruins of a once popular system the settled and perpetual domination of a governing class from which there would be no escape save through the portals of fiery revolution.

It is by a departure from these first principles of safe government that all the dangers of the past have been encountered. It was through such a departure that the law which now afflicts us was enacted, and it is only by a penitent and obedient return to them that we can hope to dispel the cloud that now hangs over us, and for ourselves and our children after us to preserve this, our sacred temple of human rights, from all the invasions and pollutions of despotic power. [Applause.]

Mr. ARNOLD. Mr. Speaker, I come from a district, the largest in area and population of any within the Empire State of the Mississippi Valley, and from its plains in the east to its mountain tops in the west comes to me but one voice, that of earnest, solemn protest against the passage of the bill introduced by the distinguished gentleman from West Virginia [Mr. WILSON].

I should be untrue to myself, Mr. Speaker, untrue to the constituency I represent, and untrue to the people of that great State, did I not, here and now, oppose this measure which so vitally affects their interests.

Sir, I do not believe, in the entire history of our Government, a question so important has ever engaged the attention of Congress. The discussions of 1860, indeed, had their full and momentous space, but after all they related simply to a contest which was to be decided by the sword, and the result of which in no event involved Anglo-Saxon slavery. But to-day we are confronted with a proposition, in the far-reaching effects of which, as I stated in the last Congress, may be seen the financial serfdom of the American people.

All history shows that individual and political bondage follows financial subjection. The debtor is the slave of the creditor, and where conditions are created by law that make impossible the abolition of such relation, then indeed is despotism supreme and perpetual.

We had as well look this question squarely in the face. The people will not, this time, be deceived by any catch phrases and glittering generalities. Whoever shall in this contest by his vote strike a blow direct or indirect against silver, will be branded as a monometallist in letters that will stick to him as long as he lives. In season and out of season, in the darkness and in the light, in the populous city and the lonesome forest, he will feel and know that he has arrayed himself against silver as a money of final redemption.

Mr. Speaker, for more than eighty years prior to 1873 we were on the bimetallic standard. Silver was as good as gold. Hand in hand marched the two metals on their beneficent mission. Gentlemen have undertaken to show that during this period sometimes silver was worth a little less, sometimes a little more, than gold, but all their herculean efforts have simply resulted in demonstrating that the relative value of the two was not only practically equal, but that the standard was automatic and equilibratory.

Why it seems to me as plain a proposition as can be, that the value of money is determined entirely by the demand for it, and if for example the value of gold should rise superior to that of silver, there would then be no demand for it, but for the other metal, and *vice versa*. This is that constant automatic action which tends to form an equilibrium between the two metals at the ratio fixed, spoken of by Sir Guilford Molesworth.

On the other hand, a single standard is an impossibility. How shall a thing measure itself by itself?

But it is not my purpose to theorize. A few plain facts and practical suggestions are worth more than all the systems of finance in the world. This bill proposes a simple and unconditional repeal of the purchasing clause of the Sherman act. It proposes not only to stop further silver purchases, but also further silver coinage. No substitute or measure of relief is offered in its place. Indeed, its open and avowed advocates plainly tell us that its intention is to place the country upon a single gold standard. That this is the full determination of the President is clearly gathered from the message he has sent us.

True, gentlemen on this floor, whose sincerity I do not question, and whose acumen I certainly recognize, have told us that the President is a bimetallist and the fast friend of silver. He was elected upon a bimetallic platform; he could have been elected upon no other; but this message, I repeat, is an unequivocal declaration of war on silver. It is an Executive pronunciamento that the time has now arrived when this Government should adopt the monetary system of Europe. A more straightforward document in the interest of gold as the sole monetary standard could not have been penned and sent out from Lombard or Wall street. It will bring joy and gladness to the financial vampires that are ever sucking the life blood of the people, and sorrow and despair to the toiling and producing millions.

Mr. Speaker, the provision in the measure retaining the present silver circulation in our currency will deceive nobody. Gold will be the sovereign standard to which all other values must bow. The tremendous power now lodged in Wall street at its pleasure to contract the volume of money, thereby proportionately decreasing all property and labor values will be multiplied many fold. Push but the veil aside, and the abyss meets our vision.

Mr. Speaker, I have before me a statement from the Treasury Department showing the amount of gold and silver coins and certificates in circulation in the United States up to the first of the present month, from which it appears that our stock of gold is $604,000,000 and our stock of silver $615,000,000. The per capita circulation of gold and silver combined, therefore, is in round numbers $18, and of gold alone $9.01. It is, then, proposed to put this nation, with a population of 67,066,000 upon a per capita circulation of $9. For again let me repeat, all other kinds of money will be measured by gold. There will not then be even a Sherman law to protect silver from utter annihilation.

Mr. Speaker, I will not lend myself to this unholy scheme. To the already fast-moving march of the classes over the masses I will not by my vote add the momentum of law. Sir, I am no defender of the Sherman act. It is, indeed, as characterized in the Chicago platform, "a cowardly makeshift." But, sir, it is the only law within the statute books that at all recognizes silver as money.

Sir, I shall vote for all of Mr. BLAND'S substitutes; first, for the ratio of 16, and then on to 20. These all failing, I shall vote to restore the Bland act. Still failing, I shall vote first, last, and all the time against unconditional repeal, believing that the President will veto any subsequent measure favoring silver, and shall rely in confidence for approval upon my constituents, to whom alone I owe allegiance.

Sir, what reasons are given for this tremendous change in our monetary system?

Gentlemen glibly tell us that this step has become imperative by reason of the excessive silver production relatively to gold. It is on a par with other statements sent out by the enemies of silver. The silver production of last year was less in this country than in the preceding year, and the commercial value of all the silver produced in the whole world last year was only $2,000,000 greater than the value of all the gold produced.

Here are the figures:

Gold production in 1892, $130,816,600.

Silver production in 1892, $133,054,000.

Where is that cataclysm of silver which is to bury the world deeper than plummet ever sounded? But this is hardly half the truth. The production of silver, relatively to gold, is now smaller than it was at any time from 1801 to 1840.

The following is the average production of both metals for each year of the present century:

1801-1820, 4 of silver to 1 of gold.
1821-1840, 2 of silver to 1 of gold.
1841-1860, 2½ of gold to 1 of silver.
1861-1880, 2 of gold and 1 of silver.
1881-1889, ½ more silver than gold.

Or, to put it in another form, for the first twenty years of the century we had in this country 300 per cent more silver than gold; the second twenty years 100 per cent more, and now only 16 per cent more. Let us not be blind to facts. The crusade that has been waged in the interest of gold has been a crusade of slander and misrepresentation.

But we are told, Mr. Speaker, that our silver coinage is becoming every year relatively greater than gold. This also is a misrepresentation. For thirty-three years after 1806 we coined more than $47,000,000 in silver and less than twenty-three millions in gold. We had then more than $2 in silver for every $1 in gold. To-day we have less full legal-tender money in silver than in gold, and counting all kinds of silver money, including the seventy-seven million limited tender, our silver stock is only eleven millions greater than our entire gold stock. Thus this claim of the monogold metallist falls to the ground.

But it is said, sir, that the silver is a debased and depreciated dollar. In 1873 silver was worth more than gold. It commanded a premium in the money markets. What struck down its value? The fiat of law, the demonetization act of 1873, a measure that was passed clandestinely through Congress, that was signed by President Grant in ignorance of the poisoned chalice contained in the cup, and that received the careful revision and supervision of Ernst Seyd, a London banker, as evidenced in the report submitting that bill to the House. The law can create a demand for

money and thereby give to it a value, or it may destroy that demand and thereby destroy its value as money.

Sir, who does not remember, when the clouds hung dark and threatening in 1860, gold, true to its cowardly and unpatriotic instincts in all times of need or peril, fled and deserted the country, and the mighty power of law created a money which furnished the sinews of war in the most gigantic internecine strife of history. No; it was the act of 1873 that first depreciated silver as money. Afterwards, when the Bland-Allison and Sherman act respectively sought, as it was then supposed, to restore it to partial coinage, its price immediately rose, but almost as immediately fell when it was discovered that those measures were being executed in a way to discredit silver.

Mr. Speaker, I have no disposition here to quote the free-silver utterances of the present Secretary of the Treasury; they are a part of our history; they are recorded in the official proceedings of Congress, and they will stand there to confront him as long as he lives. But I want to say right here, from the day Mr. Carlisle entered upon the duties of his great office down to the present time, no act of his has been friendly to silver, or has varied in the least from the policy of his Republican predecessor. Our silver dollar is selling to-day at a premium—not because it is redeemable in gold, because there is not enough of that commodity in the world to redeem one-tenth of the tokens behind which it impudently pretends to stand.

No, that silver-dollar valuation is not based upon gold as its redeemer, nor, Heaven knows, upon any confidence in bankers, but upon something stronger, greater, and more honest than all these, the wealth and credit of the people of the United States. Had Mr. Carlisle recognized this fact, and known, as he must have known, that every dollar coined from the bullion purchased under the Sherman act could and would have maintained its parity with gold, if paid out for such purchases, by reason of the pledged faith and credit of the nation, we should never have heard of a gold scare. That mysterious gold reserve would not have been rising and falling like a thermometer with every pulsation of Lombard and Wall streets.

Mr. Speaker, remove the restrictions from silver coinage, make it a full legal-tender, debt-paying money, and it will immediately bound into new life and give relief to a people who are now suffering from a circulation contracted simply because under our suicidal policy we permit a few gold gamblers to bring on panic and business depression at their own sweet will. You can not relieve the people by making money still scarcer. You would strike down one-half our money metal; what, then, would follow? You increase twofold every form of indebtedness. Where the debtor now owes $100 under this policy he would have to pay $200.

Sir, the load of indebtedness is already weighing down the farming and laboring classes. How much greater do you intend to make it? Will nothing but the absolute ownership of the earth satisfy you? Take heed you do not go too far. The gradual absorption of all wealth in the hands of the few presaged the fall of Assyria, Egypt, and Rome. But remember we are an Anglo-Saxon race, who can not and will not be enslaved.

But, Mr. Speaker, as I have shown, the unconditional repeal of the Sherman act means a ruinous contraction of our currency and a fall in the price of all products of labor. Since 1873, since silver has gradually fallen in value, the staple products of the farm have kept pace with it in its downward course.

The following table will show the relative depreciation of silver, wheat, and cotton since that period:

Year.	Wheat.	Cotton.	Silver.	Year.	Wheat.	Cotton.	Silver.
1872	$1.47	$19.3	$1.32	1883	$1.13	$10.8	$1 11
1873	1.31	18.8	1.29	1884	1.07	10.5	1.01
1874	1.43	15.4	1.27	1885	.86	10.6	1.06
1875	1.12	15.0	1.24	1886	.87	9.9	.99
1876	1.24	12.9	1.15	1887	.89	9.5	.97
1877	1.17	11.8	1.20	1888	.85	9.8	.93
1878	1.34	11.1	1.15	1889	.90	9.9	.93
1879	1.07	9.9	1.12	1890	.83	10.1	1.04
1880	1.25	11.5	1.14	1891	.85	10.0	.90
1881	1.11	11.4	1.13	1892	.80	8.7	.86
1882	1.19	11.4	1.13	1893	.50	7.2	.75

These figures are eloquent. Let every farmer in the land study them. He will understand why it is that he is now selling wheat, corn, and cotton at ruinously low figures. He will find the reason to be in the steady appreciation of gold. What will the future of the farmer be if this system shall long continue? Gentlemen, these are the bread-winners, the hope and salvation of our country; destroy them and you destroy the country.

But, Mr. Speaker, it is said that we are lagging behind in the race of nations, that all the civilized governments have adopted the gold standard, and that we should adopt it as a means of self-preservation. Sir, this is an insult to the American people. We have the greatest country on earth; our resources are practically inexhaustible, and our independence unquestioned. Buried in our mountains lie more silver and gold than in any other country on the globe, and yet, withal, we must receive our financial lessons from Europe. Could toadyism go farther?

Why, sir, we are no more dependent on England, France, or Germany than we are upon the Sandwich Islands. What is there, Mr. Speaker, in the economic conditions of England that we should envy? True, they have a landed aristocracy, privileged classes, and gilded royalty. There may be seen in its full perfection the extremes of wealth and poverty. But let us for a moment, if we can, withdraw our attention from her money center in Lombard street to her rural population. Let us see how the single gold standard has bestowed its blessings on that class. I read from report of Consul Howard, Miscellaneous Document No. 109, for the months of January to April last, inclusive, page 82:

Of all the industrial classes in Great Britain the tenant farmer is the most worthy of consideration and sympathy. Incredible as it may seem to American farmers, who are paying from $18 to $25 per month, with board, to a common farm hand, the agricultural laborer in England is paid on an average about $12 per month, out of which he boards himself, shelters and feeds his family, and provides them with the alleged comforts of life. The rate of wages has saved the farmer from bankruptcy hitherto and made it possible for him to till the soil and pay the rent, but it has at the same time driven, and is driving, the agricultural labor to city and town, where it swells the constantly increasing current of common labor to a disastrous flood.

While the English farmer and laborer are thus striving to keep soul and body together, a gentleman of the same realm, not entirely to fortune and to fame unknown, Mr. Alfred de Rothschild, in his speech at the International Monetary Conference at Brussels, says:

I hold that wheat at thirty a quarter instead of forty-five is rather a blessing than otherwise.—*Senate Executive Document* No. 82, page 69.

Here is a man with the courage of his convictions. This Napoleon of Napoleons of finance boldly and characteristically states the desires and purposes of the money power to be financially to enslave the laboring people in order that the drones may live at their expense.

Let us look for a moment at Germany, another gold-standard country. I read from the same consular reports, pages 96 to 98:

The earnings of the average wageworker are pitiably small. It is certain they do not allow him any luxuries; it may well be doubted whether in many cases they are sufficient for the barest necessaries.

It will be seen that the wages paid weavers and those engaged in the textile industries are among the lowest in the scale. The condition of this class is indeed most hopeless. Long hours in ill-ventilated and close quarters, and a minimum allowance of the plainest food, have so reduced the majority of artisans as to make them physically incapable of outdoor work of any kind. The usual fare for a weaver is a breakfast of thin coffee, with dry bread broken into it. Dinner consists of potatoes, potato soup, or meal soup, with dry bread. For supper there is either thin coffee, with dry bread, or soup. Meat is purchased in small quantities on Sundays and holidays by the better paid; for the great mass it is a luxury beyond reach. The character of the food never varies from year to year; winter and summer, it is always the same.

From two-thirds to three-fourths of the incomes of small wage-earners is spent for food—food little in quantity and inferior in quality. In a community of 8,000 factory hands the weekly expenses for food in a family of two (man and wife) were apportioned thus: Bread and meal, 181 pfennigs; potatoes, 35 pfennigs; vegetables, 13 pfennigs; biscuits, 12 pfennigs; milk, 6 pfennigs; butter, 110 pfennigs; bacon, 6 pfennigs; meat, 30 pfennigs; herrings, 8 pfennigs; salt, etc., 7 pfennigs; sugar, 11 pfennigs; chicory, 5 pfennigs; total, 426 pfennigs, or 60¾ pfennigs per day.

This is cited as a typical case among those whose average income is 400 marks—about 42 per cent of the entire population. In another instance the average yearly income of twenty-four families was 295.37 marks. Reckoning two children and one adult dependent upon this amount, the share falling to each would be 98.46 marks—in other words, a daily allowance of 27¼ pfennigs. Less than 7 cents a day is thus represented to be the limit to be expended by 46 per cent of the weaving population.

But, as abject as is the misery and privation revealed by such figures, the privations imposed upon those working in their own garrets are still greater. These unfortunates are for the most part women and young girls. In Leipsic, according to a recent monograph on social studies, the wages paid for a week's work of from eleven to thirteen hours daily in making paper lanterns is 4.50 to 9 marks; men receive from 10 to 12 marks. Women working for umbrella factories get from 5 to 8 marks weekly.

The week's wages of a man and wife working together twenty-four hours daily in the making of felt shoes amounted to 12 marks. Sewing girls working for dressmaking establishments receive from 4 to 8 marks per week. Instances of this sort might be multiplied. In many cases the average annual income is not over 150 marks by reason of the enforced idleness at certain periods. The very lowest weekly sum required to exist is estimated at 6.50 marks. This affords a suggestive commentary.

One more instance—that of France, which since 1873 has been under the single standard. From the same authority, page 11, I read as follows:

In spite of what official statistics may state, I am able to say that in this very large and important industrial community the average skilled workman earns less than $400 per year. In round numbers 1,800 francs is what an expert weaver owning his own loom can earn. Unskilled labor is paid by the municipality 58 cents per day, and it is no uncommon thing to find scores of skilled laborers out of regular employment seeking work from town to town at 58 cents per day.

How can a man support a wife and two or more children when his total earnings, assuming that he works three hundred days in the year, amounts to $174 per year? Yet this is the task thousands of human beings are called upon to face annually in France.

When one considers that in a population of 38,000,000 the number of people

engaged in agriculture, commerce, and other industries exceeds 30,000,000, and that there are only about 2,000,000 persons of independent means, it is not difficult to see how the majority may get the impression that they are oppressed by a very small minority.

These instances, Mr. Speaker, will give to the farmers and laborers of America an idea of what their condition, already bad enough, will be when they are placed upon this great commercial plane of the civilized nations of the earth. Evidently, so far as they are concerned, the monometallic gold standard is not a dispenser of all blessings and the all-in-all savior of nations. What would gentlemen have? Would they relegate our agriculturists of the West to the condition of those in England? Do you want still further to reduce the prices of agricultural products, and, therefore, all labor in that department of industry? Do you, with Mr. Rothschild, clamor for still cheaper wheat and cotton?

Sir, these are the natural and inevitable results of a monometallic gold standard, because the quantity of gold in the world, being confessedly insufficient to do its business, it follows, as a matter of course, that such scarcity appreciates its value, and that therefore they who control its supply likewise control the value of all labor or property and can depreciate it at their pleasure.

Now, under the bimetallic standard such a condition of affairs is not so easily brought about. Where you have the free and unlimited coinage of both metals, silver ever has been and, from the nature of things, ever will be the people's money, and will circulate among them, and thus make it harder for those who desire to corner the gold to do so, and thereby to control all other values. But we are told that this will be cheap money. I want to repeat, that whenever the law creates a use for a given article, thereby causing a demand for its use, value is added to it by reason of such use and demand.

That is just as plain as anything on earth can be. Take, then, your silver bullion, if you please; stamp it with the Government stamp, declare that it is a dollar, that it is 100 cents, that it is a legal tender for the payment of all debts, and that silver dollar will march on side by side with your gold dollar, and hold its own in the race of business in this country. [Applause.]

I want to call attention to another point. We are told that the Sherman law is the cause of the present panic. I have just about come to the conclusion, sir, that the people who assert that hardly believe it. If they do, I am almost tempted to say that they are not only monometallic men, but that they certainly must be monoidea men. You had read to you, gentlemen, the other day, a passage in which was depicted the fall of the Roman Empire by reason of the contraction of the currency. Did the Sherman law have anything to do with that? [Laughter.] Again, in 1816, England adopted the single gold standard. The same merciless depression that has always followed the effort to conduct the business of a country on a gold basis, followed there. It is graphically described by Alison, as follows:

The effects of this extraordinary piece of legislation were soon apparent. The industry of the nation was speedily congealed, as a flowing stream is by the severity of an Arctic winter. The alarm became as universal and widespread as confidence and activity had recently been. The country bankers, who had advanced largely on the stocks of goods imported, refused to continue their support to their customers, and they were forced to bring their stocks into market. Prices, in consequence, fell rapidly; that of cotton, in particular, sank in three months to half its former level. * * * The effects of this sudden and prodigious contraction of the currency were soon apparent, and they rendered the next three years a period of ceaseless distress and suffering in the British Islands. * * * The effect upon prices was not less immediate or appalling. They declined in general within six months to half their former amount, and remained at that low level for the next three years. Distress was universal in the latter months of 1819, and that distrust and discouragement were felt in all branches of industry, which are at once the forerunner and the cause of disaster.

Did the Sherman law have anything to do with that? Again in 1836 was the currency contracted in England. The same historian describes its consequences, as follows:

On, however, the tempest came, and fearful was its violence. With the steady "contraction of the currency" by the Bank of England, which began in July, 1836, prices fell during the whole of the ensuing winter, and in the spring of 1837 the panic was universal. Many bankruptcies took place, though fewer in Glasgow than might have been expected from the severity of the pressure, owing to the amount of solid wealth which had been made in the preceding five years. But as prices of all sorts of manufactured produce had sunk nearly a half, the manufacturers were under the necessity of lowering wages; and this soon induced strikes in nearly all the branches of skilled industry.

Why, sir, to contract the currency of a country is opposed to even the teachings of Alexander Hamilton, the father of the Republican party. He says to annul either of the metals as money is to abridge the quantity of circulating medium, and is liable to all the objections which arise from the comparison of the benefits of a full with the evils of a scanty circulation.

And, coming down to 1873, De Lavelaye tells us that prices fell, and industry, losing money, limited its operations. Why, sir, in 1873, the criminal period of the centuries, almost universal depression reigned over England, the Continent, and the United States. Mr. Bright, in 1879, referring to the condition of England, said, "I believe the agricultural owners and occupiers of land have lost more than £150,000,000." He attempted to attribute the misfortune to poor crops and seasons.

But, sir, those poor crops and seasons have been lasting for many years, with no signs of abatement. Deeper with each succeeding year has sunk the farmer in the scale of poverty, while the mortgage, daily growing more gigantic, swoops down upon his devoted home, and, like the bird of evil omen, "casts its shadow on the floor." Ah, the Sherman law had nothing to do with these depressions. Only the other day the Australian bank failed. So dire was the distress resulting that the newspapers stated, in order to preserve existence itself, the crown of womanhood was placed on the auction block and sold to the highest bidder. Why, we are beginning now to find out the whole truth about this panic. It belts the civilized globe. The Continent is not exempt from its baneful touch. Only a day or two ago nine stockholders failed in London and two in Liverpool.

It is criminal in such a calamity to falsely assign the existing evils to a cause in no wise responsible for them, simply as a pretext to place the country upon a gold standard. It is that and nothing more. A cruel, heartless conspiracy on the part of the banks. They have the country by the throat, and refuse to loosen their grip, unless they are given still further power over the people. But the Sherman law is responsible for it all. Why, Banker Clews sings a different tune in his financial review of August 5:

He gets up off of the Sherman law and the "fool people who are hoarding their money," and jumps on the Chicago speculators. He says their "withholding of grain and other kinds of produce from the usual course of export for several months was largely the cause of the heavy drain of gold." He says "the stringency which they so largely helped to create has at last compelled them to realize at ruinous losses."

The distinguished gentleman from New York [Mr. HENDRIX], a national banker, to whose able speech I had the pleasure of listening the other day, says in relation to it, "Why, God Almighty himself could alone bring about such a condition as involves the whole globe to-day."

No, this war on the people's money commenced in 1873. The present attack is the final onslaught of the enemy. It is Plutocracy *vs.* Democracy. It is Lombard and Wall street united for a common purpose. For my part, as a humble Representative on this floor, I shall cast my lot with the common people. To all influences that would hold me back, I say with the Seminole, "Blaze with your serried columns, I will not bend the knee."

Mr. Speaker, for years and years has Congress legislated in the interest of the select few. The creditor alone receives attention. Let us now do the debtor justice. Let us not add to his burdens. One more word and I have done.

We have been told, Mr. Speaker, that this question rises superior to party. If by that declaration it is meant that the issues involved in this discussion will reach to every fireside in this land, then, indeed, it is true. If it is meant that we are brought face to face with a proposition to impose the financial slavery of Europe upon the American people, then, again, is it true.

But if by that declaration it is meant that it is the duty of Congress to legislate upon these lines, then it is not true, but beneath party. For, Mr. Speaker, the behests of the money power are seldom tempered with mercy or with justice. From the day when Dives lifted up his eyes in hell, down to the present time, has this unrelenting oppressor of mankind marched steadily on, crushing, as a modern Juggernaut, all within his reach. And he is marching on now over mercantile and manufacturing interests and even over his allies and confederates, the banking institutions. Nor would he halt here appalled at new fields of conquests. He would invade every home in this fair land: yes, he would trample upon the prostrate forms of despondent fathers and weeping mothers, woman in her beauty, man in his strength, budding childhood and prattling infancy, on all, to accomplish his end.

But it may be well, Mr. Speaker, for these men to remember that there is a time when forbearance ceases to be a virtue. They should not become oblivious of the fact that a new light has dawned upon the western world. The spirit of intelligence is there abroad. As the children of Israel in their weary march of old were guided by a pillar of cloud by day and a pillar of fire by night, so we in this struggle of the centuries shall have as our pillar of cloud by day the Constitution of our fathers and our pillar of fire by night the patriotism of the people. Nor shall we reckon without our host. We are not representing Old World constituencies, but a people brave, intelligent, and patriotic, who have solved this problem, and who will be quick to act upon the maxim, "Eternal vigilance is the price of liberty."

Mr. Rothschild, at the international monetary conference at Brussels, said:

So far as agreeing upon a universal standard is concerned, no two nations are alike as regards their individual wealth, resources, and expenditure;

and therefore no universal agreement can be made with respect to a general currency.

Then, sir, let this Congress declare, when this discussion shall have ended, that Mr. Rothschild for once at least in his life spoke the truth. Let it legislate upon the same independent line of policy and action. Let it declare, in language unmistakable, that the United States, the central star of the nations of earth, shall not be plucked from its proud eminence to become a satellite of England; but rather, on the other hand, moving along its appointed course, aloof from the jarring elements beneath, it shall continue to perform its great revolutions within the orbit of national independence.

Now, Mr. Speaker, in conclusion let me say this, and in no spirit of threat or of prophecy: If the highest duty of this Congress shall consist simply in repealing the Sherman law, then let the tidings go forth, as assuredly they will, that on this proposition the Republican party and the Democratic party are one. If the issue upon which the last campaign was fought and won be a delusion and a snare, again and again let the tidings go forth, as assuredly they will, that on these two propositions the Democratic party and the Republican party are one. If the condition of the tariff, as suggested, is by no means critical, and in the sweet by and by it may possibly receive homeopathic treatment, again and again, and again let the tidings go forth, as assuredly they will, that upon these three propositions the Democratic party and the Republican party are one.

But if, as I believe, the Democratic party is still the party of the people, if it would remain true to its traditions and its teachings, if it would go beyond the narrow confines of the money-changer's office and listen to that voice, deep toned as thunder, coming from the teeming millions of this broad land, then indeed shall it re-write, but this time in letters imperishable as our mountains of silver and gold, resistless as our rivers rolling down to the sea, and majestic as the grandeur of our free institutions, that old, old Democratic doctrine, "The free and unlimited coinage of silver at the ratio of 16 to 1." [Prolonged applause.]

Mr. WILLIAMS, of Mississippi. Mr. Speaker, I feel keenly the ridiculous attitude in which I am placed of undertaking to speak here and now, and I feel, as other gentlemen have perhaps felt before me upon their first plunge into the political world at Washington, like rising in my seat simply to thank the Speaker sincerely for the magnificent opportunity which he has given to me, as sixth upon the night list, to speak to a lot of pages and empty benches. [Laughter.] And I felt, in justice to the dignity of the district I represent, the largest in the State of Mississippi and the most Democratic, inclined to decline with thanks the honor. But, sir, upon second thought, it occurred to me that all of us were very small people in the city of Washington, and that it was best to be submissive to the will of the House; and besides that there was a duty due to the people I have the honor to represent; that it was due them not alone to publish in the RECORD, but to stand on the floor of this House and to voice the eternal warfare which they now inaugurate and will never end against a policy the ultimate result of which would be to reduce the free farmers who constitute nine-tenths of the population of that district to the condition of German Bauern, of Scottish crofters, or of Irish tenant farmers.

It struck me that I would not be doing my duty to them to allow even the ridiculous situation which surrounds me to prevent me from expressing their voice and views. Therefore, without apology, which will necessarily consume time, and with the modesty which is becoming in one who has had no legislative experience here or elsewhere, who, furthermore, has had no official experience of any sort, never having held or sought an office in my life, coming here from the people, fresh from the agricultural people of the country, voicing the wishes of the great agricultural Democracy, which, I submit, is as respectable and just as much entitled to weight as are boards of trade or the commercial exchanges in this broad land, having no vantage ground at all, unless it be one (and I hope for the sake of the American people and the honor of Congress that it is not)—unless it be one to occupy the ground of entire sincerity of conviction and honesty of purpose, I shall undertake to plunge into this great debate.

The first step that I shall take will be to request the Clerk to read an extract from a paper which I now send up—the Boston Traveller.

The Clerk read as follows:

[Special Dispatch to the Traveller.]

WASHINGTON, D. C., Aug. 14.—President Cleveland has determined to apply his most heroic influence to bring about the speedy adoption of the silver repeal bill.

He has issued instructions to all of his Cabinet officers that there shall be no more appointments made upon the recommendation of men in Congress about whose vote upon the silver problem there is any doubt.

He has gone even further, and has directed that there shall be extended no official courtesy whatever to anyone in Congress until it is known how his vote is to be cast upon the silver question.

Two Senators from the far West called upon Secretary Hoke Smith the other day and asked to have enforced certain laws adopted by the last Congress relating to Indian reservations, and they were surprised to be informed by the Secretary of the Interior that the Department would take no action upon the request of men in Congress until after the Sherman law was repealed.

The Senator attempted to explain to Secretary Smith that there was not the slightest partisanship or personal favor to them in the request made, but the Secretary of the Interior replied that he was carrying out instructions and there would be nothing done except the routine of the Department until after the silver question was disposed of.

Mr. WILLIAMS of Mississippi. Now, Mr. Speaker, I have had that article read and I desire to make no comments save to say two things: First, that I do not believe a word of it. I believe that it is a base calumny upon the leader of the Democratic party and the President of the United States. I do not believe and can not believe that an administration headed by a man whom I have reverenced and admired, and taught the people whom I represent to reverence and admire, headed by a man who has made himself dear to the American people not alone by saying that "public office is a public trust" but by acting it; who has carried that principle farther than I would have carried it, so far that he has declined to use official patronage for the purpose of rewarding the men who have carried the cause of sound political principles to a successful issue or of punishing the common enemy, the Republican party; I decline to believe that an administration headed by that man for whom I have demonstrated my respect and reverence now for three Presidential periods, by advocating his cause to the best of my humble ability, not alone after nomination but before it, could change its position and sink to the base and contemptible littleness of using official patronage to disrupt the Democratic party, for that is the purpose if it were to be done. [Applause.] For, Mr. Speaker, men ought to be affected with the natural consequences of their acts.

That is one thing that I wanted to say. The other is this, in behalf of the Southern men who sit here: Even if I believed that, it would demonstrate to my mind but one thing, and that would be the woeful lack of knowledge of human nature which must exist in the mind of the author of such a policy.

You, a Southern man, Mr. Speaker, just think of the attitude in which this places you, for a moment. For ten long years we, the gentlemen of the South, bore on our lances the cause of local self-government and civil liberty on the American continent, with no aid from any quarter except now and then a random shot from old New York (God bless her; although she is wrong now on this question) and the persistent musketry of little New Jersey. But can it be that any man of common sense believes for a moment that that magnificent cohort of Southern gentlemen, who stood out manfully for self-government, with the charge of treason palsying every nerve and oppressing them in every effort, could be controlled and cajoled at this late day by a few pitiful post-offices. [Applause.]

During that entire period, amid darkness and clouds, with no break in the monotony of the gloom, save now and then a lightning flash accompanying a thunderbolt hurled from Washington; when legislatures were dissolved at the point of the bayonet and good men torn from their wives' sides at dead of night and hurried to Sing Sing—without so much as one ray of the gentle sunshine of official favor in nation, State, or county—we fought fiercely on and at the end conquered a peace and renewed position.

And I take it, Mr. Speaker, that the men of the West, free born and manly, are as courageous as we are, and are as firm in their convictions; and I know that the magnificent race from which we spring, armed with the sense of mastery that it has always been able to exert, with the spirit of domination that has made it master wherever it went, is not to be controlled in that sort of style, whoever else may be.

And, Mr. Speaker, if there were a man upon this floor so contemptible as to be induced by such reasons to take a position contrary to his convictions, I would ask of his constituents, if they be a Southern constituency or a Western one, that when he goes home they may meet him at the border, and kick him in a westerly direction through the northern tier of counties, then in a southerly direction through the western tier of counties, then in an easterly direction through the southern tier of counties, then in a northerly direction back to the point of beginning; and then give him one grand boost and land him in the town of Quincy, Massachusetts [applause], where there exist gentlemen who are willing to rise upon this floor and say "Put me down as one of the President's gentleman ushers." [Laughter.]

Mr. Speaker, in the old country, where maids of honor, amid the scented perfume of the court, are glad to be prostituted to the pleasure of the executive, and are not ashamed of the bastards which result, there are men who yet consider it an honor to be gentlemen "flunkeys." [Laughter.] In God's name, may the taste not spread in America!

Mr. Speaker, I wish in the next place to insert in my remarks in the RECORD an article from the New York Recorder which expresses so nearly my opinion in certain respects that I shall make it a part of the RECORD, because I believe that a record is now being made, and partially even by as humble an individual as myself, which in 1896 shall be made a part of the war material of the battle, a part of the war material necessary then. The article from the Recorder is as follows:

GIVE US FREE SILVER.

The Recorder believes that the time has come when the will of the people must be enforced alike upon Congress and the President, and the mints of the United States be thrown open to the free coinage of silver.

The financial and business situation is admittedly bad. There is no need to exaggerate it. It might be worse. It will become worse, much worse, unless Congress and President Cleveland can get together and relieve the existing commercial congestion by prompt and adequate legislation.

The President admits in his recent message that the repeal of the silver purchase law of 1890 will not fully meet the exigencies of our situation. It is confessed on all hands that to simply repeal the Sherman act and stop there will not leave our currency upon a satisfactory basis, or provide for a safe and sufficient circulating medium.

The business of this country can not be done upon a purely gold basis. There is too much business to be done, and too little gold to do it with, to justify the experiment of a currency based wholly on one metal, and that one the scarcer and dearer of the two. The total disfranchisement of silver as a money metal, which seems to be the aim of the gold extremists at Washington, means a violent and ruinous contraction of values. The mere threat of it has already given the first sharp twist to the screws of contraction.

To persist in the total elimination of silver from our currency is madness. The lead of the gold monometallists has been followed far enough. It is time to call a halt, and demand that silver shall pe put back in the place it held for eighty years, from the formation of the Government down to 1873, and be made again one of the two main pillars of the American system of currency and coinage.

It is evident that his party in Congress is not fully with the President, and will not act upon his initiative unless he will assent to a provision by which silver shall be retained as a partner with gold on a just and fair ratio in the metallic basis of a nation's money. Congress is not ready and willing to repeal the act of 1890 until the President on his side is prepared to give his assent to a new law based on bimetallic principles restoring silver as a money metal and reëstablishing the double standard.

This is the perilous feature of the situation at Washington. If the President and Congress can not harmonize their views and act together without long delate and delay, the crisis through which the trade and industry of the country are passing must and will grow more acute. Is there any way of bringing them together? Only, as the Recorder thinks, by putting such a pressure of public opinion upon them both as will compel them to meet on middle ground and take decisive action.

The President is not justified in asking for the unconditional repeal of the present silver law. To postpone the definite readjustment of our currency laws, leaving silver demonetized and its use as a standard money metal wholly prohibited, would, in the Recorder's opinion, precipitate a financial and business catastrophe compared with which all past panics would seem to have been mere bugaboos.

Absolute gold monometallism spells ruin, universal and unsparing ruin, for the people of this country.

Congress is right in demanding securities for the silver already coined and represented in our paper circulation, and a guaranty for the permanent retention of both metals and the historic double standard, at a ratio to be fixed with a due regard to the existing conditions of the currencies and coinages of the world. Congress stands for the American people in this matter. It is their dearest interests which it is defending in defending their constitutional currency—gold and silver.

The single gold standard has never been sanctioned or desired by the people of this country. Their will has been over and over again expressed to the contrary at every election and in every Congress for sixteen years past. Their determination that silver shall not be outlawed at the mints has been clearly and forcibly shown by overwhelming majorities in both branches of Congress. It never was stronger than it is to-day.

The clamor of the money-changers, the usurers, and the stock gamblers, inspired by the English influences that radiate from Lombard street, and which represent the organized rapacity of the world, has not shaken the faith of the American masses one iota in the honesty, the justice, the fairness, and, above all, the vital necessity of maintaining silver side by side with gold in their national money system.

There may have been a change in the relative measuring values of the two metals. That has often occurred in the course of history. But that change, whatever it may be, can be corrected by a change in the ratio of coinage from the present 16 to 1 to, say, 19 or even 20 to 1. It does not justify the total abolition of silver as a standard money metal. England is reported to be at this moment exchanging her gold for Indian silver on the basis of 22 to 1, showing that even the leading gold standard country recognizes that silver possesses an exchangeable value with gold at some ratio that can be fixed. And we may be sure that the Bank of England, in fixing it at 22 to 1, has been as unfair to silver and as partial to gold as it has dared to be.

The Recorder earnestly calls for a general expression of the popular will loud and clear and general enough to make the President and Congress understand that the people demand immediate relief from the stifling and stagnating currency conditions from which they are now suffering; and that, while they want the act of 1890 repealed, they also want the free coinage of silver restored at such new ratio as the wisdom of Congress may see fit to fix.

The money power has spoken for gold monometallism, and Mr. Cleveland seems to be its executive echo. Now let the people be heard and Mr. Cleveland be clearly informed that Congress, and not he, represents the national will on this matter of admitting silver as well as gold to the mints.

Gen. Grant once said, speaking from the same chair now filled by Mr. Clelelland: "I have no policy to enforce against the will of the people." The Recorder recommends Mr. Cleveland to adopt the same attitude on this money question, for it is the only one that is worthy of an American President. Congress is the repository of the people's lawmaking power, and it correctly represents them in resisting the single gold standard crusade, at whose head Mr. Cleveland has apparently placed himself. He can do the nation no better service at this grave crisis in its financial and business history than to yield gracefully and say with Grant: "I have no policy to enforce against the will of the people."

It is of the very first importance that the present state of affairs should not be long continued. Business is benumbed in every branch, currency and coin are alike in hiding, exchange is difficult to effect for want of money to do it with, perfectly sound banks are embarrassed themselves and can not give ordinary accommodations to their depositors, trade is clogged and hampered at every turn, mills and workshops are closing in large numbers, and even the most solvent and flourishing firms find it hard to draw on their deposited moneys in such forms as to meet their weekly pay-rolls in the usual way.

This is the situation, and it is not improving, but growing worse with every day's delay at Washington.

Bad as it is, it would become infinitely worse if Congress were to yield to the single gold standard movement and surrender the cause of silver. Such a surrender would mean disaster to all classes except the vultures that always flesh their beaks deepest and gorge themselves fullest on a field that is strewn with the victims of a vast commercial and industrial calamity. The merchant and the manufacturer, the big business man and the small tradesman, the great mass alike of employers and employed, the professional man, the brain-worker and the brawn-worker, and, more than all, the laborer and the wage-earner in every occupation, will all be drawn down together in the vortex of contraction if silver is outlawed.

To make gold the sole standard and the only currency is to diminish the volume of our money by one-half. That is contraction; and contraction means the complete paralysis of all enterprises, the utter collapse of credit, the complete prostration of trade from New York to California, and the consignment of myriads of working people in every city and State in the Union to idleness and starvation.

The Recorder pleads with all its power that this whirlpool of contraction may not be opened. President Cleveland and Congress must get together and prevent it. The people must raise their voices now and demand their own salvation. If silver be not restored quickly to free coinage, the most optimistic man can not look forward six months without fear. Millions of unemployed, wageless men, with their wives and children crying for bread that can not be earned for them, will be hard to reason with. But they will have to be reasoned with if silver is outlawed from the mints. And it will be idle to tell them that it was thought best to starve them in order to place the country on the same gold-standard footing as England.

Repeal the act of 1890, readmit silver to free coinage at a new and reasonable ratio, and do it quickly. That, and nothing less than that, will put the business of the country firmly on its feet again, give new heart to capital, new hope to labor, and restore good times throughout the land.

If this be not done and the antisilver madness prevail, the prosperity of the country can not be recalled, and its peace will soon be in serious peril.

Think of it! A few years ago there was a sort of nondescript known as a protection Democrat. Do you remember him? Where is he now? At home or on the other side of this chamber.

And I will tell you, in the name of the agricultural classes and in the name of the yeomanry of America, who do not live in cities of a hundred thousand population and over, that four years from now they are not going to step out and beat the old Democratic party because a minority here join hands with an almost solid Republican party and defeat the will of the people, but they are going to capture and hold the machinery of the Democracy; and the "monometallic Democrat" will be where the protection Democrat is to-day. [Applause.]

Now what strange posture are we in, gentlemen, politically speaking? A majority of the Democrats in the Senate, nearly a two-thirds majority, and a majority of the Democrats in this House stand here in favor of carrying out that plank of the platform at Chicago which said:

We hold—

Mark the language—

to the use—

Not the certification—

of both gold and silver—

As what? not subsidiary coin—

as the standard money of the country, and we believe in the coinage of both metals without discrimination or charge of mintage.

I was surprised to hear my learned friend from Tennessee [Mr. PATTERSON] the other day liken his position here as a representative of the people to that of a lawyer who had misadvised his client. We occupy no such attitude. I know not what he may have said to his people upon the stump. I know not what you may have said to yours. Your contract is there. I have no criticism to make of it so far as that is concerned; but a man does not occupy toward his constituent the attitude of an advising counsel. He is a public servant, sent here to obey their mandate, a servant in the truest sense, where it is an honor to serve, but still a servant, and he stands in the attitude of one of two contracting parties who have entered into a covenant.

I am in favor of the free coinage of silver from honest convictions, and so told my people; but if I had changed my mind now I would not change my vote. As a gentleman, I would not until I had first resigned and gone home to my people and given them the pitiful opportunity to answer the question, "Have you changed yours?" [Applause.] It is a covenant, a bargain, a contract, and an honorable man keeps it. I understand in the particular case of the gentleman from Tennessee that he told his people upon the stump that he did not know whether he was in favor of free coinage or not, and they sent him here anyhow. I want everybody to understand——

Mr. TRACEY. Will the gentleman allow me to ask him a question?

The SPEAKER *pro tempore*. Does the gentleman yield to the gentleman from New York?

Mr. WILLIAMS of Mississippi. Yes, I will yield to the gentleman from New York.

Mr. TRACEY. Will the gentleman allow me to ask him a question?—and as he is the last speaker he will have the time—when the gentleman from Mississippi refers to the gentleman from Tennessee [Mr. PATTERSON] is he not aware that the gentleman from Tennessee in the last Congress did vote against the free coinage of silver.

Mr. WILLIAMS of Mississippi. Just a moment ago I stated that I understood that on the stump the gentleman from Tennessee told his people that he was not in favor of the free coinage of silver.

Mr. TRACEY. He voted in this body against the free coinage of silver before he appeared on the stump before his people.

Mr. WILLIAMS of Mississippi. I do not care for that. I was simply stating that what I had said would apply to the attitude which I would occupy if I changed position, and that the gentleman from Tennessee I understood did not occupy the same attitude, because he told his people before he came here that he was not in favor of the free coinage of silver.

Mr. TRACEY. Now, you do not care whether he told the House or not?

The SPEAKER *pro tempore*. Does the gentleman yield to the gentleman from New York?

Mr. WILLIAMS of Mississippi. You know I have only thirty minutes.

Mr. TRACEY. You are the last speaker and have plenty time.

Mr. WILLIAMS of Mississippi. Very well, then.

Mr. TRACEY. I wished, in the absence of the gentleman from Tennessee, to call the attention of the gentleman from Mississippi to the fact that in the last Congress the gentleman from Tennessee (Mr. PATTERSON) voted against the free coinage of silver, on the floor here, and then went before his people and was sustained.

Mr. WILLIAMS of Mississippi. Mr. Speaker, the gentleman from New York evidently has not understood me. I have just undertaken to explain that, although that what I have outlined would be the attitude which I would occupy were I to vote against the free coinage of silver, I understand that was not the attitude occupied by the gentleman from Tennessee, because he did tell his people, as I understand, upon the stump, that he was not in favor of the free coinage of silver, and, if so, that is his covenant and contract, with which I have nothing in the world to do. I threw it out generally for fear it might be thought I was impugning the motives of an old and valued friend.

Mr. TRACEY. Well, now, Mr. Speaker——

Mr. WILLIAMS of Mississippi. He might be, furthermore, justified by his people, and I will admit that as a fact.

Mr. TRACEY. Now, the gentleman from Mississippi has spoken about the minority of the Democratic party being in accord with the Republican party on this question, I would like to ask the gentleman from Mississippi whether, in the event of the majority of the Democratic party voting for the unconditional repeal of the purchasing clause of the so-called Sherman act, that will satisfy him, and if the members of the party on this floor will then be justified in having favored the unconditional repeal, and whether they would be justified before the people for so voting in case, on Monday next, the majority of the Democratic party vote in favor of unconditional repeal?

Mr. WILLIAMS of Mississippi. I will answer that question by saying that if a man said to me, "Suppose the moon was made out of green cheese?" I would answer by saying, "But it is not made out of green cheese, and never will be." [Laughter and applause.]

Mr. TRACEY. I will predict that on next Monday the majority of the Democrats in this House will vote for the unconditional repeal of the purchasing clause of the Sherman act. [Applause.]

Mr. WILLIAMS of Mississippi. Never, sir, while the world holds.

Mr. TRACEY. You will see.

Mr. WILLIAMS of Mississippi. Now, Mr. Speaker, what else do we see when we take notice of the peculiar posture of things. That nearly 100 votes will be found on the other—the Republican—side, which are looked to by the gentleman from New York and by the President, as necessary to carry this legislation through. But, I find another thing. I find, Mr. Speaker, that the entire Southern and Western delegation here, except a few gentlemen who are the representatives of large metropoles in which strong banking and creditor interests control, are on one side, and I find upon the other side the representatives of the money-lending and creditor interests of the Northeast.

The exceptions on our side are gentlemen who represent Memphis, Tenn., New Orleans, La., Vicksburg, Miss., Jacksonville, Fla., etc.

Mr. Speaker, I think that things have come to such a point that it is not unparliamentary for me to give a definition of Congress. Congress, in the new dictionary which I propose to write, shall be defined thus: "A court of appeal from the decision of the common people, the appeal being always preceded by a motion for a new trial upon the alleged cause of newly discovered evidence." [Laughter and applause.]

Now, I will go further in answering the gentleman's question and say, that even if it were possible that a majority of the Democrats on this floor can be cajoled or coerced into voting as he predicts, if the alleged representatives of the great Democratic party of this country should so vote, they would not reflect the will and wishes of a majority of the Democracy, and I propose to stand by the majority of the Democracy. [Loud applause.]

Why, gentlemen, why was it that the pressure came to call this House together a month earlier than originally contemplated, do you suppose? Why do you suppose they got up this great pressure all at once? It was for fear the panic would cease of itself before they could get their work in. [Laughter and applause.]

Mr. BRYAN. So stated by a New York banker.

Mr. WILLIAMS of Mississippi. It was stated by Mr. Clews, the great banker; and Mr. Yacob Strauss or Isadore Strauss came right along down to see the Chief Executive; and although representatives of the people had been writing time in and time out from April last, trying to get an extra session of Congress in order to stop the infernal robbery of the McKinley tariff bill, and could never get even so much as the courtesy of a reply to their letters, yet when Yacob Strauss came in the game was up and the thing was settled. [Laughter and applause.] In other words, gentlemen, you have reached the point where you have got the debtor and the farming classes on the one side and the banking and creditor classes on the other. We can carry the war into Africa but you can not. [Laughter.] You can not come down into Mississippi and get any converts who are interested as you are, because, thank God, I live in a State where there is not a millionaire nor a pauper. [Applause.] We have neither the one nor the other, and you can not convert any of your class down there because they do not exist there. But, gentlemen, I do not thank God for the opposite state of affairs which exists where you and your brother banker, the gentleman from New York [Mr. HENDRIX] who first addressed us, lives. By the way, on looking into the Congressional Directory I find that he is not a banker, he is the president of a Trust Company, the very kind of thing that the Democratic party says it wants to put down. [Laughter.] I repeat, you can not make any converts in our part of the country; but when we get up just within the shadow of your palaces in New York we can, with perfect ease, find the men whose interests lie on our side of this question. [Laughter.]

Now, my friends, there are two classes of people who have been discussing this issue. I admire the courage and consistency of the gentleman from Connecticut [Mr. SPERRY] who spoke to us the other day, and who said: "I want for my people the best money, the most valuable money." That means, if it means anything at all, the money which will purchase the most of service or of commodity; and very relevant indeed was the interruption of the gentleman from Louisiana, [Mr. BOATNER] when he asked him:

But, sir, you do not desire that your people shall be paid back in better money than they lent, do you?

And, Mr. Speaker, that question was not answered, and it never will be answered satisfactorily to the people, nor at all until the crack of doom, unless gentlemen on the other side should be brave and bold enough to come out like that grand old man in England, Mr. Gladstone, who stated the other day that he represented a creditor nation. That is where you really stand and you had better come out and take your position like men. Do not pray "Good Lord; good devil." [Laughter.] Do not say "Good President," and in the same speech "Good people;" but come right out and tell what the interests of the people on your side are. [Laughter.] And, gentlemen, if your constituents have that interest, I do not blame you a particle for representing their interest. Not at all. On the contrary, I admire Mr. Gladstone, who, when he was interrogated on the floor of the House of Commons the other day as to whether he was going to send the delegates back to the monetary conference, replied:

What is the use? What do we want with a bimetallic convention? I am afraid—

Said he,

to undertake to state what the amount is, but a very large amount of money is due to people who live within the United Kingdom from people who live without the United Kingdom. I should estimate it at not less than two billions of sterling—ten millions of American dollars. I admire the philanthropy of gentlemen who would make a gift to our debtors of that amount, but I do not see what cause we would have to congratulate ourselves, though I may perhaps see some reason why the rest of the world should congratulate itself.

Now, my friends, I have referred to this incidentally, but understand me, I take no part in these flings at the mother country. Grand old mother country, who sits there in her islands and rules the world, as she is ruling it to-day financially, and ruling you New York people amongst a good deal of the rest of the world. Had I stood in Mr. Gladstone's place I would have taken the position that he took, because it was for the interest of his people. It is no reason why we should do a thing because England desires us to do it. Neither is it any reason why we should not do it because she desires us to do it. Her interest may be ours in any given matter, or it may not. To say that England wants a thing is no argument for it or against it; and I believe in my heart than anglophobia is just as stupid as anglomania. I want gentlemen to understand, therefore, that I am taking no stock in any arguments of that sort. Nor am I taking any stock in another argument that has been used here, the theory that there has been a conspiracy; because I believe that there are a large number of people who are as honest as I am and far more intelligent than I am, who sincerely believe with all their souls that if this country adopts the free coinage of silver it will sink to a monometallic silver basis—people, I say, who are just as honest as I am, and among them chief stands Grover Cleveland. I do, however, believe there has been a combination, not a conspiracy, but a combination, and that combination has been formed by those people in their own interests. Nor do I blame them, the world being so full of selfishness, for combining in their own interest. The natural trend of the banking business is in the direction of dearer, or as they call it, "better" money—a money which will buy more when they get it back than it would have bought when they lent it out.

From a purely selfish "business" standpoint, and they do not pretend to be ruled by other than business motives—they do not assume to be philanthropists—they would be stupid not to operate to the best of their ability with that end in view. Why should they not want the principal to grow as well as the interest? Why should not their great and intelligent chieftains in England, Germany, France, and America coöperate to that end? They would do it unconsciously. And thus there came about "combination" everywhere without "conspiracy" anywhere—without need for "conspiracy."

Mr. Speaker, gentlemen speak of silver having been demonetized because of its overproduction; yet until the year 1881 there never had been a single year since the American and Australian discoveries of gold in which the production of silver measured by weight was sixteen times the production of gold measured by weight; in other words, there never had been a year up to 1881 when the basis

of the real comparative value of the two metals, which is their comparative rarity, equaled the American ratio of 16 to 1. So that, when gentlemen say that silver has been demonetized by the civilized countries because it was getting too cheap and too abundant they either show great ignorance indeed or they assume great ignorance on the part of their auditors.

I am not going back to England's initiative in 1816, because England at that time adopted a gold standard for the avowed reason that gold was the cheaper of the two metals, not because it was the dearer. England had come out of a great war with a great amount of debt upon her shoulders; she was not then the great creditor nation of the world that she is to-day; and when after coming out of that war she consummated the resumption of specie payments she did it in gold, because gold was then the cheaper of the two metals at a ratio of 15½ to 1, which was the ratio in England.

[Here the hammer fell.]

Mr. TRACEY. As I interrupted the gentleman, and as he is the last speaker this evening, I ask unanimous consent that his time be extended so long as may be necessary to enable him to finish his remarks.

The SPEAKER *pro tempore*. The gentleman from New York [Mr. TRACEY] asks unanimous consent that the time of the gentleman from Mississippi be extended indefinitely. Is there objection? The Chair hears none.

Mr. WILLIAMS of Mississippi. Now, Mr. Speaker, what I intended to say was this, that the facts in regard to demonetization disprove the theory that the cause was the overproduction of silver. Watch the dates while I run over them quickly. Germany took the initiative in 1871; Scandinavia followed in 1872; the United States came along in 1873; then there came limited coinage in France and the Latin Union in 1874; then there came an entire cessation of coinage in France in 1876 or 1878. Now, Mr. Speaker, at the time the United States demonetized silver it was worth four mills more than gold in the dollar at our ratio. Germany consummated the demonetization in 1873 by putting her silver coins upon the market (I am not mistaken about the date), but she took the initiative legislation in 1871. At that time the amount of silver in a silver dollar was worth 3 cents more than the amount of gold in a gold dollar. Silver was not demonetized because there was overproduction. In those countries where demonetization took place there were two motives leading to it, one peculiar to Germany, the other common as to Germany and all the other countries. The motive peculiar to Germany was that it was thought demonetization would cripple her old enemy, France. It was a military measure for Germany to go to a gold basis and dump her silver into France. It turned out to be foolish, because France upon her bimetallic basis stood there solid and paid out one billion of gold dollars—five milliards of gold francs—and when she got through with this payment she was in a more prosperous condition than her neighbor who had received the money.

Mr. TRACEY. Will the gentleman permit me——

Mr. WILLIAMS of Mississippi. Certainly.

Mr. TRACEY. The gentleman will allow me to suggest that he is inaccurate in the statement he has just made as to the quantity of gold paid by France to Germany. The indemnity paid by France to Germany after the Franco-German war did not include the quantity of gold which the gentleman has stated. A great portion of the payment was made in silver——

Mr. WILLIAMS of Mississippi. That is not my recollection.

Mr. TRACEY. Only a small percentage of the payment was made in gold. A very large percentage was paid in silver and paper.

Mr. WILLIAMS of Mississippi. My recollection, Mr. Speaker, is that the payment was made entirely in gold and in paper, and that paper was paper for which gold was afterward given; so that, in fact, the entire payment was made in gold.

Mr. TRACEY. I will ask the gentlemen to refer in his published speech to the data in support of his assertion.

Mr. WILLIAMS of Mississippi. I understand that the gentleman's recollection of the matter does not accord with mine. I am frank to say that very possibly he may be right and that some of this amount was paid in silver; but that is not my recollection. I was in Europe about that time and I heard it constantly said in Germany where I was a student that there was five milliards of gold francs to be paid by France. I do not get my view from any historical account, but from my recollection of then current events. The other reasons common to all governments were that such a course was to the interest of the ruling or so-called better classes, and that the people had really nowhere a voice in it.

Now, Mr. Speaker, another thing that strikes me as peculiar about this situation (if you will excuse me a moment) is the air and bearing of my friends who take the position that the only sensible thing is a gold monometallic currency. You all heard the first gentleman who spoke from New York [Mr. HENDRIX]; you marked his manner; his eyes "in a fine frenzy rolling" from gallery god to gallery goddess; his brow arched over his eye; his chest thrown out; his head thrown back, overlooking this House as a set of comtemptible pigmies, whose opinions were not worth consulting. [Laughter and applause.] His *ipse dixit* comes like a Papal bull—*ex cathedra*.

Now, Mr. Speaker, I submit that nobody in the world, except an assistant Secretary of State, the negro that stands guard at the Postmaster-General's anteroom, or a sleeping-car porter, have a right to that sort of bearing. [Laughter.] The first two have it by the customs of the city of Washington and the last has it by the common law of America. [Laughter.]

But it struck me, gentlemen, that perhaps this gentleman, coming from the same State, thought he had fallen heir to the manner and bearing of the late distinguished Roscoe Conkling. If so, I could tell him two things in that connection; first, that the manner was not that of Mr. Conkling, for although Mr. Conkling was a man who spoke his mind, he at all times treated his opponents, both in word and deed, with the utmost courtesy. He never called his enemies or his opponents in debate "jibbering idiots." He never put them in lunatic asylums. [Laughter.] He never told them that they were afflicted by "midsummer madness" and all that sort of thing. Although he might have thought that all the rest of the world (in his own mind) were fools, he never allowed them to see that that was his opinion. Another thing: even if it were the manner and bearing of Mr. Conkling, which the gentleman from New York assumes, I can tell him that it would require the superb eloquence and the magnificent intellectuality, the keen, cutting sarcasm, the wit and the incisive logic of Mr. Conkling to carry it off, here or elsewhere, outside of a counting house. [Applause.]

But, Mr. Speaker, if you will excuse me for a few moments longer, the gentleman from New York made some allusion to the evolution business before he got through with his remarks, and I want to tell you a little about that matter. He said this was a process of evolution, and that we might as well bare our breasts to the avalanche, I believe it was, and try to hold it back as to stand athwart the path of the world's evolution. Now, I take it from what I see of the gentlemen—I find that he was a newspaper editor first and later on the president of a trust company—I take it that it never fell in his way particularly to study the scientific theory of evolution, and that he needs information as to what it really is. I will take the liberty of informing him. Evolution, as I understand it, is the gradual consummation of a natural end by or through a process of the survival of the fittest and the extinction of the unfit. To illustrate: An acorn drops from an oak tree and a magnificent oak under peculiarly favorable circumstances is grown. It spreads its boughs and its shade in every direction over the adjacent country. Owing to its favorable environment it grows up a better oak than that from which the acorn originally fell. Acorns drop from this second oak and these are better than the acorns from the parent tree, and oaks continue to grow under the new and more favorable environments, and these also continue to improve until we have at the end of a period an improved oak, not much like the parent tree from which the acorn originally fell, and the acorn from that oak is different from the acorn of the parent oak, just as the Irish potato is now superior to and different from the original plant discovered in Peru.

But another illustration, Mr. Speaker. It is said that the monkey was the father of the man, and that he lost his appendage because it ceased to be useful. Not being needed it was not used, and therefore an extinction of the unfit followed. You know it takes use to develop the muscles of the arms and the legs, and so, too, a prehensile appendage or attachment of that sort requires use to develop its growth. [Laughter.] But there being no use for it, the monkey under new environments, not having to use this part of his anatomy, it became weaker and weaker and less and less in size and usefulness as a tail, until finally it dropped off and left nothing but a rudimentary appendage. [Laughter.] That is evolution. But if a man had gone and got a monkey out of a menagerie and taken a broadax and cut his tail off little by little, that would not have been evolution. That is just what has been done with silver. There has been a creditor broadax at work, first in Germany, then Scandinavia, then France, and then the United States, and then the miserable wielder of the instrument declares that he believes that this broadax is God's principle of evolution. [Laughter and applause.] As the gentleman has evidently never had evolution explained to him I thought it best to give this information.

Now, gentlemen, there is one argument that has been made in this Congress in the trial of this great cause before the people which I want to notice. Gentlemen say, O, well! Repeal the Sherman act now—repeal it now and trust to the common sense of Congress for a future remedy. I am with you. I am a bimetallist. I will vote for a free-coinage bill later, but not as a condition to repeal the Sherman act. My reply is this: If that magnificent, sturdy, and very honest gentleman who is Chief Executive of this nation will trust the common sense of Congress we will trust it, and you can repeal the Sherman act, gentlemen on the other side, in an hour, by the watch, whenever you are ready to give us assurance of his willingness to trust us and approve our future action.

If there is any sincerity in that argument, bring us here a pledge from the Executive that he will not veto a free-coinage bill later on, and then I will be with you. But you are not going to get the pledge. Why? Because the President is too honest a man to pledge himself to do a thing which he is not going to do. And, to be perfectly plain—I do not understand parliamentary usages, but I hope I am not unparliamentary—to be perfectly plain, you will never get from him the approval of a free-coinage bill unless it goes as an adjunct to the repeal of the Sherman law. You may not get it in that way, but you certainly will not get it in any other.

And I find it hard to believe in the sincerity of gentlemen who appeal to me to throw aside the only vantage ground we have. Why, Mr. Speaker, when I was a boy, if I undertook to run and catch-as-catch-may with another boy, and wrestle it out, if I got the underhold I thought it was ridiculous for him to turn and say: "Well, here, let us quit and give me the underhold and then call it a fair wrestle!" [Laughter.]

Now, gentlemen, I come to the discussion of this question first by stating what I favor. I favor the repeal of the Sherman law, the purchasing clause of it or all of it—I do not care which. I favor that, because that bill was never anything and is not now anything except a miserable silver bullion subtreasury scheme, and no more respectable from the standpoint of sound governmental practice than the subtreasury scheme which was advocated by our friend from Kansas here, which was to issue certificates of the Government to pass as money, upon the deposit of cotton, corn, and tobacco. I favor the repeal of the Sherman bill because it was a Trojan horse cunningly intruded into our fair city of Bimetallism, from which the enemies were to come, as I thought then and as the event has since shown, to try to overcome the city.

I favor the repeal of the Sherman law because I have had love for its enemies and hatred for its friends; but I favor the free coinage of silver because I think we have come now to a plain issue, and that there is no use trying to dodge it; that for this House of Representatives the issue is, Shall we have gold monometallism or shall we have bimetallism? And the thing to be argued is, "Is bimetallism practicable or possible?"

Now, Mr. Speaker, in that connection, let me say this: Gentlemen say bimetallism will necessarily bring us to silver monometallism. I do not really believe it, but if I did believe it, and if I were put to the choice and had no other choice, if the sole alternative which faced me was to accept either gold monometallism, a dishonest gold dollar, or silver monometallism, a dishonest silver dollar, the former dishonest to the debtor of the country and the latter dishonest to the creditor of the country, if I could conceive of being placed in the attitude where I had no other possible alternative but to put my hands into the pocket of one or the other and rob him, I would ask heaven's forgiveness for the deed, but I would rob the richer, so help me God. [Applause.]

But I do not take it there is any such issue as that. I take it that we have got to come down and get a right money. Now, gentlemen, starting off at that basis, I want to give a definition of money. It is not my definition, or it would not be worth a copper cent. There is nothing new in finance. When you have found anything new it is not worth talking about. It is like religion in that respect. Mr. Edward O. Leech, the last director of the mint, in an article in the North American Review in April, 1891, I believe, gives a definition of money which he has boiled down from the best authorities, and it is this:

> Money is an instrument used in the exchange of services or commodities, which is at one and the same time a measure of values and an equivalent of values.

It must be both; and all the money fallacies, the two extreme fallacies which have grown up in this country, have come about by the disregard of one or the other necessary attribute of money. The fiat money man totally disregards the equivalency attribute of money, totally disregards the fact that money in order to be right money must be something beyond human control, beyond the control of politicians to increase or decrease at their sweet will, because, gentlemen, after all, government is a government of politicians. There are three hundred and fifty odd in this House and eighty odd I believe in the other, but it is a government of politicians. The fiat money man loses sight of the fact that money must be made out of something which can not be controlled, infinitely increased, or largely decreased at mere human will; that it must be a something which God has *naturally fitted* to act as money, just as God has fitted wheat to be turned into bread, or cotton to be turned into cheap clothing; that in order to possess the attributes which are necessary, it must be a something found within the storehouse of nature, which even human industry and human invention can not produce at will by increased human exertion, a something which must be *found* and in limited amount and with tolerable constancy. It must be something which will grow in production *pari passu* with the growth of population and wealth and transportation, and all the other instrumentalities of civilization.

On the opposite extreme is the gold monometallist. He loses sight entirely of the measure of value feature in his sole contemplation of the equivalency feature. He forgets that it must be sufficient in volume to answer the purpose of a measure; that it must be sufficient to measure things with the assistance of other things redeemable in it, and not too much of the other things to be currently redeemed in it. He loses sight of the fact that it must be something not too precious, but which can be divided and brought down, so that it will measure the smallest commodity. Both lose sight of the fact that gold and silver were money many years, not by law, but before there ever was a law, and that they were money because they were precious metals, and became more precious metals because they were money.

The question has been frequently asked, "Are gold and silver precious metals because they are money, or are they money because they are precious metals?" The question is a stupid one. They became money because they were rare and precious, and they became still more precious because of the increased demand for them in use as money. They were money, as I said, before ever law or statute book made them such, before a mint or coinage existed, and if you were to-day, all over the world to rescind every coinage law upon every statute book in the world they would both remain money. The only difference would be that they would pass by weight and assay instead of by tale. Why? Because God made them—not legislation, not government, not man's ingenuity fitted them for it. And how did He do it? He gave them the attribute of rarity and preciousness; the attribute of infinite divisibility, and the attribute of comparative indestructibility and that of malleability; the quality of easily taking and permanently retaining stampage; so that men came to use them just as they came to use oats to feed horses with, and wheat to grind for bread, because they were naturally adapted to that purpose. It was a natural use. There is evolution; not the broadax sort of evolution, but the right sort of evolution—nature's Entwickelung.

Now, all that the silver men ask you in the world is, to "take the law off of silver;" treat the two natural money metals alike; that is all. They ask me, "But can the United States cure an evil which has been existing, if by demonetization at all, then by the demonetization of other nations besides our own?" I answer them entirely and completely, "No." But we can undo our part of the wrong and set the example for other people to undo their part. In proportion as the wrong is undone, the divergence now existing between the two metals, instead of widening, will close up to some extent, but to what extent we can not say.

But gentlemen say there is a large intrinsic-value difference. My reply is, you do not know what intrinsic-value difference there is; and when you use the expression in connection with gold and silver you use a double middle. When you speak of the intrinsic value of gold metal, you mean the intrinsic value and bullion worth, its use as money considered and accounted for; and when you speak of the intrinsic value of silver you mean its value as bullion, independent of its use and any prospective demand for it for that purpose. Intrinsic value, gentlemen, is value in use. You can not, as the gentleman from Ohio [Mr. HARTER] said, fix the price of things by legislation. You can not pass a law saying that wheat shall be worth 50 cents, or a piece of paper shall be worth a dollar, and then make it so; but you can fix the value of things by any law which increases or decreases either demand or supply.

If I believed, as some gentlemen do here, that if there is to be bimetallism it must be had by international agreement and that this is attainable only by our joining western Europe in further demonetization, and thus convincing ourselves and them by a great "object lesson," I still would not be in favor of doing what they wish as the first step. They say that you must convince the world that gold is not to be had in sufficient quantity to carry on the business of the world. That was the argument of the gentleman from Maryland [Mr. RAYNER]. How will you convince the world? How will the world receive the demonstration in this way or any object lesson be sufficient to convince the world? What would bring about this demonstration? It would be a knock-down argument indeed! An "object lesson" of universal bankruptcy, suffering, misery, accompanying tumult and riot. As much as I love bimetallism, I do not want to reach it that way. But I furthermore hold that that is not the best way to reach it. I say there exists not upon the face of the globe to-day one single institution or law which came about as the result of international convention unless some great and strong nation first set the example or unless the "convention" came about as the result of war. Gentlemen on the other side may delve in all the history books and find not one instance.

Now, think a moment. Away back yonder, over one hundred years ago, people thought it would be useful to try to get a given point of longitude for universal use. Nobody was concerned in the matter; no vested interests were at stake. You could take the very point on which I stand now as your starting point, and it would do just as well as Washington or Paris or London, and it is a great convenience to science and to mankind that there should be a single point of world-wide acceptance. But mere national jealousies and inertia have prevented it, and to-day England starts her longitude from Greenwich, America from Washington, Russia from St. Petersburg, France from Paris, and Germany from Berlin, and the State of Massachusetts would start it from Boston if it was not too small a part of the Union. [Laughter and applause.]

Take another matter. There is no man of common sense in this wide world but agrees that a metric system is the best for weights and measures, and ever since Thomas Jefferson undertook to bring it about, and had some influence upon the statesmen of the French Republic in bringing it about there—I do not know how much—scientific congress after scientific congress have sent out their pronunciamentoes urging it; yet the two most intelligent peoples of the world, the head and front of civilization, the one civilizing the islands of seas and the other civilizing the continents, England and the United States of America, still measure molasses by the gallon and wheat by the bushel, and subdivide them not into tenths and hundredths, but into quarters and eighths and thirty-seconds, to the confusion of youth and old age. [Laughter.]

Now, my friends, I learned when I was a boy that it has been a

truth ever since the day when the woodman dropped his axe into the stream and prayed to Hercules to recover it, ever since the day when, as we are told in another fable, he prayed to Hercules to lift his wagon out of the rut, and Hercules told him to first put his own shoulder to it, ever since that day it has been true that in national as well as individual undertakings you can never accomplish anything until somebody makes the start. [Applause.]

There is no consummation without an initiation. All are not going to complete what each in turn is afraid to begin. You can't inaugurate a great industrial enterprise on the credit of a wish to see it succeed. You must "show your faith by your works," and first take stock yourself.

And who is better fitted to take the start than we? All the nations now see the bad effects, but each one is standing waiting for the others, as we are. Each one says: "If I throw myself into the breach I must take the risk of not being followed and the responsibility on behalf of the nations of the world must rest on me."

Now, Mr. Speaker, I began by saying that I felt the ridiculousness of speaking at all under the circumstances, and I find, to my astonishment, that I have made it still more ridiculous by making a serious speech to a row of still half empty benches. [Cries of "Go on!"] No; I shall stop now, with that degree of forbearance and politeness that has always characterized me. [Laughter.] If there is anything in the world that I am, it is a sympathizer with the sufferings of mankind [laughter], and, in deference to that feeling, I shall stop now and load the people of my district with the remainder of this speech through the CONGRESSIONAL RECORD. [Laughter and prolonged applause.]

I had just said that we must take the initiative. Are we in a condition to do so? Can we afford to coin more silver? If so, at what rate and for how long a time can we persist in it? The best argument is always an inductive one—one drawn from our own experience or from the experience of others.

Our own situation first, then.

It is not true that "we have too much silver," nor that "the people do not want silver," nor that "silver is driving out gold," nor that the certificates under the Sherman bill are driving out gold, nor, in fact, that gold is being driven out at all now. These statements made, or assumed, as the base of arguments are simply false in fact, and that is the long and short of it. A premium is being paid to-day at New York for the despised silver dollar, and gold is pouring by the millions daily into this country, there having been forty millions to come within twenty days.

Listen to the following statement of Watson & Gibson, brokers, of the condition of things in Wall street. It is not the utterance of politicians, but of business men for the guidance of their clients:

The Clerk read as follows from the St. Louis Republic:

[Special to The Republic.]

NEW YORK, *August* 13.

The following is a carefully prepared statement of the situation in Wall street by Messrs. Watson & Gibson, brokers, 55 Broadway, New York:

"Where is all that fear of our 65-cent silver dollar? We were told only a few months ago, by the urgent advocates of the abandonment of silver by this country, that the preference for gold would lead to its hoarding and withdrawal from circulation, and that everybody would want to pass his silver dollars on quickly to his next neighbor, as they used to pass 'wild-cat' currency from hand to hand lest it depreciate in the keeping. There is a hoarding of gold, but only by those who can not get the more convenient form of legal-tender paper money.

"Further than this, more gold is now paid into the custom-house and more paid out by the Treasury and the banks than in years. Instead of leaving our shores, gold is coming this way by every steamer; and, since its loss by export last spring so greatly disturbed the public peace of mind, conversely the return of this gold ought to, and indeed does, encourage the financial community. But why not go further and say that, if the gold critics were right last spring in attributing the outward movement of gold to the silver law, they should now ascribe the return flow to the same measure? The silver bill is a nondescript, but it is the neutral ground between free coinage and the introduction into this country of the sole gold standard, which would have a cramping and contracting influence, and, therefore, it is a sort of ark of the covenant.

* * * * * * * *

"No man can gauge the probable measure of legislation on silver. Congress was called together to rule silver out by what President Cleveland and the ultra-gold men would do—namely, to unconditionally repeal the silver bill. One man's guess may be as good as another's, but that is no reason why we should be so modest as not to guess at all. Our guess is a long struggle, a great many speeches, parliamentary moves and rumors, with the final result of a free-coinage bill on a changed ratio, say 20 or 24 to 1, possibly with a provision for a gradually descending ratio, if the open market price of bullion shall rise.

"The presentation of such a bill to Mr. Cleveland would be a curious picture of the whirling of sentiment and events. Things do not often come out as they are planned, they "gang aft agley," and those who are so sure of a repeal of the silver bill without substitute may come to realize this very effectually.

"On Tuesday everything went down after the President's message appeared, except silver, which was 74½ bid, but not offered below 75½, as against 73 bid Monday. On June 30, the day Mr. Cleveland issued his call for a special session of Congress, silver sold as low as 67 and as high as 69, and on Thursday it sold at 78½, or 11½ cents per ounce higher. This shows the inherently strong position of silver in the market."

These gold shipments are continuing. I will read these extracts from the commercial reports of 17th and 18th from great metropolitan journals:

[Washington Post.]

MORE GOLD FROM EUROPE—LARGE CONSIGNMENTS OF THE YELLOW METAL COMING TO THIS COUNTRY.

LONDON, *August 17.*

Gold to the amount of £314,000 was withdrawn from the Bank of England to-day for shipment to the United States.

The Hamburg-American line steamer Columbia, which sails to-morrow from Southampton for New York, will take consignments of gold valued at $1,440,000.

SOUTHAMPTON, *August 17.*

The Trave, from Bremen, sailed hence for New York at 4 p. m. to-day. She carries $910,000 in gold for American houses.

NEW YORK, *August 17.*

The steamer Lahn, which arrived last night, brought $672,055 gold from Southampton and 1,047,500 francs from Paris. There is £37,370 consigned to the Canadian Bank of Commerce in transit to the Bank of Nova Scotia of Chicago.

[New York Press, August 19.]

The gold stream does not seem to be interrupted in the least. The Spree made the record for a merchant steamship carrying gold with its cargo of £805,000, which arrived last week. Now the Fuerst Bismarck comes in with $4,200,000 to fourteen different consignees, and it is evident that some of it will go to Chicago.

As there is no attempt to report with accuracy the shipments from the other side, it will be noticed that every steamship brings more than is reported. The Etruria, which is due to-day, has, it is reported, $1,850,000, which will bring the total for the week perhaps up to $10,000,000. La Touraine also has a considerable amount. The Trave, from Southampton, on Thursday had $910,000; the Columbia, from Southampton, yesterday, $1,440,000; the Campania, from Liverpool, to-day, $800,000 that is known of, and the Elbe, from Bremen, to-day, $300,000. In addition to all this, Chicago engaged yesterday $950,000, and Kidder, Peabody & Co., $50,000. Then the Bank of England yesterday paid out 302,000 sovereigns for shipment to this country, and 60,000 more for Toronto, whence they will quickly find their way to Chicago. There is little wonder that this makes the stock market flat abroad.

And notwithstanding all this, people have been wanting silver and needing it so much more than gold that they have been demanding silver in preference to gold at United States subtreasuries in exchange for the Treasury notes issued under the Sherman bill. In proof whereof listen to this statement of Secretary Carlisle, made officially in response to inquiries of the Senate:

[August 18.]

Secretary Carlisle sent to the Senate yesterday the following communication in reply to a resolution passed by the Senate on Wednesday requesting certain information as to the redemption of Treasury notes issued under the Sherman act:

In response thereto, I have the honor to say that during the present month Treasury notes issued under the act of July 14, 1890, amounting to $714,636, have been redeemed by the Government in silver dollars. While I do not pretend to have knowledge of the degree of information possessed by the holders of the notes so redeemed, I am of the opinion that they were fully advised at the time of such redemption that they could have gold instead of silver if they so desired. I base this opinion upon the general publicity which has been given to the terms of the act, no less than upon the instructions of this Department to the Treasurer and assistant treasurers of the United States. I am also supported in my belief by the fact that in the circular of this Department issued to the public for their guidance in their dealings with the Treasury, and containing the regulations which govern the issue, redemption, and exchange of the paper currency and the gold, silver, and minor coins of the United States, there is a paragraph which reads as follows:

Gold coin is issued in redemption of United States notes in sums less than $50, by the assistant treasurers in New York and San Francisco, and in redemption of Treasury notes of 1890 in like sums by the Treasurer and all assistant treasurers.

In further response to the resolution, I have to say that recently gold coin has been presented at an office of this Department and silver dollars asked in exchange therefor, and that the exchange was not made for the reason that all the silver dollars in the Treasury at the time were required under the provisions of the laws relating to the currency to be held in the Treasury to cover outstanding silver certificates and Treasury notes issued under the act of July 14, 1890. At present the Department would not and could not exchange silver dollars for gold coin if requested to do so by holders of gold for the same reason; but if the conditions of the Treasury were such as to afford a margin of silver dollars in excess of silver certificates and Treasury notes outstanding, such exchange would be made.

So much for the actual condition; that we need more silver, or else something equally good in its stead.

Now how much more can we usefully absorb, even granting for the sake of argument that the contention of our opponents is correct in this that free coinage at any given ratio would neither close up nor materially diminish the existing difference between the bullion value of the two metals? How much silver can we support even as token money—discredited and virtually redeemable in gold? The answer to these questions must be drawn from the experience of other nations.

Let us see how far we can go, even treating silver thus unfairly, and presuming beforehand for the sake of argument, that not a nation on the globe will join us in the step we take—how far before our silver could or would drive out gold? It will be admitted that no country is on a sounder monetary basis than France. With its constant political upheavals—its Wilson and Panama scandals, everything to betoken uncertainty, it seems impervious to panic or monetary disturbance.

It has not been long since France saved England from crash, and that Gibraltar of financial institutions—the Bank of England—from suspension. The figures which I shall use, as a basis of computation, are taken from an article written by Edward O. Leech, late director of the mint, and published in the April number of the North America Review for 1891.

They would be, of course, slightly different to-day, but not enough so to affect conclusions.

France had $700,000,000 of silver with a population of 38,000,000, or a per capita allotment of $18.42. It is true, that France is now coining no silver. But she did not stop coining until she reached the above figures, and has never had the slightest trouble or question even about maintaining parity between her gold and her silver. The United States had, at the date of Mr. Leech's article, $469,262,000 of silver and 64,000,000 of population, making a per capita allotment of $7.33. Population and coinage have both increased since and about equally. The difference is $11.09 per capita. We must still issue, say, $11 for each man, woman and child in the United

States to be on an equal footing with France, as to silver currency, or a gross additional sum of $704,000,000 silver.

But has not all this silver driven gold out of France? Not a whit, for France has, in round numbers, $200,000,000 more of gold than we, and it is increasing, having $900,000,000 as against our $700,000,000, in round numbers.

But you say "can we be expected to stand as much silver circulation as France can and does?" Answer me frankly, why not? There are, indeed, two reasons why the "danger line" for us would be farther to seek than for her, first our coinage ratio is 16 to 1, and hers only 15½ to 1, and, second, France must make her calculations for virtually stationary figures, she is at a standstill as regards population, and her growth in commerce—in money needs—from decade to decade is very slight. We grow in population about 25 per cent (or one-fourth) each decade, and industrially, and in opportunities for the use of money, very much more. If we should happen for awhile to overshoot the danger line, which may be somewhere beyond where France stands, we would soon, like Topsey, "grow up to it." A coinage of $288,000,000 the decade, or $28,800,000 each year, or $2,400,000 each month, would barely keep pace with the increase of population at the rate of $18 per head of increase for the next decade, even if we did not coin the $704,000,000 to establish the French allotment for our present population.

How long would it require to coin $700,000,000 of silver, in dollars, quarters, halves, dimes, keeping in mind and coining each month $2,400,000 to keep up with the increase of population and business?

The present full capacity of United States mints, working day and night, and coining nothing but silver, is $5,000,000 (five millions) per month. Working regular hours, $3,500,000. If run day and night, full time, it would require of the $5,000,000 possible monthly coinage the sum of $2,400,000 to keep pace with population, leaving $2,600,000 to go on the count as part of the proposed $700,000,000. This would require two hundred and sixty-nine months or twenty-two years. If present mint capacity were doubled it would require eleven years. To make the calculation differently—this time leaving the growth of population and commerce out of the count—to issue $700,000,000 silver would require running the present mints day and night and coining nothing but silver the period of eleven years eight months, by which time the population of the country would have increased 18,000,000 of souls, requiring for them $324,000,000 more of silver to be coined in order to put us on equal footing for the then existing population as to silver with France, leaving us $200,000,000 behind her in gold.

Stating it differently yet—doubling the mint capacity—working day and night, coining only silver, we could coin the $700,000,000 in five years ten months, and the population having increased in that time say eight millions of souls, we would still require $144,000,000 of silver and $200,000,000 of gold to be on an equal coin basis with our sister Republic.

Either of these periods—twenty-two years, eleven years or even the shortest five years ten months—would give them ample time for negotiation with foreign powers.

Moreover, it would be an admonition to our Government and an invitation to others to negotiate seriously.

Hitherto "negotiation" has been a pretext to side track free coinage.

We have either not negotiated at all or else with hope of failure, or at best with fear of success on the part of our negotiators.

All these calculations are made with a view to the context of the "Bland substitute" for the "Wilson bill," now before the House.

The substitute is a coinage act pure and simple—"first come, first served," with no provision for certificates on deposit of bullion. The only certificates provided for in it, or contemplated by it, are certificates on the deposit of coin.

There must first be the actual coinage, before a single certificate can issue.

There is not now and there never was any just fear of danger to the monetary system of the United States from too much coin of any sort. There has been in the past, and there is now, impending danger from too much uncovered paper, which is money only in so far as the "measure of value" side of money is concerned, in no sense as an "equivalent." Pure "measure of value" money is worth as much as either gold or silver in times of peace, prosperity, and universal confidence in the giver out of the promises to pay. But in days of gloom, public distrust, or war, an approximation to an "equivalent" money will be needed.

It is curious how people howl about an "honest dollar"—"only 80 cents" and all that, when they regard complacently a circulation of $500,000,000 of uncovered paper—rich man's money. Where, pray, is its value as an "equivalent?" It is merely good as peace and prosperity money. But they say "faith in the Government" is behind it. So it is; but nothing else. That is behind the silver dollar, too. Besides that there is at least 65 cents behind it, even when demonetized, in actual use, and used chiefly for spoons and waiters.

Fully one-half of this enormous sum of $500,000,000 of uncovered paper had best be put into gold or silver, or both. Even then we would have more uncovered paper afloat than any other solvent nation, except Belgium and The Netherlands, than any other government on the face of the globe that pretends to maintain specie payment, except the two named above; for England has only $64,000,000, France but $96,000,000, Germany only $160,000,000, insolvent Italy only $211,000,000, and worse insolvent Austria only $260,000,000.

But they say paper money is so much more convenient. Convenient to whom? To the man who has to carry it, I suppose. The average citizen is not bothered with over $10 at a time. The statistics, which would show how many men had ever handled a $50 bill would be a miracle of astonishment to most people who have never seriously thought of it. I am no epemy to a sound paper currency. The Government's note is just like anybody else's. Just so long as there are not enough of them out to arouse suspicion of nonpayment with those who have dealings with it, it is good. But need rich men, who for their own convenience or to prevent the actual circulation of cheap money (for most paper money being in large denominations does not actually circulate at all) bring all their influence to bear to discriminate against silver on the ground that it is worth only 65 cents as an "equivalent" and to favor national bank notes, treasury notes, and other "rich man's money," which possesses no value as an "equivalent" at all, need these men be astonished, when poor ignorant men are deluded by their example into fiat money crazes and into demanding an issuance of "Treasury certificates" on the deposit of cotton, corn, onions, or green peas, as well as on the deposit with the Government of silver bullion? Can you expect them to make the distinction? To be frank about it, do you not find some trouble in making it yourself sometimes when your head is not over clear?

So I say we can stand $700,000,000 more of silver, $2,400,000 per month, on top of that $200,000,000 more of gold on top of that, and $200,000,000 more yet of gold and silver to take the place of fully that much uncovered paper.

Before we shall have coined enough to approach the danger line, as historically and inductively demonstrated, coining, if you choose, day and night with double our present capacity of mintage, and coining nothing but silver—a ridiculous supposition—we shall probably have a monetary convention with the states of South and Central America, through Great Britain with India, with France, Belgium, the Netherlands, Switzerland, and Italy and Austria-Hungary, and Roumania—all naturally bimetallic countries, and, possibly, even with Germany and Russia—not naturally hostile to bimetallism. But they say we will be the dumping ground for all the world's silver. What country on the face of the globe which has coined silver now floating at par at the ratio of 15½ to 1 (the universal ratio except with us and Mexico) would go through the folly of recoining at 16 or 20 to 1, at our mints? Remember, under the substitute the Government buys no silver; it merely coins it and hands it back to the owner.

But, even if it came, it would come in exchange for something we had to sell.

The silver would be worth more to us than the product or else we "wouldn't trade." If it was worth more, we would trade and would make our profit. There is no very serious danger, I take it, of somebody's *giving* us their silver. And, if they did, "need a body cry?"

Mr. Leech says that the entire value of all the silver mined in the world's mines, in 1889 was $161,318,000 and estimates that of the product of 1890, not then fully reported, at $168,000,000. This being the case, then, if all the silver from the world's silver mines came to us, it would require us, in order to coin $700,000,000 at the rate of $168,000,000 a year (the world's product), as estimated by him, considerably over four years. The administration would still have ample time "to negotiate"—four years—before we could possibly be on the ground that France has demonstrated not to be dangerous. But, of course, such a supposition is absurd. Not over half of the world's product could possibly come to us. All nations, even monometallic ones, use silver as fractional currency; much is still required for "limited legal tender" silver in quasi bimetallic countries. India and China, the great "silver sinks of the world," would want and get their share, for no English legislation can change the hereditary and traditional attachment of the Hindoo for silver. Mexico, Central and South America, which have virtually no coin but silver, would want and get their share. Silver spoons would not cease to be used as wedding presents, nor would dudes and dudesses cease to hand around cigars, tooth picks, and green apples on silver waiters. The Connecticut watchmakers would still inclose the right or wrong time of day behind silver cases, to hide it from "curious mortal eyes." We could not, as a fact, receive over $120,000,000 per annum of the annual output, at the outside; $96,000,000 would be a safer estimate. With the first figures we could give very nearly six years and with the last considerably more than seven years "to negotiate," without approaching the danger line. If there is anything wrong about these figures, it is the fault of Mr. Leech or of the North American Review. Mr. Leech was director of the mint; the North American is, I believe, monometallic and Republican.

I have thus far argued the question on the monometallist's assumption that silver is and must remain mere token money, subsidiary coin relying upon a backing of gold for its value.

This is an unwarranted assumption, however.

I have a little doubt, very little, however, about the power of the United States, conjointly with the other silver-using and bi-

metallic countries of the globe, being able to maintain the bullion parity of the two metals at a ratio of 16 to 1. I have no doubt whatsoever about our ability to do so at an increased ratio, 20 to 1, that being, if anything, too high.

Free coinage will not have so much effect on the bullion value of silver, because of the present increased demand, though much in that way, as because of the status of silver prospectively. I lay down the proposition that silver answers every end of money as well as gold. As an "equivalent" of values it is the equal of gold. As a "measure of values" it is superior, because more stable and less liable to violent fluctuations of production.

Mr. Leech says in the article in the North American, which I have already referred to:

> Time was when silver possessed the conditions necessary to fit it to serve as such a "measure" and "equivalent." It does not possess them to-day.

If it does not, and if, furthermore, its inadaptability to one or the other end has grown out of the nature of things, that is, if it has not been produced or brought about by legislation, by human interference, then the author has made a strong argument against any effort to cure the defect by repeal of legislation or counter human interference. His own article, however, furnishes proof positive that the so-called depreciation of silver has not been altogether, nor even mainly, the result of natural laws, but, on the contrary, is the direct result of human interference. If the series of total and partial demonetizations which have decreased the demand for and thereby depreciated the value of silver had taken place in the case of gold, does any one doubt but there would have resulted a great depreciation of gold as an "equivalent?"

Does any one doubt, that if all this legislation had had its genesis in Great Britain too long ago for one of my age to remember distinctly, in Germany as far back as 1871, in the United States in 1873, and if such a combination of the creditor nations and creditor classes had been consummated fifteen years ago and was being daily urged further now, does any one doubt that in 1893 the subject of discussion with the American people would be "is gold fit to serve for money," is it or can it be made (which is the right statement) at once a "measure" and an "equivalent?"

Does any one believe that the demand for gold for plate, jewelry, gilding, etc., could possibly have kept the metal up to its present value, the great demand for it as money, its chief natural use, being thus curtailed? It must be remembered that, if coin is an "equivalent," it is because of its intrinsic value. This intrinsic value is due, as in all things, to its value in use, its capacity for being used for valuable purposes, its present and prospective use.

It is peculiar capacity for use in subserving certain purposes which gives value, "intrinsic value." If gold and silver were not limited in production, indestructible and yet malleable and infinitely divisible, capable of receiving and retaining stampage, not easy to rust, in a word not peculiarly adapted to use as money, neither would have ever been used as money and neither would, for other purposes solely, be so useful and hence would not have the intrinsic value, as mere metals, of either copper, nickel, or iron.

What I have supposed as happening in the case of gold is actually what did happen in the case of silver. The history of the happening, the how and when and the where of it, you all know.

We know that in 1873, the year of silver demonetization by the United States, the value of the silver in a silver dollar was one dollar and four mills. This was after England and Germany had done their worst, but before the United States had struck the fatal blow.

To answer the purpose of a measure of value, especially with a view to deferred payments, the chief essential is stability of value in the measure itself. That means—taking a series of years—stability of supply, relatively to the supply of other things. The measure must be something which increases approximately at a pace with the average of commodities.

Deductively reasoning you would naturally expect less fluctuation in the production of silver than in that of gold, because silver comes from deep mining, and is somewhat dependent upon steady industry, gold from surface findings, a matter chiefly of pure accident; and historically and statistically you find just what you might have expected to be a fact. •

I hand to the Clerk, to be printed in the RECORD two tables, marked A and B.

Table A is a table of variations or fluctuations from year to year in the production of each metal from 1849 to 1891, inclusive. You will note that the greatest fluctuation in the production of silver from any one year to the year succeeding was in 1861, when it increased 10 per cent. You will find gold decreasing one year 18 per cent, increasing in other years by bounds of 16, 55, 63, even 96 per cent.

I have said that a right "measure of value" metal ought to increase gradually from year to year *pari passu* with population, trade, transportation, etc. Note from Table A that while silver has done just this thing with tolerable uniformity, gold has positively decreased in production during nineteen out of the forty-two years. You will also note that there is being less gold produced yearly now than there was yearly from 1852 to 1860, inclusively—the entire amount of gold produced in all the world's mines in 1891 being 125,000,000, and over half of this, as a matter of fact, being used in the arts.

But the monometallists say there is a new and different order of things now. "There is an unheard-of overproduction of silver." Examine table B.

TABLE A.—*World's yield of gold and silver, with percentage of annual variation in supply.*

Year.	Gold, in millions of dollars.	Variation from previous years.	Silver, in millions of dollars.	Variation from previous years.
1849	27	.....	39	0
1850	44	63	39	0
1851	68	55	40	2
1852	133	96	41	2
1853	155	16	41	0
1854	127	−18	41	0
1855	135	+ 7	41	0

1888	159,809	3,388,606	21.2	21.99
1889	185,809	3,901,809	21.0	22.09
1890	181,256	4,180,532	23.1	19.76
1891	189,824	4,479,649	23.6	20.92
June, 1893 (average)	.....	.....	18.6	30.18

NOTE.—The figures for 1493–1862, both years inclusive, are Soetbeer's; those from 1882–1891 are from the reports of the Director of the Mint.

From it you will see that in 1891 there was by weight 23.6 times as much silver as gold produced from the world's mines; and our friends, the enemy, say you can not have bimetallism with such a huge disproportion of production.

Their ignorance is only equaled by their assumption of wisdom.

Go back further with your dates on that table and you will see that for three hundred years (from 1545 to 1840) the disproportion was greater than now. And this was when so-called "evolution" had not produced a single gold bug. You will note, that in one twenty-years period, from 1581 to 1600, there was over fifty-six times as much silver produced as there was of gold. In the ten-year period, 1801–1810, the weight of silver produced was over fifty times that of gold; in the next decade over forty-seven times; and yet, during all that time, we had bimetallism at a less ratio than the present one. Note also, that when silver was demonetized in 1873 there was no relative overproduction, nor did the production after that year exceed 16 of silver to 1 of gold until 1881.

Note another thing in connection with the new proposed ratio of 20 to 1, viz, that the average comparative production from 1881 to 1891, inclusive, has been less than 20 to 1, has been 18.6 ounces of silver to 1 ounce of gold. How a few plain facts and figures dispose of asinine expert assumptions! I hold in my hand a little pamphlet compiled by Mr. H. Emerson, of Germantown, Pa., in which he has collocated, from Mulhall's Dictionary of Statistics, the Encyclopædia Britannica, and the Engineering and Mining Journal, some instructive tables of comparative statistics. As far as I have been able to verify them they are exact in every particular. I shall make a part of my remarks the portions of the pamphlet and the tables under the respective headings: Fact one, fact two, fact three, and fact four.

FACT ONE.

The total production of silver between 1871 and 1892 relatively to gold is little more than half what it was during the three hundred years preceding the California gold discoveries.

Period.	Years.	Gold.	Silver.	Ratio of weight.
		Kilos.	*Kilos.*	
1545–1850	306	4,427,900	146,347,000	33.12
1871–1892	22	3,727,966	63,764,534	17.14
1561–1660	100	796,200	38,024,000	47.75
1661–1780	120	1,944,800	53,031,700	27.27
1781–1840	60	1,650,360	67,420,000	40.86
1891	1	190.000	4,480,000	23.6

FACT TWO.

The fluctuation of silver supply between 1545 and 1892 has been less than that of gold.

Annual production of silver.

	Kilos.
Minimum, 1561–1580	300,000
Maximum, 1891	4,500,000

Increase, 15 fold.

Annual production of gold.

	Kilos.
Minimum, 1561–1580	6,840
Maximum, 1853	234,000

Increase, 34 fold.

Sudden fluctuations in gold.

Ten-year interval:	Kilos.
1831–1840	20,289
1851–1860	201,138

Increase, 10 fold.

In dollars, increase, $120,000,000.

Four-year interval:

1849	$27,000,000
1853	155,500,000
Amount	128,500,000

Increase, 5.8 fold.

Sudden fluctuations in silver have not occurred in the last three hundred years.

Ten-year interval:

1801–1810	$894,000
1821–1830	460,000

Decrease to one-half.

In dollars, decrease, $10,117,600.

Four-year interval:

1887	$136,000,000
1891	186,000,000
Increase	49,000,000

Increase, 1.4 fold.

At a ten years' interval, 1881–1891, the increase of silver was $80,000,000, the increase in gold 1841–'50 to 1853, was $122,000,000, or one-half more in dollars.

At a four years' interval, 1887–1891, increase of silver $49,000,000, and of gold 1849–1853, $128,000,000, almost three times as much, and for a one-year interval, 1889–1890, increase of silver is $15,000,000, while 1851–1852 shows a gold increase of $55,000,000.

Whether, therefore, we take intervals of time long or short, remote or recent; or whether we consider percentages, or absolute amounts, or value in dollars, the production of silver has been incomparably less fluctuating than that of gold.

FACT THREE.

The added stock of silver since 1872 (twenty years) to the total world's supply of both metals to the world's money has been neither absolutely nor proportionately as large as the added stock of gold to the previous world's supply of both metals in the twenty years 1850–1870.

Total amount of gold and silver mined, in million dollars.

	Gold.	Silver.	Total.
1492–1850	3,160	6,000	9,160
1852–1871	2,573	.....	.....

Increase through *gold* to previous supply of gold and silver, 28 per cent.

UNPARALLELED PROSPERITY.

	Gold.	Silver.	Total.
1492–1872	5,836	7,000	12,836
1873–1892	2,362	2,430	.....

Increase through *silver* to previous supply of gold and silver, 19 per cent; increase through gold *and* silver to previous supply, 27 per cent.

*Stock of precious metals in the world.**

	Gold.	Silver.
1850	$2,535,000,000	$4,880,000,000
1890	6,175,000,000	6,065,000,000

Percentage of increase: Gold, 142 per cent; silver, 24 per cent.

*Mulhall, page 306.

FACT FOUR.

The annual increase of gold *and* silver since 1860 has not been as great as the annual increase of population, of commerce, of railroads, of cotton, of grain, of pig iron in the United States for the same period.

	1840.	1860.	1870.	1889.	1890.	Increase.
						Per cent.
Gold and silver (world's supply)	.....	$167,000,000	.....	.....	$311,000,000	86
Population	.....	31,400,000	.....	.....	62,600,000	100
Railroad mileage	.....	30,626	.....	.....	166,702	444
Leading railroads of the United States:						
Mileage	.....	.....	15,501	.....	63,477	309
Freight movement	..... tons.	.....	396,000,000	.....	4,938,000,000	1,147
Passenger movement	.....	.....	1,732,000,000	.....	6,421,000,000	277
Banking power	$450,000,000	.....	$2,200,000,000	.....	$5,150,000,000	*389 / †134
Grain product	..... bushels.	1,240,000,000	.....	3,454,000,000	.....	178
Cotton	..... pounds.	1,836,000,000	.....	.....	3,623,000,000	98
Pig iron	..... tons.	821,000	.....	.....	9,200,000	1,208

*First period. †Second period.

The table published under the head of fact four is especially important, as showing the danger of relying on one metal only when both put together do not keep pace with the world's growth in population, nor transportation, nor banking power, nor grain, nor cotton, nor pig iron.

Assertions that silver fluctuated violently and is depreciating rapidly from natural causes grow out of the fact that the assertors have reference to the price of silver in gold.

But in addition to the fact that necessarily silver does not fluctuate any more in terms of gold than gold does in terms of silver, it is a fact that the price of all commodities, as expressed in the amount of silver bullion for which they would at given times exchange, has varied less than their price, as expressed in the amount of gold bullion for which they would exchange.

Here is a table compiled by Mr. Sauerbeck, the eminent statistician, giving in one column the average price for each year of forty-five principal articles of commerce in the London market, and in the second column the average price of silver for each year 1874–1892, inclusive.

It shows that the price of silver as expressed in gold has been

steadily going down, but also that the prices of the forty-five articles, as expressed in terms of gold, have been steadily going down all the time, and almost, if not quite, at the same pace with silver. This shows the comparative stability of value of the two metals as compared with the value of commodities, and also demonstrates an appreciation of gold gradual, growing, and constant, everything becoming cheaper and cheaper in terms of gold, which means that gold is becoming dearer and dearer in terms of everything, which means, in turn, that it is becoming yearly more and more difficult to obtain a given amount of gold in return for service or products—more and more products must be given to get the given amount of gold.

If the use of silver as money is still further curtailed and the demand on gold to perform that function still further increased, this movement will of course be accelerated and its already grinding effects accentuated.

Mr. Sauerbeck's index numbers.

Year.	Index numbers of 45 principal commodities.	Index number of silver.
1874	102	95.8
1875	96	93.3
1876	95	86.7
1877	94	90.2
1878	87	86.4
1879	83	84.2
1880	88	85.9
1881	85	85.0
1882	84	84.9
1883	82	83.1
1884	76	83.3
1885	72	79.9
1886	69	74.6
1887	68	73.3
1888	70	70.4
1889	72	70.2
1890	72	78.4
1891	72	74.1
1892	†68	‡65.4
1893*		

*Lowest price of wheat on record; lowest prices of stocks since 1884.
†June and July, lowest price of wool in its history.
‡Lowest price of silver on record.

Between 1850 and 1870 there was a slight rise in the value of commodities, and during the same period silver was at a slight premium compared with gold.

The still more eminent statistician, Mr. Soetbeer, has published a table of comparative gold prices of silver bullion and of one hundred and fourteen articles in the free port of Hamburg, leading inevitably to the same conclusion and demonstrating the same facts.

I shall also insert this table in the RECORD as a part of my remarks:

Year.	Index number of general prices.	Price of silver per ounce in gold.
1871	127.03	$1.326
1872	135.62	1.322
1873	138.28	1.298
1874	136.20	1.278
1875	129.85	1.246
1876	128.33	1.156
1877	127.70	1.201
1878	120.60	1.152
1879	117.10	1.123
1880	121.89	1.149
1881	121.07	1.138
1882	122.14	1.136
1883	122.24	1.110
1884	114.25	1.113
1885	108.72	1.065
1886	103.99	.995
1887	102.20	.978
1888	101.98	.939
1889	106.13	.935
1890	108.13	1.046

And yet in the face of facts and figures like these gentlemen will continue parrot-like to repeat the stereotyped cry taught them by the money-lenders, that bimetallism would lead to a silver standard and the "dishonest silver dollar."

In the first place it would not lead to the single silver standard, and in the second place, if it did, the dollar reached would not be as dishonest as the gold dollar, which is now the measure of value.

But our opponents say, the general fall in prices and the universal depression which set in in 1873 and still continues is due to improved processes cheapening production, and not to the appreciation of gold.

That this is in many things to a great extent, and in all things partially, true, I do not doubt.

Listen to the voice of the celebrated monetary commission of Great Britain, twelve illustrious men, one-half gold standard and one-half double standard advocates. They unanimously report as follows:

We are of the opinion that the true explanation of the phenomena which we are directed to investigate is to be found in a combination of causes and can not be attributed to any one cause alone. The action of the Latin Union in 1873 broke the link between silver and gold, which had kept the price of the former as measured by the latter constant at about the legal ratio, and when this link was broken the silver market was open to the influence of all the factors which go to affect the price of a commodity. These factors happen since 1873 to have operated in the direction of a fall in the gold price of that metal.

And futher on in their final report, on p. 95, I find these words:

In India, in the opinion of nearly all the witnesses whom we have examined, the purchasing power of the rupee continues unimpaired and the prices of commodities measured in silver remain practically the same. We have no evidence to show that silver has undergone any material change in relation to commodities, although it has fallen largely in relation to gold; in other words, the same number of rupees will no longer exchange for the same amount of gold as formerly, but, so far as we can judge, they will purchase as much of any commodity or commodities in India as they did before.

And six of them, in a separate report, use this unanswerable language, which I find published by Mr. David A. Wells in his incomparable work, Recent Economic Changes, on page 190, at bottom.

We are not insensible to the fact that facilities for production are habitually increasing, and the cost of production is constantly becoming less. But these factors have always been in operation since the world began; and while we recognize their tendency to depress the prices of commodities, they are not, in our opinion, sufficient to account for the abnormal fall in prices, which has been apparent since the rupture of the bimetallic par, and only since that time.

My friend from Mississippi [Mr. CATCHINGS] in one breath accounted for the fall of silver by the diminished demand for it as money, caused by the series of demonetizations which have taken place, and in the next breath denied that anyone could show that there had been any appreciation of gold!

A given cause will produce a given effect, but the reverse cause has no tendency to produce the reverse effect!

Such is the absurd and illogical position. Just in proportion as the demand for silver, in present and prospective use, has been lessened by legislation, just in that proportion has the demand on gold for present and prospective use to fill up the vacuum been increased. The demand increased, the supply remaining the same or less, and yet no appreciation of price!

The gentleman from Maryland [Mr. RAYNER] went further, and in the heat of debate and paucity of thought absolutely denied that there had been any appreciation of gold. In this connection I quote from a very valuable work, published by the Appletons in 1886, with the title "Class Interests," p. 68 *et seq.*:

Now, what is the fact in regard to the relative value of the gold and silver dollars for the last eight years? The production of gold has steadily fallen off, its consumption in the arts has steadily increased, its function as money has been weighted by the demonetization of silver, and prices have steadily declined. These facts conspire to show that the value of the gold dollar has increased—how much, it would be difficult to say. I will quote J. Barr Robertson, in the Economist, February 23, 1884: "Mr. Goschen's select committee, all of them gold-standard men, produced a large volume, in which they satisfied themselves that they had shown the causes of the "depreciation in silver," but the Indian government immediately produced incontrovertible evidence to prove that silver had not depreciated in purchasing power, and last spring Mr. Goschen gave a long and able address at the Institute of Bankers to show what the bimetallists had abundantly shown for the previous seven years, namely, that the disturbance in the gold price of silver was chiefly due to the appreciation of gold; so that Mr. Goschen, by no means a very courageous investigator, has come over to the bimetallic view, that the monetary troubles of the past ten years have been mainly caused by the rise in the purchasing power of gold, while silver has remained comparatively stationary in purchasing power, and has therefore been during that time far more completely a standard of value than gold."

Later, Dr. Giffen, the statistician, has come to the support of the same view.

The prevailing opinion is that silver has depreciated because it has been demonetized; but this very act of demonetization of silver has caused a greater demand for gold and raised its value. Mr. W. Westgrath says in the Economist: "As gold has been (in the United States especially) so largely substituted for paper as well as for silver, I agree with your correspondent (Robertson) that the result has been decidedly more an appreciation of gold than a depreciation of silver, and that the effects upon our trade, and, I may add, upon the incidence of our public debt, have thus far been very serious indeed." In speaking of the efforts to get silver out of the way, Mr. H. R. Greenfell, ex-governor of the Bank of England, says: "By these processes the states of England, Germany, and France have created an artificial demand for gold, which has upset all prices, enhanced the property of all creditors, and diminished the means of all debtors." (The Economist, March 1, 1884.)

Now, what is there to show that, since 1877, the divergence in the bullion values of gold and silver has been wholly due or mainly due to the depreciation of silver? I am somewhat conversant with current references to this subject, and I know of nothing except the eternal reiteration, "the fall of silver," the "dishonest silver dollar," and "the danger of getting down to the debased silver standard." If the bullion in the silver dollar will buy as much now as it would in 1877-'80, while the gold dollar will buy more, which is the more honest dollar? Or, even if silver has depreciated as much as gold has appreciated to make the difference that has taken place between them within the last few years, and the silver dollar is, therefore, dishonest, is not the gold dollar equally dishonest? Herein appears the assumption of these who are shouting so lustily about the dishonest dollar. The trouble with this business is that the creditor class, the money-owners, and the fixed-income class, are the people whose views are mostly voiced in our great journals and it is the bias of these classes to regard the dear dollar, constantly growing dearer, as the truly honest dollar, simply because it is growing heavier in their pockets. A few years ago an eastern journal had a heavy editorial to prove how much more honest the people are in the East than in the West, in this country. We can not censure classes for seeing to their own interests; they have done so from the beginning, but none the less is it the duty of the great body of the people, whose real interests are thus threatened, to organize for the encouragement of a higher sort of "honesty" than that which has been so fulsome of late in its own praise. I have no doubt that there are editors, South and West as well as East, who reiterate the catch phrases of the monometallists without having given any careful attention to the real points at issue. Gold appears to be fixed in value and central in importance, as the earth appears to be fixed in the center of the heavens; and, giving the matter no careful thought, they are altogether sincere in assuming that the gold standard is uniform and silver fluctuating, and they join in the chorus, "the dishonest silver dollar!" With them it is as if the earth stood still and the heavens moved.

I also quote from the same work, as bearing on the general effect of the monometallic policy, beginning on page 64, as follows:

The mines are adding nothing at present to the stock of gold for money purposes. Its consumption, as well as that of silver, in the arts and manufactures is very great and rapidly increasing. It is now three times as great as it was twenty years ago, four times as great as it was thirty years ago. On the other hand the production of gold is steadily falling off. From 1856 to 1860, the annual production of gold was 137 millions; in 1879, 107 millions; in 1888, 94 millions. It is estimated that the annual consumption of gold in the arts is steadily increasing; so it is to be expected that in a short time, taking the last twenty years as a guide, the consumption of gold will be greater every year than its production. This, together with the wear and loss of coin, will draw upon the present stock of money gold, and draw upon it largely; and yet, in the face of these facts, known to all who have given the subject study, we have classes in the community who want gold alone to be the measure or denominator of values.

If this movement were to be carried out, how would it operate on the various classes in society? In the first place it would increase the relative wealth of certain classes, and diminish the relative wealth of other classes, with no corresponding merit in the one class or demerit in the other. All whose property consists in credits and moneys, all whose incomes are fixed annuities and Government salaries, and salaries not readily adjusted to the changed conditions, all these would gain directly by the general adoption of gold monometallism. What they gain others would lose. All prices would fall, all property would be bought and sold at lower figures; and all who own such property, all producers, would have to do with less than before. All indebtedness would be increased. Enterprising business men who had borrowed a part of the capital they used, would be crippled. The farmer still having payments to make on his home would be weighted. The same number of dollars having in all cases to be paid, and those dollars having increased in value, the debtor would have to pay more, and the creditor would receive more value than he loaned or sold. And yet we have classes in society that are laboring in season and out of season to establish monometallism. But this form of insidious and unjust redistribution of wealth is not all we have to look out for. Our monometallists are quite concerned for the poor laboring men. They say, if we get too much silver—and we are always right on the eve of getting too much—prices will go up, and wages will not buy as much, greatly to the disadvantage of laborers. Usually, however, pretty soon after prices go up, wages rise, and laborers are quite sure to have all the work they can do. A good deal of unnecessary alarm is shown about the high prices work-people may have to pay. One would suppose that a little of this alarm might be reserved for the contingency of loss of employment and lower wages under the crushing operation of constantly increasing scarcity and dearness of the gold dollar. But this is precisely the side of the shield that our Argus-eyed monometallists never see.

Under advancing monometallism, if the movement can not be arrested, money must become constantly dearer and prices constantly lower; with what results? With a steady discouragement to business. When prices are falling business is always dull. Buyers hold off, and the competition of unsuccessful sellers sinks prices even lower than would be indicated by the reduced volume of money. As purchases made on falling prices are always small and consumption economical, production has necessarily to be limited, and there is a constantly diminishing demand for labor. Workingmen are thrown out of employment or have to work on reduced time or reduced wages, so that, even on falling prices, laborers are worse off than they were before. Under progressive gold monometallism, with the lessening supply of gold all consumed in the arts, with the wastage and loss in coin going steadily on, and the stock on hand absolutely diminishing, this depression of business is not merely a temporary thing; it must continue from year to year with the effect of casting down the great middle class relatively lower and lower, and sinking employés to the borders of beggary and slavery. Monometallists never discuss these permanent features of their system; they merely refer in a partial way to what can only be immediate and temporary results, relying, like advocates, on the safe mental inertia of those they mean to influence.

The gentleman from Maryland [Mr. RAYNER], wrapped in a cloak of monometallic self-sufficiency, went further still and positively denied that the depreciation of silver had been caused by demonetization, denied that demonetization had any effect on the price of silver, and as an inference from that position denied that remonetization would have any effect.

Refer to tables and prices of silver.

But no reference to statistics ought to be necessary. The gentleman is old enough to remember that in 1890 the prospect alone of a free coinage bill becoming law in the United States sent silver up 20 cents on the London market (from 43.625 pence to 54.625 pence).

He is also old enough to remember that two months ago, in June last, merely closing the mints of India to private account caused silver to decline in one day nearly 10 cents (from 77 to 68¼ cents) and caused a fall before the decline ended of nearly 20 cents. "None so blind as those who will not see."

The greatest curiosity in the way of an argument came from the lips of the gentleman from Florida [Mr. COOPER]. He said, "that as a lawyer he had learned the value of expert testimony and that all the 'experts,' the 'financiers,' were opposed to free coinage and wanted unconditional repeal."

I can tell the gentleman two things; first, that though courts avail themselves of expert testimony, a man is not called to testify in his own behalf as an expert; he might be too expert. Second, that the world, with its finances, commerce, and religion, would have gone to the "demnition bowwows" long ago, had it been guided by experts and their biases.

When Adam Smith created the science of political economy he found in existence the so-called "mercantile theory" of trade and finance. It was held by all traders, bankers, and experts. Not a merchant belonging to a London guild but laughed at the Scottish professor. They did not answer him, but laughed at and ignored him. And for many years the world imitated them, for surely "the trade" knew "business" better than anyone else.

When Andrew Jackson and Thomas H. Benton reformed the finances of this country and emancipated the people from the National Bank thralldom, they found not only the United States Bank, but successful bankers everywhere and all the commercial classes in all the large cities, everybody, in short, except the "common people" (who, if the gentleman from Tennessee [Mr. PATTERSON] is to be believed, "do not understand these things"), against them.

Leading statesmen of "national reputations," also of every party, including Clay, Calhoun, and Webster, and the "Metropolitan press," with scarcely an exception, were against them, because forsooth they thought too "surely the experts know."

But the horse sense of "Old Hickory" and the plain common sense of the "common people" triumphed and to-day there is not a reader in the United States fool enough to say they did not triumph deservedly.

Later on when we wanted to reform the tariff all the "experts" in that line cried out against it.

Again for a season they fooled the people.

But we are here now with the power and the will to do just what the experts don't want done.

And the ultimate effect of our doing it will justify its having been done.

When Luther came, theological "experts" were against him; when Christ came, theological "experts" crucified him.

The expert intellect runs now and has always run in grooves; the "present status," whatever it is, having been long studied and being intimately understood by the "expert," and his mind having become molded to the clay he works in, is precious to him.

Of all forms of government, the most ridiculous and unfortunate would be "a government of financiers by financiers," which would also be a government "for financiers." The *bourgeoisie* understands its own interest with a view to the immediate future. All history shows that beyond that it is incompetent.

What is the condition confronting us? First, scarcity of money in actual use. How do gentlemen propose to remedy it? Make it scarcer.

Second. A divergence constantly widening between the two metals. How do gentlemen propose to remedy it? Make it still greater by increasing the demand for that one whose price is already too high and by lessening the demand for that one whose price is too low.

That is "expert" statesmanship!

There is no lack of confidence among the people of the Union in any form of its currency.

Lack of confidence in currency makes it go out and get about, each man getting something in exchange for it as soon as he can.

People do not hoard things which they fear will become valueless. The trouble is lack of confidence in investments.

And this has come about because men see nothing in which they can put their money which has not been falling in price with more or less constancy for twenty years and which does not threaten to continue indefinitely to fall. Men do not like to buy on a falling market.

And what, in turn, has produced this?

For twenty years the world has been madly and uselessly endeavoring to get on a gold basis, thereby making gold more and more valuable and other things, as expressed in terms of gold—the only metal recognized as real money—cheaper and cheaper.

And now we are requested not to throw our great power and influence abreast the current to try to stem and check it, but to accelerate the movement!

I will not join the "expert" movement of still further grinding the masses, robbing the debtors, and depreciating the agricultural produce of my country.

Coin both gold and silver, or else deprive both of governmental aid. As I have said, they would both pass as money, only by weight and not tale. Of course nobody is seriously in favor of having no coinage laws.

Coinage is convenient if all can have access to it, if government will confine itself to its legitimate functions, which are to declare the weight, the fineness, the ratio, and the device.

But when Government goes further and attempts to restrict the supply of coin, it takes from money its most desirable quality and attribute—its elasticity; and moreover depreciates the intrinsic value of the bullion whose coinage is restricted. The gentleman from Ohio [Mr. HARTER] said that the volume of money makes no difference—that nations are not prosperous in proportion to their volume of money.

If he had used the word currency instead of money I should have agreed with him.

But the proposition as laid down by him is absurd. Real money, gold and silver, have intrinsic value, and a country is richer and more prosperous for every ounce of gold and silver it has, as it is for every additional pound of iron or bushel of wheat.

Moreover, the richer a nation is the more money it will have. If it has no mines, it has valuable products and precious energies, and these will draw gold and silver. All that is needful is that Government should not hamper the operation by preventing coinage and use as coins.

The countries which have the most money, *real money*, are to-day the most prosperous, and those which have the least are the least prosperous.

In interrogating the gentleman from Ohio the other day, I did not use the word currency, as the RECORD makes me do, but money.

In support of the drift of my question then and of my assertion now, I insert the following names of countries and amounts per head of money and paper currently redeemable in money, *i. e.*, on demand at any hour.

In the order of greatest volume.

France	$40.56
Netherlands (Holland)	28.88
Belgium	28.53
Australia	26.75
United States	25.15
Great Britain	18.42

I have dwelt upon the monetary prosperity of France. It has long been an axiom among men of information that Holland is the country of the world where prosperity among the common people is greatest, distribution of wealth most nearly even (except in France), and where the smallest percentage of people either hunger or shiver.

In the order of least volume.

China	$1.75
Turkey	2.88
India	3.64
Japan	4.90
Mexico	4.91
Russia	6.63

Comment is needless. The figures are from the World Almanac for 1893, p. 142.

The gentleman from New York [Mr. HENDRIX] calls it "gibbering idiocy," "stark midsummer madness," to believe what we believe, viz, that the two metals can be maintained as money on a parity with each other at a ratio to be fixed by law, with due regard to intrinsic values.

Did this gentleman, who says he was born in the West and left there, and who, in my opinion has been getting further and further away ever since, until now he thinks the western boundary of the United States is the Hudson River, did this gentleman believe that when he consented to run and be elected on a platform which asserted that this very thing could be done and promised that it should be?

If not, he should be more charitable to us, who but stand where he a short while since stood. If he did so believe, however, how can he successfully plead "not guilty" to the charge of obtaining a thing of value—to wit—an office, under false pretense?

Now to address myself to this absurd proposition that the Sherman bill, vicious, silly, as it is, is the cause of the present condition of things.

The only undeniable fact and sound utterance in the speech of the gentleman from New York [Mr. HENDRIX], is contained in these words, the italics are mine:

> I do not assert here that the Sherman purchase law is the cause of all the woe from which this country is suffering at this moment. *No intelligent man talking to intelligent men would undertake to make an assertion of that kind.* The Sherman silver law was not responsible for the failure of that Federal bank in Australia in January, 1893, nor for the tumble there of fourteen great banks, nor for the rebounding force of the distress which has gone round the world since that time like a bowlder bouncing down a mountain side.
>
> No; the wave of distress has encircled the globe. The Anglo-Saxon race has overdone the business. It has gone on conquering and populating the far distant isles.
>
> (See CONGRESSIONAL RECORD, August 13, 1893, page 63.)

The gentleman "gives away" the whole case now before the court, but he is right. I will not join him in the utterance: "No intelligent man talking to intelligent men would make an assertion of that kind." The President "makes an assertion of that kind" in his message, and I am not willing to deprive him of the quality of intelligence, nor am I willing to believe that the Congress of the United States, to whom he addressed that message, are not a body of "intelligent men."

This trouble has been brewing for long. The crash in Argentina, the Baring Brothers' failure, the Bank of England on the verge of temporary suspension, and only saved by $15,000,000 of gold from silver-using France, the widespread wreck of Australian banks and industries, all these things are current history. English capitalists then found it necessary to draw in their business—to sell their securities to get money for liquidation at home and in the colonies—ours among the first, and chiefly for obvious reason.

Extensions could not be offered, securities must be protected and be taken, as they came over by millions, requiring the gold.

Unfortunately just at that moment Austria-Hungary was trying to get $75,000,000 of gold for resumption. What condition did this unprecedented coincidence find us in?

Why, we had been "overdoing it," like our English cousins. Boom towns every where; inflated "industrials," overcapitalized and sometimes fictitious, doing business on a basis of 6 per cent money and currency and 94 per cent credit appliances; boasting of it even as an evidence of civilization, forgetful of the fact that credit and credit appliances are only necessary evils of commerce and civilization, and not things whose growth requires or should receive encouragement. Added to all this, it found us, owing to the operation of the McKinley bill, which had made the cost of imports greater and the price of exports less, with a balance of trade against us, requiring shipments of gold on our own account.

To it all and more than it all, add that it found us sharing our part of the evils accruing from the slow pressure of a twenty-year effort on the part of Western Europe, and partially on our part too, to do business on a still narrower cash basis by making gold the sole standard and measure of value. This had sapped our energies and left our financial constitution open to attack.

I think the only wonder is that we have stood it so well. But we did stand it, until agricultural exports came to draw back our lost wealth.

What did the Sherman bill have to do with all this?—a bill under which 50 millions of paper certificates are issued in a country which collects and spends 500 millions a year?

The Sherman bill had but one effect: It enabled the gold exporters to draw their gold from the Federal Treasury, instead of from the banks. It *had to go*, and I don't see that it makes much difference to the country whether it was taken from the Treasury or from the banks.

But I think the Treasurer ought to be armed with power to protect the gold in the Treasury.

Give him the power which the Bank of England has, of controlling export movements by rate of exchange, or, better still, let him, like the Bank of France, pay out the metals half and half. My constituents want the Sherman bill repealed, but they do not want its repeal used as a club in the hand of "financiers" to drive us to gold monometallism.

Its repeal is well enough, but more must be had.

Do not listen to the siren voice of international bimetallism. Its voice is always raised when a free coinage bill is about to become law. It is the voice of the Lorelei. We will have it in time. But we must first have national bimetallism. The South and West will never rest until we get it.

Even the East, it seems to me, might see that the country can never have rest from the agitation of this question until the functions of money—coequal money—have been restored to silver. It is the only thing which will prevent a worse panic than this—a world panic.

On motion of Mr. BRYAN, the House then (at 11:40 p. m.) adjourned until 10 o'clock a. m. to-morrow.

SENATE.

WEDNESDAY, *August 23, 1893.*

Prayer by the Chaplain, Rev. W. H. MILBURN, D. D.

The Journal of yesterday's proceedings was read and approved.

PETITIONS AND MEMORIALS.

Mr. FAULKNER presented a petition of the West Virginia Farmers' Alliance and Industrial Union, praying for the free coinage of silver at a ratio of 16 to 1; which was ordered to lie on the table.

Mr. STEWART. I present resolutions adopted by the Franklin Club of Cleveland, Ohio, and the Central Labor Union of Cleveland, Ohio, with a membership of over 17,000, and a mass meeting of ten or twelve thousand unemployed citizens of Cleveland, remonstrating against the unconditional repeal of the Sherman act and the issue of bonds, favoring the free and unlimited coinage of silver at the ratio of 16 to 1, and urging the passage of Senate bill No. 3, to supply the deficiency in the currency, a bill introduced by myself a short time since. I move that the resolutions lie on the table.

The motion was agreed to.

Mr. CAMERON presented a petition of sundry business men of Philadelphia, Pa., indorsing the resolutions of the Trades League of Philadelphia, praying for the repeal of the purchasing clause of the so-called Sherman silver law; which was ordered to lie on the table.

Mr. POWER presented a petition of the Methodist Episcopal Church of Montana, representing 2,340 members, praying for the repeal of the Geary Chinese exclusion law; which was referred to the Committee on Foreign Relations.

Mr. VOORHEES. I present the petition of John Overmyer, who is the president of the Second National Bank of North Vernon, Ind., and a very prominent citizen of that State. He petitions Congress to enact a law to levy a moderate tax on the average deposits of national banks, to be collected by the Treasury Department at Washington, for the purpose of providing a fund out of which the depositors in any national bank that may fail shall be paid in full any residue that may be due them, after exhausting all the assets of such bank, including the individual liability of the stockholders; and that the present tax on the circulation of national banks be repealed. I move that the petition be printed as a document, and referred to the Committee on Finance.

The motion was agreed to.

Mr. DAVIS presented a petition of the Board of Trade of Mankato, Minn., praying for the repeal of the silver-purchasing clause of the so-called Sherman law; which was ordered to lie on the table.

He also presented a petition of the Chamber of Commerce of Minneapolis, Minn., praying for the repeal of the law requiring the Government to purchase silver; which was ordered to lie on the table.

Mr. TURPIE. I present sundry petitions from citizens of Indianapolis, Ind, one praying for the establishment of the single gold standard, one praying for the unlimited coinage of both gold and silver, one praying for the free coinage of gold and silver at a ratio of 16 to 1, and one in the following language:

We, the undersigned, want the denomination dollar represented by the gold dollar, the silver dollar, and the paper dollar, that each and all three be legal tender for all debts public and private and exchangeable one with the other, dollar for dollar

I move that the petitions be referred to the Committee on Finance.

The motion was agreed to.

BILLS INTRODUCED.

Mr. VOORHEES introduced a bill (S. 663) for the benefit of Mrs. Anna C. Supplee, of Harrison, Ohio; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Patents.

Mr. BUTLER introduced a bill (S. 664) for the relief of Agnes and Marie De Leon; which was read twice by its title, and referred to the Committee on Claims.

Mr. HUNTON introduced a bill (S. 665) making an appropriation for improving the public road in Alexandria County, State of Virginia, connecting the District of Columbia by way of the Government bridges, known as the Aqueduct bridge, Chain bridge, and Long bridge, with the National Cemetery at Arlington, Va.; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Military Affairs.

Mr. HUNTON. In a bill that I introduced for similar purposes to the one I hold in my hand one of the names was printed wrong. I reintroduce the bill for the purpose of correcting the mistake.

The bill (S. 666) for the relief of Isaac Davenport and others, citizens of Virginia, was read twice by its title, and referred to the Committee on Claims.

Mr. BATE introduced a bill (S. 667) for the relief of C. B. Bryan & Co.; which was read twice by its title, and referred to the Committee on Claims.

Mr. CALL introduced a bill (S. 668) for the relief of William W. Webb; which was read twice by its title, and referred to the Committee on Military Affairs.

Mr. WHITE of Louisiana introduced a bill (S. 669) for the relief of Catherine M. Pritchard, her heirs, administrators, executors, or assigns; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 670) for the relief of C. Augusta Urquhart; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 671) for the relief of Cora A. Di Brazza; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 672) to authorize the Secretary of the Treasury to refund certain moneys collected by the United States; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 673) for the relief of Mrs. Mattie S. Holland; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 674) for the relief of the estate of Marcus Walker, deceased, late of Franklin, in the State of Louisiana; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 675) to authorize the Secretary of the Treasury to refund certain moneys collected by the United States; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 676) for the relief of certain employés of the United States mint at New Orleans, La.; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 677) for the relief of the heirs of Joseph Nicholson Chambers, late a resident of the parish of East Feliciana, in the State of Louisiana; which was read twice by its title, and referred to the Committee on Claims.

He also introduced a bill (S. 678) for the improvement of Southwest Pass, Mississippi River; which was read twice by its title, and referred to the Committee on Commerce.

He also introduced a bill (S. 679) to provide for the location and satisfaction of outstanding military bounty land warrants and certificates of location, under section 3 of the act approved June 2, 1858; which was read twice by its title, and referred to the Committee on Public Lands.

He also introduced a bill (S. 680) conveying to Rafael Seguro, of Iberia Parish, La., the right, title, and interest of the United States in and to certain lands in said parish of Iberia; which was read twice by its title, and referred to the Committee on Public Lands.

Mr. PALMER introduced a bill (S. 681) granting a pension to William Emerson; which was read twice by its title, and, with the accompanying papers, referred to the Committee on Pensions.

Mr. WHITE of California introduced a bill (S. 682) to repeal an act entitled "An act to protect trade and commerce against unlawful restraints and monopolies," approved July 2, 1890, and to define, punish, and restrain acts, contracts, and combinations in restraint of trade and interstate commerce; which was read twice by its title, and referred to the Committee on the Judiciary.

Mr. PEFFER (by request) introduced a bill (S. 683) to prohibit the sale of intoxicating liquors within the District of Columbia; which was read twice by its title, and referred to the Committee on the District of Columbia.

Mr. PROCTOR introduced a bill (S. 684) for the relief of Mrs. Evalyn N. Van Vliet; which was read twice by its title, and referred to the Committee on Pensions.

Mr. MANDERSON (by request) introduced a bill (S. 685) to amend the general land law of March, 1891, by making ceded Indian lands free to five-year homesteaders; which was read twice by its title, and referred to the Committee on Indian Affairs.

Mr. HANSBROUGH introduced a bill (S. 686) to amend an act entitled "An act to divide the judicial district of North Dakota," and to provide for the fees and compensation of the officers of the circuit and districts courts of the said judicial district; which was read twice by its title, and referred to the Committee on the Judiciary.

Mr. TELLER introduced a bill (S. 687) for the relief of the legal representatives of A. C. Boone; which was read twice by its title, and referred to the Committee on Claims.

Mr. BLACKBURN introduced a bill (S. 688) for the relief of Theodore R. Timby; which was read twice by its title, and referred to the Committee on Naval Affairs.

Mr. HUNTON introduced a bill (S. 689) to authorize the Falls Church and Potomac Railway Company of Virginia to extend its line of road into and within the District of Columbia, and for other purposes; which was read twice by its title, and referred to the Committee on the District of Columbia.

Mr. VANCE introduced a joint resolution (S. R. 21) for the relief of the aged and infirm colored people of the District of Columbia; which was read twice by its title, and referred to the Committee on Pensions.

COINAGE OF SILVER.

Mr. PASCO. I submit several amendments to be proposed to the amendment of the minority of the Committee on Finance to the bill (S. 570) discontinuing the purchase of silver bullion. I ask that the amendments may be read and lie on the table and be printed.

The amendments were read and ordered to lie on the table and to be printed, as follows:

Amendments intended to be proposed by Mr. PASCO to the amendment introduced by the minority of the Committee on Finance to the bill (S. 570) discontinuing the purchase of silver bullion.

Strike out section 1 and insert in lieu thereof the following:

"That a commission, to be composed of three citizens of the United States, shall be appointed by the President, to ascertain and determine by the 1st day of January next the fair and just ratio between the actual and intrinsic values of silver and gold, as a basis for the future coinage of silver, as herein after provided, without discrimination against either metal or charge for coinage, so that the dollar unit of coinage of both metals may be of equal intrinsic value. And the said commission shall report to the Secretary of the Treasury the result reached by them as soon as practicable after the date hereinbefore named, and he shall thereupon fix and determine the weight of pure and standard silver to be contained in the silver dollar, the half-dollar, the quarter-dollar, and the dime authorized to be coined by this act, according to the said report, and the said coins so authorized and thereafter coined shall be of the standard and weight thus fixed and determined by the Secretary of the Treasury."

In section 2 strike out all after the second "of" in line 10, and insert in lieu thereof the following: "The fineness and weight fixed in accordance with the provisions of the first section of this act."

In section 3 insert after "may," in line 2, "from and after the 1st day of March, 1894."

Mr. HILL. I desire simply to give notice that if agreeable to the Senate I shall address it on Friday next, at the conclusion of the routine morning business, upon a subject about which the Senate has heard very little—the silver question.

TRANSACTIONS OF NATIONAL BANKS.

Mr. STEWART. If the morning business is through I should like to submit some remarks.

Mr. PEFFER. There is at least one resolution which comes over from yesterday.

The VICE-PRESIDENT. The Chair lays before the Senate

the resolution submitted by the Senator from Kansas [Mr. PEFFER], coming over from a previous day. It will be read.

The Secretary read the resolution submitted yesterday by Mr. PEFFER, as follows:

Resolved, That the Secretary of the Treasury be directed to inform the Senate—

First. Whether, and in what respect, the national banks, or any of them, in the cities of Boston, New York, and Philadelphia are being now conducted in violation of law.

Second. Whether said banks are paying depositors' checks promptly in lawful money.

Third. Whether said banks, or any of them, are demanding rates of interest higher than those provided by law for the loan of money or in discounting notes and bills.

The VICE-PRESIDENT. The question is on agreeing to the resolution.

Mr. HOAR. I move that the resolution be referred to the Committee on Finance.

Mr. PEFFER. Is the motion to refer debatable?

The VICE-PRESIDENT. The Chair so understands.

Mr. PEFFER. I hope the Senator from Massachusetts will not insist upon a reference of the resolution. It is a very important matter, and we ought to have the information immediately.

The VICE-PRESIDENT. The question is on the motion of the Senator from Massachusetts that the resolution of the Senator from Kansas be referred to the Committee on Finance.

Mr. HOAR. Mr. President, I once heard President Grant say that the worst subordinate a military officer could have is one who always obeys orders. In a time of popular distress and panic it is utterly impossible to get along without the greatest trouble and suffering if every man and organization charged with a public function is compelled to drive everybody it has to deal with up to the strict letter of the law.

I understand that the President of the United States appointed a Comptroller of the Currency who had not been a banker, who had not been a speculator, who had not been a dealer in credits or exchanges of any kind. He took a man whom he believed, and believed on good evidence, was a clear-headed, capable man, able to deal, with energy, force, impartiality, and honesty, with any public subject upon which his faculties should be turned, and to discharge any responsibility that should be committed to him. As to whether the President was right in his estimate of that gentleman I have, of course, no personal means of pronouncing an opinion, but I suppose the Senate thought he was right because they confirmed him.

I understand he has not thought it best to bring everybody right up to the rack whenever any national bank in this country has failed to comply with the strict and extreme letter of the law in dealing with its customers, and has tried to get along and have the communities and business men supplied with credit as well as currency; and I think it would be well to wait a week or ten days and see what we are going to do about things in general before we go to poking into that question too much.

The Comptroller of the Currency is acting under the direction and the constant supervision of an eminent gentleman familiar with these subjects, lately a member of this body, who is acting under the direction and constant control of the legally constituted President of the United States. I do not believe it is well to pass this resolution just now. If the Committee on Finance look at it and by to-morrow morning or the next day say that it is not going to do any harm, or that there is not any more information they want to ask at the same time, they will report it back.

Mr. VOORHEES. I think it would be much safer to have the resolution printed and referred to the Committee on Finance; so as to let us see exactly what we are doing in these critical times.

The VICE-PRESIDENT. The Chair will state to the Senator from Indiana that the resolution has been printed. The motion of the Senator from Massachusetts is that it be referred to the Committee on Finance. That is the pending motion.

Mr. VOORHEES. That is the correct motion.

Mr. HARRIS. May I ask that the resolution be read.

The VICE-PRESIDENT. The resolution will be again read.

The Secretary again read the resolution.

Mr. VOORHEES. Mr. President, I noted what the Senator from Massachusetts said in regard to the present Comptroller of the Currency. I think at a time of great peril and difficulty that officer is giving the country evidence of signal ability and signal integrity, and that he can be most fully trusted in the discharge of his duties.

I trust that the resolution may be referred to the Committee on Finance. It will not be buried there by any manner of means, but it will be examined, and we can then act more intelligently and more safely than we can by adopting it this morning.

Mr. PEFFER. Mr. President, I know that we are all out of order in this discussion.

Mr. HOAR. Not at all.

Mr. PEFFER. I understood that the discussion of the resolution is not in order at this time.

Mr. COCKRELL. It is a legitimate subject of debate.

The VICE-PRESIDENT. The Senator from Kansas is recognized on the resolution.

Mr. PEFFER. I am surprised, Mr. President, to witness the sensitiveness of Senators upon this point at a time of peril such as we are now passing through, when the people of this country are looking to the men who are congregated in the national Capitol as their lawmakers for counsel and advice. When it comes to our ears that one of the institutions which the Government has established for the purpose of supplying currency to the people is not obeying the law, and that instead of supplying currency they are refusing it, they are hoarding it, it is time that the people should know the truth about it. Hence I have asked for an official answer from the Secretary of the Treasury.

My information is, as the Senator from Massachusetts [Mr. HOAR] kindly suggested a moment ago, that the banks are being run to-day in open violation of law, that the lawful reserve in New York City alone has been diminished some $19,000,000 below the lawful amount. I am informed reliably by what has been said on this floor, by private correspondence, and by word of mouth, that not only in Boston, in New York, and in Philadelphia, but in other portions of the country, the national bankers are refusing to pay even depositors their own money, and yet we are asked now, in this condition of things, to refer the resolution to the Finance Committee, for no other reason in the world, I am satisfied, with due respect to the integrity of the Senators, but to delay this proceeding and to shield the banks from the consequences of an exposure before the American public.

We are now discussing the pending measure, which I understand is the regular order, to supply to the national banking institutions an additional currency by extending to them the benefit of the margin of 10 per cent upon their bonds now deposited, and while we are discussing that measure, a measure of relief, a resolution asking whether the banks are now being conducted according to law is to be shelved and side-tracked by being sent to a committee and kept there. I have no idea that the resolution will be reported favorably until, as Senators have kindly suggested, the storm has passed over.

I am tired of the delay of public officers, Mr. President. These banks are public institutions, and I propose, so far as I and those I have the honor to represent are concerned, to hold them to a strict accountability.

Mr. KYLE. Mr. President, I hope the Senate will not at this time refer the resolution to the Committee on Finance. It means, if it is not buried there, that the resolution will be reported back adversely by the majority of the committee.

I believe in the right of the Senate of the United States to ask for information from the Secretary of the Treasury whenever they see fit. It is right that the members on one side of this discussion should receive the same courtesy and the same treatment on the part of the Secretary of the Treasury as the other party receives. I noticed the other day that when the Senator from Missouri [Mr. VEST] spoke upon his measure, the silver bill, that the Secretary of the Treasury was immediately upon hand to furnish gratuitously information for the benefit of the majority of the Committee on Finance.

I claim now the right, as one of those who are interested in knowing the condition of the national banks, to have this resolution considered.

Mr. WHITE of Louisiana. May I ask the Senator what he means by information being gratuitously furnished by the Secretary of the Treasury?

Mr. KYLE. I mean that he is ready to anticipate the wishes of the majority of the Committee on Finance.

Mr. WHITE of Louisiana. Does the Senator mean to state on this floor that the Secretary of the Treasury was not requested in writing for the information which he furnished?

Mr. KYLE. Privately, I presume.

Mr. WHITE of Louisiana. Has the Senator preferred any request to the Secretary of the Treasury for information which has not been responded to?

Mr. KYLE. Does the Senator refer to myself?

Mr. WHITE of Louisiana. Yes, sir.

Mr. KYLE. I have not, unless denied at this time.

Mr. WHITE of Louisiana. Then the Senator has been denied no information by the Secretary of the Treasury.

Mr. VEST. If the Senator from Louisiana will permit me, in the communication from the Secretary of the Treasury to which the Senator from South Dakota [Mr. KYLE] refers, Mr. Carlisle himself says, "referring to a conversation had with the Senator from Indiana." There it is [exhibiting], showing that there was no written communication and no official demand from the Fi-

nance Committee or from the Senate for that letter. It grew out of a private conversation, as the Secretary himself says.

Mr. VOORHEES. I was in search of light and knowledge that morning, and I went as chairman of the Committee on Finance, as a Senator from Indiana, and as an humble individual, to a man who I thought, and still think, knows far more on these questions than I do, or than even does the Senator from Missouri, for whose ability I have great respect. I asked the Secretary of the Treasury in regard to the feasibility of coining at the rate of 20 to 1, and he stated to me the points of objection. I then requested to have them put in writing and sent me. That is the history of it.

I have very great respect for the Senator from Missouri, for his bill, for his work, and for anything he does, but I wanted to know whether there were objections to the recoinage of the silver now in existence in this country, and, if so, what they were, and I asked the Secretary to tell me, and then asked him to put the information in shape so that I could use it publicly.

Mr. VEST. Mr. President, I have no issue with the Senator from Indiana, and made no statement that there was any irregularity in regard to that communication. I referred to the remark of the Senator from Louisiana [Mr. WHITE], who asked the Senator from South Dakota [Mr. KYLE] if he meant to say that that communication did not come from an application in writing?

Mr. WHITE of Louisiana. I do not think I said that. I beg the Senator's pardon. I stated, or meant to state, that the information had been "requested," and did not intend to use the words "in writing." The statement of the chairman of the Committee on Finance entirely bears out what I said, and, in my judgment, makes it perfectly manifest that the application of the word "gratuitous" to the Secretary of the Treasury in discharge of his great functions of sending a communication in answer to a request of the chairman of the Finance Committee of this body, whether verbally or in writing, is utterly unborne out by the facts and unjust.

Mr. HILL. Mr. President, I think the Secretary of the Treasury had a perfect right to send the letter in question to the distinguished chairman of the Finance Committee of this body, and that it makes very little difference to anyone whether it was sent gratuitously or otherwise. He had a right to furnish that information to any Senator, either upon request or otherwise. That is not the question, however, now before this body.

The distinguished Senator from Kansas [Mr. PEFFER] has seen fit, in the discharge of his duty as a member of this body—entitled as much as any other member to full rights as a Senator here—to introduce a simple resolution of inquiry with reference to the public conduct of an officer of this Government. Such resolutions have been passed here time and time again upon the bare request or suggestion of a member of the Senate.

I am not here to make any accusations against the officer referred to. I do not assume that he has violated the law. Possibly there might have been no suggestion of the reference of this simple resolution to the Committee on Finance but for the fact that the distinguished Senator from Massachusetts [Mr. HOAR] was understood to say that it was likely or probable that that officer might have in some slight or trivial respect violated the law of the land.

Mr. HOAR. The Senator will pardon me. I said nothing of the kind. I was speaking of the national banks, and said I did not believe they should be brought right up to the rack when they were doing the best they could, and I spoke of the Comptroller of the Currency not being in a hurry to prod and drive them to the strict letter of the law. I think he is, so far as I know, absolutely within his legal discretion and legal duty. I preceded what I said by stating that I understood that he was selected for his office under the belief, on the part of the President and the Senate, that he was a man of large common sense and not interested in any of these institutions, as he was engaged in another profession.

Mr. HILL. Mr. President, I assume that the Comptroller of the Currency is bound by the law of the United States, and if it is his duty to prod the national banks, then he ought to perform that duty. I do not know whether he has discharged his duty or not, but I assume that he has, and I assume that he can make a proper and respectful reply to the resolution of the Senator from Kansas.

I think a principle is involved here. It is not customary to refer to the Finance Committee resolutions asking for information, for the Senator from New Jersey [Mr. MCPHERSON] less than six months ago offered a resolution for information which would enable him to make some remarks upon the tariff question, and the resolution was promptly passed. How frequently have such resolutions been passed here upon the bare request, or even the bare suggestion, of the most humble member of this body?

What is there in the resolution that it should be suppressed? What is there in the resolution which requires that it should be examined by the Finance Committee? I make no reflections upon that committee. I have the greatest respect for its distinguished chairman and for each member of it. That is not the question. The question simply is that we have before us a resolution asking for information in reference to the discharge of duty by an officer of the Government in reference to financial matters to which the eyes of the country are now directed. I think courtesy requires that we should allow the Senator from Kansas to have the resolution passed in order that he may make such suggestions or remarks on the subject as may seem to him proper.

I have heard no suggestion why the resolution should go to the Finance Committee. I do not share in the opinion of the Senator from North Dakota [Mr. KYLE] that a reference would be the last we would hear of the resolution. If that be true, it ought not to go to the committee; but I do not believe it. I simply say that similar resolutions have been passed heretofore upon a bare suggestion for information, and why make an exception with the Senator from Kansas now? That is the question I present to the Senate. I think we ought to pass the resolution. I think we ought to give an officer of the Government an opportunity to vindicate himself, and I think he can give this information quickly and there will be no trouble with regard to it. Therefore I think the resolution ought not to be referred to the Finance Committee.

Mr. MANDERSON. Mr. President, a few days ago in a debate upon the bill to increase the issue of currency by the national banks to the extent of 10 per cent of their bonds and up to the par thereof, the question arose as to what was the course which had been pursued during this time of great financial distress by the banks of the city of New York, and there seemed to be a difference of opinion and a lack of full knowledge in the Senate upon that proposition. I think that since that debate the press of the country has somewhat relieved the Senate's ignorance. There seems now to be no question but that the banks of the city of New York, when checks of their depositors are presented to them, decline to pay the currency upon such checks and demand of the depositor that for the check thus presented he shall receive a clearing-house certificate. That has been frequently stated of late in the press of New York.

I am not ready to say but that that course, which is a technical violation of the law and for which there is perhaps no warrant in the statutes, is probably justifiable under the present deplorable conditions; but I do not agree with the Senator from Massachusetts that it is well we should cover up from the knowledge of the people exactly what is the course that is being pursued by the national banks of New York and elsewhere. If the existing facts justify such action outside of the pale of the law, the people of the United States are intelligent and patriotic enough to appreciate that that strain of the law is needed at this trying time.

I have in my hand the Sun, which, it is said, "shines for all," and rises daily in the city of New York, of date Monday, August 21, issued since the debate to which I refer, and I find therein an article signed Matthew Marshall. I have no personal acquaintance with him, but I understand that he is one of the trusted financial editors of the New York Sun, who every Monday morning gives to the public an article on the monetary situation. I read from this article the following statement of the facts as they now exist in the city of New York:

> Notwithstanding the large arrivals of gold from Europe and the increase of their reserves, the banks of this city still refuse to pay their depositors in currency, and will do no more than certify checks as good through the clearing-house. Consequently currency can be had in considerable amounts only by paying, as it is said, a premium upon it, which is now about 3 per cent, but the transactions are really sales of claims against the bank at 3 per cent discount. That is to say, the money which a depositor had to his credit on a bank's books a month, and which was then worth par, will now bring only 97 cents on the dollar, with the prospect of a still further depreciation. Many depositors, therefore, instead of buying currency with their checks, pay out the checks themselves to their creditors, who pass them on in turn to other creditors, and thus a new kind of currency has been added to the miscellaneous varieties of it already in circulation. We had: 1, gold coin; 2, silver dollars; 3, silver fractional coin; 4, gold certificates; 5, silver certificates; 6, old legal tenders; 7, Sherman-act Treasury notes; 8, national-bank notes; and now we have a ninth kind in certified bank checks, the issue of which on an extensive scale by the banks of the South and the West is proposed as a means, in the absence of other money, for moving the crops to market. How grievously our whole currency system needs reorganization and reform this bare statement of its chaotic condition sufficiently testifies, but we seem to have no financiers competent for the task.

I quote further from this interesting article:

> The question is, how much longer our banks can, without bringing on a catastrophe, continue in their course of increasing the volume of clearing-house certificates and of denying to their depositors payment in lawful money of their checks. Thus far depositors have been very patient, and have good-naturedly submitted to the enforced scaling down of their dues; but they can not be expected to submit to it forever. A bank that can not or will not pay claims against it in the regular course of business is, by the decisions of our State courts, insolvent, and, if the bankrupt act of 1867 were now in force, a refusal by a bank for forty days to pay checks on demand would be a commission of bankruptcy.

This extract from the article shows the situation in the city of New York. There can be but little doubt about the truth being as stated by this writer, but the exact facts as they exist are called for by the resolution of the Senator from Kansas, which

I hope either by its immediate adoption by the Senate or its speedy report by the Committee on Finance, if it shall be thought best to send it to that committee, will be procured for the use of the Senate.

I do not take kindly to the suggestion of the Senator from Massachusetts that it is well for an officer of the Government of the United States to step outside of the law that creates the duty of his office. It may be that Gen. Grant said that a good subaltern officer is one who disobeys orders. I have been taught, on the contrary, that the highest duty of a military subaltern is obedience to the order of his superior. I think one of the most unfortunate results that obtained during our war in the way of distress, of outrage, of riot, and rapine was when an officer in the northern part of Alabama, reaching a section of that State, said to his command that he proposed to close his eyes to their actions for two or three hours.

I do not believe in officers of the Government closing their eyes to that which is in violation of the law, either civil or military. If they do so, it certainly should be done in such open manner as to challenge the criticism and, if the facts justify or demand it, justify the support of the people of the United States.

I do not see how any harm can come by a full exposé of the present condition, believing, as I do, that what has been done has been for the best. I hope the resolution of the Senator from Kansas will speedily pass, and that we may obtain the information called for by it.

Mr. McPHERSON. Mr. President, since I have been a member of this body in all the mutations of party politics I have never visited a Department of the Government and asked for information upon any subject that it has not been promptly given me. With one single exception, to which the Senator from New York has referred, I think I have never offered a resolution in this body calling for information from any of the Departments, because of the fact that it was infinitely easier for me to obtain it by visiting the Department and simply preferring the request.

Now, sir, the resolution offered by the Senator from Kansas evidently has at least one object. The desire for information is a very proper one, but the Senate has an organ in this body in the person of its Finance Committee. It has been the universal practice of this body when important matters of a financial character came before it to refer the subject of the resolution to the Finance Committee, and, if necessary, have the committee bring the officer of the Government, who has been criticised in the country, before the committee and investigate each and every matter involved in the criticism.

Mr. PEFFER. Mr. President——

Mr. McPHERSON. No, I do not yield to the Senator at this moment.

The VICE-PRESIDENT. The Senator from New Jersey declines to yield.

Mr. McPHERSON. Mr. President, as long as we have that organ constituted as it is, made up of both political parties, and composed of gentlemen representing every idea with respect to the bills and resolutions that may be now pending before this body, surely no Senator will for a moment believe that there would not be a fair and a proper investigation of the whole subject and such a report made to this body as is proper for the committee to make.

Now, as to the alleged technical violations of law. The people of this country are in a suffering condition. A condition of panic exists everywhere in this country because of want of money. If there has been a technical violation of law, the Committee on Finance will investigate it and report, and then the Senator from Kansas will make such criticism upon it as he pleases. But to arraign before the people of the country at this particular time an officer of the Government charged with the great responsibility of preventing a worse panic existing among the industries of the people, and to do it in this manner, seems to me to be very unseemly. I do not think it is improper.

The resolution should go to the Committee on Finance. I have no doubt the honorable chairman of that committee would immediately set about an investigation, and when the investigation is made it will be reported. No Senator has a right to complain of any dilatoriness on the part of the Committee on Finance in reporting back to the Senate measures which have been submitted to it, either with one recommendation or another.

Mr. WOLCOTT. Mr. President, I think if we want this information it is rather important that the resolution be not referred to the Finance Committee. I think the course of the Finance Committee as shown in the last report which we had manifestly foreshadows what would be the fate of this resolution. We would undoubtedly have a report from the Finance Committee to the effect that it is of the utmost importance we should have this information, but owing to the existing condition of affairs and the necessity of inspiring confidence we ought not to press it. I suggest that if we want the information the call for it had better go direct from the Senate.

Mr. GORMAN. Mr. President, I am aware that it is the custom of this body to pass any resolution asking for information from a Department of the Government that any Senator may think he requires in the discharge of his public duty, but I submit that there are exceptions to all rules. There comes a time, as it has come before, when patriotic duty would require nonaction if action were to bring further distress upon the people of this country. There are some things, Mr. President, that we are bound to take note of. They are as public as if they were in the written law. For the third or fourth time during our present monetary system we have reached a period when the national banks of the country are powerless to furnish sufficient currency to provide for the current business.

Mr. President, it is not a new case. The same thing occurred in 1873, 1877, and 1890, and now, in 1893, when it was impossible for the banks to literally comply with the law. They violated it by refusing to pay checks when presented, though the amount was on deposit. They issued clearing-house certificates by the millions, as they are doing to-day. They did it openly. The Secretary of the Treasury and the Comptroller of the Currency, whose sworn duty it is to enforce the law, may not have had official information of it; but they must know that the strict enforcement of the law would close the doors of many of the best banks in the country. Such action would not only impair the usefulness of the banks, but would affect injuriously every commercial interest. Mr. President, never during the existence of the national banks has a period arrived half as threatening as the one which confronts us now.

Mr. HOAR. Will the Senator from Maryland allow me to ask him a question?

Mr. GORMAN. With great pleasure.

Mr. HOAR. Suppose the Comptroller of the Currency shuts up the banks, will not the result be that everyone of them will have to be put into the hands of a receiver and nobody will get any money until the receiver pays it out?

Mr. GORMAN. Why, Mr. President, the Senator states the law. He knows that is the law; and the mover of this resolution, and every gentleman of intelligence in the United States, understands that that is the fact. There is not a man I know of outside of this Chamber, no matter what his views may be as to the remedy, who does not know that there is a technical violation of the law, and that it is the patriotic duty of the Secretary of the Treasury to forbear and not add to the distress, but wait until we shall act and give relief.

Now, Mr. President, heretofore on each of the occasions when there was such action as the banks are now taking, there was but one remedy. There is but one remedy under the system of finances by which the country is operating. The banks are powerless to act except as they have done. No relief ever has been given the country except through the Treasury Department, which came to their relief by the sale of bonds and the deposit of the currency in the national banks, or anticipating the interest on the public debt, thus increasing the currency in circulation. That was the action on each of the occasions of congestion and panic during Gen. Grant's Administration, and afterwards by the Senator from Ohio [Mr. SHERMAN] during the Hayes Administration. When he was Secretary of the Treasury, he was criticised for placing hundreds of millions in the possession of the national banks.

Under Mr. Cleveland's former Administration, Mr. Manning, Secretary of the Treasury, deposited sixty-odd millions within a few months in the national banks, because the banks were then helpless as they are now. They could not then honor all demands. The relief given by the deposit of Government funds stayed the panic. But now Mr. Carlisle, the Secretary at the head of the Treasury Department, is powerless to give relief for the reason that the money is not in the Treasury and bonds can not be redeemed. You have left nothing there to redeem them with. No deposit can be made in the national banks, because the money is not in the Treasury.

And now, Mr. President, by the action of this august body, by the passage of a resolution of inquiry so drawn that it would be understood by the country—and I take it it would be understood by the Executive—to mean an expression of opinion by the Senate that he must enforce the law. To do this, without first having provided the Treasury with money to relieve this distress, means increased embarrassment. Congress had better never have assembled than that such action should be taken.

As I understand this matter, we have met here not to add to the embarrassment of the people of the country, not to bring further distress upon financial institutions or to throw more labor out of employment, but we have met for the purpose of giving relief. In whatever form it comes, divided as we are on both sides of the Chamber as to the details of the bill to be passed, I do not

doubt (as I never have doubted the wisdom of any Congress) that we can rise above our own views, our own partisanship, sink it all in this hour of distress—a distress greater than any which has occurred from 1861 until now. Mr. President, under such circumstances the rule of the Senate, the custom of the Senate, more binding than law, that every member shall have what information from a Department he may deem necessary for his public duty, ought, in my judgment, to be set aside in the interest of the common weal.

Mr. President, I trust the resolution will be referred to the Committee on Finance for its consideration.

Mr. HILL. I am as anxious, sir, as the Senator from Maryland can possibly be to relieve the financial distress of this country. I will go with him as far as he will go in the effort to keep out partisanship in the disposition of the financial question. From the hour we first met in this body my efforts have been toward bringing about a proper solution of the question; and my efforts have been just as zealous, just as earnest, as have been the efforts of the Senator from Maryland. My position upon this great financial question has not been misunderstood. I spoke upon this subject last February when I thought I saw the danger coming to the country. I did not hear the eloquent voices of some other gentlemen aiding me in that contest.

What is the precise question? Gentlemen do not understand one another upon the other side of it. I thought I heard an intimation that there had been something wrong somewhere. I judged that much from the suggestion of the Senator from Massachusetts. He disavowed any intention of saying that there had been any wrong anywhere. Then the Senator from Maryland steps forward and says, "Yes; there has been a violation of the law, a conceded violation of the law, on the part of national banks, winked at by officials." That is the idea we get from his remarks. I do not know whether that is true or not. I think, whether it is true or not, it ought to be investigated.

What do you want to refer to this committee? Is it a committee of investigation to investigate the acts of the Comptroller of the Currency? No. For what purpose is the resolution to be referred? As I understand the Senator from Maryland, the only object of a reference to the committee is for the purpose of not acting upon it, for the purpose of suppressing it in the interest of the public welfare. That seems to be the idea. There has never been a cause so bad in the history of the country that its advocates have not always felt that they acted in the interest of the public welfare.

The resolution is a simple one. What is it? It simply asks the Comptroller of the Currency to give us certain information in his possession as to what has been done in his office, or by the national banks of the country, so far as he understands what has been done. The details of the resolution I do not propose to give. What is the objection to it? Is it a proposition to try the Comptroller of the Currency? Is it a proposition to arraign the national banks for a violation of their duty? No; it is a simple, ordinary, and proper resolution; and I say courtesy to the distinguished Senator from Kansas entitles the resolution to be passed here and now. What reason can there be given against it?

The Senator from Maryland says there are great times in the history of the country when we must rise above partisanship. I agree with him. What has that to do with this question? There are great times when we must be equal to the occasion. What has that to do with suppressing an ordinary resolution of inquiry? The resolution does not provide for the appointment of a committee to investigate anybody. The resolution does not provide for making charges against anybody.

Are you afraid of the facts? This very debate will cause inquiry into what has been done. This debate in the Senate of the United States will direct attention to the question, and every person will be apt to inquire to-morrow morning what has been done by national banks, and what has been done by the Comptroller of the Currency, that the Senate of the United States dare not pass a simple, ordinary resolution of inquiry? What are you afraid of? Are we not trying to quiet the existing panic? Is the panic to be quieted by such proceedings as this? Are resolutions calling for information to be suppressed, put down, shelved, put into a committee and there pigeonholed? Can we not stand the light of day on this subject? Can not the acts of our officials, whoever they may be—and I myself make no charges against them whatever—stand a simple inquiry?

What will this committee do? The Senator from New Jersey says that the committee will look into the matter, and the fair inference from his remarks is that if they find anything wrong they will not report the resolution, but if they find everything has been right, then they will report the resolution. Why can we not make that inquiry now? I appeal to the Senators around this Chamber that there is no reasonable, tenable objection that is presented why the resolution should not be passed. Why should not the distinguished Senator from Kansas be treated the same as every other member of this body? He has the same rights to offer a resolution and have it passed.

How long is it since a resolution of inquiry has been referred to a committee before being allowed to pass? I have not heard it in the last year and a half that I have been here. Therefore, I say to you it is not a question of patriotism. It is not a question as to what should be done in this great hour of distress. It is a simple, ordinary question of Senatorial courtesy; and I have heard no reason yet presented why the resolution of the Senator from Kansas should not be passed. I do not agree with him in his peculiar notions of finance. I do not belong to his party. He has his own views upon these questions, but he has a right to have any proper, legitimate information spread upon the records of the Senate, and there can be no objection to it.

Mr. WASHBURN. Mr. President, I should like to ask the Senator from New York a question before he sits down. Supposing that this resolution is passed and these inquiries are made of the Secretary of the Treasury, and, in response, he states to the Senate what every intelligent business man in this country knows to be the condition of things in the city of New York, so far as the national banks are concerned, and supposing the Secretary answers in the line of exact truth, what does the Senator propose to do about it? What does he propose thereafter that the Senate shall do?

Mr. HILL. I have made no proposition as to what we shall do. That is for the Senator from Kansas to say. In acting under his oath of office, he must be the judge of what it is his duty to do under those circumstances. Possibly I shall do nothing but listen to the debate, as I have done most of the time since I have been here, but the Senator from Kansas will have the right to judge for himself what he will do. It is not for me to judge for him.

Mr. WASHBURN. It seems to me if the resolution is passed and we receive the reply which is inevitable, that it will be notice to the Comptroller of the Currency to administer the law literally and technically: the result of which will be to close almost every bank in the country and place it in the hands of a receiver. That is a calamity which, it seems to me, we should look forward to with great hesitation. I do not believe it is the duty of patriotism, of party, or of good common sense to inject anything of that kind into the present deplorable condition.

Mr. MITCHELL of Oregon. I desire to call the attention of the author of the resolution and the Senate to its phraseology. If it were a resolution merely calling for certain facts, then I should be disposed to agree with the Senator from New York [Mr. HILL] and the Senator from Kansas [Mr. PEFFER], who offered it; but a careful examination of the resolution will show that something more than that is involved and implied in the resolution. For instance, take the first clause, which reads as follows;

Resolved, That the Secretary of the Treasury be directed to inform the Senate—

I call especial attention to this—

First. Whether, and in what respect, the national banks, or any of them, in the cities of Boston, New York, and Philadelphia, are being now conducted in violation of law.

That calls for no fact whatever; it calls simply for a conclusion, an expression of opinion on the part of the Secretary of the Treasury as to whether the banks in these three several cities are or are not being conducted according to law. There is in this first resolution, I respectfully submit, an implication, first, that the banks are proceeding in violation of law; secondly, there is an implication in the request of the Secretary of the Treasury that that violation of law is being winked at or carried on with the approval first, of the Secretary of the Treasury, and, secondly, with the approval of the Comptroller of the Currency—an implication which I do not think ought to be cast upon any public officer by any simple resolution calling for information.

It is the privilege of the Senate, desiring information, it seems to me, to specify the facts in reference to which it is desirous of being advised, and then to call upon the Secretary of the Treasury to furnish the information. But to adopt a resolution calling upon the Secretary of the Treasury to state whether certain banks are proceeding "in violation of law," is a resolution for which I do not like to vote.

I am no defender, of course, of the Administration; it has its defenders here; but I believe in the honesty and integrity of both the Secretary of the Treasury and the Comptroller of the Currency. I believe the present Comptroller of the Currency to be a very able, dignified, and honest man, thoroughly capable of conducting the business of his office. I believe he is earnestly and faithfully wrestling with the condition of the country to-day in his official capacity, and doing the best he knows how, and as well as any man could. I should not like, therefore, so far as I am individually concerned, to vote for the first clause of the resolution, which carries with it an implication of wrongdoing,

first, upon the part of the banks, and secondly, upon the part of the Secretary of the Treasury and the Comptroller of the Currency.

Now, let us see the second request. It is objectionable, also, although not to the same degree as the first:

Second. Whether said banks are paying depositors' checks promptly in lawful money.

Mr. HILL. What objection is there to that?

Mr. MITCHELL of Oregon. I should think a resolution in this form would be infinitely better:

Second. Whether the national banks or any of them, are paying depositors' checks promptly, and in what kind of money.

Then we shall get the facts.

Mr. HILL. Is there any difficulty with the Secretary of the Treasury determining what is lawful money?

Mr. MITCHELL of Oregon. The Senate of the United States is just as capable as the Secretary of the Treasury of determining what is lawful money and what is not lawful money. What we want to know is as to the kind of money which is being dealt out for those checks.

Mr. HILL. Will the Senator allow me?

Mr. MITCHELL of Oregon. Yes, sir.

Mr. HILL. When the Secretary tells us what kind of money is being paid out, he can describe it as lawful money or unlawful money, or he can describe it in any way he pleases so that the Senate can tell.

Mr. MITCHELL of Oregon. I think that would be as objectionable as the part to which I attract attention. What is the third request?

Third. Whether said banks, or any of them, are demanding rates of interest higher than those provided by law for the loan of money or in discounting notes and bills.

There we again apply not for a fact, but for an opinion of the Secretary of the Treasury. The resolution ought, in my judgment, if we desire to be advised as to the facts, to read something like this:

Third. What rates of interest said banks, or any of them, are demanding for the loan of money or in discounting notes and bills.

We shall then be calling for a fact, not a conclusion; and it would be for the Senate to determine whether the kind of money that is being proffered in liquidation of checks is lawful money or not.

I shall cheerfully vote for a resolution calling for the facts, but I do think the resolution should be amended so as to leave no implication at the outset of wrongdoing upon the part of the Secretary of the Treasury and the Comptroller of the Currency.

Mr. BUTLER. Mr. President, if I took the view of these resolutions which the Senator from Oregon evidently takes, I should certainly not vote for them; but as I understand the English language, I can not, for the life of me, understand how any Senator or anybody else can discover in the language of the resolutions the slightest purpose to reflect upon the Comptroller of the Currency or the Secretary of the Treasury. They are resolutions couched in the usual language, purely and simply of inquiry.

Mr. MITCHELL of Oregon. I beg pardon. If the Senator from South Carolina will allow me, I do not think he can point to a single resolution ever proposed, much less adopted, by the Senate of the United States, in which the head of any Department was called upon to say to the Senate whether a certain law was being violated or not.

Mr. BUTLER. The resolution does not ask him whether he is violating the law. The first clause says:

Whether and in what respect the national banks, or any of them, in the cities of Boston, New York, and Philadelphia are being now conducted in violation of law.

Not that the Comptroller of the Currency is violating the law; not that the Secretary of the Treasury is violating the law; but whether, from his official position, he can inform the legislative department of the Government that any of these banks is conducting its business in violation of law. I can not understand what harm or injury is to result to anybody from that information. On the contrary, I do understand why very great good may result.

The Senator from Minnesota [Mr. WASHBURN] informs us that everybody knows the national banks have violated and are violating the law. Well, if everybody knows it, what harm can result if the Senate should be informed officially of that fact?

Mr. WASHBURN. Harmed in what respect?

Mr. BUTLER. If it is such a grave matter—if we are right on the verge of a precipice—if there is an abyss just in front of us, and we are in danger of going over that precipice by the publication of this information, we can consider it in executive session.

But the Senator from Massachusetts [Mr. HOAR] has informed us that the Comptroller of the Currency has not prodded the national banks, has not held them up to a strict accountability under the law. He does that upon his official responsibility. I have no complaint to make if he has done the best he can; but what harm is to result to the country if the Senate is informed officially of that fact? That is all that is asked.

I suppose I stated in the outset that if there was any purpose or design to arraign the Comptroller of the Currency or the Secretary of the Treasury I would be the last man on this floor to vote for such a resolution; but, as the Senator from New York [Mr. HILL] has stated, it is the ordinary, every-day resolution of inquiry for information; and if it should turn out that these banks have been violating the law, if it should turn out that they are responsible for the present condition of affairs, instead of the Sherman act, it seems to me we could legislate more intelligently if we knew that fact.

I make no accusations against the national banks. I have my own individual opinion as to the causes of the troubles which are upon us; but I do not understand that these institutions are hedged about by any special protection or divinity which would protect them against the inquiries which the Senator from Kansas has very naturally made.

For one, I shall vote against referring the resolution to the Committee on Finance. There is nothing for the committee to investigate. The resolutions do not call for an investigation; they simply call for information which the legislative department of the Government has a right to have, and without which, possibly, it may not be able to legislate intelligently.

I suppose, from what I have heard, that the Comptroller of the Currency has done the best he could, and is doing the best he can; the Secretary of the Treasury has perhaps done the best he could under the circumstances; but I have yet to understand why any contingency, however grave and serious it may be, can protect anybody for violating the law when the balance of the country is held to a strict observance of it. There is no justification for any such imputation. If these institutions have flown in the face of the law, and are continuing to do so flagrantly and violently, this body ought to know it, and know it promptly, in order that they may apply the proper remedy and prevent the repetition of the offense.

I would state one fact which comes within my own personal knowledge. I met a gentleman on a train last night, who informed me that, as president of a large manufacturing establishment in the South, he had deposited in one of the banks of the city of New York a large amount of money, and had telegraphed and written to that bank to send him $5,000 of currency with which to pay his laborers on Saturday night.

Mr. ALLISON. A national bank?

Mr. BUTLER. I am not prepared to say that it was a national bank—I do not know about that—but it was one of the banks of the city of New York. He said that that bank at first declined to do it, but finally sent him $5,000 in currency and charged him 1½ per cent for sending him his own money. I said to this gentleman, "You certainly did not pay it?" "Why," said he, "I was obliged to pay it." "To pay 1½ per cent for sending you your own money?" "Yes, sir." That is one instance. As has been stated by some Senator, I believe that a check on a man's own deposit has to be discounted at 3 per cent.

I have heard a great deal about the want of confidence in the country, brought about by the Sherman act. The Sherman act had about as much to do with that want of confidence as a pebble in a mill pond has to do with stirring the waters. It is, unless we are all misinformed, a want of honesty—and we may as well speak plainly—and the sooner the country finds it out the better it will be for everybody.

There are a good many things, perhaps, which might be said in this connection, but I shall defer, and shall content myself with saying and repeating substantially what has fallen from the Senator from New York—that this is an ordinary resolution of inquiry submitted by a Senator upon this floor, we must assume in good faith, for the purpose of procuring information to enlighten the legislative mind.

Mr. HARRIS. Will the Senator allow me to ask him a question?

Mr. BUTLER. Certainly.

Mr. HARRIS. I ask the Senator if he is sure that this is the ordinary resolution of inquiry? In view of the criticisms made by the Senator from Oregon [Mr. MITCHELL], the first inquiry is, have certain banks executed the law in the performance of their duty? That is an inquiry for a legal conclusion.

I think the resolution ought to be modified in form. I have no objection to inquiry being made of the Treasury Department for any fact within its keeping, but why should we ask that Department for a legal conclusion? Let the Senator from Kansas modify his resolution, asking for any number of facts he wants, and I will go with the Senator from South Carolina to enable him to obtain them; but why should we make the inquiry of that

Department? If the Senator wants legal conclusions, the resolution ought to be addressed to the law department of the Government, the Attorney-General. Therefore, I do not think it is quite the ordinary resolution of inquiry.

Mr. BUTLER. Mr. President, that is a criticism of the language of the resolution in which, of course, the Senator from Tennessee may indulge. I take a different view. I think this is simply a resolution of inquiry addressed to the proper officer of the Government. If legal conclusions are requested, that officer can very easily refer the resolution to the Attorney-General for his judicial opinion as to whether the banks have violated the law; but the reply of the Attorney-General, I think, to an inquiry of that kind would be, "I have no information upon which to base a judgment and, therefore, I am unable to answer the inquiry."

I am not at all particular about the phraseology of the resolution, but, I submit, in common fairness not only to the Senator from Kansas, but to this whole body, that the resolutions ought to be passed, and the information, if possible, ought to be furnished to the Senate.

My experience in resolutions of inquiry has been, in days gone by, that the executive officers send to the Senate just such information as they please, and we have no means of compelling them, which I have yet discovered, to disclose facts which they choose to conceal. I do not mean to say or intimate that this official would do that, but I do say that within my knowledge it has been done in the past. I take it if the Comptroller of the Currency or the Secretary of the Treasury should conclude that the information would be incompatible with the public interests—I believe that is the stereotyped phrase—the chances are that he would decline to give it, and perhaps give the reasons for his refusal.

Mr. FRYE. That phraseology is never used with the Secretary of the Treasury.

Mr. BUTLER. I do not say it ever has been done.

Mr. HOAR. I merely wish to suggest to the Senator from South Carolina, as he will recollect in a moment, that we do not put that phrase into any request, except requests made of the President.

Mr. BUTLER. I understand that that phraseology is only used in requests sent to the President, and sometimes in requests to the Secretary of State in reference to matters relating to foreign governments. But the Secretary of the Treasury will send just such information as he pleases. If he gives it all, so much the better.

I have not been able, however, to share with other Senators in the belief that we are on the eve of such a great and solemn crisis, as the expression is, that this body may not be informed of a public fact with which it may have to deal.

Mr. CULLOM. Mr. President, when the resolution came up this morning it occurred to me that possibly it ought to be referred to the Committee on Finance, and I believe that I made a remark of that kind in the hearing of the Senator from Massachusetts [Mr. HOAR]. I do not see, however, that there is any probability whatever that any information will be given by the Secretary of the Treasury or the Comptroller of the Currency which will disturb public affairs, because I am not one of those who believe that there is any information to be given which would do so.

I believe, in the first place, that the Secretary of the Treasury and the Comptroller of the Currency will state the exact facts, and all of them, for that matter, and that when they are all stated nobody will be hurt, in my judgment.

Mr. COCKRELL. Would it not inspire confidence on the part of bank depositors?

Mr. CULLOM. On the contrary, if the facts should be stated as I have indicated, and it is found that the banks of the country and the business of the country have been going on in a legitimate, lawful way, instead of doing injury, the information will do good.

Whatever difficulty may have existed in New York, in Boston, and in Philadelphia as to the manner of doing business by the banks of those three great cities, I desire to say in behalf of the banks in my own State, I believe in the whole West, and in the great city of Chicago particularly, there has not been an hour at any time during this panic, as it is called, when, if a man had the money in a bank and presented his check, he could not get the money for it, and that is the case to-day.

While I am not disposed to criticise the action of the New York and other Eastern banks upon the question of issuing clearing-house checks, because there may possibly be a condition there which justifies it, yet I am inclined to believe that if the banks of those cities had gone straight along, as did those of Chicago and St. Louis, they would have been paying checks to-day, instead of using these other instruments of writing as a mode of settlement. Whatever be the case, however, I desire to appeal to my friend from Kansas to put his resolution in a plain, straight manner, asking for the facts; then I shall be ready to vote for it, and I am inclined to think other members of the Senate will do the same thing.

Mr. HILL. Will the Senator allow me a moment?

Mr. CULLOM. Certainly.

Mr. HILL. With the consent of the Senator from Kansas, I offer the following as a substitute for his resolution:

First. What facts may be within his official knowledge which may show that any national banks in the cities of Boston, New York, and Philadelphia are now being conducted in violation of law, if any such are so conducted.

Second. Whether such banks are paying depositors' checks promptly, and in what kind of money.

Third. What rates of interest said banks, or either of them, are demanding or receiving for the loan of money or in discounting loans and bills.

I think that will accomplish the object the Senator from Kansas has in view.

Mr. MITCHELL of Oregon. The first clause, I think, is about as objectionable as the original.

Mr. HILL. The first clause asks an officer of the Government for any facts within his official knowledge showing a violation of the law. If that does not accomplish the object, then I do not know how to frame a resolution.

Mr. PEFFER. Will the Senator from New York again read the first clause?

Mr. HILL. It reads:

First. What facts may be within his official knowledge.

Mr. MITCHELL of Oregon. I suggest that the Senator insert "if any."

Mr. COCKRELL. Say "What facts, if any."

Mr. HILL. I will modify it so as to read:

First. What facts, if any, may be within his official knowledge which may show that any national banks in the cities of Boston, New York, and Philadelphia are now being conducted in violation of law, if any such are so conducted.

The VICE-PRESIDENT. The Chair will state to the Senator from New York that the amendment offered by him can be read for information. The Chair understands, however, that the proposed amendment is not in order during the pendency of the motion of the Senator from Massachusetts to refer to the Committee on Finance.

Mr. HOAR. I should like to make a suggestion to the Senator from New York.

Mr. COCKRELL. The Senator from Illinois [Mr. CULLOM] has the floor.

The VICE-PRESIDENT. The Chair so understands.

Mr. CULLOM. I yield to the Senator from Massachusetts for an inquiry.

Mr. HOAR. I beg the Senator's pardon. I suggest to the Senator from New York that, instead of the phraseology which he uses, he use some such language as this:

Tending to affect the question whether any banks have complied with their legal obligations.

It seems to me quite clear that if it should turn out that any bank in the country has violated the law, if there be any fact bearing upon that question, it ought to come to us, and with it the excuse or apology or otherwise, that that should come in also and should not be excluded.

If the Senator will allow me to put a simple illustration. We will suppose that there is a bank in the city of Boston where the Senator and I each have a deposit. That bank has $10,000 in currency, and that is all it has. Of course I do not mean to state an extreme case of that kind as probable, but I put it in that way to illustrate my meaning. Suppose I send in a check for $10,000 and the Senator from New York sends in a check for a like amount, and the Senator from New York is asked by the president of the bank, "What are you going to do with that money?"

Mr. HILL. I think I should not tell him.

Mr. HOAR. I think you would. The Senator from New York replies, "I am going to pay 1,000 workmen $10 apiece, on which they can support their families for the next week." Suppose the president would say, "Mr. HOAR, what are you going to do with that money," and I replied, "I am going to take my family to Europe, and want to make a deposit of $10,000 with the Barings," and the president of the bank would say, "I can supply but one of your demands, and I think the demand of the Senator from New York is the one which public interest requires me to comply with." That is in principle and substance what some of the baks are doing. I do not know how many. Will not the Senator so modify his request for the information that the attendant explanatory facts may come in, and not merely the bald, naked refusal to pay the check?

Mr. HILL. In regard to the instance which the Senator from Massachusetts gives, I simply say that while the transaction may be a perfectly proper one, and I should appreciate the favor of the cashier of the bank in permitting me to get my money, yet,

nevertheless, the Senate is entitled to know precisely what the transaction was.

Mr. HOAR. That is what I want.

Mr. HILL. And it does not change it in any form to call it a violation of law or anything of the kind. I do not think it is offensive in the slightest degree to ask an officer whether any bank in the country has violated the law.

I do not care about the precise phraseology of the resolution. The criticism was only made when the Senator from Oregon rose. It had not been criticised before. The Senator from Kansas is entitled, and we are entitled, to the information, whatever form of language may be adopted.

Mr. CULLOM. I had about concluded what I had to say, but I yielded to my distinguished friend from Massachusetts [Mr. HOAR] because he seemed to be very anxious to make extended inquiries.

Coming back to the question, it is not very material as to what language is used in connection with the subject. The country knows what is desired; and the resolution in any form will procure, I have no doubt, the information. I think, as a matter of criticism, the resolution of the Senator from Kansas might be modified with great propriety, but, so far as I can see, it is not going to hurt anybody if it stands as it is.

Mr. FAULKNER. I should like to ask the Senator from Illinois a question, if he will permit me.

Mr. CULLOM. Certainly.

Mr. FAULKNER. I should like the Senator from Illinois to state a single instance which has occurred in the Senate—certainly none has occurred since I have been one of its members—where a resolution of inquiry has been presented in this form, and the chairman of the committee having jurisdiction over the subject-matter of the resolution has asked its reference to the committee, so as to determine whether it were necessary to enlarge its terms or otherwise, that the request has ever been denied?

Mr. CULLOM. In response to the Senator from West Virginia, in the first instance, I will say the reference of the resolution to the Committee on Finance was not asked by the chairman of the committee, but by the Senator from Massachusetts [Mr. HOAR], and the chairman of the Finance Committee subsequently indorsed the request in about as mild a way as it could be done.

I agree with the Senator from West Virginia that, ordinarily, when the chairman of a great committee asks that any resolution of inquiry shall be referred to his committee, it is proper and right that it should be done; but there does not seem to be enough to this resolution to justify any long debate about it in the first place, or its reference to any committee, because it is a resolution, if it be in proper form, similar to resolutions offered by Senators almost every day during a session.

Mr. FAULKNER. The Senator will permit me again. Has not the importance of the action which the Senate has uniformly taken been demonstrated in this very case, in which we find that the Senator from New York, in order to reconcile his views upon this question with the views of other Senators, has materially and essentially modified the language of the resolution as originally proposed by the Senator from Kansas?

Mr. CULLOM. Generally it is wise to refer important resolutions to the committee having the subject-matter in charge. I agree to that; but, as I said before, this is a simple resolution of inquiry, and most of the information asked for, I have no doubt, is already in public documents. There seems to be a desire to find out a few additional facts, and it is rather magnifying the consequence of them by referring the subject to a committee. If anything is calculated to disturb the public mind, it is the effort on the part of the Senate to make this a great question. So far as I am concerned, I am willing to vote either way without discussing it further.

Mr. ALLISON. Mr. President, as an ordinary rule, I believe, when a Senator desires information upon any matter in any of the Departments of the Government, he is clearly entitled to have that information, and as a general thing we pass resolutions *nem. con.*, asking for information; but an examination of the resolution of my friend from Kansas, I think, shows it to be a resolution of very wide scope. I do not know that it is wise to pass it without some modification—even, perhaps, a further modification than that suggested by the Senator from New York. The first inquiry contained in the resolution is:

> Whether, and in what respect, the national banks, or any of them, in the cities of Boston, New York, and Philadelphia are being now conducted in violation of law.

Manifestly the Secretary of the Treasury has no information in his office that any or all of these banks are being conducted in violation of law. It will be necessary, therefore, for him, before he can answer the resolution, to make inquiry of each and every bank in the cities of New York, Boston, and Philadelphia as to what they are doing, in order to know whether or not they are acting in violation of law.

I do not know how many banks there are in the city of New York, but I understand there are fifty-four national banks associated together in what is known as the clearing house. The Senator from Massachusetts [Mr. HOAR] can probably inform me how many national banks there are in Boston. I should say there must be thirty or forty of them, and probably a like number in the city of Philadelphia.

The pending resolution requires the Secretary of the Treasury to give us information as to each and all of these banks—because he must inquire of each and all of them before he can give us information—upon the topic whether or not they are conducting their business in violation of law. That, I submit, is a pretty extensive inquiry to be made by the Secretary of the Treasury, and he might possibly inform us that he had no appropriation which would enable him to make such a careful investigation.

The second inquiry is:

> Whether said banks are paying depositors' checks promptly in lawful money.

With all deference to my friend from Kansas, who sits near me, I do not like that phraseology. It is an implication in justification of the conduct of the national banks of the city of New York, which I think has been, and probably is now, reprehensible. Those of us who were here some years ago remember very well that the national banks of the city of New York refused to take upon deposit silver certificates issued by the Government, and in 1882, now eleven years ago, we were compelled by law to say that no national bank should be a member of any clearing-house association which did not receive on deposit silver certificates; and it is a matter of fact well known—at least, very well known in this body and elsewhere—that those national banks from that hour to this have, wherever they could, discriminated against silver certificates.

They have pushed them out and out into the remote regions of our country and held, where they could, the greenbacks and the gold certificates. Much of the currency famine that has recently existed in the city of New York arises from the fact that the banks have not held in their vaults as a part of their reserve the silver certificates issued under the authority of the United States, nor have they held there any silver dollars. The silver certificates and silver dollars have been pushed out into the remoter regions of our country.

By implication at least, the Senator from Kansas says the banks in these great cities ought to pay all their depositors in lawful money of the United States, when we know that silver certificates are not lawful money. Therefore, for one, I do not wish by implication to sanction, in this body, the idea or suggestion that for a moment we here condone the banks for discrediting the silver certificate of the United States which calls for lawful money and which is a legal tender in the payment of debts and in ordinary transactions.

The third inquiry made by the Senator from Kansas is pertinent and proper. If any national bank in the city of New York, or Boston, or Philadelphia, or anywhere else, is exacting from the people of this country who do business with it unlawful interest, it is a violation of law which should subject it to the severe scrutiny of the Comptroller of the Currency, and, if need be, impose upon it such penalties as the law has provided against the payment of unlawful interest.

Mr. President, I criticise in this way the resolution, for the reason that I fear it will not accomplish in detail what the Senator from Kansas may have in his mind. I confess I have not heard him explain in detail precisely what he wishes to reach. If it is that the banks are receiving unlawful interest, they should be condemned for it. If it be that they are paying out silver certificates instead of lawful money to their depositors, they should be commended for it. Therefore I would not condemn them even impliedly for not paying their depositors in lawful money.

If the Senator from Kansas and other Senators who support the resolution desire merely to raise the question whether the system adopted by the associated banks in the city of New York, and in the cities of Philadelphia and Boston, are issuing their certificates and that those certificates ought not to be issued, then let us make that the issue directly and squarely with the banks and with the Secretary of the Treasury. Let us inquire whether the banks are issuing certificates of the associated banks and whether the certificates are being circulated as money in violation of law, and then, if we choose, let us deal with it by prohibitions or by condemnations as we may determine.

So I would prefer that we should go even beyond the suggestions made by the Senator from New York, and make specific inquiries, in order that we may know what the banks are doing in violation of law. If that is the point aimed at (and I suppose

there is something of that kind aimed at in the resolution) I am willing to pass the third proposition without debate and without suggestion, because no national bank, especially in this stress of our country, should be permitted for a moment to act as a miser and Shylock, in exacting unjust and usurious interest in violation of law.

Therefore I am in sympathy with my friend with respect to that inquiry. I should be glad to know whether the national banks are paying their depositors in the currency of our country, including silver certificates as well as lawful money. That part is a pertinent inquiry; for if I am a depositor in a national bank, whether in the city of New York or elsewhere, I have a right when I call for my deposit that I shall be paid in the current money at the time, and that I shall not be paid in anything else. If that is aimed at let us inquire whether the national banks in these cities are failing to pay their depositors in the current money of our country. As to the certificates of the associated banks, I confess myself that I have regarded them as somewhat irregular, and yet I am told that they do not circulate as money, and are not so intended, and if that is the case they may be within the letter although without the spirit of the law.

So, Mr. President, I would be glad to have the Senator modify his resolution to meet the criticisms which I have made and which others have made, if he will do so; and that perhaps would avoid the necessity of referring it to a committee. But if it shall be referred I do not regard the Committee on Finance now, whatever it may have been in the past, as a tomb for the burial of resolutions and propositions that may be presented to it by the Senate.

I know it has been criticised in the past in that way, but now we have a living, active, energetic committee, composed of a majority of our friends on the other side, and for us to assume for a moment that the resolution would be consigned to the tomb of the Capulets in that committee I think would be an unjust imputation. As an humble member of the committee I shall endeavor to secure whatever information the Senator desires within the fair purview of the law and make a report as early as possible if the resolution shall be referred, but I would prefer that there should be a fair modification of the resolution in order to secure whatever information we want and that is available, and that then we shall pass the resolution without debate.

Mr. McPHERSON. Mr. President——

Mr. CULLOM. If the Senator from New Jersey will yield to me, I have a letter from the Comptroller of the Currency in reference to deposits in national banks, etc., which it might be well just now to put in the RECORD.

Mr. BUTLER. Let it be read.

Mr. CULLOM. It is very brief.

Mr. McPHERSON. I yield for that purpose.

The VICE-PRESIDENT. The letter will be read.

The Secretary read as follows:

TREASURY DEPARTMENT,
OFFICE OF THE COMPTROLLER OF THE CURRENCY,
Washington, D. C., August 16, 1893.

SIR: In reply to your inquiry of this date, the following is the information requested:

Amount of capital stock of national banks at the close of business August 15, 1893, $698,638,165.

Amount of bonds deposited in United States Treasury to secure circulation at the close of business August 15, 1893, $197,040,400.

Amount of surplus belonging to national banks at the close of business July 12, 1893, date of last report of condition, $249,138,300.

Amount of net undivided profits July 12, 1893, $89,051,877.

Amount of individual deposits in national banks July 12, 1893, $1,556,761,230.

Very respectfully,

JAMES H. ECKELS,
Comptroller.

Hon. S. M. CULLOM,
Senate Chamber, City.

Mr. HOAR. I call for the yeas and nays on the pending motion.

The VICE-PRESIDENT. The Senator from New Jersey [Mr. McPHERSON] has the floor.

Mr. HOAR. If the Senator from New Jersey will allow me—I do not propose to cut off debate—I merely want to have the yeas and nays ordered on the pending motion.

The VICE-PRESIDENT. The question is on the motion of the Senator from Massachusetts to refer the resolution of the Senator from Kansas to the Committee on Finance. Upon that question the yeas and nays are demanded.

The yeas and nays were ordered.

Mr. McPHERSON. Mr. President, I would not rise to say another word with respect to this matter except that I have a deep and abiding feeling that it is one of supreme importance, which should have careful, and calm, and deliberate consideration by the Senate. I should like to inquire of any Senator who takes the opposite view what the Comptroller of the Currency is to report. Under the provisions of the resolution is he to report from day to day the examination of each of these banks so far as progress has been made, or is he to delay until such time as he obtains all the information required by the resolution and then make a single report?

Does the Senator from Kansas propose day after day, in the absence of a report, to rise in his place in the Senate and demand to know what amount of information the Comptroller of the Currency has received? We stand here, Mr. President, in the midst of great peril, in a time of great danger. It seems to me that the Senate should view this matter with composure and should not take some new and untried method of bringing the question before the Senate. The Senator from New York [Mr. HILL], in the observations which he made to this body, said that if the resolution did not suit the views and judgment of the committee, probably it would not be reported.

The VICE-PRESIDENT. The Chair is compelled to interrupt the Senator from New Jersey. The hour of 2 o'clock having arrived, it is the duty of the Chair under the rule to lay before the Senate the unfinished business coming over from yesterday, which will be stated.

The SECRETARY. A bill (S. 453) to provide for the issue of circulating notes to national banks.

Mr. HOAR. Mr. President——

Mr. McPHERSON. I yield to the Senator from Massachusetts, knowing very well——

Mr. HOAR. No, I have the floor in my own right. If the Senator wishes to continue his speech I will yield myself. I understand the pending resolution goes over under the rule, and I take the floor on the unfinished business; but I will yield to the Senator from New Jersey.

Mr. McPHERSON. Oh, no.

The VICE-PRESIDENT. Does the Senator from Massachusetts yield the floor to the Senator from New Jersey to conclude his remarks?

Mr. HOAR. I do not understand that the Senator from New Jersey desires to conclude.

Mr. PEFFER. I ask that the pending business be temporarily laid aside in order that the Senator from New Jersey may continue his remarks.

Mr. McPHERSON. I do not insist on that. I shall not interfere with the pending order.

Mr. PEFFER. Then I ask that the unfinished business may be laid aside temporarily.

The VICE-PRESIDENT. Is there objection to the request of the Senator from Kansas that the unfinished business be laid aside temporarily?

Mr. HOAR. I have the floor, I understand. I object.

The VICE-PRESIDENT. There is objection, the Chair will state to the Senator from Kansas.

Mr. BUTLER. The Senator from Massachusetts perhaps did not hear the request of the Senator from Kansas.

Mr. HOAR. I did. He asked that the unfinished business be laid aside to continue the consideration of the resolution which has been before the Senate.

Mr. BUTLER. He desires to have it temporarily laid aside in order that he may submit some remarks.

Mr. HOAR. I did not so understand him.

Mr. BUTLER. That is what I understood the Senator from Kansas to propose.

Mr. PEFFER. That is what I was trying to say, but I will not speak more than five minutes.

Mr. HOAR. I wish to speak about five minutes on the bill now before the Senate. I propose to be absent to-morrow, and I should like to say what I have to say now.

Mr. COCKRELL. I suggest that there be unanimous consent that the Senator from Massachusetts be heard, and then that the Senator from Kansas follow him.

Mr. GORMAN. Certainly.

Mr. STEWART. I proposed to address the Senate this morning, but gave way for morning business.

Mr. WASHBURN. I think it is more important to go on with the unfinished business than to continue the consideration of the resolution of the Senator from Kansas.

Mr. VANCE. I wish to inquire what has become of the privileged question which is before the Senate and is to be voted on at 5 o'clock.

Mr. PEFFER. I rise to a parliamentary inquiry.

The VICE-PRESIDENT. The Senator from Kansas asks the attention of the Chair for a moment.

Mr. HOAR. I have the floor, I understand, and the Senator from Kansas rises to a parliamentary inquiry.

Mr. PEFFER. It is a mere parliamentary inquiry whether, as the situation now is, the further consideration of the resolution which has just been laid aside will be in order to-morrow morning or whether it is now disposed of?

The VICE-PRESIDENT. The Chair will state that the resolution goes to the Calendar under the rule.

INCREASE OF NATIONAL-BANK CIRCULATION.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (S. 453) to provide for the issue of circulating notes to national banks.

Mr. HOAR. I ask that the amendment to the pending measure offered by the Senator from South Carolina [Mr. BUTLER] be read.

The VICE-PRESIDENT. The amendment will be read.

The SECRETARY. It is proposed to add to the bill the following as an additional section:

SEC. —. That section 3412 of the Revised Statutes of the United States, the same being section 122 of the national-bank act, imposing a tax of 10 per cent upon the amount of notes of any person or of any State bank or State banking association used for circulation and paid out by them, be, and the same is hereby, repealed.

Mr. HOAR. I wish to have the attention of the Senate for only about five minutes upon the amendment offered by the honorable Senator from South Carolina [Mr. BUTLER], and upon the general question of the various amendments which have been offered to the pending bill.

Mr. President, I am opposed to removing the tax on the circulation of State banks, because I am opposed to restoring to those banks the power of issuing, circulating, and furnishing currency which it was the object of that tax to take away from them. I think the people of this country entitled to have a currency of which every dollar shall be equal to every other, and which shall be unchanging in value so far as the wit of man can bring that to pass.

That currency should be national. It is the function of the National Government to see that it is provided. It never has been and never will be provided by the States.

Mr. Madison declared that "it is the duty of the Government to establish a national currency."

Whenever the National Government has undertaken that duty it has been well performed. Whenever it has left it to the States, the result has been most disastrous. In 1814, 1837, and in the period from 1853 to 1860 the people of this country were compelled to use a circulating medium which fluctuated 10, 20, 50 per cent in different States. The result was the great financial suffering of those years and the years which followed. They were times in which, as Daniel Webster well described them, "the only uncurrent property in this country was money."

Mr. President, there is a spirit abroad which seems to desire that the American workingman, the farmer, and the business man shall have at their command two kinds of money only: the first, money that will not pass current in any nation but ours; the second, money that will not pass current in any State or neighborhood but his own.

We are asked why we will not trust the function of regulating this matter to the States. I answer very frankly that I am unwilling to trust the matter of regulating these matters to the States. We have tried the experiment, and it failed. The money of the Bank of the United States, as long as it was supported by the Government and until it became a private institution, and the money of national banks from 1863 to the present day, has circulated without distrust and without the loss of a penny to any holder. The money of our national banks to-day will pass all over this continent and all over Europe, I suppose, without discount.

The States have tried their hands at this business, and have failed. Some of them have a strict and some of them have a loose system of banking. But I think in every one of them there have been instances—where the banks have failed—of great loss to the holders of bank bills. I remember myself, in 1853, waiting for ten or fifteen minutes at the ticket office at the station in Baltimore, where there was a crowd, while the railroad official consulted a book to know the value of the different bills which were offered him to pay for tickets, and made a reduction of 3 per cent on one man's bill, of 5 per cent on another, and 10 per cent on another. I was somewhat gratified when I held out to him a $20 gold piece in one hand and a $20 Massachusetts country bank bill in the other, and he preferred the bill to the coin.

There is no use mincing these matters. Some States will yield, in times of panic, to the demand for loosening the restrictions on the issuing of currency; some States will establish their systems originally on false principles, and the result will be that while their own people will be the chief sufferers, the people of the whole country will suffer more or less. Every dollar, whether of paper or coin, which a workman, or woman, or child may be induced to take should be as good as any other dollar the world over, and that can be accomplished only by the Government of the United States.

Mr. President, the great crises, the times of suffering and financial distress in this country have not been times preceded by a scarcity of currency. Undoubtedly when the panic came money was hoarded and took to cover. But the panic has been caused primarily by a want of public confidence in the medium of exchange, and that want of public confidence has been caused in its turn by other issues, an irredeemable and ill-regulated currency. In the great crisis of 1837, Mr. Webster described this condition of things as follows:

And as to the soundness of the currency, how does that stand? Are the causes of alarm less now than in 1829? Is there less bank paper in circulation? Is there less fear of a general catastrophe? Is property more secure, or industry more certain of its reward? We all know, gentlemen, that during all this pretended warfare against all banks, banks have vastly increased. Millions upon millions of bank paper have been added to the circulation. Everywhere, and nowhere so much as where the present Administration and its measures have been most zealously supported, banks have multiplied under State authority since the decree was made that the Bank of the United States should be suffered to expire.

Look at Mississippi, Missouri, Louisiana, Virginia, and other States. Do we not see that banking capital and bank paper are enormously increasing? The opposition to banks, therefore, so much professed, whether it be real or whether it be pretended, has not restrained either their number or their issues of paper. Both have vastly increased.

When the present panic came on, like a clap of thunder from a clear sky, while I do not attribute it wholly or chiefly to any legislation affecting the currency, yet it has come on at a time when the currency was more abundant in this country, both in absolute volume and per capita, than at any other time in its previous history. It is not a want of currency, but a want of confidence in it that impairs the credit and brings panics.

I desire to relieve the distress of the people by authorizing the additional issue of national-bank notes which are secure and safely guarded, every dollar of which will be as good as a gold dollar in the pockets of the people, and by a prompt repeal of the provision which, if it stands and continues, will have a tendency to increase our silver coinage to an amount far above the existing gold coinage of the country, far above our existing supply of gold, and far above its reasonable proportion to gold under present circumstances. I am willing to take measures, in concert with other commercial countries, for restoring silver to its proper and permanent place in the service of mankind. But with this measure I desire to stop.

Mr. President, it has been said a dozen times—it can not be said too often—that the profit of debased currency, of a fluctuating standard of value, of insecure paper money, goes to the bankers and dealers in credit whom the repeal of this provision will multiply in every part of the country. It has been said that to argue for a safe circulation, regulated by the States, needs a humorist and not a financier. The loss, the sorrow, the suffering is to fall upon the laborer, the farmer, the person unacquainted in business, the woman, and the child.

There is one consideration specially applicable to this matter, which ought to be stated here. That is the vast and dangerous multiplication of counterfeiting which always existed, and which always must exist under State regulations. The loss by these communities falls upon unskilled persons and upon communities far from centers of business. The colored people of our Southern States, those of them who are now endeavoring to become honest, industrious American citizens, will be the class, most of all others, to be the victim of this crime. If there were no other objection to this amendment this would be enough, in my mind, to condemn it.

Mr. BUTLER. Would it interrupt the Senator from Massachusetts if I should ask him a question?

The PRESIDING OFFICER (Mr. FAULKNER in the chair). Does the Senator from Massachusetts yield to the Senator from South Carolina?

Mr. HOAR. Certainly.

Mr. BUTLER. I understand the Senator to state that in 1837, when the State-bank circulation was in operation, great harm, and injury, and wrong were suffered by the laboring classes.

Mr. HOAR. I read Mr. Webster's testimony to that effect, given at the time.

Mr. BUTLER. Will the Senator be kind enough to account for the present suffering which is going on among the laboring classes of the United States when the State-bank circulation is not in operation?

Mr. HOAR. They are now suffering, as I have just observed, from the want of an abundant currency.

Mr. BUTLER. I understand from the newspapers that there are about a million laborers out of employment.

Mr. HOAR. The currency is hidden now. Then it was bad.

Mr. President, it is the fashion nowadays to make bitter attacks on our banking system. I do not suppose that system to be perfect. I have no doubt experience has taught us, and will hereafter teach us, many improvements in the conduct of these institutions, some of which may, I dare say, be profitably brought about by legislation. But it is the best we ever had. In my opinion it is the best we are likely to get. I think it is of immense importance to the people of the United States to se-

cure the strictest supervision, under national authority, of the institutions which furnish currency and the institutions which lend credit. Neither private responsibility nor State supervision will, in my opinion, be sufficient to secure this needed scrutiny.

What is the main function of a bank? It is that which enables the working people of this country, whose labor is at the foundation—alike of all agriculture and all manufacture—to receive the pay for their work in cash, while all other persons engaged in production must do their part upon credit and wait for their share until the consumer is ready to pay for the finished product.

As has been often said, 90 per cent of all the vast manufactured product of this country—the greatest manufacturing country in the world—is labor. That labor, when the process of manufacturing begins, and until it ends, receives its daily, or weekly, or monthly stipend in cash. The employer, unless he has accumulated a fortune, must get credit both for his material and for what he pays to his workmen until the time comes for him to dispose of the finished article. Even then, in the ordinary course of business, he sells to the purchaser on a future credit until the article is finally disposed of to the consumer.

This credit it is the function of the bank to supply. It is a function more important even than the function of supplying currency. This function must be performed by institutions whose integrity, financial soundness, careful conduct, and moderate gains are, in part, regulated by law, and in part secured by the blazing light of publicity upon their every transaction, or the function will be discharged by irresponsible private speculators, against whom the public and business men of the country have no security whatever.

There are exceptions. But the gains of our banking institutions for the last twenty years have been moderate and not at all out of proportion to the difficulty and risk of their business. It will be a bad day for the people and the United States when the business of their exchanges and their credits ceases to be conducted by well-regulated banking institutions, and private speculation takes its place.

How is it that this thing operates? It is the simplest of matters, as it is the commonest of occurrences. The man who has become the master of some manufacturing business, who has been a journeyman, or a foreman, until he has become fitted by experience and by public confidence to be the master of an establishment, either alone or in company with some owner of capital, builds and starts a mill. Very likely he borrows one-half the cost of his plant. The plant is worth a hundred thousand dollars, and he has to borrow fifty or forty thousand dollars of that amount. He goes to a savings bank, where the earnings of wage-earners and of poor people have been deposited and gets the money.

When he is ready to start he assembles 100 or 200 workmen, everyone of whom must be paid cash down daily, or weekly, or fortnightly, or monthly. If he can not borrow the money to do this, these workmen must remain unemployed, or his business must stop or must be transferred to some large capitalist who can advance the money. He gets the money at a bank of discount. Now, Mr. President, I appeal to the experience and observation of every man who knows anything about the subject that these two places—the savings bank and the national bank—are the places where this money, if the security be good, can be had at the cheapest rate and on the most favorable terms as to prospect of renewal, if necessary.

Suppose the national bank is shut up and the private moneylender has taken its place. Does anybody believe that the business of this country can be conducted, as it has been in the main for the past ten years, at 5 per cent or 6 per cent, and in many places at 4 per cent or 4½ per cent, as the ordinary rate of discount?

But for this banking system the workman must go unemployed or must work on credit and sell his claim against his employer to sharpers and speculators, and the employer must in turn resort to the private speculator, subject to no Government supervision, subject to no restraint and no law, exposed to no publicity and to no restraint of public opinion, or the manufacturing business of the United States must stop.

Is there any doubt that under these circumstances the ordinary rate of interest on business paper would at least double? Is it not true that wherever the banks are most abundant the rate of interest is the lowest? Is it not true that whenever the ordinary condition of things is disturbed the remonstrance and the cry of alarm comes first to us from the banking centers of the country?

The notion seems to prevail in some quarters—I sometimes think it has penetrated the Senate Chamber, and, indeed, I sometimes think it has taken possession of the Finance Committee, or some of them—that the managers of our Eastern banks are a set of harpies, delighting in the misery of the people, reaping a harvest from their distress, and expanding and contracting the currency, seizing business by the throat, and "bulling" and "bearing" the market in order that their institutions may reap a benefit from the people's sorrow.

Mr. President, there is no truth whatever in the notion. Wherever there is an actual or a threatened departure from the path of steady business, conducted under general and permanent rules, limited to moderate gains, and conducted by safe processes, the first and the most emphatic remonstrances that reach us come from our banking institutions. I can speak for the conductors of these institutions in my own State. Their stockholders are, as a rule, persons of moderate fortunes, whose savings have been invested in the banks with the desire not so much for large profit as for permanent safety.

Men buy a little bank stock that they may leave it to their widows or their children as a permanent and secure resource, which is to stand and abide through long terms of years. And the directors of the New England banks are, as a general rule, the class of persons whom men select for integrity and wisdom and prudence in the conduct of such trusts. They are not the speculators, they are not the rash and daring investors; they are not, as a rule, men whose own property is at stake in the hazards of speculation or in the hazards of ordinary business. They are men who have retired, many of them, from other active duties, and are advanced in years; men who are known by their prudence in the management of their own affairs to be fitted for the office of stewards and managers of the property of others that may be intrusted to them.

There are exceptions in this branch of business, as in other branches of business. But in the main, and as a general rule, if you wish to find men on the bed rock of whose integrity you would be willing to rest a confidence which should endure and not fail—when the infant just born shall become of age after twenty-one years—or when the girl just made a widow shall be an aged woman of fourscore—you may seek them and you will find them among the managers of the banking institutions of New England, with as much certainty as anywhere on the face of the earth.

Mr. STEWART. Mr. President——

Mr. VANCE. I call for the regular order, the privileged question which is before the Senate, and upon which it was agreed that we shall vote at 5 o'clock. Several Senators are prepared to address the Senate on the subject, and if the financial debate goes on they will not have time. Hence I call it up now.

Mr. STEWART. If any Senator desires to speak I do not wish to interfere with the matter which is to be voted on at 5 o'clock. I gave notice that I would submit some remarks on the bank bill immediately after the morning business. The time seems to have been consumed, and I renew the notice for to morrow. Immediately after the morning business to-morrow shall ask leave to submit a few remarks upon the bank bill.

ENROLLED BILL SIGNED.

A message from the House of Representatives, by Mr. T. O. TOWLES, its Chief Clerk, announced that the Speaker of the House had signed the enrolled bill (S. 50) in aid of the California Midwinter International Exposition; and it was thereupon signed by the Vice-President.

PURCHASES OF SILVER BULLION.

The VICE-PRESIDENT laid before the Senate a communication from the Secretary of the Treasury, transmitting, in response to a resolution of the Senate of August 21, 1893, a statement prepared by the Bureau of the Mint, giving the aggregate amount of silver bullion purchased under the act of July 14, 1890, during the month of July, 1893, together with the cost thereof; the amount, date, and price of each purchase, etc.; which, with the accompanying papers, was ordered to lie on the table and be printed.

SENATOR FROM MONTANA.

The Senate resumed the consideration of the resolution reported by Mr. HOAR from the Committee on Privileges and Elections, March 27, 1893, as follows:

Resolved, That Lee Mantle is entitled to be admitted to a seat as Senator from the State of Montana.

Mr. GALLINGER. Mr. President, if sentiment or feelings of friendship governed in the matter under discussion, I would find no difficulty in voting to sustain the report of the majority of the Committee on Privileges and Elections. The gentleman who comes here by appointment of the governor of Montana has won friends on all hands, while the late Senator from the State of Washington [Mr. Allen] is a man for whom I entertain feelings of profound regard and admiration. But we are not dealing with sentiment or friendship, but with the Constitution of the United States, which we are sworn to uphold.

Interpreting that instrument as I do, and after having listened patiently to the debate; having studied both reports, investi-

gated the precedents, and carefully read the proceedings of the Convention which framed the Constitution, I am reluctantly constrained to cast my vote against the admission of the gentlemen appointed by the governors of the States which are now partially unrepresented in this body.

Had it not been that my own State has furnished an unusual number of contests of this kind I would have contented myself with casting a silent vote, but as it is I will ask the Senate to bear with me a few minutes in the closing hours of this debate.

In the debates on the adoption of the Federal Constitution, Mr. Ellsworth said:

> It is only said that the Executive may supply vacancies. When the legislative session happens to be near the power will not be exerted.

And that view seemed to be generally accepted by the Convention; certainly it was not combated by anyone.

The Constitution says, Article I, section 3:

> If vacancies happen, by resignation or otherwise, during the recess of the Legislature of any State, the executive thereof may make temporary appointments until the next meeting of the Legislature, which shall then fill such vacancies.

That language is certainly free from ambiguity to the ordinary mind. Shrewd lawyers may contort it; special pleaders may give it a meaning not intended, but I submit that a fair interpretation of it absolutely destroys the claim that is set up in behalf of the appointed Senators from Montana, Washington, and Wyoming.

Let us, Mr. President, briefly look at the precedents directly bearing on this question. I hold in my hand the recent publication entitled "Compilation of Senate Election Cases from 1789 to 1885," and I select the cases under the head of "Cases concerning the power of executives of States to fill vacancies." Some of these cases were decided in the early history of our Government and when the purpose of the framers of the Constitution was presumably understood.

The first case on record is that of Kensley Johns, of Delaware, in 1794, a case which the distinguished Senator from Massachusetts [Mr. HOAR], in his exceedingly able report, inadvertently, no doubt, omitted from the list of cases he submitted. Mr. Johns was denied his seat on the ground that a session of the Legislature had intervened between the vacancy and the appointment.

Case 2. Uriah Tracy, of Connecticut, in 1801: Mr. Tracy's credentials set forth that he was appointed "from the 3d of March until the next meeting of the Legislature." Mr. Tracy was given his seat, but it will be noted that the Legislature of Connecticut had not been in session between the date of the vacancy and the appointment.

Case 3. Samuel Smith, of Maryland, in 1809: This case simply involved the question whether a Senator holding a seat by appointment could continue to sit after the State Legislature had convened.

Case 4. James Lanman, of Connecticut, in 1825: Mr. Lanman was refused his seat, notwithstanding the State Legislature had not been in session. This case is peculiar, and it is unfortunate that the grounds on which the Senate proceeded are not given.

Case 5. Ambrose H. Sevier, of Arkansas, in 1836: In this case the committee of the Senate reported that, as the time when Mr. Sevier was to go out of office was decided by lot, and as the Legislature, not being in session after this decision (mark the words) could not supply the vacancy, it came fairly within the provision of the Constitution. Accordingly Mr. Sevier was given his seat.

Case 6. Robert C. Winthrop, of Massachusetts, in 1851: His case simply involved the question as to the time when the term of service of a Senator appointed by the executive of a State, during the recess of the Legislature thereof, rightfully expired. It has no application whatever to the present contest.

Case 7. Archibald Dixon, of Kentucky, 1852: This case involves only the question of tenure, and, like the preceding one, has no relevancy to the question at issue.

Case 8. Samuel S. Phelps, of Vermont, in 1853: This is an interesting case, inasmuch as Mr. Phelps was denied his seat for the distinct reason that the Legislature of Vermont had been in session and failed to elect. A majority of the Senate committee reported in his favor, but the report was rejected by a vote of 12 yeas to 26 nays.

Case 9. Jared W. Williams, of New Hampshire, in 1854: This is a case where the Legislature met and failed to elect. Mr. Williams was denied his seat, and the State was only partially represented for a time, as has happened to other States at different times in the history of our Government.

Case 10. Charles H. Bell, of New Hampshire, in 1879: In this case the Legislature did not convene until June following the vacancy on March 4. The governor appointed Mr. Bell, and by a vote of 35 yeas to 28 nays Mr. Bell was seated.

The only two remaining cases are those of Henry W. Blair, of New Hampshire, in 1885, and Horace Chilton, of Texas, in 1891. The Blair case was identical with that of Bell, just considered, while the Chilton case did not involve any of the questions pretaining to the case under consideration.

It will thus be seen, Mr. President, that in all the cases involving the power of the executives of States to fill vacancies under circumstances where the State Legislature has been in session, not one case similar to the one under consideration has been decided affirmatively. The precedents are all against it, and the contention of the distinguished Senator from Massachusetts that it was the intention of the framers of the Constitution to always keep the Senate full does not appear to have been seriously entertained in the early years of our history.

The New Hampshire cases of Bell and Blair have been cited to sustain the views of the majority, but it should not be forgotten that the Legislature of New Hampshire did not have an opportunity to elect in either one of these cases.

But, notwithstanding this fact, I never believed that the Senate acted wisely in either the Bell or the Blair case. By an amendment to our State constitution changing the time of election and not changing the date for the legislative session, the people of my State deliberately deprived themselves of the power to choose a Senator at the proper time, so as to keep the Senate full, and I know of no constitutional provision authorizing the governor to appoint under such circumstances.

And again, Mr. President, while a portion of our people felt and believed that Messrs. Bell and Blair should be admitted from March 4 to the assembling of the Legislature, in June, I never heard a man in New Hampshire, Republican or Democrat, suggest that if the Legislature failed to elect in June the governor could again appoint. That is a new gospel, so far as the people of my State are concerned.

Mr. President, I am opposed to the views of the majority of the Committee on Privileges and Elections (1) because they are, as I conceive, in conflict with the spirit and intent of the Constitution, which provides that the terms of Senators shall be for six years, and that they shall be elected by the Legislatures of the several States and not be appointed by the executive, except in cases where the legislative branch can not exercise its constitutional duty of choosing a Senator because it has not had an opportunity so to do.

2. I am apposed to the proposition because it leads to the absurd and dangerous conclusion that if in this instance, because of the failure or neglect of duty on the part of the Legislatures of three States to elect Senators, three Senators are to be seated by appointment, a larger number may be seated in the same way in some future Congress, so that we may reach the time when a majority of this body will be here, not as the choice of State Legislatures, but as the appointees of governors.

3. I am opposed to seating these men because the Legislatures of the States from which they came, whose duty it was to elect, adjourned without discharging the function imposed on them by the Constitution, thus voluntarily and absolutely relinquishing their right to full representation in this body.

4. I am opposed to seating these men, because such action on the part of the Senate will be in the nature of a premium on disloyalty to party, and will give encouragement to ambitious and unscrupulous men to exert their influence to nullify the constitutional method of electing Senators. If a political obstructionist, disowned and repudiated by his party, can gather around him a few men, controlled either by honorable or venal means, prevent a choice of the Legislature, and secure his own appointment by the governor—I say if this can be done once, what is there to prevent it being done by the same man a second or third time, and thus the representation of the State be kept full by the choice of a man selected not by the Constitution, by a man not the choice of the people of his State, by a man not the choice of his own party, but by a man who, either by political trickery, by corrupt means, or by disloyalty to party, perpetuates himself in the Senate in opposition to the wishes of his own people, and under a strained and extraordinary construction of the Constitution of the United States?

Mr. President, I do not mean to assert that any one of the gentlemen seeking admission at the present time did anything dishonorable in the contest in his State Legislature; on the contrary, we know he did not, but it is clear to my mind that the admission of these gentlemen will inevitably lead to unnecessary discord and trouble in many future contests. Safety lies in the direction of a close adherence to constitutional methods. Neither a strained construction nor a loose construction of the organic law should govern our action. Let us insist that the Legislature shall perform its duty, and not attempt to transfer power to the executive which belongs to a coördinate branch of the State government. The refusal to seat the men now knocking at the door of the Senate will be a salutary lesson to State Legislatures, and will put an end to an evil that we can not afford to indorse or encourage.

Mr. President, I have heretofore held to the view that the election of Senators by popular vote was not to be desired, but if the choice is to come between that method and the appointment of Senators by governors of States there would seem to be every reason for submitting the matter to the people for their determination. But better and safer than either of those methods is the one contemplated by the Constitution, and notwithstanding prophecies to the contrary on this floor and in the public press, I have faith to believe that the vote to-day will sustain the views of the minority of the Committee on Privileges and Elections, in support of which I have so imperfectly argued.

Mr. PLATT. Mr. President, if the Senate were ready to proceed with the bill to increase the circulation of national banks up to the par value of the bonds deposited to secure circulation I should not venture to say anything upon the subject which is now before the Senate. I should much prefer now to occupy the short time which I propose to occupy by entreating Senators to act promptly on that bill. But this question, which we must decide at 5 o'clock this afternoon, is a very important one. Its importance is only overshadowed by the fact that the financial situation engrosses all thought and attention at present.

What is the exact proposition before the Senate? It is to admit to a seat in the Senate a person appointed a Senator by the governor of a State after the Legislature which could have elected had been in session, had an opportunity to elect, attempted to elect, and failed to elect. There is no precedent in all our hundred years of Senatorial history for such action. The proposition is entirely and absolutely without precedent. Indeed, no such case has ever been presented to the Senate in all the hundred years of Senatorial history, but it is not because instances have not occurred where a governor might have made or attempted to make the appointment under precisely the same circumstances in which the governors of these three States have attempted to make the appointment, namely, that the Legislature which could have elected had met, attempted to elect, and failed to elect.

There are many cases in our history where those have been the facts, and never was it supposed that a governor under those circumstances could make a temporary appointment. There is no reconciling the fact that until the governor of Montana, the governor of Washington, and the governor of Wyoming, in the three cases before us, attempted it, no governor ever supposed that such an appointment would be within the meaning or spirit of the Constitution, with the claim made here that it would have been the proper course to have pursued for executive appointments to have been made in such cases. No Senator upon this floor, in the discussion of a contested-election case, from the time of the formation of the Constitution, has ever made the claim until this report of the majority of the committee, that, under such circumstances, the governor's appointee should be admitted. It has been stated over and over again in the discussions, which have been had by the best lawyers in the Senate, that the governor could not appoint under such circumstances; it has been universally conceded and never denied. That is the statement.

I said that cases had not been wanting in which a similar appointment might have been made by the governor, and I desire to refer to some of them. But first I wish to refer to the case in which a State at the time of its admission attempted by its Legislature to elect, and was unrepresented here for, I think, three years after its admission because its Legislature had failed to elect. Senators may say that that is not precisely this case, but the logic of the case carries the majority of the committee and Senators who propose to vote for the admission that far, as has been admitted in the discussion of this case.

The act for the admission of the State of Iowa was passed in 1845, and the State was fully organized and in operation by January, 1846; and yet she had no Senators for nearly three years. She was represented in the House of Representatives during 1846, and at least one Legislature met and endeavored to elect Senators and adjourned without electing Senators. She had no representative in the Senate until the middle of December, 1848, when Senators Dodge and Jones took their seats, they having been elected by the Legislature chosen that fall.

If the governor can appoint in this case he could in that. If the contention of the majority of the committee is true, that the Constitution must be so construed, its language and its meaning to the contrary notwithstanding, that the Senate shall be always full, the State of Iowa and its governor made a great mistake in that the governor did not appoint two Senators so that the State might be represented in the Senate during the first three years when it was a State.

Now, let me cite some Senatorial cases:

In Maine there was a vacancy in 1853. The Legislature, which met in the January previous, and which under the Constitution was charged with the duty, if it may be called a duty, of electing a Senator, after repeated efforts adjourned without electing a Senator, and the vacancy was not filled until the next regular session of the Legislature of the State. That was a case like the one before us. The Legislature met and attempted to elect, failed to elect, and never even thought (and I venture to say that in that day, in 1853, there could not have been a lawyer found in the United States who would have advised it) that the governor had a right to appoint.

In Connecticut, my own State, a vacancy occurred March 4, 1851. The Legislature then convened annually in May. The Legislature which sat in the May previous, namely, in 1850, was the Legislature charged with the election of a Senator. At that May session an attempt was made to choose a Senator, and after several ballotings the whole subject of the election of a Senator was, upon motion, indefinitely postponed. The governor did not appoint. In the May session of 1851, the next year, the seat having been vacant from March 4, 1851, until the May session of the Legislature of 1851, the matter came before the Legislature and the Legislature took 22 ballots in its endeavor to elect a Senator; and, becoming convinced that it was impossible to agree, again, on motion, indefinitely postponed the election of a Senator.

No action was taken by the governor, and in 1852, in May, the Legislature again met and elected a Senator, who took his seat, Hon. Isaac Toucey. So from May 4, 1851, until some time in May or June, 1852, the State of Connecticut had only one representative in the Senate, because it supposed, and because everybody supposed that the governor could not under those circumstances appoint, and because it had never been claimed that the governor under such circumstances could appoint.

In Pennsylvania a vacancy occurred March 4, 1855, and the Legislature of that State, at its session beginning January, 1855, prior to the time when the term expired, made repeated attempts to elect a Senator, but failed to do so, and adjourned May 8 without effecting a choice. At the next regular session of the Legislature, January 14, 1856, Senator Bigler was elected and took his seat. So the State of Pennsylvania was a year without representation as to one of its Senators upon this floor. We had good lawyers in those days, but nobody rose to say that the purpose of the Constitution was to keep the Senate full, always full.

In Maryland, a vacancy occurred March 4, 1843. The Legislature assembled December 26, 1842, and remained in session till March 10, 1843, after the time when the vacancy occurred, when it adjourned without electing a Senator to fill the vacancy. The house of delegates, on several occasions, passed a resolution fixing a day for the election of a Senator, but the senate refused to concur therein. Want of action on the part of the senate prevented an election. The vacancy was not filled until the next regular session of the Legislature, and the State of Maryland was a year without representation in this body.

In North Carolina a vacancy occurred March 4, 1853. The Legislature assembled in November, 1852, and made repeated efforts to elect, but adjourned without an election. As the sessions of the Legislature of that State were biennial it did not meet again until November, 1854, when Daniel S. Reid was elected. Thus the State of North Carolina had one vacant seat in this Chamber for eighteen months.

In Indiana a vacancy occurred March 4, 1855. The Legislature of that State met January 4, 1854, and there were repeated attempts for both houses to go into joint convention for the purpose of electing a Senator; but the senate refused, the practice having been to elect in joint convention. The Legislature of the State failed to elect until February, 1857, when Mr. Fitch was elected and admitted to his seat in 1858. So, from 1855 to 1858 Indiana had only one Senator on this floor, nobody supposing that the governor could make a temporary appointment to fill the seat in that time. For two years the State of Indiana had only one representative in the Senate. The present Senator from Indiana [Mr. TURPIE] had not then risen to instruct his people that the object of the Constitution was to keep the Senate "full, always full." The people of the State of Indiana in those days believed that the governor had no power to appoint.

In Missouri a vacancy occurred March 4, 1855. The Legislature met in the January previous, within two or three days commenced balloting, and continued to do so in convention forty-one times. It adjourned March 5, 1855, without effecting an election. The Legislature met again December 29, 1856, and on January 13, 1857, elected Mr. James S. Green Senator. So the State of Missouri went almost two years, to phrase the language of the minority, without its equal representation on the floor of the Senate, because it was supposed the governor of the State had no power to appoint a Senator under those circumstances.

In California a term expired March 4, 1855. The Legislature assembled January 1, 1855, and had numerous ballotings for United States Senator, but adjourned May 7, 1855, without hav-

ing made any choice. It assembled again January 7, 1856; repeated attempts were made to elect a Senator; and it again adjourned April 21 without having done so. The Legislature assembled January 5, 1857, and on the 13th of the same month elected William M. Gwin, two Legislatures having attempted to elect, balloting as did the Legislature of the State of Montana, failed as the State of Montana has failed, and the seat of one Senator in the Senate went vacant nearly two years because there had not then arisen a man in the United States to claim that under those circumstances the governor could appoint.

I put that strongly, Mr. President, for in all my reading of the debates until this case I have never found that the claim was made that under such circumstances the governor could appoint; and it has been repeatedly asserted and universally conceded in the Senate that he could not.

In Oregon a vacancy occurred March 4, 1859. At the extra session held May 16, 1859, the question of the election of United States Senator was considered, but the Legislature adjourned June 4, 1859, without filling the vacancy. At the regular session held September 10, 1860, repeated attempts were made to elect, but on October 10, 1860, a motion was made to postpone the election of United States Senator, which motion prevailed. The authority which I am reading does not state when the Senator was finally elected, but there were three sessions of the Legislature balloting for Senator, failing to elect a Senator, and the seat remaining vacant here until the Legislature should fill that vacancy.

Mr. MITCHELL of Oregon. In this connection, if the Senator will allow me, I will state that there was another precisely similar case in the State of Oregon, where there was a vacancy in the representation of that State in the Senate from the 4th day of March, 1885, until the 19th day of December, 1885, the Legislature whose business it was to elect having met and attempted to elect and failed to elect, and the governor declined to appoint because he believed he had not the power.

Mr. PLATT. The same thing occurred in New Hampshire, and the governor of New Hampshire did not attempt to appoint. New Hampshire had but one Senator from August 4, 1854, to July 30, 1855—nearly a whole year. The Legislature which met in June, 1854, attempted to fill the vacancy by election, but after numerous attempts adjourned without making an election.

Now, it would seem, Mr. President, as if a statement of the universal practice and universal understanding of the Senate upon this subject ought to be enough. There is no necessity of going further; but a new departure is proposed and some Senators have had new light on the subject; and therefore I propose to discuss the question very briefly to see whether there is anything in the Constitution which warrants the views taken by the majority of the committee. But first I wish to advert to a rather remarkable circumstance. In the report of the Committee on Privileges and Elections it does not appear that the State of Montana ever made any attempt to elect a Senator.

Neither in the report of the majority of the committee nor in the views of the minority can that fact be ascertained; and it has to be stated here on assumption that in this case, as in all the cases I have read, or most of them, the Legislature of the State of Montana met and commenced to vote at the time prescribed by statute, and continued voting until the end of the Legislature without electing. Of course it was an oversight on the part of the committee, but it affords an opportunity upon the record to connect this case with several cases where the Senate has without discussion seated persons who were appointed by governors, after an election by the Legislature was possible, to a seat at the beginning of a term.

Mr. President, I can not go over fully, as I would do if this case had not been so thoroughly discussed, the constitutional argument or the precedents; and yet I apprehend it is true that no person who ever read for the first time the clause of the Constitution which provides for the election of Senators—without a preconceived idea of what he wished, or without specially desiring to seat some one—ever supposed that when a Legislature had had an opportunity to elect and failed to elect, the governor could make a temporary appointment. To test this supposition of mine I have taken occasion to ask some of the best lawyers of my acquaintance who had not considered this question to read that clause for the first time and tell me what it meant, and they have uniformly said that it was the meaning of the Constitution that whenever the Legislature had an opportunity to elect it must elect, and only when it had no opportunity to elect could the governor make a temporary appointment.

I submit that that is the plain common-sense meaning of the Constitution, the provision of which relating to the election of Senators is as follows:

ARTICLE I.

SEC. 3. The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six years; and each Senator shall have one vote.

Immediately after they shall be assembled in consequence of the first election they shall be divided as equally as may be into three classes. The seats of the Senators of the first class shall be vacated at the expiration of the second year, of the second class at the expiration of the fourth year, and of the third class at the expiration of the sixth year, so that one-third may be chosen every second year; and if vacancies happen by resignation, or otherwise, during the recess of the Legislature of any State, the executive thereof may make temporary appointments until the next meeting of the Legislature, which shall then fill such vacancies.

I do not see how it is possible that any Senator who has studied the evolution of this provision of the Constitution by consulting the history of the Constitutional Convention, can suppose that the words "happen in the recess of the Legislature, by resignation or otherwise," were intended by the framers of the Constitution to cover a vacancy occurring at the commencement of a term.

Mr. HOAR. If it would not disturb the Senator, before he passes to that point, I should like to ask him in regard to the statement he just made about the opinion of eminent lawyers. Does not my honorable friend think that all the eminent lawyers who were consulted used language in a loose fashion, which implied that they were not very accurate men?

Mr. PLATT. No, sir.

Mr. HOAR. Was not that the case if they stated to him that when a Legislature had an opportunity to elect it must elect? Is it possible for a body to say that a tribunal consisting of two artificial persons, a senate and a house who might disagree, must agree, or a tribunal consisting of a large number of persons who might be divided into three parties must agree? The Senator's statement was that every lawyer whom he consulted said the United States Constitution meant that when a Legislature had an opportunity to elect it must elect. This is not merely a little quibble or a careless phrase; it is the very substance and marrow of this argument; that is, that the most honest, conscientious, devoted State Legislature may be in a position where it can not elect.

Mr. PLATT. If I used language exactly like that which the Senator from Massachusetts attributed to me, speaking extemporaneously, that is not precisely what I intended to say. What I intended to say is, that their opinion, coinciding with mine, was that where the Legislature had an opportunity to elect, the election must be by the Legislature, if there was one.

Mr. VANCE. If there was a Senator elected?

Mr. PLATT. If there was a Senator elected. I do not know whether I stated it in that way before, but that is what I intended to say. However, the proposition that no duty is laid upon the Legislature to elect comes with rather queer grace, not to say poor grace, from the Senator representing the majority of the committee, for we have heard all through the discussion that the Constitution put a duty upon a State to be represented, a doctrine to which I do not agree. The Constitution lays no duty upon any State which does not rest within the discretion of the State as to whether it shall be performed or not. I believe I am correct about that.

Now, to return to the evolution of this clause of the Constitutional Convention. The first proposition in relation to the election of Senators was in the fifth resolution presented in the famous Randolph resolutions:

5. *Resolved*, That the members of the second branch of the National Legislature ought to be elected by those of the first out of a proper number of persons nominated by the individual Legislatures; to be of the age of — years at least; to hold their office for a term sufficient to insure their independency; to receive liberal stipends, by which they may be compensated for the devotion of their time to the public service, and to be ineligible to any office established by a particular State or under the authority of the United States, except those peculiarly belonging to the functions of the second branch, during the term of service and for the space of — after the expiration thereof.

Mr. Pinckney submitted a draft of a constitution at about the same time, in which the following article occurred:

ARTICLE 4. The Senate shall be elected and chosen by the House of Delegates—

A name which had been proposed for the lower house of Congress. Mr. Pinckney's plan, as was Randolph's, was that the Senators should be elected by the lower branch of Congress.

ARTICLE 4. The Senate shall be elected and chosen by the House of Delegates; which House, immediately after their meeting, shall choose by ballot—

Specifying unequal numbers from different States. I leave that blank.

The Senators chosen from New Hampshire, Massachusetts, Rhode Island, and Connecticut, shall form one class; those from New York, New Jersey, Pennsylvania, and Delaware, one class; and those from Maryland, Virginia, North Carolina, South Carolina, and Georgia, one class. The house of delegates shall number these classes, one, two, and three; and fix the times of their services by lot. The first class shall serve for —— years; the second for —— years, and the third for —— years. As their times of service expire, the House of Delegates shall fill them up by elections for —— years; and they—

That is, the house of delegates—

shall fill all vacancies that arise from death or resignation for the time of service remaining of members so dying or resigning.

It has been a query why, in the completed Constitution, which

says, "when vacancies happen during the recesses of the Legislature by resignation or otherwise," the word "death" should not have been included, the most obvious case in which a vacancy might occur. I think that anyone who will read the debates of the Constitutional Convention taking this draft of Mr. Pinckney's and see that the original idea was the Senators were to be appointed by the lower house, which would have the opportunity to fill all vacancies, and see that he mentioned vacancies by death or resignation, the two most obvious methods, will come to the conclusion that the vacancies spoken of afterwards in the Constitutional Convention were understood to be the vacancies which were spoken of in the first draft of the Constitution, and that the word "death" was omitted because it was universally understood that it was unforeseen vacancies which were to be filled by the governor making temporary appointments.

Mr. MITCHELL of Oregon. The word "resignation," the Senator will allow me to suggest, was used because there was a question about the power to resign.

Mr. PLATT. I am coming to that in a moment. Later in the Convention the whole subject was referred to the committee on detail, and they, with their known desire to condense, used the language which I shall read. In the meantime there had been very much discussion in the Constitutional Convention on the constitution of the Senate and the method of appointing the Senators, and it had been decided by vote that that appointment was to be made by the Legislatures of the several States. Then the committee on detail phrase it in this way:

Article 5, section 1. The Senate of the United States shall be chosen by the Legislatures of the several States. Each Legislature shall choose two members. Vacancies may be supplied by the executive until the next meeting of the Legislature. Each member shall have one vote.

SECTION 2. The Senators shall be chosen for six years; but immediately after the first election, they shall be divided by lot into three classes, as nearly as may be, numbered one, two, and three. The seats of members of the first class shall be vacated at the expiration of the second year; of the second class at the expiration of the fourth year; of the third class at the expiration of the sixth year; so that a third part of the members may be chosen every second year.

Senators who wish to carry out the idea that the Constitution provides that all vacancies may be supplied by the executive where the Legislature has failed to elect, as in this case, jump to the conclusion that if the language had remained as it was in the report of the committee on detail it would have meant all vacancies. I deny it. I say the whole proceedings in the Constitutional Convention are against that assumption, and that the probable reason why they said only "vacancies" was that they never supposed there could be a vacancy occurring by the expiration of a term which the Legislature would not fill up, and because they had reference to the very vacancies which were mentioned in the Pinckney plan, "vacancies by death and resignation." For brevity of speech they left out "by death and resignation," and said "vacancies," meaning the vacancies which had been alluded to in the Pinckney plan.

Then Mr. Madison said the word "resignation" was necessary because it was not certain that a Senator could resign. That is the way the word "resignation" got in and the word "death" was left out. The vacancies referred to were vacancies by death or resignation, which were the only vacancies which when the committee on detail drew their report were anticipated, and the word "resignation" was reinserted, so to speak, as it had been in the Pinckney draft, because there was a question about whether a Senator could resign or not.

The amendment of Mr. Madison was to supply after the word "vacancies," the words—

happening by refusals to accept, resignations, or otherwise, may be supplied by the Legislatures of the States in the representation of which such vacancies shall happen by the executive thereof until the meeting of the Legislature.

Can anybody tell me that Mr. Madison in his modification omitted the word "death," which had already been used in the Pinckney plan, unless it was supposed by every member of the Convention that the vacancies referred to in the report of the committee on detail were the vacancies which had been spoken of in the Pinckney plan by "death or resignation?"

It will be observed that in the final draft the question of vacancies is transferred entirely from the place which it occupied as left by the action of the convention upon the report of the committee on detail and put in as the last clause in which the subject is treated.

Article I, section 1. The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof for six years, and each Senator shall have one vote.

It seems as if in the final draft it was intended once more to emphasize the fact that the Senators were to be chosen by the Legislatures of the States; and I shall show before I get through that it was only *ex necessitate rei* that there could be an appointment by a governor, namely, to fill an "inconvenient chasm," to prevent the inconvenience of a Legislature assembling in extra session when it would soon meet probably in regular session.

Now, showing that the committee on style, which put the draft of the Constitution in formal shape, determined to emphasize once more what had been so struggled for in the convention, that is, that these appointments should be made by the Legislatures, they include all matter relating to the election or choosing Senators in a single sentence, and then they transpose the matter relating to temporary appointments by the governor, placing it after the provision relating to classification. Now, listen:

The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof for six years.

The Senator from Oregon [Mr. MITCHELL] well said, that means the Senate of the United States shall be composed of two Senators from each State, who shall be chosen by the Legislature thereof for six years.

Immediately after they shall be assembled, in consequence of the first election, they shall be divided as equally as may be into three classes. The seats of Senators of the first class shall be vacated at the expiration of the second year, of the second class at the expiration of the fourth year, and of the third class at the expiration of the sixth year; so that one-third may be chosen every second year—

Now comes the clause about vacancies, the whole scheme as to the mode of choosing Senators having been completed—

and if vacancies happen, by resignation or otherwise, during the recess of the Legislature of any State, the executive thereof may make temporary appointments until the next meeting of the Legislature, which shall then fill such vacancies.

It did not give the governor power even to fill a vacancy so far as the language was concerned. It insisted upon it that the Legislature alone should fill the vacancy. The governor, to be sure, to avoid an "inconvenient chasm" might make a temporary appointment. Yet Senators to-day say it is not of the slightest consequence how a Senator gets in here, so the Senate is "kept full, always full," and they propose to construe the Constitution so as to read out of it the clause "chosen by the Legislature thereof for six years."

Upon the construction proposed here it is possible, nay, it is probable, that instances will occur when, for the whole Senatorial term of six years, the Legislature will not elect, or, in the language of the Constitution, choose; but the governor will appoint from time to time. I say any construction which reads out of the Constitution the vital part of a clause can not be the correct construction. Any construction which makes it possible—for the Senatorial term of six years may be occupied by one or more Senators under gubernatorial appointment here—is not a correct rendering of the Constitution of the United States. With all deference to all Senators who claim it, I say it is absurd; and it is hard to reason against absurdities.

Now, Mr. President, I have shown that this case is without precedent absolutely. It is without an opinion or a dictum until the report which is before us was made. It is against all precedents. There never has been a case where the Legislature has attempted to elect and failed to elect and a man has come here by gubernatorial appointment. The reason of that is because it was universally understood, universally conceded, that the governor had no right or power to appoint.

I now ask Senators if they have any doubt on this question as to the construction of the Constitution to do what I will not stop to do, take the debates, read them through so far as they appertain to this question, from the submission of the Randolph resolutions and the Pinckney plan to the final adoption of the Constitution, and if they can so read it and still hold to their opinions that a governor can appoint when a State has had the opportunity and availed itself of its opportunity, but failed either by deliberate action, by neglect, or inability to elect, that the governor may appoint, then I will simply say that I can not understand such logic, such reasoning, such construction.

Mr. CHANDLER. Will the Senator allow me a moment?

Mr. PLATT. Certainly.

Mr. CHANDLER. The time is running toward the hour to which the debate is limited, and I wish to ask the Senator, who is going over the ground with which we are all familiar, and asserting a construction of the Constitution which undoubtedly prevailed down to 1879, whether at that time a different construction of the Constitution was not adopted, beginning with the first New Hampshire case and ending with the last New Hampshire case, in which new construction of the Constitution the Senator himself participated? That is what I should like him to give a larger portion of the time to, than I fear he will do, if he does not reach the point pretty soon.

Mr. PLATT. It was not necessary that the Senator from New Hampshire should remind me of that matter. I had no intention to avoid that proposition. I shall come to it in due season. I want to say right here that it was said over and over again in the debate on the first New Hampshire case—the Bell case—that in such a case as this the governor would not have any right

to appoint, and nobody contradicted it. Do not call that case a precedent for this.

Mr. President, this whole argument for the admission of the appointed Senators rests upon two grounds, the one an assumption that the main purpose of the framers of the Constitution in choosing this language was to "keep the Senate full, always full," and the second that the Bell case is a precedent; both of which I deny. I say there is nothing in the Constitution itself, either in its language or spirit, there is nothing in the debates of the Convention, there is nothing in any previous plan or resolution of the Constitutional Convention which for a moment gives countenance to the idea that it was in the minds of the framers that they would keep the Senate always full, whether a State exercised its right to elect or not.

It could not have entered into their minds, it could not have been supposed, that a State would ever deliberately refuse or neglect to avail itself of the privilege which the Constitution gave it to be represented in the Senate of the United States: and the Constitution provided in another place that a State should not be deprived of its equal representation in the Senate except by its consent. It plainly intended that if a State did not avail itself of the right and the privilege which was given it to be represented in the Senate, and chose to go unrepresented here, there was no power on the part of the Senate and no way in which it could be represented here; and it was the right of the State to go unrepresented here if it desired.

Mr. President, I can not answer this new assumption—I will not say it is entirely new in this case; it has grown up—any better than by——

Mr. HOAR. I should like to ask the Senator, before he passes from the point he has been considering, if he denies the constitutionality of the legislation of 1866? He says the Constitution goes on the ground that if a State desires to go unrepresented it may. Does he not understand that it was the very purpose of that Congressional legislation to prevent the Senate from going unrepresented whether the State would want to do so or not?

Mr. PLATT. I do not think I am called upon to answer that question. I have heard it argued over and over again by the best lawyers in the Senate, including Mr. Edmunds, that that law is unconstitutional. I have no desire to pass upon it at this time, and until the Supreme Court passes upon it I desire to consider it constitutional.

Mr. HOAR. I thought the Senator's argument denied the constitutionality of that law.

Mr. PLATT. I do not think it follows at all. That was to prescribe a method.

Mr. MITCHELL of Oregon. It was to facilitate the chances of election.

Mr. PLATT. Yes; but if you hold that that law places an obligatory duty upon the State, I do not believe the Constitution ever intended to place duties upon the States. I understand that they intended to leave them free to act as States. So far I am in accord with my State rights friends.

Now, I can not answer the first assumption, on which this argument rests, any better than to answer it in the words of the Senator from Massachusetts [Mr. HOAR] himself, who, in this report, says:

> What is the great and leading purpose which the provision now under consideration was designed to accomplish? It is that the Senate of the United States shall be full, always full.

I listened with great pleasure, agreeing with the Senator, to the speech which he made on the election of Senators by direct vote of the people. He had an idea when he made that speech as to what the great purpose of the Convention was. He said:

> Fourth. The Senate was to represent deliberation in the expression of the popular will by the length of the term of office of Senators, and by its removal from the direct popular vote in the method of choice.

That is what he thought was the great purpose of the founders of the Constitution in providing for the Senate and the method of the election of Senators when he made his speech against the election of Senators by the people, and I believe he was right then. I go through these debates and I find that idea everywhere prevailing; it being the central idea of those debates that the Senate should be so constructed as that by length of term of service and by removal from popular elections the Senate should be free from the possibility of being influenced by temporary public clamor.

That was the great idea which controlled. It was around that standard, how the States should be represented and how Senators should be elected, that the battle of that Convention raged. It was a discussion of these questions and a division upon these questions which came near wrecking the Convention. To say now in the year 1893 that the great purpose of that Convention in framing this portion of the Constitution was to keep the Senate always full, even by appointment by governors, to say nothing of the popular will, it seems to me shows the desperation of the argument to which the majority is driven in this case. The Senator from New Hampshire is afraid I am taking up too much time, and therefore I will not stop to read.

Mr. CHANDLER. Too much time without reaching the point, I meant.

Mr. PLATT. I have reached that point now. I should like to hear the Senator answer it without stopping to read from the debates of the Constitutional Convention what is known to all Senators. There were members there who wanted the Senate to resemble the House of Lords, and I do not think they would have thought that it would much resemble the House of Lords if a Senator had to go into a truck and dicker bargain with a governor to obtain a seat in the Senate of the United States. They would have men of high character here. Well, a man of high character may be appointed by a governor, and a man who can intrigue and, therefore, has not high character can be appointed by a governor. No, the idea of the character of the Senate and it sconstitution, so as to preserve the character of the ideal Senate which the members of the Convention had in mind, was the great thought which influenced them and directed them in framing and wording this provision of the Constitution.

Mr. President, I said in the opening of my speech that no person had come here before claiming a seat in the Senate upon the appointment of a governor under similar circumstances. Why have we here three at the opening of this particular session? Because advice was given from the Senate, before the Legislature adjourned, that if there was no election by the Legislatures, and persons were appointed by the governors, they would probably be admitted. I have a right to say that, because the question was asked me by interested gentlemen from those three States, and I gave my opinion to the contrary. I was told by them that other Senators believed such would be the case, and that they would be admitted.

But it is said the Bell case is a precedent for this. I deny it *in toto*. It is said that the Bell case broadened the Constitution by construction. A single word about that, Mr. President. I do not want to broaden the Constitution by construction and I do not want to narrow it by construction. I want the Constitution as it fairly reads and fairly means; and when I am accused of being illiberal and narrow and strict in my views of the Constitution, a charge which I do not think lies at my door, I reply by saying that it is just as bad to attempt to expand and broaden the Constitution by construction as it is to attempt to narrow it by construction.

The question which a Senator should ask is, what is the meaning of the Constitution derived from its language and from all the circumstances surrounding its adoption?

What was the Bell case? It was not this case. That is certain. It was not a case in which the Legislature of the State of New Hampshire had met previously to the expiration of an old term and the commencement of a new term and voted for Senator and were unable to agree, or, as in the old case of the State of Connecticut, indefinitely postponed the election. It was not a case where, as in the case of Montana, they met on the day appointed, balloted clear up to the last day, and failed to elect; but it was a case where the Legislature of the State of New Hampshire, though it was believed by many members of the Senate to have had the opportunity to elect, itself believed it had no opportunity or right to do so.

Let me state exactly what that case was, if I can. I am sorry to take up so much time as to deprive the Senator from New Hampshire [Mr. CHANDLER] of the opportunity to make another speech on the subject, and I do not think I shall. This was the New Hampshire case, the Bell case:

> Two Legislatures were elected in New Hampshire in 1878, one in March, whose term began in June and extended to May, 1879; the other in November, whose term began in June, 1879, and lasted two years. Senator Wadleigh completed his term of six years March 3, 1879. An extraordinary session of the Forty-sixth Congress was called later in the month. The Legislature of New Hampshire elected in March, 1878, treated the law of 1866 as valid, and took no steps to elect a Senator, leaving the duty where the act of 1866 placed it, to be performed by the next Legislature, elected in November, 1878.

The Senator from Florida [Mr. PASCO] says—and I may go back to that argument—that the duty belonged under the Constitution to the former body, but the Legislature of New Hampshire, believing that it was obeying the law of the United States passed in 1866, and that the Legislature last chosen before the expiration of the time should make the election, let the election go until June after the vacancy occurred, believing that that was right. They had still more than that upon which to postpone the election till the next meeting of the Legislature. The question had been submitted here to the Senate previously, and there had been a report of the Committee on Privileges and Elections that it was the Legislature which was to meet subsequent to the expiration of the old term and the commencement of the new which was entitled to elect.

They had the voice of the Senate, through its Committee on Privileges and Elections, if it was never acted upon formally by the Senate, that it was the Legislature which was to come in after the expiration of the old term and after the commencement of the new term which had the right of election under the statute, and the statute was supposed to be and presumed to be constitutional. It was argued by the then Senator from Pennsylvania in the Bell case to be constitutional. So the Legislature of New Hampshire, not intending to neglect any opportunity which the Constitution gave it, not intending to forfeit any rights conferred upon it by the Constitution of the United States to elect a Senator for six years, acting upon the advice of the Committee on Privileges and Elections of the Senate, omitted to proceed to the election.

That case was decided by a vote of 35 to 28. I was then here, Mr. President. I came into the Senate at that extra session in 1879, and I have a very distinct and vivid recollection of that case and its discussion. I know what influenced my vote. I know that my opinion then, upon an examination of the Constitution, was that the Constitution meant that when the Legislature had had an opportunity to elect, and failed to elect, the governor had no power of appointment, and I know I reasoned in the New Hampshire case that the State ought not to be held up to that construction of the Constitution, when the Legislature really believed fairly under the statute of the United States that the Legislature preceding the term of expiration had no power to elect, and when the Committee on Privileges and Elections had so advised it. That is the ground on which my vote went.

Mr. HOAR. Mr. President——

Mr. PLATT. Let me get through with this point. I can, by turning to the RECORD, give the reasons for the votes of two other Senators—James G. Blaine and Henry L. Dawes, the former colleague of the Senator from Massachusetts—and I believe I shall. Mr. Blaine said:

My judgement now is that the Senate of the United States, having by their action prevented the Legislature of New Hampshire which ought to have elected from exercising that privilege, it would be rather hard for the Senate to turn around and say that the man who comes here now under the appointment of the governor, the only possible way left open by which the State can now have full representation on this floor, should not be received. That is the only way in which the Senatorial seat may be filled for that vacancy, and it would be rather hard, I think, looking at it in an equitable point of view, if equity can be pleaded, for the Senate to prevent the appointee of the governor from taking a seat.

Mr. Dawes said:

If any Legislature of New Hampshire has been prevented from undertaking to make a choice of a Senator, it has been prevented by an act of Congress. The Legislature which met last June could not have filled the vacancy according to the law of Congress, because the letter of that law says that the Legislature which shall make this choice shall be the one chosen next preceding the expiration of the term for which any Senator has been elected. That Legislature was not such a Legislature. If the act of Congress had used the words "the Legislature of each State at its last regular session next before the expiration of said term shall proceed to make a choice," it would have left the matter without doubt, and would have intended what I have no doubt Congress intended to enact when they used the words "the Legislature of each State which is chosen next preceding the expiration of the time for which any Senator was elected."

But Congress used words which happen, in their application to the case of New Hampshire, to deprive the Legislature of the State of New Hampshire of the power of electing a Senator according to the letter of their own law. It is the act of Congress and the words they unfortunately selected in that act which prevented the Legislature of New Hampshire from following its letter and choosing a Senator by that Legislature, which otherwise would have done so.

* * * * * * *

That the State of New Hampshire should be deprived of its representation here because of this unfortunate phraseology does not seem to me to be sound policy.

Mr. HOAR. I was going to ask the Senator if he himself thought that was a sound constitutional argument?

Mr. PLATT. No matter whether it is a sound constitutional argument or not——

Mr. HOAR. If the Senator is making his argument regardless of whether it is a sound constitutional argument or not, I have nothing to say.

Mr. PLATT. The Senator can address no *ad hominem* argument to me in this matter. I know what influenced my vote. If I was not right then, if my vote was not properly influenced, the Senator has the right to comment upon it and to say so; but the vote seating Bell never proceeded upon the ground of this case, and there were votes enough given to the seating of Mr. Bell, to my own personal knowledge and reading from the RECORD as well, to have changed the result if it had been supposed that it would be cited as a precedent in a case like this.

Mr. GRAY. May I ask the Senator, if it will not interrupt him—I think he has already stated it, but to emphasize the distinction between the Bell case and this—if the Legislature which met in June and actually did elect was chosen before the vacancy happened?

Mr. PLATT. The Legislature was chosen in November before, to meet in June. It was the last chosen Legislature according to the requirements of the statute. The then Senator from Wisconsin [Mr. Carpenter] tried very hard to argue that the other was the last chosen Legislature; but I think he was alone in that view of the case. Let us see, however, whether the Bell case is a precedent for this case or not.

The Bell case was discussed elaborately by good lawyers, and no one of them intimated that in such a case as this would Mr. Bell be seated; but it was stated over and over again, and acceded to, that if the Legislature, having the opportunity, had attempted to elect and failed to elect, the governor could not appoint. The Senator from Massachusetts himself admitted it then.

Mr. GRAY. So that, if the Senator will excuse me again—and I think he is putting it very strongly—the Bell case was a case in which there was literally, in the words of the Constitution, an appointment by the governor in the recess of the Legislature, as we understand it.

Mr. PLATT. Yes. The opinion then expressed by the Senator from Massachusetts has been alluded to in this debate, and I allude to it, not for the purpose of showing that the Senator from Massachusetts has changed his opinion, but for the purpose of showing what the universal opinion then was. Mr. Carpenter asked the Senator from Massachusetts this question:

Take the case of Wisconsin. Our Legislature assembles on the first Monday of January. It has to elect to fill up the vacancy that is to occur in March. The Legislature generally sits until about the last of April.

Now, pay attention to this:

Suppose they begin on the day fixed by the act of Congress to ballot for Senator; they make no choice; they ballot up to and past the 4th of March without making an election. A vacancy then occurs; by the Constitution the term expires, and the Legislature sits still, with that vacancy running on, balloting for thirty days and unable to make a choice, and finally adjourns without making a choice. Could the governor then appoint a Senator upon the ground that that was a vacancy happening in the recess of the Legislature?

Mr. HOAR. I think not.

It is not to the discredit of the Senator from Massachusetts that he now thinks the governor can appoint, and if he has changed his mind or if he replied hastily then, it is entirely proper that he should maintain his present view. But he was at that time at the head of the minority of the committee making the report, which report was adopted, and he was then willing to admit in that case that a person appointed by the governor, as in this Montana case, could not be admitted, for that was perfectly described in Mr. Carpenter's question.

There was another member of that committee, Mr. Cameron of Wisconsin, who took charge of the case in the absence of the Senator from Massachusetts. The Senator from Massachusetts having gone away and left the case in the charge of Mr. Cameron of Wisconsin, Senator Garland was arguing against the admission, and speaking of a Pennsylvania case, said:

The same question arose in Pennsylvania in 1855. During the winter of that year the Knownothing Legislature got into a factious wrangle over Cameron and his rivals, and failed to elect a Senator. The State was thus unrepresented from the meeting of Congress in the fall until the middle of January, and Governor Pollock, after an exhaustive examination of the question, decided that the vacancy was not one that he could fill by appointment.

And I believe that he so advised the Legislature in a message.

In that opinion the leading lawyers of the State concurred, and Pennsylvania was without a Senator until Governor Bigler was chosen in 1856.

That is a piece of history.

* * * * * * *

Mr. CAMERON of Wisconsin. I suggest that the reason why he did not have power to appoint was that there had been a session of the Legislature and the Legislature had not elected.

Mr. GEORGE. Who said that?

Mr. PLATT. Mr. Cameron of Wisconsin, who then had charge of the Bell case, the Senator from Massachusetts having gone.

Mr. President, I could cite other expressions from the Bell case, of which there are plenty, showing it to have been conceded then that an appointment under the circumstances of this case would be inadmissible. I have the references to them. I will cite one more from Senator Cameron of Wisconsin, because he was in charge of the case. That was when Mr. Garland was speaking about the Kensey Johns case. Mr. Cameron of Wisconsin interrupted him to say:

Will the Senator allow me to suggest that a session of the Legislature of Delaware was held after the vacancy happened and before the governor assumed to appoint Mr. Johns; and if I understand that case—it was examined by the committee although not referred to in either report—the refusal to admit Mr. Johns was put upon the ground that the Legislature met and had a session after the vacancy happened and did not elect; and, consequently, the Legislature having met, and having had an opportunity to elect a Senator, and having not done so, the governor had not authority to appoint.

Though the Johns case was not precisely like the present, there is no difference in the argument, because the contention of Senators now is that, no matter under what circumstances a vacancy or a want of occupancy of the seat exists, the governor

can make a temporary appointment in the recess of the Legislature.

How it is possible to claim the Bell case as a precedent for this case I am unable to discover. I am not going over all the precedents. They have been referred to by other Senators. I think the great lawyers of the country have been pretty uniformly of opinion that under no circumstances could a governor fill a vacancy happening, if you choose to use the word, by the expiration of the term of office at the commencement of a term.

Mr. HOAR. I wish——

Mr. PLATT. Allow me one word. Certainly, as I read the Lanman case, that was the decision in the Lanman case; certainly, as I read the Sevier case, it was acknowledged in that case to have been the decision in the Lanman case; certainly, as I read the debate, it was Daniel Webster who suggested that in the Sevier case there was no constitutional vacancy, and he voted against the admission of Mr. Sevier. So all along through our history, without disparaging in the least the ability and the character of the lawyers who in the Bell case contended that a governor might make an appointment at the commencement of a term, the great weight of authority and opinion is on the other side. That case has always been distinguished from a case where the Legislature, knowing that it had the power to elect, deliberately declined or refused or failed to elect.

Mr. HOAR. I wished to ask the Senator before he passed from his discussion of the Bell and Blair cases if he was willing to state whether, in the course of his argument, he admits the decision in those cases to be sound or unsound? Were the Bell and Blair cases decided rightly or wrongly, in the judgment of the Senator?

Mr. PLATT. I think they were decided wrongly, if decided only on the ground that the governor might appoint at the beginning of a term. I think I will read a single extract from Senator Conkling, for he puts the case strongly. Senator Hill of Georgia was discussing that case; and I want to compliment that Senator, now that he is gone, by saying that as I listened to the argument I thought it was one of the most admirable arguments which I ever heard from the mouth of a lawyer. While Senator Hill was arguing against the admission, Senator Conkling interrupted him for a question, and said:

> I am listening with great pleasure and great satisfaction to what seems to me a very clear and able presentation by the Senator from Georgia, but to enlighten myself I venture to ask him a question. Suppose the design of the framers of this instrument was to deposit with the Legislature, as has been done, the power to fill original terms in the Senate, but in order that there might be no chasm in the Senate, or that the Senate might be kept full, to commit to the governors of the States the power to give temporary commissions in all instances when temporary vacancies occurred, either by death, resignation, expulsion, failure to accept, or, as in the present case, a change in the fundamental law of a State bringing on a hiatus. Suppose, now, that was the design of those who framed this instrument. My request to the honorable Senator is that he tell me what words they should have employed different from those which we find in order to vest that power and accomplish that object?

The Senator from New York, it will be seen, held that the change in the fundamental law of the State brought on the hiatus, and that it was, therefore, one of the classes of vacancies which were to be included under the words "happen by resignation or otherwise." Senator Hill said, "I see," and then Senator Conkling said:

> The Senator will see that the distinction I take is not technical or formal; it is substantial; and I will prove that by a single illustration. If it should be the established law that wherever a Legislature decided not to elect the power to fill the vacancy should revert to the executive of the State, the Senate and all of us must see how exposed the whole process of filling seats in the Senate would become; because the governor and his friends by cabal, intrigue, maneuver, might so arrange that the Legislature would decide not to elect or would fail to elect in order that the governor might gather to himself the power to fill the vacancy. The next Legislature might decide not to elect, and so indefinitely within the six years the executive power of a State might usurp that which the Constitution deposits with the legislative power.

Mr. President, that was no idle fear which was expressed by the Senator from New York, and I venture to-day the prediction—I will not call it a prediction—but I want to express my belief and opinion, that if we to-day violate all the precedents of the last hundred years, if we override the opinion of all the constitutional lawyers of this country up to the time of the bringing out of the report which seated the Senator from Florida [Mr. PASCO], if we admit the Senators from these three States, where the Legislatures have tried to elect and failed to do so, it will be but the beginning of this business.

The great Senator from New York foresaw clearly what would be the result. Senators, who were to be removed from the possibility of being influenced by popular clamor, will be dependent for getting their office upon one man; Senators, who the Constitution insists shall be elected by the Legislatures for six years, are to come here appointed by one man in piecemeal terms of one or two years to serve out the six-year term. There will be enough of it in the country, Mr. President.

I close by saying that such a construction destroys what has been understood to have been the character intended to be conferred upon the Senate by the framers of the Constitution. It affords every opportunity for intrigue, cabal, and corruption. I am sorry to say that the tide of corruption about Legislatures is rising in this country; but the opportunity to buy a seat in the Senate of the United States is tenfold greater where a governor only is to be dealt with than it is where a Legislature is to be dealt with.

Mr. HOAR. I should like to ask the Senator a question.

Mr. PLATT. Let me finish.

Mr. HOAR. I wish to ask if the Senator knows of an instance in this country where it has been said or suggested, or insinuated, that a governor has been bribed; and if he does not know a great many instances where others have been?

Mr. PLATT. It is not so easy to determine the influences which are brought to bear upon one man.

Mr. HOAR. I will ask my friend if he believes there was ever such a case in this country?

Mr. PLATT. There have been but three cases in this country where a Legislature has deliberately failed to elect with the expectation that the governor would make an appointment. I am not to impute any corruption to either of these three governors or to the Legislatures, but I am speaking of the tendency of things as they were spoken of in the Constitutional Convention. I tell you that any construction of the Constitution which makes it possible for a six years term to be filled here either by one or more Senators under appointment, by the will or whim of one man, is a dangerous construction of the Constitution, and will bear its bitter fruit if the Senate adopts it.

Mr. TURPIE. I wish to say, Mr. President, that the honorable Senator from Connecticut [Mr. PLATT] is laboring under a misapprehension. The Senator from Indiana, to whom he alluded, did rise up. I was not silent; was not inactive. I advised our governor at the time that he had the right to appoint. I even urged the appointment; and many gentlemen of that State, older than myself in the profession and in public service, gave the governor the same opinion. So it was not from any lack of authority or of judgment that there was power in the executive to make the appointment that he failed or declined to make it.

It happened at that time that the governor of Indiana was a candidate for a seat in this body, well known and avowed. He afterwards did occupy a seat here. Being governor, he could not with much propriety appoint himself; he was afraid to risk in public opinion that sort of promotion. The gentleman who held the second office in the State at that time was in well-known, recognized, intense hostility to the governor. There was then no method by which the governor could in a regular manner reach a membership of this body, and he preferred that the vacancy should run two or three years, taking the chances of the legislative preference, rather than violate good taste or morals by an appointment which would be very questionable in the public view.

The failure to make an appointment was *de facto*, not *de jure*. It was founded upon circumstances of political pressure, not of any defect or of any thought of defect of authority in the governor to have made one, if he had seen fit to do so.

I may be allowed to remark—although I wish to confine this entirely to what I think was a misquoted history of Indiana, a portion of it—that three or four of the *lacuna* instances by the honorable and learned Senator from Connecticut, where vacancies existed in other States owing to the failure of the governor to appoint, are just as likely to have arisen from similar causes as the one the history of which I have now given.

Mr. PLATT. May I inquire who was the governor of Indiana at that time?

Mr. TURPIE. Joseph A. Wright.

Mr. PLATT. Mr. President, the Senator from Indiana has unconsciously made one of the strongest arguments in the world, the strongest possible argument, why temporary appointments, where a Legislature has failed to elect, should not be committed to the governor of a State. If a governor, believing that he had the power to make the appointment, desiring himself to be a candidate, and not willing to appoint because he thought he would prejudice his own chance of election, for that reason failed to appoint, when he supposed he had the right to do so, it is as strong an instance as can possibly be adduced to show that a governor may not properly exercise the power of appointment to vacancies of this kind.

Whenever a governor has made a temporary appointment which he was entitled to make, the newspapers have generally teemed with suggestions that he was going to make that appointment by some agreement with somebody who would disappear at the end of the temporary appointment, and allow him to become a candidate for the place himself. If there is no corruption to be feared, there is that bargain always to be feared.

Mr. CHANDLER. Mr. President, having expressed my

views briefly on the resolution before the Senate on a former occasion, I should not have taken the floor again at this time, in view of the fact that there are other Senators who wish to speak, who will easily consume the remaining time allotted to the discussion before the vote is taken, but for the reason that the Senator from Oregon [Mr. MITCHELL] the other day introduced into the RECORD a letter from the late Senator from Vermont, Mr. Edmunds, in which letter, written to the governor of Oregon on the 1st day of September, 1885, he advised the governor not to make an appointment of United States Senator to fill a vacancy then existing in consequence of the failure of the Legislature of Oregon to make an election.

This opinion, brought in here by the Senator from Oregon with considerable exultation, is, as I can conceive, not in accordance with the speech of the then Senator from Vermont in March, 1885, in the case of Senator Blair, who was admitted to a seat under appointment from the governor of New Hampshire.

In making this statement I am not asserting that there may not be a distinction made between the three New Hampshire cases and the present case; but I desire to call the attention of the Senate to the extremely strong and positive arguments in favor of seating Mr. Blair made by the then Senator from Vermont. His remarks are contained in the RECORD of March 10, 1885. Senator Edmunds took occasion to quote the first draft of the original Constitution:

ART. V, SEC. 1. The Senate of the United States shall be chosen by the Legislatures of the several States. Each Legislature shall choose two members. Vacancies may be supplied by the executive until the next meeting of the Legislature. Each member shall have one vote.

Thereupon he said:

There, as it stood in that final report in detail, final at that time, but changed afterwards, you will see that there was no limitation or qualification or restriction except "vacancies." They might occur during the sitting of a Legislature. Whenever they occurred the executive was to fill those vacancies until the Legislature should elect, not until its next meeting even; but in order to keep the representation of the States full, in order to create a national government which should have all its faculties and all its members in place to perform their duties, this draft reported by the committee of detail provided for a universal filling of a vacancy by the executive, and provided for his filling it if a vacancy happened or occurred or existed, whatever it was, even if the Legislature were sitting.

Senator Edmunds, having read this first draft, and having put the construction upon it that it provided for a "universal filling" of vacancies, proceeded to consider what the convention subsequently did, without for a moment conceiving that the convention intended when they made their final draft to so construct the clause in the Constitution that it would not be as broad as the clause in the original draft.

Mr. Edmunds next argues, first, that the word "resignation" was put in not as an exclusive word, but, as has been frequently shown, for the purpose of recognizing the right of a Senator once elected to vacate his seat if he chose. He said "the words "resignation or otherwise"—

were put in expressly for the purpose of recognizing the power of a Senator to refuse to hold on to the office to which he had been appointed.

Then Senator Edmunds proceeded to give the broadest kind of construction to the meaning of the words "resignation or otherwise," and to scout the idea, which has been so many times advanced in the debate upon this question, that the word "otherwise" meant "likewise." He said:

If Mr. Madison by proposing, or the convention by adopting, the words "resignation or otherwise," had meant to classify a series of cases like resignation, why would not Mr. Madison, eminent in his knowledge of the English language and clear in its expression, have said "likewise?" That is the adverb which would suit the class of cases to which my friend from Missouri refers. "Other things happening in like manner" is the definition of "likewise," while "otherwise" means things happening in any other manner than by resignation. That is the dictionary and the common sense and the universal knowledge of everybody who knows the English language.

Senator Edmunds appealed to the Senate of the United States not to try to put a narrow and limited construction upon the Constitution. He demanded that they should not seek out some class of vacancies which the executive of a State should not be allowed to fill. He said:

Wherefore, then, upon any principle of patriotism, or law, or justice, should we endeavor by construction to narrow down the franchise of a State, if I may call it that, and endeavor to find some class of cases where for some period of time a State shall go unrepresented? I am unable to see it.

The Senator from Vermont lastly entreated the Senate to stand by the precedent which had been set in the case of Mr. Bell, and not to continually embarrass and disarrange public affairs by changing a rule of decision once deliberately adopted after full discussion.

So, Mr. President, I appeal from the Senator from Vermont when, at the suggestion of the Senator from Oregon, in September, 1885, he was writing to the governor of Oregon advising him not to appoint a Senator, and expressing to him the hope that in some way a Republican Senator might be obtained; I appeal from Senator Edmunds, expressing this opinion in a letter written for a particular purpose, to Senator Edmunds making his deliberate and careful speech in the Senate, followed by the vote which he gave in favor of the admission of Mr. Blair.

In this decision the Senator from Vermont was joined by the Senator from Connecticut [Mr. PLATT], who has so eloquently and forcibly addressed the Senate this afternoon. Twice the Senator from Vermont and twice the Senator from Connecticut have struggled in the Senate to prevent the adoption of a narrow rule of construing the Constitution and have urged the Senate to adopt a construction which would tend in the direction of the avowed purpose, as Senator Edmunds put it, of the founders of the Constitution to keep the Senate always full: and yet now the Senator from Connecticut comes forward and penitently confesses that the opinion which he then held and the votes which he then gave were wrong and that those votes ought not to have been given. Next he proceeds to tell the Senators who differ from him that it is an utterly absurd proposition which those Senators now make in conformity to the votes which he gave on that former occasion.

Mr. President, the Senator from Florida [Mr. PASCO] also places himself in the position of asserting that the rule in the New Hampshire cases ought not to have been adopted by the Senate. In full view of those two cases, and notwithstanding he himself sat here from the 4th of March last until the expiration of the extra session under an appointment from the governor of the State of Florida without making any objection to his own title, he now frankly says that the decisions in the New Hampshire cases were wrong, and also that the governor of Florida ought not to have appointed him to take and hold the seat which he so lately held in the Senate.

Mr. PASCO. Mr. President, I will suggest to the Senator from New Hampshire that he has not read my speech, or he would not make that statement.

Mr. CHANDLER. I must beg pardon of the Senator from Florida for not having read the whole of his speech, but the Senator will correct me if I am wrong when I say that he does, in the closing summary, assert that the decision in the New Hampshire cases was wrong. If I am mistaken, then I will withdraw what I said.

Mr. PASCO. Mr. President, it is so late in the afternoon that I dislike very much to consume the time of the Senate by entering upon this subject again now, and I regret that the Senator has not read over the very carefully prepared remarks I made on this subject so as to know exactly what my views are.

The position I took in reference to the Florida case briefly is this: That the decisions in the Bell case and in the subsequent New Hampshire case of Mr. Blair were upon the law of 1866, that those decisions were made by a tribunal which had authority under the Constitution to pass upon the election of Senators; that this tribunal sustained the law of 1866 and sustained the appointment of Senators in cases where Legislatures under it had not had an opportunity to act; that this law and these decisions settled the law and the practice before the Florida case arose.

The law of 1866 requires the election of a Senator to be made by the Legislature last elected before the term expires, and the decisions of this body sustain elections made under that law as regular, the Legislature so elected is the proper one to choose a Senator. When the State of Florida acted under that law, she was simply obeying the decisions of this body. As long as those decisions remain unchanged, it was the duty of the governor of the State to appoint to a vacancy at the beginning of a term occurring before the Legislature had an opportunity to choose a Senator. It was the only way in which the State could get representation in this body at the extraordinary session.

I stated, however, that my own opinion was that the Bell case had been decided improperly. But the Senate has hitherto treated cases like the New Hampshire and Florida cases as differing from the Montana case in this, that in the latter case the Legislature had the opportunity to choose a Senator.

Mr. CHANDLER. I did not misapprehend the Senator, and I agree with him.

Mr. PASCO. I will state further that in my judgment the law of 1866 is faulty in requiring the Legislature last elected to choose a Senator instead of the Legislature which last meets before the Senatorial term expires. That is briefly the statement of the case I made.

Mr. CHANDLER. I agree with the Senator from Florida that it was the duty of the governor of Florida, in view of the precedents, to make the appointment which he did make; but I correctly stated that the Senator from Florida expressed the opinion that the decision in the New Hampshire cases was an erroneous decision, according to his construction of the Constitution.

Mr. PASCO. If the Senator had simply said that, I should not have interrupted him.

Mr. CHANDLER. That was all I intended to say.

My colleague [Mr. GALLINGER] has also frankly stated to the Senate that, in his judgment, the decision in the previous New Hampshire cases was erroneous. It is true he stated that he made the distinction, which other Senators undertook to draw, between the New Hampshire cases and the present case, but he further distinctly said that, in his judgment, the decision in the New Hampshire cases was erroneous.

Whether that decision was erroneous is the whole question, as I conceive, before the Senate. It is not whether in the early days of the nation there was a construction placed upon the Constitution which was technical and narrow, and would not allow the appointees of governors to sit in this body, but the question is whether we have liberalized that construction by the precedents as they now stand at the end of one hundred years under the Constitution.

In the beginning it was held that there could be no appointment at the beginning of a term, but that rule was violated in 1797, and from that time down to this hour we have numerous cases where appointments have been made by governors of Senators to take their seats at the beginning of terms.

And at last, Mr. President, we come to the New Hampshire cases, and from the New Hampshire cases to this case, when the question is, whether we shall continue this late and liberal construction of the Constitution, or whether we shall go back to the old and technical construction of the Constitution.

I say that it is impossible to draw a line of principle which distinguishes the New Hampshire cases from this case, for, as has been stated by my colleague [Mr. GALLINGER] and as clearly appears from the facts, the State of New Hampshire deliberately disabled herself from bringing a Senator here at the beginning of the Senatorial term, and notwithstanding this action of hers the power of gubernatorial appointment was allowed, and three appointees, Mr. Bell in 1879, Mr. Blair in 1885, and Mr. Marston in 1889 were allowed to take and retain their seats under the power of appointment.

It was upon the strength of these cases that I felt constrained to give my adhesion to the report of the majority and to speak in behalf of the gubernatorial power of appointment in the present case. I can not make the power of the Legislature and the power of the governor either inferior or superior the one to the other. The one power is conditional; the other is unconditional, but the two are of equal dignity. The Legislature, under a correct construction of the Constitution, may keep a Senator here if they choose to make, and succeed in making, an election. If they fail to keep a Senator here, then the governor may fill the vacancy.

I hold, notwithstanding the woeful predictions of the Senator from Connecticut [Mr. PLATT] that by the Senate the governor of the State, exercising this conditional, but when the occasion arises, absolute power of appointment, is to be respected as a portion of the government of a State as much entitled to be allowed to exercise the power which the Constitution confers upon him by its express language as is the Legislature of the State in accordance with the Constitution.

Mr. PUGH. I desire to ask the Senator from New Hampshire a question. Is it not conceded, and will any Senator deny, that the power of the governor to appoint and the power of the Legislature to elect are both delegated powers of equal dignity in the Constitution? There is nothing of the character of a reserved State right or State power in the power of the Legislature to elect a Senator. The one power is just the same as the other; they are both delegated, and both are of equal dignity and importance.

Mr. HAWLEY. Mr. President, I have been surprised, I confess, at the breadth and strength of the differences among Senators upon this question. It comes, I think, partially from a difference in our general theories concerning the relations of the States and the Federal Government, and from what I respectfully think to be a misapprehension of the designs of the founders of the Constitution.

If you will take up this book and read the Articles of Confederation, it will surprise you again that they were able to carry on war, to establish their independence, to call themselves in Constitutional Convention, to do anything, in short, as a united body. It is the loosest possible agreement. There is not a sanction given to any power reposed in the provincial congress. It is substantially a respectful request in every respect. During the war of the Revolution, the marvelous wisdom, patience, and patriotism of those wonderful men and the gracious favor of Almighty God carried them along; but after the war everything tended to a condition of utter and hopeless ruin.

But everyone here knows well the state of feeling that led to the calling of the great Constitutional Convention. If there was any great and underlying purpose in that Convention at all, it was to form a union, to create a great central, national, protective government, representing the great masses of the people to the rest of the world in such a manner that nobody from within could destroy it; that it should not be shorn of its locks, like Samson; that it should not be hamstrung, taken by surprise, or ever found at a disadvantage; that there should never be a branch of the Government without somebody occupying it, or never be a function of government where there was not a person to discharge that function. That is the underlying purpose of the whole instrument.

When you come to what is ordinarily called a discussion of State rights and the respective powers of the State and the national governments, I am, in a general sense, a very strict constructionist upon the State rights side; but when I come within what is the unquestioned field of the Federal Government, then I exult in its imperial power, and demand for it every ounce that belongs to it.

They went into that Convention with that purpose. Let us see what they did. They took absolute control of the election of Representatives in Congress. The States may make their rules, select their times, place, and manner. They long ago selected the time for choosing their Representatives, but if the times, place, etc., are not acceptable to the great Federal Government, it may alter or make all the regulations for the choosing of Representatives. The Senator from Massachusetts [Mr. HOAR] calls my attention to the fact that they may not elect on one ticket, as they used to do. So that provision is made that we shall never be without Representatives in what we sometimes call, disrespectfully, the lower House of Congress.

How, then, about the Senators? We have the same power in the Federal Government of regulation over the times and manner of choosing United States Senators, but we have nothing to do with the place. For some reason, while regulating the time, the manner, etc., the framers of the Constitution excepted the place at which the election of Senators may be held.

To those gentlemen who are scrupulous about interference with State dignity and power I commend the well-known statute which provides for the election of Senators. No man ever questioned the entire jurisdiction of the Federal Government over that subject; and in comes the Federal Government into the legislative body of a sovereign State and practically orders it, on a certain day after its organization, to meet in separate houses and take a vote upon the question of the election of a Senator; then to meet in joint convention the next day and compare their votes, and if there be a coincidence of choice, then the election shall be declared, but if there shall not be they shall take one vote every legislative day thereafter until they shall have come to a choice.

Does anybody see anything in that to raise the question that that interferes with the dignity and majesty of a sovereign State? Will anybody say that there were not abuses which called for the wise exercise of just such a power? Some of the State Legislatures used to do just what some people fear they will do now, and what they occasionally do now; but it was then a common occurrence that factions broke up, nullified, delayed, dissipated the power of the Legislature; and there was no Senator chosen, or he was not chosen until toward the end of the long session, when innumerable combinations sometimes brought on corrupt bargains.

So far as the Federal Government could do it, it put an end to that, and provided to the best of its ability for a speedy choice.

Some one made the remark here that the Constitution gives the States no command. Well, I think it does, very distinctly. I recollect one that made a great deal of trouble at one time in the history of the Government:

> No person held to service or labor in one State, under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due.
>
> A person charged in any State with treason, felony, or other crime, who shall flee from justice, and be found in another State, shall, on demand of the executive authority of the State from which he fled, be delivered up, to be removed to the State having jurisdiction of the crime.

Before a member of a Legislature in either house can take one step in the discharge of his duties, he must obey the following command in this book:

> The Senators and Representatives before mentioned, and the members of the several State Legislatures, and all executive and judicial officers, both of the United States and of the several States, shall be bound by oath or affirmation to support this Constitution.

There are commands enough; and the restrictions, the delegations—the Senator from Alabama [Mr. PUGH] makes a wise distinction—found elsewhere in the Constitution make the objection that the Constitution imposes no commands a merely technical one.

Now, when we come into the Constitutional Convention, as I read Elliott's Debates and Madison Papers I find these distinguishing great purposes running throughout: A great jealousy of undue influence with the autonomy, with the wise individ-

uality and local self-government of the States, and, on the other hand, an equal desire that the great government they were forming should be eternal; that it should be an indestructible union of indestructible States.

Mr. GRAY. Will the Senator from Connecticut allow me to ask him a question?

Mr. HAWLEY. Oh, with pleasure.

Mr. GRAY. If the great underlying purpose of the framers of the Constitution, which the Senator, with some others, has discovered, was that the Senate shall be always full, and if the provision in regard to temporary appointment by the governor be a carrying out of that great underlying principle, why was it that those framers who knew so well how to use the word "shall" in the instances the Senator has just read, say, when it comes to temporary appointment by the governor, that he may make a temporary appointment, and do not say that he shall make it?

Mr. HAWLEY. I will answer in the language of one of my great predecessors from Connecticut, Mr. Ellsworth:

It is only said that the executives may supply vacancies. Where the legislative meeting happens to be near, the power will not be exerted.

It is not necessary to say "shall;" it is not necessary that it should be imperative. We trust something to the people.

Mr. MITCHELL of Oregon. May I ask the Senator from Connecticut a question?

Mr. HAWLEY. Certainly.

Mr. MITCHELL of Oregon. I understand the Senator to be arguing that all vacancies in the House of Representatives, no matter how created, shall be filled in the manner pointed out in the Constitution; and following that up, that whenever a vacancy exists in the Senate——

Mr. HAWLEY. Excuse me, I never said a word about vacancies. I spoke of the general choice, the regulation of the times, places, and manner of choosing Representatives.

Mr. MITCHELL of Oregon. I understand the general scope of the Senator's talk to be, that whenever a vacancy exists in the Senate of the United States, no matter how it occurs, or when it occurs, then, until the Legislature shall fill that vacancy, the governor may appoint, and that appointment confers just as good a title as though the title came from the Legislature itself. The question I wish to ask the Senator from Connecticut is this: Why did the framers of the Constitution, in defining vacancies in the House of Representatives and vacancies in the Senate, use different language? In other words, why did they use the words "when vacancies happen," in reference to vacancies in the House of Representatives, whereas when they come to refer to vacancies in the Senate they use entirely different language? "When vacancies happen," of course, means any vacancies, all vacancies, but the language referring to vacancies in the Senate is entirely different from that employed in defining vacancies in the House. Referring to the Senate, the Constitution says, "if vacancies happen by resignation or otherwise." Wherefore the necessity or the propriety, or the common sense, if you please, of putting in those four words of qualification, "by resignation or otherwise," if it were intended that the governor had the power to appoint whenever a vacancy occurred, no matter how it occurred?

Mr. HAWLEY. I understand the question, and I will answer the Senator by simply reading two lines and a half from the Constitution, which provide for filling vacancies in the House of Representatives:

When vacancies happen in the representation from any State, the executive authority thereof shall issue writs of election to fill such vacancies.

There is no intervening legislative body. We speak directly to the people there; but with regard to the election of a Senator, the time for the appointment of a Senator may be within a week of the meeting of the Legislature, and that is precisely the reason Chief Justice Ellsworth, of Connecticut, gave for using "may" instead of "shall." Otherwise, doubtless, the Constitution would have used "shall" in regard to Senators also.

Mr. MITCHELL of Oregon. That is simply drawing a distinction between a command and a permission.

Mr. HAWLEY. The Senator asked me why there was a difference between the two clauses, and I have told him all I know about it. It is so near 5 o'clock that I can not permit my remarks to be cut into slices. Now they had before them the following:

The Senate of the United States shall be chosen by the Legislatures of the several States. Each Legislature shall choose two members. Vacancies may be supplied by the executive until the next meeting of the Legislature.

That is complete. I understand there would have been no question if that had been left as agreed upon at one time. They discussed it. I omit the discussion. Then a motion was made to strike out the words "vacancies may be supplied by the executive." There was the broad, general issue clearly made. One single State voted for it, eight voted against it, and one State was divided and lost its vote, and the question was never raised again. There is no record of there being another vote and another contest on that subject.

When the Constitution came away from the committee on style it had been changed a little; but there was another vote that I must call attention to. That might have been left just as it was, and it would have been so left, undoubtedly; you can read the report and see—it would have been left just as it was, "vacancies may be filled by the executive," if Mr. Madison had not thought of a possible matter of difference. In the House of Commons the right is denied to a member to resign. They keep up a ridiculous old fiction in the House of Commons that a man can not resign, like that of fines and recoveries and all that sort of superannuated and scrubby nonsense in the common law.

So, when a member wants to resign, he accepts the stewardship of the Chiltern Hundreds, a government office, which is incompatible with his holding a seat in the House, and then he gets out of that body. They do not allow him to go out of the big open door, but if you go into that cloakroom you can get out through it. It occurred to Mr. Madison, the analogy being so strong between our House of Representatives and the House of Commons——

Mr. LINDSAY. Will the Senator from Connecticut pardon me?

Mr. HAWLEY. Certainly.

Mr. LINDSAY. If the Senator believes that to have been the real reason, why was the language qualified in the Constitution?

Mr. HAWLEY. I do not know; that is one of the conjectures.

Mr. LINDSAY. Why was it not also provided that a member of the House of Representatives might resign, the House of Representatives being analogous to the House of Commons?

Mr. HAWLEY. I do not know, I am sure. I have only got what Mr. Madison said here, and I can not think of any other reason for putting that clause in, except that the report says:

Mr. Madison, in order to prevent doubts whether resignations could be made by Senators, or whether they could refuse to accept, moved to strike out the words after vacancies, and insert the words "happening by refusal to accept, resignation, or otherwise, may be supplied by the Legislature of the State in the representations of which such vacancies shall happen, or by the executive thereof until the next meeting of the Legislature."

Vacancies "happening by refusal to accept, resignation, or otherwise;" and the words "refusal to accept" were stricken out because I suppose they thought that clause was entirely unnecessary. So it finally came out, "vacancies happening by resignation or otherwise." It differs in no respect from what it originally was when nobody disputed the appointing power to the governor. It differs only in the insertion of the words "resignation or otherwise," and there was sense in using the word "resignation," as I have shown by this historical reference.

There is no escape in my judgment from the conclusion that it is right to seat Mr. Mantle unless you can find it in the construction of the word "otherwise." That is the only escape. Otherwise the governor has a right to appoint. So it is of some consequence to know what "otherwise" means. It is of no consequence in dealing with 999,999 out of the 1,000,000 of the common people because they know what "otherwise" means, but it takes a lawyer to find out that "otherwise" means "likewise." It takes a lawyer to find out that "otherwise" is simply one of the species of "other;" that it is only practically equivalent to "likewise;" that "otherwise" is something right along in the direction of what you have been at all the while.

Now, let us see if "otherwise" means anything of that sort. It may amuse you to have a little more of this read than you have heard from anybody else. Here is the great Century Dictionary; and do not let any man tell me that it is merely a modern dictionary, because these men give you all the old Scandinavian, all the old Danish, and Celtic, and Norwegian, and Icelandic, and everything else that there is to be dug out of it. "Otherwise" is defined:

In a different manner or way; differently.

That is to say, in another manner or way, by resignation, or in another method or way. "Any other manner or way" is the common sense of it. So it ought to read, and it does read practically thus. "If vacancies happen." What does "happen" mean? Is there a broader word than that? It means to come to pass, in the common language of the scriptures. If we find it here, whether it came up, or down, or any way; whether it flew here, walked here, was thrown here, grew here, anything to make it happen, there it is. If vacancies happen, if they come to pass in any manner, resignation included. That is what is meant. If vacancies happen in any manner, resignations included during the recess of the Legislature, the executive may appoint, etc.

Now, let us see what is the meaning of the word "wise." Wise is a noun as well as an adjective. It means:

Way; manner; mode; guise; style; now seldom used as an independent word, except in such phrases as in *any wise, in no wise, on this wise.*

* * * * * * *

IN ANY WISE, in any way; by any means.

* * * * * * *

IN NO WISE, in no way; on no account; by no means.

Therefore, when I say "otherwise" I mean "in any other way under the sun, resignation included," That I think is very clearly what is meant. Of course, there is a temptation to follow up this kind of speculation, but that is enough for me. I do not care, for my vote here, what A B or C D or any distinguished man said, except that it throws more light and appeals to my reason, for I have a theory of the Constitution, and I can read the English language, and I think I know what "otherwise" means. There is the great underlying pervading theory of the Constitution. Like nature, it abhors a vacuum. There is no want that is indispensable to the existence of a great imperial nation that is not in the Constitution; and it is one of the first duties of this Congress to see that there are no empty places where there is work to be done.

Mr. HOAR. Mr. President, I desire to say a few words—probably I shall not desire to occupy more than ten minutes—in conclusion of the debate.

Mr. CHANDLER (at 5 o'clock p. m.). I ask unanimous consent that the time for taking the vote may be extended fifteen minutes.

The VICE-PRESIDENT. Is there objection to the request of the Senator from New Hampshire that the time for taking the vote on the pending resolution be extended fifteen minutes?

Mr. VANCE. I have none.

Mr. HARRIS. Does the Senator from Massachusetts need that much time?

Mr. HOAR. I shall not take so much, I hope.

The VICE-PRESIDENT. The Chair hears no objection to the request of the Senator from New Hampshire, and the time for taking the vote is extended until a quarter past 5 o'clock.

Mr. HOAR. Mr. President, this seems to me as simple and plain a question as ever was confused by metaphysics or clouded by legal argument. The Constitution of the United States says that when there is a vacancy in this body by death, resignation, or otherwise——

Mr. MITCHELL of Oregon. It does not say that. The word "death" is not in the Constitution.

Mr. HOAR. Well, "resignation or otherwise," then. It may be filled when caused by resignation or otherwise. As my friend says, "death" is not mentioned, and if the word "otherwise" means "in the same way as resignation," you can not fill the vacancy when a Senator dies, according to his suggestion.

Mr. President, one of two things is true: either when the framers of the Constitution said "otherwise" they meant "in any other way," and intended to provide for all cases of vacancy, or the framers of the Constitution meant to provide that there should be certain cases, naturally to be expected, easy to be foreseen, impossible not to have been thought of by them, in which the States should not be equally represented in the Senate.

Will anybody doubt that those circumspect and wise and experienced men knew very well that State Legislatures, bodies who, if their two branches acted separately, were to record the action of two artificial beings who were very likely to differ, and if they acted as they have done only since 1866 in joint convention were to be composed of a number of men who might be divided into three or four parties, and so could not agree—is there a member of the Senate who will stand up here and say that he doubts seriously that the framers of the Constitution did not mean to anticipate and provide for that condition of things?

If they did mean to provide for it, is there a man bold enough to justify his vote on this question by announcing that he believes in that case our fathers did not mean to have the Senate filled? They provided that ninety-nine one-hundredths of the American people could not for ninety-nine hundred or ninety-nine thousand years, if this nation should endure so long, under any conceivable circumstance or for any conceivable reason, have two Senators for forty-three States and the forty-fourth State have but one. Th eone constitutional impossibility, so far as the wit of man could devise, and the power of a national Constitution could enact, was that when this Senate was to act on the important questions affecting the rights of the States and the people two voices should answer for each.

Now, that is the whole of it; and when there is a vacancy by resignation or "otherwise," a word comprehending every possible or conceivable case, the governor, if the Legislature has not done it, is to appoint. Upon the meaning of the word "otherwise" and upon the truth of these two simple propositions this whole debate has, in fact, turned. There have been winding and turning and searchings of precedents and splitting of hairs; but when any Senator objecting to the admission of Mr. Mantle is asked, Do you admit that the decision in the New Hampshire case was right? he is obliged to answer as the Senator from Connecticut [Mr. PLATT] answered, "I voted for it because I thought it would be a hard case, but I have now concluded it was wrong." That is the substance of what the Senator says.

Why, Mr. President, the Senator from Connecticut and, I think, one other Senator sought to convict me of an inconsistency because when in the middle of the debate, the question not being before the Senate, when we were discussing something else (as he thinks, when we were discussing the New Hampshire case), Mr. Carpenter, of Wisconsin, asked me if I claimed or thought that if the Legislature met and separated the governor could then appoint. It was such a case as every lawyer in this body is familiar with. Somebody comes up to you when your head is full of something else, in the street or in the town meeting, and says: "Squire, how will it be, supposin'?" I never heard of the lawyer who admitted that the opinions he gave under such circumstances were of much value. Almost as soon as I took my seat after that speech, on reflection, I came to the conclusion that I had made an erroneous answer, and I have acted on another principle in the Senate ever since.

If my honorable friend thinks I am to be held in law, or in morals, or in consistency, or in responsibility to public opinion by the answer which I gave to that shrewd question put by that shrewd gentleman at that time, what is his condition, who comes in here to take back four solemn votes of his own on cases before the Senate and in issue—the Bell case, the Blair case, the Marston case, and the Pasco case, two of them cast after the most deliberate and solemn debate, a debate participated in by the great constitutional lawyers of the country?

Mr. President, if there was nothing else in this case but these four great and recent precedents, I should argue both to the understanding and the conscience of the members of this body to stand by them. No court, no legislative body, no tribunal can maintain the respect of the people long that does not maintain its own consistency and that does not regard its own solemn judgments.

He and I struggled for half a winter to maintain that principle in the case of Mr. Kellogg, of Louisiana, against the gentlemen on the other side of the Chamber, angered, possessed with the feeling that Mr. Kellogg had been improperly admitted; and when the majority changed and the Democrats came in, they still held (and held fast, under the lead of the Senator from Georgia [Mr. GORDON], the Senator from South Carolina [Mr. Hampton], and the Senator from Delaware [Mr. Bayard], now in honorable service abroad, and the great jurist from Mississippi [Mr. Lamar], who recently went to his reward to the grief of all his countrymen North and South) to the doctrine of sustaining the deliberate judgments of the Senate.

My honorable friend from Connecticut speculates about the possibility of a Legislature being influenced by corrupt reasons and refusing to elect a member of this body in order that the governor may appoint some ambitious person who is in league with him; and he thinks there may be a very bad result from our adhering to the solemn judgments of the Senate on that account. I should like to know what possibility of corrupt influence bringing popular liberty and republican government itself into discredit can be greater than the influence which, if this disregard of our precedents is established as a policy, will be brought to bear on the minds of the members of this body to seat or unseat men who have a rightful title to seats here according as they expect they will vote one way or the other on some exciting question pending.

I think that the attitude of my honorable friend from Connecticut, who has voted four times for this doctrine and now seeks to reverse it (honest as every man who knows him knows everything he does and thinks is honest), is still an attitude more fraught with a graver public danger than any he has suggested as flowing from one or the other exposition of the Constitution in this matter. My honorable friend says that although he thinks the New Hampshire cases were wrong still there is a distinction between those cases and the one before the Senate.

Mr. PLATT. I have not said that I thought the New Hampshire cases were wrong.

Mr. HOAR. I asked the Senator whether he thought it was a sound constitutional decision, and he said no.

Mr. PLATT. I understood the Senator's question to be on the point as to whether, if the case was admitted to be decided on the question that a governor could appoint at the commencement of a term, I thought it was wrong.

Mr. HOAR. The Senator thought it was wrong.

Mr. PLATT. I did not say that.

Mr. HOAR. The Senator said he did not think it was right on any ground; but if he thinks so, on what ground?

Mr. PLATT. I do.

Mr. HOAR. On what ground?

Mr. PLATT. On the ground that the State of New Hampshire had not had an opportunity to make the election.

Mr. HOAR. Now, just let us look at that a moment and see where the true principle comes in. The Senator says if a State legislature has tried its best to make an election, as in the case of Montana, where the Legislature met and balloted at the time fixed, and balloted day after day and week after week, and failed because the members of that Legislature could not find a man on whom a majority could conscientiously agree, an inability which to every just and honest man is absolute in the conduct of the affairs of life, he will keep the man out; but when the whole people of a State deliberately put it into their constitution that their Legislature shall not meet at the proper time and shall not elect at the proper time, so that not only there has been no attempt on the part of the Legislature to do its duty, but the people say that the Legislature shall not try to do its constitutional and lawful duty, then in such case my honorable friend from Connecticut says of course he will let the man in.

The Constitution then, according to my honorable friend from Connecticut, is this: When the framers of the Constitution, Oliver Ellsworth, James Madison, and their associates, said if there is a vacancy "by resignation or otherwise," they did not mean in any other way but in the same way as resignation, if any other same way could be conceived of; that they intended that in a certain easily to be foreseen condition there should be vacancies in this body, and then further they provided that if a State Legislature tried its best to elect and could not, the governor should not have any power to appoint, and the State should go unrepresented, but if the people of the State put it into their constitution that their Legislature should not even try to elect a Senator, then it is such a hard case that the man ought to be admitted.

Mr. President, that is the whole of it. You may discuss and refine and bring into this matter the subtlety of dialectics and split hairs, if when the framers of the Constitution said "resignation or otherwise," they meant "resignation or any other conceivable case," then this case belongs to Mr. Mantle. If they meant to narrow the provision to the case of a vacancy by resignation or something like it, to the case of the abandonment of his post for a good or evil reason by the Senator, and in the great field of other possibilities, and intended that the State should lose its equality and its sovereignty, that it should not be represented here, then the case is not with Mr. Mantle.

If the words "happen by resignation or otherwise" include the case at the beginning of a term where the State has sent nobody here and it was impossible to send any body here, then this case belongs Mr. Mantle upon the precedents; but if it be sound doctrine that it is a hard case and the State shall be excused and the governor shall appoint when it does not try, and the people say the Legislature shall not try to elect its Senators, then the case is not with Mr. Mantle upon our precedents. If the case be that upon precedent, upon principle, upon authority the people of these three States have a right to have their constitutional voice uttered, then for one—other gentlemen will do as they please—I should feel myself degraded and man-sworn if I voted to keep them out because I do not like the votes they are expected to give.

The VICE-PRESIDENT (at 5 o'clock and 15 minutes p. m.). The Chair reminds the Senator from Massachusetts that the fifteen minutes' extension of time has expired.

Mr. HOAR. The Senator from Massachusetts is through.

The VICE-PRESIDENT. The pending resolution will be read.

The Secretary read the resolution reported by Mr. HOAR, from the Committee on Privileges and Elections, March 27, 1893, as follows:

Resolved, That Lee Mantle is entitled to be admitted to a seat as a Senator from the State of Montana.

Mr. VANCE. I offer the following as a substitute:

Resolved, That Hon. Lee Mantle is not entitled to a seat in this body as a Senator from the State of Montana.

The VICE-PRESIDENT. The question is upon agreeing to the substitute offered by the Senator from North Carolina [Mr. VANCE] to the resolution reported by the Senator from Massachusetts [Mr. HOAR].

Mr. VANCE. On that I call for the yeas and nays.

The yeas and nays were ordered; and the Secretary proceeded to call the roll.

Mr. ALLEN (when his name was called). I am paired on this question with the Senator from Georgia [Mr. COLQUITT]. If he were present I should vote "yea."

Mr. ALLISON (when his name was called). I am paired with the junior Senator from Georgia [Mr. GORDON], and therefore withhold my vote. I should vote for the admission of Mr. Mantle if I were not paired.

Mr. FAULKNER (when Mr. CAMDEN'S name was called). The junior Senator from West Virginia [Mr. CAMDEN] is necessarily detained from the Senate to-day. If he were present he would vote "yea" on the pending resolution. He is paired with the Senator from South Dakota [Mr. PETTIGREW].

Mr. CHANDLER (when his name was called). Upon this question I am paired with the senior Senator from Vermont [Mr. MORRILL]. If he were present he would vote "yea" and I should vote "nay."

Mr. MITCHELL of Oregon (when Mr. DOLPH'S name was called). My colleague [Mr. DOLPH] is detained from the Senate by illness. He is paired with the senior Senator from Indiana [Mr. VOORHEES]. If my colleague were here he would vote "yea."

Mr. HARRIS (when his name was called). I have a general pair with the Senator from Vermont [Mr. MORRILL], who is necessarily absent; but, he and I agreeing in opinion upon this question, he asked me to allow him to pair with another Senator. That pair has already been announced. I vote "yea."

Mr. PETTIGREW (when his name was called). I am paired with the Senator from West Virginia [Mr. CAMDEN]. If he were present I should vote "nay."

Mr. CAMERON (when Mr. QUAY'S name was called). My colleague, Mr. QUAY, is paired with the Senator from Alabama [Mr. MORGAN]. If my colleague were present he would vote "nay."

Mr. RANSOM (when his name was called). I have a general pair with the Senator from Maine [Mr. HALE]. That pair has been transferred to the Senator from Iowa [Mr. WILSON], and I vote "yea."

Mr. TURPIE (when Mr. VOORHEES'S name was called). My colleague, Mr. VOORHEES, is paired with the Senator from Oregon [Mr. DOLPH]. If my colleague were present he would vote "nay."

The roll call was concluded.

Mr. ALLISON. My colleague, Mr. WILSON, is paired on this question with the Senator from Maine [Mr. HALE].

Mr. CALL. I am paired with the Senator from Maryland [Mr. GORMAN]. If he were here I should vote "yea."

Mr. DUBOIS. I wish to inquire of the Senator from Alabama [Mr. PUGH] if he knows how his colleague [Mr. MORGAN] would vote on this question.

Mr. PUGH. I am satisfied that if my colleague were present he would vote "nay;" that is, in favor of the appointment by the governor.

Mr. DUBOIS. The Senator from Alabama [Mr. MORGAN] is paired for the pending proposition.

Mr. PASCO. Mr. President——

The VICE-PRESIDENT. The debate is proceeding by unanimous consent. The Chair hears no objection, and the Senator from Florida will proceed.

Mr. PASCO. I will state that in the list of yeas and nays on the Bell case, which is regarded by many as the same case as this, the Senator from Alabama [Mr. MORGAN] was among those who voted "nay." Those who voted in the negative on the Bell case were the following Senators:

Messrs. Bailey, CALL, Carpenter, COCKRELL, COKE, Conkling, Davis of Illinois, Eaton, Farley, Garland, Grover, HARRIS, Hereford, Hill of Georgia, Houston, Johnston, Jonas, Kernan, Lamar, Maxey, MORGAN, Pendleton, RANSOM, Slater, VANCE, VEST, Wallace, and Withers.

That is the official record in the case.

Mr. PUGH. There are a good many who voted that way then and vote differently now.

Mr. MITCHELL of Oregon. I object to discussion.

Mr. DUBOIS. I submit that it is customary in this body when a Senator announces how his colleague would vote that his word is taken.

Mr. STEWART. And he is paired accordingly.

The VICE-PRESIDENT. This is a matter over which the Chair has no control. The announcement of the pair was made when the name of the Senator from Pennsylvania [Mr. QUAY] was called.

Mr. MANDERSON (after having voted in the negative). I desire to change my vote. I vote "yea."

The result was announced—yeas 35, nays 30; as follows:

YEAS—35.

Berry,	Gibson,	Mitchell, Oregon	Smith,
Blackburn,	Gray,	Mitchell, Wis.	Stockbridge,
Caffery,	Harris,	Murphy,	Vance,
Coke,	Kyle,	Palmer,	Vest,
Cullom,	Lindsay,	Pasco,	Vilas,
Dixon,	McMillan,	Peffer,	Washburn,
Faulkner,	McPherson,	Platt,	White, Cal.
Gallinger,	Manderson,	Proctor,	White, La.
George,	Mills,	Ransom,	

NAYS—30.

Bate,	Daniel,	Hansbrough,	Hoar,
Butler,	Davis,	Hawley,	Hunton,
Cameron,	Dubois,	Higgins,	Irby,
Carey,	Frye,	Hill,	Jones, Ark.

Jones, Nev.	Power,	Squire,	Walthall,
Lodge,	Pugh,	Stewart,	Wolcott.
Martin,	Roach,	Teller,	
Perkins,	Shoup,	Turpie,	

NOT VOTING—20.

Aldrich,	Camden,	Gordon,	Pettigrew,
Allen,	Chandler,	Gorman,	Quay,
Allison,	Cockrell,	Hale,	Sherman,
Brice,	Colquitt,	Morgan,	Voorhees,
Call,	Dolph,	Morrill,	Wilson.

So the substitute submitted by Mr. VANCE was agreed to.

Mr. MANDERSON. I enter a motion to reconsider the vote by which the substitute was agreed to.

Mr. VANCE. I move to lay that motion on the table.

The VICE-PRESIDENT. The Senator from Nebraska moves to reconsider the vote by which the substitute was agreed to, and the Senator from North Carolina moves to lay the motion on the table.

Mr. MANDERSON. I ask unanimous consent to say a word. Of course I understand that the motion to lay on the table is not debatable.

The VICE-PRESIDENT. Is there objection? The Chair hears none, and the Senator from Nebraska will proceed.

Mr. MANDERSON. My purpose in changing my vote was that I might put myself in a parliamentary position to enter the motion to reconsider.

Mr. VANCE. I think I shall have to object.

Mr. MANDERSON. I did so simply because of the fact that there seemed to be a dispute as to pairs. That dispute certainly can not be ended now. I think that common fairness to those who have objected to the disposition of the pairs should prompt the Senate to let the vote go over until another day, so that the question as to the pairs can be properly disposed of.

Mr. VANCE. I object to debate, Mr. President.

Mr. MILLS and others. Question.

Mr. WOLCOTT. Mr. President——

The VICE-PRESIDENT. The Chair will state that debate proceeds only by unanimous consent. The Senator from North Carolina interposes an objection.

Mr. WOLCOTT. I move that the Senate do now adjourn.

The VICE-PRESIDENT. Pending the motion of the Senator from North Carolina to lay on the table the motion of the Senator from Nebraska to reconsider, the Senator from Colorado moves that the Senate do now adjourn. [Putting the question.] The Chair is in doubt.

Mr. VANCE. I demand the yeas and nays.

Mr. HARRIS. I ask the Senator from Colorado to withdraw the motion to adjourn in order that I may move that the Senate proceed to the consideration of executive business.

Mr. WOLCOTT. I withdraw the motion for that purpose.

Mr. HARRIS. Then I move that the Senate proceed to the consideration of executive business.

The VICE-PRESIDENT. The question is on the motion of the Senator from Tennessee. [Putting the question.] The Chair is in doubt.

Mr. HARRIS. Then let us have the yeas and nays on the motion to proceed to the consideration of executive business.

The yeas and nays having been ordered and taken, the result was announced—yeas 57, nays 6; as follows:

YEAS—57.

Allen,	Dubois,	Jones, Nev.	Roach,
Bate,	Faulkner,	Kyle,	Shoup,
Berry,	Frye,	Lindsay,	Smith,
Blackburn,	Gallinger,	Lodge,	Squire,
Butler,	Gibson,	McMillan,	Stewart,
Call,	Gray,	McPherson,	Stockbridge,
Cameron,	Hansbrough,	Manderson,	Teller,
Carey,	Harris,	Martin,	Turpie,
Chandler,	Hawley,	Mills,	Vest,
Cockrell,	Higgins,	Mitchell, Oregon	Vilas,
Coke,	Hill,	Peffer,	Walthall,
Cullom,	Hoar,	Perkins,	Wolcott.
Daniel,	Hunton,	Platt,	
Davis,	Irby,	Proctor,	
Dixon,	Jones, Ark.	Pugh,	

NAYS—6.

Caffery,	Palmer,	Vance,
Mitchell, Wis.	Pasco,	Washburn.

NOT VOTING—22.

Aldrich,	George,	Murphy,	Voorhees,
Allison,	Gordon,	Pettigrew,	White, Cal.
Brice,	Gorman,	Power,	White, La.
Camden,	Hale,	Quay,	Wilson.
Colquitt,	Morgan,	Ransom,	
Dolph,	Morrill,	Sherman,	

So the motion was agreed to; and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened, and (at 5 o'clock and 45 minutes p. m.) the Senate adjourned until to-morrow, Thursday, August 24, 1893, at 12 o'clock meridian.

HOUSE OF REPRESENTATIVES.

WEDNESDAY, *August 23, 1893.*

The House met at 10 o'clock a. m.

The SPEAKER. The Chaplain is absent this morning, the reason being, as the Chair assumes, that he did not know of the change in the hour of meeting. The Clerk will read the Journal.

The Journal of yesterday's proceedings was read and approved.

CONTESTED ELECTIONS.

The SPEAKER laid before the House the following letter from the Clerk of the House, which was ordered to be printed in the RECORD, and, with the accompanying papers, referred to the Committee on Elections:

CLERK'S OFFICE, HOUSE OF REPRESENTATIVES,
Washington, D. C., August 7, 1893.

SIR: I have the honor to lay before the House of Representatives a list of contests for seats in the House of Representatives for the Fifty-third Congress of the United States, notices of which have been filed in the office of the Clerk of the House, and also to transmit therewith all original testimony, papers, and documents relating thereto, as follows, to wit:

STATE OF ALABAMA.

Fifth district—Martin W. Whatley *vs.* James E. Cobb, three packages.

STATE OF CALIFORNIA.

Third district—Warren B. English *vs.* Samuel G. Hilborn, two packages.

STATE OF GEORGIA.

Tenth district—Thomas E. Watson *vs.* James C. C. Black, two packages.

STATE OF ILLINOIS.

Eighth district—Lewis Steward *vs.* Robert A. Childs, two packages.

STATE OF KANSAS.

Second district—H. L. Moore *vs.* Edward H. Funston, five packages.

STATE OF MISSOURI.

Eleventh district—John J. O'Neill *vs.* Charles F. Joy, two packages.

STATE OF NORTH CAROLINA.

Fifth district—A. H. A. Williams *vs.* Thomas Settle, two packages.

STATE OF TENNESSEE.

Eighth district—P. H. Thrasher *vs.* B. A. Enloe, three packages.

STATE OF VIRGINIA.

Fourth district—J. T. Goode *vs.* J. F. Epes, three packages.

The Clerk has also received a notice of contest from F. D. Koonce *vs.* B. F. Grady, Third Congressional district of North Carolina, but said notice has been unaccompanied by any testimony, and consequently the original notice is laid before the House for such action as it may deem proper to take.

The Clerk has also received notice of contest and answer thereto in the case of Frank Baltzell *vs.* J. F. Stallings, Second Congressional district of Alabama, but it was unaccompanied by testimony; all of which papers are laid before the House for its action thereon.

In compliance with the act approved March 2, 1887, entitled "An act relating to contested elections," such portions of the testimony in the above cases as the parties in interest agreed upon, or as seemed proper to the Clerk, after giving the requisite notices, have been printed and indexed, together with the notices of contest and the answers thereto, and such portions of the testimony as were not printed with all the original papers have been sealed up and are ready to be laid before the Committee on Elections.

Two copies of the printed testimony in each case have been mailed to the contestant, and the same number to the contestee. The law in reference to the briefs of both the contestee and contestant in each case has been complied with as far as possible upon the receipt by the Clerk of said briefs. Owing to delays in this matter, over which the Clerk has no control, all of said briefs have not yet been returned to him by the parties to these contests; but so far as the briefs have been furnished to the Clerk they are also ready to be laid before the Committee on Elections upon the order of the House.

Very respectfully,

JAMES KERR,
Clerk of the House of Representatives.

Hon. CHARLES F. CRISP,
Speaker of the House of Representatives.

PAYMENT OF CLERKS TO MEMBERS.

The SPEAKER also laid before the House a letter from the Clerk of the House, explaining the insufficiency of the contingent fund for the payment of clerks to members; which was referred to the Committee on Appropriations.

EXCUSED FROM COMMITTEE SERVICE.

The SPEAKER also laid before the House the request of Mr. BOUTELLE to be relieved from service on the Committee on Merchant Marine and Fisheries; which, without objection, was granted.

MESSAGE FROM THE PRESIDENT.

A message from the President, by Mr. PRUDEN, one of his secretaries, announced that the President had approved and signed joint resolutions of the following titles:

Joint resolution (H. Res. 1) making available appropriations for the payment of session employés of the House and Senate during the first session of the Fifty-third Congress;

Joint resolution (H. Res. 2) for the appropriate commemoration of the one-hundredth anniversary of the laying of the corner stone of the Capitol of the United States, September 18, 1793; and

Joint resolution (H. Res. 3) making immediately available the appropriations for mileage of Senators and Members of the House of Representatives.

ENROLLED BILLS SIGNED.

Mr. PEARSON, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled the bill (S. 50) in aid of the California Midwinter International Exposition; when the Speaker signed the same.

ORDER OF BUSINESS.

Mr. COX. I ask unanimous consent for the introduction of a bill, that it may be referred to the Committee on Banking and Currency under a similar order to that made yesterday, on the bill introduced by the gentleman from Ohio [Mr. JOHNSON].

The SPEAKER. The Clerk will report the bill.

Mr. PAYNE. I demand the regular order.

The SPEAKER. The demand for the regular order is equivalent to an objection.

SILVER.

The House resumed the consideration of the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. CHARLES W. STONE. Mr. Speaker, the condition in which we are placed to-day is, inmy judgment, too serious and the issues involved too grave to justify an appeal to passion, prejudice, or partisan feeling, or to be controlled by the varying interpretations which may be put upon the Democratic platform, which has played so large a part in the discussion of this question. What party platforms may have said, or what parties may have done in the past, is a matter of minor importance, in the anomalous and unprecedented condition in which we find ourselves. What may have been entirely wise and proper in an emergency in 1890 may be unwise and injurious in another emergency in 1893. Conditions change; new occasions teach new duties. Time makes ancient good uncouth. The matter of importance to us now is present duty morethan past history.

The drowning man, as he buffets the waves, is much more concerned to know how he can get out than to investigate how he happened to fall in, and the spectators on the bank do not need to quarrel as to who shall reach to him a helping and a saving hand. The important thing is to save the man, not who shall do it. Hence, however, much we may be inclined to deprecate or even resent that policy of the dominant party which has denied to this side of the House the least voice or possible agency in molding the pending legislation, that fact should not prevent our giving to it that fair, unprejudiced consideration and action which its merits and the startling and serious emergency confronting us both require.

What is the proposition before us? Why, simply to stop the compulsory monthly purchase, on a falling market, of tons of silver bullion, for which we have no earthly use, and the giving therefor of notes which investors seem to doubt our ultimate ability or disposition to pay in the standard money of the civilized world. Why should we continue to accumulate this bullion? What use can be made of it? Let me answer in the words of my valued friend from Missouri, the distinguished champion of the free-coinage cause, whose language always possesses the merit of candor and courageous, straightforward earnestness. He said on this floor on the 22d day of March, 1892:

> The law of the last Congress, July 14, 1890, provided for the purchase of silver at its market rate, measured in gold, and for the use of bullion for what purpose? As mere dead capital in the Treasury, which might as well be at the bottom of the Potomac.

Why now insist on continuing this senseless proceeding? If it were iron or steel, the nation might some time have some use for it in the construction of its Navy or the armament of its forts or vessels. If it were coal, it might sometime be consumed in the operations of the Government on land or sea, but silver can not be consumed or used except for the single purpose of adding to the three hundred and fifty million of idle dollars now clogging the Treasury vaults, and which can not be forced into circulation.

The real purpose of the act, to sustain and enhance the price of silver bullion by furnishing a large and certain purchaser, has not been attained, and if attainable such purpose can not be defended. As well may you ask the Government to bull the market for wheat, cotton, coal, oil, copper, or iron, by making enormous and unnecessary purchases of those articles.

But, sir, more than that, out of this purchase has arisen, in the process of time, positive and serious danger. The purchases under the Sherman law are entirely paid for in Treasury notes, payable by their terms in coin, and by fair inference and the interpretation of the Government, in such kind of coin as the holder thereof may desire. They have been issued to the amount of $148,286,348, and have gone into our circulation, and the volume is increasing from month to month. They have materially swollen the amount of our paper currency; they represent a practical reserve of silver in the nation's Treasury; they call attention to the increasing preponderance of silver in our currency, and now we are told in rotund tones, and with all the graces of polished oratory, by the gentleman from New York and others, that distrust pervades financial circles and reaches the nations of Europe, and that as a result money is withdrawn from the channels of trade and hoarded in banks and vaults.

Why this distrust? Is it senseless and baseless, the mere whim and impulse of a panic-stricken public? The gentlemen have not told us. In eloquent tones they have pictured the existing condition of affairs and implored us to repeal the Sherman law. Why? How is this condition traceable to that law? The gentleman from Nebraska [Mr. BRYAN] tells us that an alarm like a cry of fire in a crowded hall has been sounded, and the whole nation is panic-stricken. Who gave this alarm, which my friend terms a false alarm, and what was its character? Who precipitated this panic? The gentleman says it was "the same forces which have always opposed any legislation favorable to silver." Let us see.

On the 12th of April, 1892, from his seat in the Senate, Senator STEWART of Nevada, the great apostle of free coinage, uttered the following words:

> It is manifest that gold can not be obtained to redeem the Treasury notes issued and to be issued under the act of 1890 under existing law. There is no possibility of accumulating gold for that purpose, or for the purpose of sustaining the other denominations of paper and silver, above mentioned, in circulation. Silver must be coined and used for the redemption of paper or the Government must repudiate its obligations.

And again on the 2d day of June, 1892, replying to Senator SHERMAN, he uses the following language:

> He tells us that free coinage will bring us to a silver standard just as he predicted the Bland act would do. Now, our present law will do worse than that. The present law on the statute book, which he approves to-day (he may not approve it to-morrow) will do worse than that. It will inevitably bring us to a paper standard or the market value standard of silver, because it is going to be utterly impossible—there is no use in our deceiving ourselves upon this subject—to maintain gold payments under existing laws.

These are not the words of a Wall street alarmist. They are not the utterances of quaking capital. They come not from any of the gentleman's baneful forces which have always opposed silver. They are not even the timid utterances of the raw recruit in the silver ranks. They come from the general of those forces; from the grim veteran of many a hard-fought battle.

Such expressions from a Senator of the United States of long service, an acknowledged student of financial questions, and the spokesman and representative of a large element in our population, could not escape the attention of the investors in our securities at home or abroad. They would naturally produce uneasiness if not apprehension.

Then comes the widespread newspaper report, whether well founded or not I do not assume to say, but going out to the public, that the Secretary of the Treasury in the early summer, when the gold reserve dropped to a hundred million dollars, contemplated silver payments of Treasury notes, and it seemed to give substance to the people's apprehensions and fulfillment to the Senator's prophecy that we were drifting to a silver basis.

This is followed up by the President of the United States, who makes formal and official public announcement of the impending danger in his message, as follows:

> Between the 1st day of July, 1890, and the 15th day of July, 1893, the gold coin and bullion in our Treasury decreased more than $132,000,000, while during the same period the silver coin and bullion in the Treasury increased more than $147,000,000. Unless Government bonds are to be constantly issued and sold to replenish our exhausted gold, only to be again exhausted, it is apparent that the operation of the silver-purchase law now in force leads in the direction of the entire substitution of silver for the gold in the Government Treasury, and that this must be followed by the payment of all Government obligations in depreciated silver.

Whatever may have been the situation before this authoritative proclamation of danger, coming from the head of the Government and going through all business circles and to all financial centers, distrust and apprehension are now unavoidable.

Said a distinguished Secretary of the Treasury, when a financial crisis was threatened, on being asked if he was not alarmed? "No, it would never do for the Secretary of the Treasury to get scared when everybody else is," and there was solid wisdom in the utterance. Would that the President of the United States had realized it.

If, instead of the timid, halting, and irresolute policy of this Administration, ending in the loud proclamation of the serious danger of the payment of all Government obligations in a depreciated currency, there had come from the Administration at all times and upon all occasions, from the inaugural utterances forward, the uniform, unhesitating, and bold expression of a determination that the integrity of every dollar of our currency should be maintained by the exercise to the utmost limit of every power of the Executive, express or implied, the distrust and danger aroused by injudicious utterances of leading silver advocates and by the character of our currency, would have been largely allayed.

Do not misunderstand me. I do not believe that the condition of our currency was the primary or principal cause of our financial distress or business prostration. I agree with my friend from Ohio [Mr. GROSVENOR] and the gentleman from Iowa [Mr. HEPBURN] that the underlying cause of our business paralysis, first operating and continuing to operate, was and is the threatening attitude of the Democratic party toward the productive industries of this great nation, and this, with blinded judgment and partisan temerity, the President emphasizes in his message. In other words, the President alike threatens capital already invested and alarms capital seeking investment, and nothing but business paralysis can result. In short, the nation is suffering from an attack of Democratic statesmanship.

This fact does not, however, diminish the obligation of every patriot, rising above the limits of party feeling, the pride of personal opinion, and the irresponsibility of lack of power, to cooperate in every measure which by any possibility may bring returning prosperity to our suffering country.

The Sherman law, whether originally so or not, is now undoubtedly a factor in this business depression. Let us repeal it. Let us take the President's panacea. If it cures the disease, and returning prosperity follows, we shall all rejoice. If it does not, the fact will be made clearly and indisputably evident that the trouble is deeper than the Sherman law, and rests in the threatening attitude of the Democratic party toward the protection of American labor and American enterprise.

But the President's remedy is not the only one proposed. Our free-silver friends say, "Oh, yes; the ship of state is foundering in a rough and troubled sea and steering straight for the breakers, but you shall not use the pumps or change her course unless you let us load her down with the world's stock of silver, produced and to be produced. That will give her steadiness of motion and help to reach the unruffled sea of plenty and prosperity."

I do not concede the fairness of this position. I have no faith in such seamanship.

Their views, however, are urged with earnestness and undoubted sincerity, and are entitled to candid consideration. What are they? What do they propose? Simply, that the owner of silver bullion, no matter who he is, American, Englishman, or Egyptian—no matter where it was produced, whether in the United States, Mexico, or Australia—may deposit at any mint of the United States 412½ grains of standard silver, costing him to-day and purchasable anywhere for less than 60 cents, and have it coined into a dollar for his benefit and without cost to him. This 60-cent dollar the Government agrees to receive and forces all its citizens to take for 100 cents.

Whatever may be the underlying principle of this legislation, its practical operation, so long as the Government can sustain this dollar at par, is to give through the agency of the stamp and credit of the nation a substantial bounty of over 40 cents on the dollar, at present prices, to every holder of silver bullion—a species of class legislation that is entirely indefensible.

On the other hand, if the silver dollar can not be maintained at par, then the laborer's wages, the price of the farmer's crops, and every debt and obligation not by its terms specifically payable in gold, will be paid in a debased and depreciated silver currency. Gold will disappear from our circulation, and we shall reach an exclusively silver basis. Silver and gold can not both be circulated one moment after the Government ceases to be able to sustain their full and free interchangeability, dollar for dollar.

I do not propose to discuss these propositions, which have been often stated and fully elaborated during this debate and on other occasions, but rather to consider briefly some of the reasons advanced for adopting a system which must produce such results.

Why, it is claimed as a constitutional right, and the expression "gold and silver, the money of the Constitution," is rolled as a precious morsel under the tongue of every silver advocate; and in the very able, lengthy, and elaborate report from the Committee on Coinage, made by the distinguished gentleman from Missouri in the last Congress, a prominent heading in capital letters is in these words: "Free coinage required by the Constitution."

What justification is there for this? Is it provided anywhere in the Constitution that gold and silver shall be coined without limit and without cost? No sir, there is not one word to justify that assertion. Why, sir, neither gold nor silver is mentioned anywhere in the Constitution except in the tenth section of the first article, and then only in prohibiting the individual States from making anything else a legal tender. Is there anything in this prohibition from which an inference can be drawn of an obligation on the General Government, and an obligation different from the prohibition?

In the same section and paragraph the States are prohibited from impairing the obligation of contracts or granting titles of nobility. Can any inference be drawn from such prohibition of an obligation on the General Government to do the things prohibited to the States? The inference at most would be one of power only, and not of obligation, and would be only coextensive with the prohibition, namely, to make gold and silver a legal tender, and that has been done and the silver dollar is to-day as full and complete a legal tender as the gold dollar. Nowhere else in the Constitution are either gold or silver mentioned, and the claim of constitutional recognition of the silver dollar is the thinnest and flimsiest pretense. It may be proper to coin it, but it is not a constitutional requirement.

But, it is argued, a great wrong was committed and a serious outrage consummated in 1873, when the silver dollar was demonetized. Men talk flippantly and furiously, and even threateningly, of the demonetization of the silver dollar, and yet it is not demonetized, and has not been for the last hundred years, except for a brief time between 1874 and 1878. It is full legal tender and possesses all the money qualities and uses it ever did. Its coinage has simply been limited. In other words, the Government has assumed to decide for itself, instead of leaving it to the cupidity of the bullion producer to determine, how many of these silver dollars the people need and can safely use in the convenient transaction of their business and the conduct of their exchanges; and if any profit is to be made from its coinage that it shall be for the benefit of the whole people, instead of the few silver owners and speculators.

Finding over 350,000,000 idle dollars in the Treasury which can not be forced into circulation, and finding that by the continuous operation of natural forces the intrinsic value of the silver dollar has been reduced nearly one-half and that serious danger of depreciation is believed to exist, it determined to stop the coinage until the conditions change, but the legal-tender or money qualities of the dollar are in no wise impaired.

But, gentlemen reply, we are not talking simply of existing dollars, but of silver in general, and that was discredited in this country and in the eyes of the world in 1873, and they did not discover it for years afterwards. Why, the discredit of silver in this country came in 1853, and gentlemen apparently have not discovered it yet. It was then that the right of free coinage was denied to the greater part of your silver used for coinage. It was then that the full legal-tender quality was taken from all your silver coins in actual circulation. It was then that, by order of a Democratic President, the Government refused to take even your standard silver dollars in payment of impost duties due to the Government; and this refusal continued for twenty years.

Talk about the wrong of the act of 1873, which simply dropped from your coinage the silver dollar, which was not in circulation and which had been discredited for twenty years by the refusal of the Government to receive it in payment of debts! The blow at silver was struck in 1853, when you debased your halves, quarters, and dimes, closed your mints to their free coinage, and took away their legal-tender quality. How is the right to have silver coined into a dollar any more sacred than into two halves? What is the difference in principle? The question is certainly not one of degree, for up to 1853 we had coined over $54,000,000 in halves and only $2,500,000 in dollars. Why, we had coined 50 per cent more in value and fifteen times in number of the insignificant dimes than of the grand old "dollar of the daddies," which only the daddies of very modern times ever saw.

Why not be frank about these things? Why not give us the facts? Why not tell us that by the order of Thomas Jefferson the mints were closed to the coinage of the silver dollars in 1805 and for thirty years thereafter not a single silver dollar was coined?

Do you forget that the entire coinage of silver dollars, in the whole eighty years prior to 1873, only amounted to a little over $8,000,000, and that we have coined since then over $400,000,000, an average every year of nearly three times the entire aggregate coinage of the first eighty years, and that even last year we coined more standard silver dollars than in the whole eighty years before 1873?

The act of 1873 was passed in accordance with the recommendation of the Secretary of the Treasury, thrice repeated in his annual reports, commencing in 1870. It was considered with more than ordinary atttention in both Houses, its discussion filling 144 columns of the CONGRESSIONAL RECORD, and was carefully examined by committees of both Houses and by a conference committee. It was pending for over two years, and printed thirteen times by order of Congress, and it can not be impugned now because some members can be found to say that they did not know what was in it. They had abundant opportunity to know, but the fact is that the dropping or retaining of the silver dollar seemed a matter of little importance then, as we were on a paper basis, and no silver was in circulation.

Let me quote from Secretary Manning's report, made in 1886:

The act of 1873 has been denounced and praised for demonetizing silver, which it did not do. It retired no silver from circulation; it caused no coin to be sold as bullion; it withdrew the full legal-tender quality from no silver coin. * * * The arguments that anything really injurious to silver was done by the act of 1873 are arguments offered only by those who are not quite familiar with the subject.

From the report of Secretary Windom, in 1889:

As a matter of fact, the act of 1873 had little or no effect on the price of silver. The United States was at that time on a paper basis. The entire number of silver dollars coined in this country from the organization of the mints in 1792 was only $8,045,838, but they had not been in circulation for over twenty-five years.

But we are told that, by reason of some mysterious sympathy between all other commodities and silver, prices from 1873 forward, of everything except gold, have gone down continuously and regularly as the price of silver has fallen, and that adversity and distress have followed in the wake of these falling prices, and all for the lack of the vitalizing current of silver in our national currency. Gentlemen would have us understand that prices were lower in 1878 than in 1872, as the value of silver was less, and yet we poured into the currency twenty-two millions silver dollars in 1878 against one million in 1872; that prices were lower in 1879 than in 1878, and yet we added twenty-seven millions of coined dollars to our currency in 1879.

We are told that prices continued to fall from year to year, but our additions to the currency of coined silver dollars increased just as regularly, until in 1890 we coined over $38,000,000.

Gentlemen tell us that prices were falling and the market weak for want of silver sustenance, and yet we were administering the coined silver dollars in allopathic and progressively increasing doses of thirty-odd millions a year, and the more silver we coined the lower prices went. Yet in the face of this indisputable fact, and of the fact that the greatest depression in prices occurred during that period when we were coining most silver dollars and coining them fastest, the only prescription which gentlemen offer for better prices is more silver coinage.

But is it a fact that prices of all articles except gold have fallen regularly as silver has fallen? It may be true than an ounce of silver will buy as much wheat to-day as it would twenty years ago; as much cotton, as much corn. An ounce of silver is worth a little over one-half what it was twenty years ago, and the same may be true of a bushel of wheat. The area of production has been largely increased, the methods of cultivation vastly improved, and the cost of transportation to market greatly lessened, and the same may be substantially true of silver, but I will not stop to discuss causes. Will gentlemen who urge this argument say that a day's labor—the basis of all values—is worth only half what it was twenty years ago?

Have wages fallen as silver has fallen? Can the laboring man buy no more wheat or flour for his day's work now than twenty years ago? No more cotton cloth or clothing? Why, sir, wages have not fallen as silver has fallen; and if you show the millions of wage-earners of this nation that silver has dragged down with itself the price of the food he eats and the clothes he wears, and has left his wages untouched, will he regard that system as an unalloyed evil? And if other influences have operated to affect the price of labor, and they have, is it not also possible that other causes may have operated to affect the prices of other articles, as, for instance, of sugar, of iron, or of oil? This question of prices, however, is too intricate and too remotely connected with the question here for further discussion in the brief time allowed.

But, sir, my friend, the eloquent gentleman from Pennsylvania, asserts, and to be logical he must so maintain, that from 1873 on to this time we have been constantly sinking deeper and deeper in the slough of national disaster and distress, but no proof of this assertion is offered and none can be found. On the contrary, the concurring testimony of all observers, as well as the proof of census statistics, will sustain the assertion I now make, that there has been no period in the history of this or any other nation, from the beginning of recorded time, of such marvelous growth and general prosperity as in this country between the years 1880 and 1890.

Other causes operated to produce this result, and I will not discuss them, but I want to emphasize the fact that we were prosperous to a wonderful degree, and that in all this time the lack of free coinage did not operate to stay this progress.

Gentlemen picture to us France as to day the utopian home of peace and plenty, and attribute that condition to her financial system. Will they be kind enough to tell us in what essential particular that system differs from our own?

She uses both gold and silver as currency. So do we, except that we use a smaller proportion of silver than France, and are increasing that element of our currency and she is not. Her standard coins of both gold and silver are unlimited legal tender, and so are ours. Her minor coins are of limited legal tender, as are ours. Her mints are closed, and have been for years, to the coinage of silver on private account, and so are ours. There is no essential difference in the financial systems of the two nations. We have in our currency more silver than gold, while France has more gold than silver. We have to-day $664,573,320 of silver to $603,723,903 of gold, while France has $700,000,000 of silver and $900,000,000 of gold.

Will any one be kind enough to tell me what there is in this comparative composition of the currency of the two countries on which to base an argument for the unlimited use of silver? But, they say, France maintained the free coinage of silver for seventy years. Granted: but she abandoned it fifteen years ago because she could no longer maintain it. While she continued it she was in the exceptional position of having England and Portugal on a gold basis on the one side, and Germany and the rest of continental Europe on a silver basis on the other side. Between the rivalry and the counteracting forces of the two systems, and with the relative production of silver and gold not out of proportion, an equilibrium was easily maintainable. No nation to-day stands in that position, and neither France nor any other nation can now, alone, open her mints to the unlimited coinage of silver and continue on any other than an exclusively silver basis.

But, we are told that the silver dollar will buy 100 cents worth of any commodity, and hence is an honest dollar; that an inert piece of silver bullion, worth yesterday but 57 cents, by the potency of the Government stamp is worth to-day 100 cents. Yes, and the piece of paper worth yesterday one one-hundredth of a cent, by the potency of the same stamp is worth to-day a dollar. The process of transformation is essentially the same, by which has been infused the element of the nation's faith and guaranty, but because the piece of paper is now worth a dollar, dare you open the Government's printing presses to anyone who will bring paper 3 inches wide and 7¼ inches long?

Why not, if the mints are to be opened to anyone bringing 412½ grains of silver? The difference is not one of principle, but simply of degree, and where will you draw the line? If you make a dollar out of 57 cents worth of silver, why not out of 50, 40, 20 or 10? Why waste 57 cents worth of material when one one-hundredth of a cent's worth will do as well? The safety in each case is the limit of the issue, and that limit must always be within the limits of the nation's credit and of its ability to meet all its obligations and guaranties.

Issue paper money without limit, and it will have only the value of the paper on which it is printed. Coin silver without limit, and it will have only the value of the bullion of which it is composed.

I agree with you that the silver dollar is worth 100 cents to-day, for the same reason that the greenback is, viz, because the Government will give you 100 cents for it, and while the Government does that everybody else will, and when the Government ceases to do that nobody else will; and the Government must inevitably cease to do it when you remove the limit to its coinage and leave it to be flooded with the accumulated silver of the world for coinage into money at a profit of 40 per cent to the owner.

I want every silver dollar worth 100 cents, now and always, and I want that hundred cents made up of silver, and not 56 cents' worth of silver and 44 cents of argument, for argument is cheap; and it would be no consolation to the people when the dollar of unlimited coinage declined to its bullion value, that eminent gentlemen had argued long and earnestly and eloquently that it never could so decline.

We may declaim about what ought to be, may theorize about what would have been, may speculate as to what will be or would be, but must not shut our eyes to the controlling facts of actual and potential present existence. We have got more silver in our currency to-day than gold, and more proportionately than any other civilized nation of the world. Their mints are all closed to silver, and they have long since stopped such additions to their currency. We have not.

The value of silver has diminished about one-half, while its production has much more than doubled in the last twenty years, and is now nearly twenty-four times that of gold, and its relative value has dropped to one twenty-eighth that of gold.

The strongest and richest nations of Europe, after a persistent struggle, have given up the attempt to sustain free coinage as hopeless. The greatest silver using and absorbing nation of the world has abandoned that basis, and the nightmare of the competition of India and the delusive puzzle of selling for gold and buying for silver is eliminated from the situation.

In the face of these facts, and of the warning of careful students of financial laws and observers of financial movements in this country and all over the world, dare we attempt alone the task from which other nations have recoiled? Dare we place the obstacle of another national failure in the only way that leads to the full restoraton of silver, viz, by international coöperation?

Mr. Speaker, I am in favor of the fullest possible use of silver as money, consistent with the certain maintenance of its value in the hands of the people. They must, however, be protected from all danger of loss and depreciation, and this can only be done by confining its coinage within the limits of the nation's ability to redeem it on demand at 100 cents on the dollar, or by putting into the coined dollar 100 cents worth of silver at its market value.

That a measure can not be drawn that, while enlarging the uses of silver, shall do it on safe lines and with due precaution against depreciation and loss in the hands of the people, or its being made an instrument of injury to one class for the benefit of another, no man can safely assert. And opposition to this bill, which contains no such safeguards, and which, under the order adopted by the majority of this House, we are powerless to amend or change, does not imply opposition to any measure which does contain such safeguards, if presented.

I desire, in conclusion, to call attention to the fact that this pending bill is radically different from the laws existing prior to 1873, for it does not contemplate putting into actual circulation a single additional dollar of silver. It practically provides for the unlimited issue of paper money, based on and secured by the deposit of silver worth to-day in the markets of the world only 56 or 57 per cent of the face value of the paper issued, and this percentage may any day be further reduced.

Is this a safe and rational business proposition? Will this tend to restore confidence? Will it tend to diminish the distrust of our ability to meet all our paper on demand in the standard money of the world?

Mr. Speaker, we have been told again and again that we stand at the parting of two roads, and must determine which we will travel; that the one leads by free silver to the bright and blossoming fields of prosperity and plenty; that the other, by gold monometallism, leads to narrow streets and the stifling atmosphere of general want and misery. Gentlemen do not read the inscriptions on the guideboard aright. The one leads surely to an exclusively silver basis, with its constant fluctuations of values, by which the poor and honest and simple-minded always suffer and the shrewd, crafty, and rich always are benefited.

The beautiful view that rises up along that route is but the unsubstantial, enticing, and delusive mirage which covers and obscures the tempestuous sea of a silver basis with its high waves, deep depressions, and stormy winds. The other road leads to the rough, rugged, barren, and forbidding mountain height, which stands as a barrier in the way of industrial development and true progress, and up and over its sharp crags and dangerous heights only the strongest and the boldest can climb, while the weak and timid languish and starve at its base.

But, gentlemen, there is a middle road which you have failed to mention, which leads along the level plain between the mountains and the sea, through green pastures and beside still waters, where all may walk and none need faint. It is built on the safe and solid middle ground of a judicious union of gold and silver, and it is molded by the intelligence, honesty, and faith of a great nation. It leads by fruitful farms and peaceful homes; by teeming mines and humming mills; through busy marts of trade and commerce, and to the safe grounds of national honesty and prosperity; and that is the road for this nation to travel.

Mr. RYAN. Mr. Speaker, in accordance with what I believe to be the earnest wishes of the majority of my constituents, as well as with my own conviction of what is right, I intend to vote for the unconditional repeal of the silver-purchase clause in the so-called Sherman bill and against the substitute or series of substitutes therefor offered by the gentleman from Missouri.

Perhaps, having made this statement, it were better that I should refrain from any further claim on the attention of the House at this time; and it was my intention at the beginning of this debate not to say even this much, but to let the record of my vote on the too-long deferred roll-call alone express my convictions and the desire of my district on the pending measures.

But, sir, in view of some statements that have been made during the discussion, I should like to briefly express some thoughts that have occurred to me while listening to the eloquent speeches delivered on these all-important subjects.

It has seemed to me, sir, as if the people of the United States are presenting at this moment for the consideration of mankind two simultaneously panoramic views of the present condition of their country; the description of which by future historians as cotemporaneous photographs of the same subject must tax to the utmost the credulity of their readers.

The one is an exhibition of strength more than gigantic; of widsom almost Godlike; of plenty beyond the power of even prodigality to consume; of wealth immeasurable, and of genius but little less than that of a creator.

The other presents the same subject with the weakness of infancy, lacking power to reach the hand for the acceptance of proffered necessary life-giving sustenance; lacking even the comprehension necessary to loosen its hold and let fall the burden which it is conscious is dragging it to destruction: afflicted with poverty so pinching and so debasing that it cries aloud from hunger and flaunts unashamed its nakedness in the public places; while its perception of cause and effect is so rudimentary that it stands helplessly bewailing the agony produced by wounds its own folly continues to inflict.

At the head of the grandest system of land-locked seas on earth, within the borders of the central city of the future American Republic—that city herself one of the prodigies of the age—we behold, outrivaling in realistic splendor the brightest creations of fancy's fairy dreams, a vision from the contemplation of which no American citizen worthy the name can retire without feelings of increased love and admiration for his country.

In that materialized fairy land, the White City of the Lake, where are collected from all times and nations the choicest gems of the product of human genius, the most signal triumphs of mind over matter, specimens from all lands and waters of the bountiful offerings of mother earth for the maintenance of her children, from her mines, her forests, her soil and her seas, there, where man's progress is traced from a plane hardly above the level of the brute to his present elevation but "little lower than that of the angels," where is shown how the means of existence have increased, from the scanty need that nature unassisted gives, to the bounteous plenty that is more than the ample reward she returns as the wages of toil—there the citizens of our country have shown, in friendly competition with all other peoples, that their favored land is, in the closing decade of the nineteenth century, as to whatever contributes to the material comforts and to the elevation of humanity, incontestably first, let what nation may be second.

Now, sir, for another exhibition of the condition of the same country at the same time.

Within the walls of this Capitol, from every portion of the nation, within whose broad borders at this time, thank heaven, is neither plague, pestilence, nor other unusual providential affliction, more than sixty-five millions of people assemble through their representatives and daily, before God and man, bewail, "in all the matchless eloquence of woe," their unhappy condition, their almost unbearable miseries—miseries all the more poignant and galling in that they are admittedly unnecessary, even self-inflicted, and removable at will.

Professing fear lest they die of starvation in the granaries their own labor have filled with food to the bursting, or perish with cold on the steps of the storehouses their own looms, spindles, and strong arms have filled to overcrowding with fuel and fabric.

And all this suffering, present and impending, caused by lack of intelligence to secure a measure that shall justly and properly divide the united products of their various labors.

Surely, Mr. Speaker, these are most contradictory exhibits of coexisting conditions, and it will be scarcely credible, in future years, that they faithfully depict concurrent conditions of the same people. Certainly, the proud notes of exultation with which we are in one place celebrating our wonderful triumphs and progress should be stilled until we prove ourselves equal to the solution of what should be among the simplest of all questions in domestic economy, or at least until we shall have found a remedy for the present deplorable situation to which our own folly and stupidity have led and are leading us.

The President of the United States in his message conveying to Congress his reasons for convening this extraordinary session, after a most clear and vivid description of the financial situation, and after offering advice as to the proper remedy, called to our attention the proverb that "He gives twice who gives quickly." And, Mr. Speaker, if ever there was a time in the history of the country when that proverb was trite and applicable, when the nation's hopes were centered on her representatives, when she begged for action prompt and immediate, it was on the day when the message containing that admonition was delivered at the opening of the present session.

Perhaps, sir, as those versed in parliamentary procedure assert, we are moving with commendable celerity, or as fast at least as is consistent with careful and considerate legislation, and with due regard for all the vast interests involved. That may be the fact, sir; but there is no doubt whatever of another fact, which is that the country's hopes have been cruelly deferred and disappointed, that untold misery has accrued, and unknown millions' worth of the people's substance has vanished through this alleged necessary procrastination.

Mr. Speaker, should these remarks of mine delay, even for an instant, action on the questions now before us, I should have remained silent; but the House having appointed the hour for recording its decision, which may be neither hastened nor hindered, I desire to indicate some of the reasons why I shall vote

as I stated in the beginning of these remarks. First, because the silver-purchase clause of the Sherman act of 1890 has proved a disappointment even to its authors. It is admitted on all sides to be a failure in securing what it was designed to accomplish, that is, to maintain the price of silver; it is therefore impotent for good, productive only of evil.

In the second place, I am satisfied that the passage of the bill offered by the gentleman from West Virginia [Mr. WILSON] will help to restore public confidence in the financial policy of the Government, and, notwithstanding all that has been said in derision of "confidence" during this debate by the gentlemen who hold the opposite view on the pending measure, there is nothing that is of more importance, either to the individual or to the Government.

Sir, but for confidence in the ability of the State to maintain order, chaos and anarchy would speedily ensue. But for confidence among neighbors, society would speedily disintegrate; but for confidence within the family circle domestic bliss would be an unknown quantity; but for self-confidence how long could we individually maintain successfully the battle for existence? From a financial standpoint we have an example to-day of the value of confidence. The city of Boston, as we learn from the newspapers, finds no difficulty in floating, at or above par, its 4 per cent bonds at this time when money is in demand on time loans at 10 to 12 per cent in the money markets of the United States. This shows, sir, the value, even from the low plane of a dollars-and-cents point of view, of the much-derided "confidence." Yes, that which we understand by confidence is the most potent factor in the advancement of the human family that the world possesses. Again, I shall vote for the repeal bill for the reason that I am opposed to a contraction of the currency. I am not a monometallist. If I thought the effect of repeal would be to drive silver and silver certificates out of circulation, with my present information I would oppose it.

But I am firmly of the opinion, that so soon as we terminate our present most unwise financial course of exchanging our gold for silver, and with our declared purpose to maintain silver coin at a parity with gold, we shall be able to keep in circulation from six hundred millions to eight hundred millions of silver and silver certificates at the present ratio. France is able to keep, relatively to population, even a much larger sum than the greater of these, at par, with a lower ratio than ours; and I see no valid reason why we, with a rapidly increasing population, and with a probability of continued development, should not be able to maintain, at least, as large a silver circulation as she.

Now, if we adopt gold as a standard, for, except by international agreement, it is generally conceded that we can not have two standards, we shall have in this country the use of both gold and silver, and we shall be, as we ought to be, financially on a par with the most advanced commercial nations; while if we attempt the free coinage of both metals only the cheaper will remain in circulation, the dearer will go to a premium; half the money of the country will disappear; the very condition which our free coinage friends are striving to avert will be brought about by their success, and universal bankruptcy will ensue. Assertions have been made here with much vehemence and patriotic fervor that we should manage our finances in our OWN way and without reference to, or rather to show our independence in opposition to well-ascertained laws and principles of finance as illustrated by the experiences of other peoples.

But, sir, in my humble opinion we shall just as effectually, and much more advantageously to ourselves, manifest our complete freedom from foreign domination by showing that we have learned from the experiences of others, by avoiding their errors, and by following, wherever practicable, along the lines that lead them to success. To refuse to avail ourselves of the experiences which the nations of Europe have proved to be beneficial, simply because we dislike to follow where Europe leads, were unworthy a youth in his teens, much less a nation well along in its second century.

Mr. Speaker, our people desire to have, deserve to have, and can have, if they will, the best of everything, including currency. I believe we shall eventually return in some way to a free bimetallic basis and a currency based thereon, and I believe the speediest way to produce that desirable result is for the United States to adopt the single gold standard and let the effect be felt, as it will be very quickly, by those nations which have been swift to avail themselves of our mistakes in the past. In fact, I believe in that way alone lies the path to an international agreement as to a standard of value.

And here let me say, Mr. Speaker, that as necessity is the mother of invention and of evolution, I believe there will be evolved from this, or from one of the regularly recurring monetary stringencies, some practicable idea of a system of exchanges, or of a measure of values, which will practicably eliminate both of the so-called precious metals as necessary elements of currency—of course, this only by international agreement.

Finally, I shall vote for unconditional repeal of the silver-purchase clause of the Sherman bill, because my constituents undoubtedly desire me to do so in their interests, and in that of the whole country, including, as we believe, even the silver States themselves. This alone, sir, would be sufficient warrant for my action, for I am here only to express the desires and obey the wishes, so far as in my power lies, of those by whose favor I am permitted to speak within this Hall. [Applause.]

And here, Mr. Speaker, let me say a final word in answer to some bitter things that have been said of us on this side of the question during this debate by gentlemen whose reasoning has not led them to the same conclusions at which we have arrived. I believe, sir, that of all times this is the occasion when we should, if possible, avoid anything like recriminations and appeals to passions, whether of classes or of sections. It seems to me that the man who at this trying hour appeals to the baser passions and seeks to arouse animosities between our people of different occupations gives good ground for questioning the sincerity of his devotion to the supreme welfare of his country.

For this reason I have listened to some of the brilliant speeches delivered here during this debate with delight, surprise, and regret. Delight at their charming and fascinating eloquence, surprise that their able authors should manifest such apparently willfully contracted views and sympathies, and regret that American legislators of deservedly high reputation for learning and ability should at this time and on this occasion season their speeches with bitter sectionalism and spice them with blistering class vituperation.

Mr. Speaker, I have the honor to represent a district whose interests and industries are as varied, I venture to say, as any other district represented on this floor. Among its quarter million people every species of industry or occupation of which our climate profitably permits has its following, and among them are many bankers and brokers, even those having offices in Wall street, and millionaires, and multimillionaires (but I believe not so many of these latter as a few months since), and I know that I reflect faithfully the wishes of the great majority of my constituents, regardless of conditions or of occupations, when I say that what they desire is that we pass this bill, pass it quickly, go home and stay there until the time arrives for the regular session. Now, from many of the speeches delivered here it would be inferred that we from and near New York are the special representatives and champions of Wall street. But I can say for myself that were the suffrages of these gentlemen to decide an election I certainly should not be allowed to speak in this Chamber.

I am permitted to appear here, sir, by favor of the farmers alongside some of whose fathers I labored in the fields in my childhood days, by the suffrages of the laborers and mechanics of my district with many of whom I have been a fellow toiler, whose confidence I enjoy and hope to merit as long as I live. These constituents of mine, Mr. Speaker, and their interests are as dear to me as can possibly be those of any other member of this body, whether he comes from Pennsylvania or from Kansas, from Georgia or from Nebraska. Their home is my home; their interests are my interests; their destiny is my destiny. I may say in the words of old, "Their God is my God." But I am proud to pay a deserved tribute to their intelligence and their patriotism by saying that the entrance to their favor lies not through denunciation of their fellow citizens of any honest calling or occupation.

But this is no hour, Mr. Speaker, in which to hurl stinging epithets or indulge in recrimination. Let us, from whatever section we come, heed only the voice of public opinion, calling aloud to us to give the country the relief it needs, and to give it quickly. Let us, as was so generously said on the 4th of March last by the distinguished leader on the Republican side of this Chamber, "place patriotism above partisanship," and whether we were sent here as Democrats, Republicans, or Populists, accept equal responsibility for the present deplorable situation, join hands to repair the present and avert impending disaster to our common country, and show that we regard the whole of it as of greater importance than any part; all its people more than any portion; and so, by drawing an irremovable veil over the condition of the United States as now reflected at this Capitol, cause the dark picture to become only as the memory of the reflection of a lowering but transitory cloud, and transmit for the contemplation of future ages our country as now portrayed in the Magic City by Inland Sea. [Loud applause.]

Mr. COVERT. Mr. Speaker, this debate which has been participated in so earnestly and so eloquently, is rapidly drawing toward its close. I desire to congratulate the House and the country upon the character of this discussion. It has disclosed a depth and extent of research, a close and logical reasoning, and a fairness and completeness of presentation on both sides rarely reached in the discussions of any lawmaking body on earth. It has been in the fullest sense an educational debate, and as

such has been carefully watched and followed in every section of the land. While this discussion has been eminently fair in every material respect, yet gentlemen have on occasion indulged in references to the people of my own State which might call for reply did we who have been assailed believe in the sincerity of those who have indulged in these references.

No imagination, unless abnormally vivid, could in the face of established facts conceive the existence of "a gold combination" in the State of New York, powerful enough to reach its ends through any possible system of legislative action. Almost all of my colleagues who have spoken on this question, have been at great pains to explain the character and methods of our people who favor the repeal of the existing purchasing clause. My colleague [Mr. COOMBS] has spoken of the matchless generosity exhibited by New York toward other communities and States in seasons of misfortune and distress. My other colleague [Mr. WARNER] explained at length in presenting the memorial of the Chamber of Commerce, that that body was constituted not alone of bankers, but of business men generally.

My other colleague [Mr. HENDRIX] did not "boast" of his bank presidency, as stated by the gentleman from Illinois [Mr. LANE], but rather apologized for it. He intimated that he had nothing but his salary to his credit; that he was born and brought up in Missouri; and that, therefore, even though he was now a New York bank president, he was "only a little one." [Laughter.] I submit that New York has no need to be even semiapologetic in any explanation that may be given of the attitude of her people on this question.

The people of that sovereign State have in the strongest and most forceful way declared their sentiments upon all questions affecting the rights of the many as against the demands and encroachments of the few.

Upon the statute books of the Empire State stands the recorded voice of her people upon the vital question of the preservation of their interests as against corporate aggression and the excessive demands of a money power. Years ago her Legislature by formal enactment lessened the legal rate of interest on loans and advances of every character. In no one State of this Union can money be secured at so low a rate for any legitimate business or industrial enterprise.

Mr. Speaker, your own State of Georgia knows this. Alabama knows it. Florida knows it. Scarcely a Southern State whose business and industrial interests have prospered since the war but is glad to make acknowledgment of this fact. Capital for the development of mines, the building of railroads, and the furthering of internal improvements has gone to the Southland for all these desirable and beneficent purposes. Do not, I beg you, Mr. Speaker, misunderstand the spirit in which this is said. The obligation was not upon one side alone. Our business men have been glad to make these investments—as glad, perhaps, as the people of the South were to receive them. To-day the bond of union, the community of interest between the people of the New South and the people of the Empire State of New York is closer and stronger than that which exists between the South and any other one State in the whole Union. [Applause.]

What else has New York done in the interests of the many as against the few? The tax laws of New York have been characterized as drawn and enacted for the protection of poor and even delinquent taxpayers rather than for the fair protection of prosperous property owners. The drift of legislation in the State of New York during all the late years has been in the direction of the restriction of the powers of corporations and the suppression of all manner of syndicates and trusts.

Our State laws even follow the wealthy property owner beyond the grave, and compel his estate to pay a percentage of its value in the way of succession and inheritance taxes into the public treasury for the benefit of the Commonwealth.

Mr. Speaker, what State of all this grand sisterhood can point to stronger and more uniform laws against the encroachment of capital and its undue aggregation, and in the direct interests of what gentlemen on this floor sometimes refer to as the "plain, common people?"

The terms "leeches," "vampires," and "Wall street bandits" have no application to a body of people who have placed upon the statute books of their State laws of the nature of those to which I have made but brief and general reference.

Coming up from every section of the Empire State, from the body of the people who have made insistance upon the enactment of these measures—from merchants, manufacturers, mechanics, wage-earners, from Montauk to the Lakes—is the demand, peremptory and emphatic, for the unconditional repeal of the silver-purchasing enactment.

This enactment as it stands is more and very much more than a "cowardly makeshift." It is absolutely wrong as matter of principle. It has been demonstrated by the saddest experience that it is disastrous as matter of policy.

During the debate on the free-coinage bill in the last Congress, from my place on this floor, I argued for the immediate and absolute repeal of this measure; and I do not purpose to repeat now the reasons advanced at that time in favor of its unconditional repeal.

That this measure, which has been tried in the balances and found to be so grievously wanting, should be repealed upon some proper basis, has grown to be the sentiment, the almost common sentiment, of thoughtful minds in every section of this land.

Why do the people of New York who have framed the laws I have mentioned, laws strengthening the hand of labor and the cause of the "common people"—why do they demand the unconditional repeal of this enactment?

Frequent reference has been made during this discussion to the "debtor class" of our people. The gentleman from Missouri [Mr. HALL] has devoted the greater part of his speech to a defense of this body as against the creditor class of the community, and has argued that unconditional repeal would weigh heavily against their interests.

Mr. Speaker, I do not like the term "the debtor class," as applied to the great bulk of the people of this Republic. If I am employed to try a law suit or to examine a legal question for a client, and am to receive my pay when the work is done, from the very moment that work is completed my client is my debtor, though his possessions are ten times more than mine. The man who sells a ton of coal or a barrel of flour on credit to a customer, though the latter be a modern Crœsus, holds him as his debtor until the obligation is discharged.

The great bulk of the people of this land are wage-earners, getting their pay at the end of the week or the month, as the case may be.

Until the end of the week or of the month, until the stipulated pay day, though the one may live in a palace and the other in a hovel, the employer is the debtor, the employé the creditor.

I submit, sir, that the legislation we frame shall be in the interest not alone of the debtor class, as that term is applied by many gentlemen on this floor, but that it shall have a wider, broader scope, and shall be in the interest of the wage-earners, for this class, happily, makes up by far the greater number of the people of this Republic.

These wage-earners, and large numbers of them are wage-savers, are entitled to the very best and soundest money in existence anywhere as the fruit of their labors. It should be the aim of Federal legislation to secure for them this kind of money and absolutely nothing short of it. [Applause.]

And now, Mr. Speaker, can there be any definite assurance of safety in this regard, if any one of the pending amendments shall be adopted as a condition of the repeal of the existing law? Suppose that any one of the various and varying propositions seeking to establish a ratio of value between gold and silver upon the basis of 1 to 16 or 1 to 20, shall be adopted, can there be any definite assurance that the great bulk of our people who are wage-earners, and those among them who are wage-savers, will be protected in their right to receive the best kind of money that can be paid to them?

The financial history of the world has shown us that the value of silver has been gradually but surely decreasing. Time was when 1 ounce of gold would buy only 8 or 9 ounces of silver. To-day, in the markets of the world, it requires about 25 ounces of silver to obtain 1 ounce of gold. And this condition has not been brought about alone by legislative action. The opening and development of extensive silver mines, and the labor-saving processes by which the cost of production has been lessened, have been most potential agencies in bringing about this result.

What assurance can any man give, expert though he may be in all questions of finance, that the variance in value between the two metals may not be still further increased in the immediate future?

Will legislation sustain the value of silver? Why, it was imagined that the very act which we are now called upon to repeal would at once send up the price of silver and sustain its increased value.

Here was the Government of the United States a regular purchaser of the metal to the extent of 4,500,000 ounces each month. These conditions have been in operation for the past three years, and yet the value of silver as compared with gold stands to-day at about 25 to 1 in the markets of the world.

Mr. Speaker, the people of the State of New York, and I, as one of their representatives here, believe in the coinage of silver.

I believe in the declaration made in this regard in the last Democratic platform. I believe there can be no uncertainty in the construction to be given to that declaration. If there was any doubt or any ambiguity about it, that doubt or uncertainty was removed, and the platform was revised and corrected when the

same men who adopted it made Grover Cleveland their nominee for the Presidency. Early in 1892 he had hazarded his chances for the nomination by a bold, manly, and courageous declaration of his position on the financial question. His views, clearly and emphatically stated, were known and understood by all men. His views then, are his conclusions now. The people who were his advocates then should be his strongest and staunchest supporters at this juncture, when legislation is invoked in affirmance of these conclusions.

Neither the President nor any considerable number of the American people stand to-day opposed to the coinage of silver. The American people as a whole have an affection that can not be alienated for the metal that has served them so faithfully and so well. If, by international agreement, or by any other plan that can be devised, we can safely continue the free coinage of silver the whole people will say, "Let the work go on." It is the money to which we have for long years been accustomed, and we have for it all the affection we entertain for an old friend and faithful servitor.

But we must face conditions as they are, and not as we might wish them to be. Silver has become like an old and faithful servitor who has fallen unfortunately into unsteady habits. It has been abandoned for this reason by many of its former friends among the nations of the earth, and its usefulness has been largely diminished. The duty on our part is to reform it, if we can, and to restore its former usefulness if this restoration can be accomplished. Heroic measures are invoked in extreme cases, and in the existing emergency nothing, in my judgment, will accomplish the desired reform except a resort to the "gold cure." [Laughter and applause.]

I believe fully, Mr. Speaker, in the maintenance of the independence of this Republic in all material ways. I believe in its being, so far as possible, self-sustaining, just as I believe in its being in all ways self-respecting. And yet no man can doubt that we would lose in power and prosperity if through the use of a debased currency our credit as a nation should in any way be impaired. The American people are not to be persuaded to a wrong course through any cry of subserviency to the practices of European powers. They believe in the widest and freest trade with the nations of the earth by the honest and honorable methods which, being best alike in principle and in policy, will best subserve the interests of the whole people.

Reference has very ingeniously been made to the fact that Great Britain having, so far back as 1816, adopted the single gold standard as her measure of value, thereafter for years carried on trade with foreign nations using a double or even a single silver standard without friction or embarrassment.

I have no doubt that there was perfect freedom from either, so far as Great Britain, with her single standard, was concerned. Statistics have not been given, but that Great Britain profited by the transactions thus conducted may very readily be assumed when we know that the most potential of the civilized nations abroad with whom she thus traded, one after the other abolished all other systems and adopted the single gold standard as the only measure of value.

Every pound of English money, every French franc, every German mark which comes to this country adds to the wealth of the nation. Every foreign investment here brings us into closer contact and communion with our sister nations across the seas. Every investment of foreign money here, every business transaction with foreign nations, is in the direction of the casting away of the sword, and the invocation of the gentler mediation of the pen in the adjustment of all international complications.

We have heard very much during this discussion as to the dangers and difficulties which would follow a contraction of the currency; and this, in the face of the known fact that over 90 per cent of the entire business of the country is conducted upon a credit system. Whatever evils might follow currency contraction, I insist they would be but slight in comparison with those which would come to us from loss of national credit, as a resultant of a debased currency.

One of the most able and distinguished of the advocates of free coinage, the Senator from Nevada [Mr. STEWART], has said that the credit of the world is based on standard money, and the same statement is repeated by those who stand with him for free coinage.

It is with nations as with individuals. Credit is a complex quantity, constituted of various elements. Knowledge of the abstract honesty of the debtor and the desire to repay the creditor, faith in the debtor's integrity, these are elements entering into the composition of what the world calls "credit." Senator STEWART himself gives denial to his own theory that credit is based on money alone by a sketch of his own life as found in the Congressional Directory. I read only a line or two from page 72:

He attended Lyons Union School and Farmington Academy. Was teacher of Mathematics in the former school while yet a pupil. With the little money thus earned, and the assistance of James C. Smith, one of the judges of the supreme court of New York, he entered Yale College.

This bright and brainy young man had not money enough, "standard" or otherwise, to enter college, but he had what was better—he had credit—which secured him what he most desired—a liberal education; and the distinguished Senator makes manly and grateful acknowledgment of the fact even after more than forty years of time.

As with individuals, so with nations. The same elements enter into the formation of what individuals and nations alike call credit—the preservation of which is and always should be the primal obligation resting upon this Republic.

Mr. Speaker, I have said that the debate upon the pending measure has been close and logical, and eminently educational in its character. It has had its other distinguishing features, which have given it more than ordinary interest. Heroism is by no means confined to the tented field, where devoted patriots have bared their breasts to receive the shock of battle.

There have been exhibitions of the highest order of heroism on the floor of this House during discussion and attempted legislation on this silver question. I remember, and those who served here during the last Congress will readily recall the intense excitement which prevailed while the consideration of the free-coinage bill was under discussion—excitement which reached its climax when the final vote was taken. There was a district in the State of West Virginia where the sentiment at the time was strongly in favor of free coinage.

The member who represented that district had given careful and studious consideration to the proposition, and could not conscientiously bring himself to its support. He had attained a high, a very high, measure of distinction in national politics, and an adverse vote might mean for him political destruction, swift and absolute and certain. With all of his political future thus in possible jeopardy, firm and loyal to his convictions of duty as a member of the American Congress, the cause of free coinage received a negative vote when response was made to the name of WILLIAM L. WILSON of West Virginia. [Applause.] That he has since been returned to this Congress is to the infinite credit of his home district, and it is to the credit of my friend from Tennessee [Mr. PATTERSON], and a number of other gentlemen on this floor, that they have, in a brave and manly way, during this discussion, announced that while they favored free-silver coinage in the last Congress they stand opposed to it as conditions present themselves to-day. [Applause.]

Mr. Speaker, with all the American affection for silver as currency, there is yet a deeper American feeling for abstract honesty in governmental and business affairs. The people of this country are honest people. They will never consent to coin silver upon any other basis than that of its actual, commercial, and intrinsic value.

They will make insistence that all metal money, be it gold or be it silver, shall be worth as much when uncoined as it is when coined. The American people have a proper national pride as well as a proper national honesty. They will make insistence that every dollar, whether of gold or silver, coined in this country, and having upon it the stamp of the American Government, shall be received, without demur and without suspicion, at its full face value, in whatever country across the seas an American citizen may make a tender of an American dollar. [Loud applause.]

Meanwhile, with the conditions which confront us—conditions, in my judgment, based rather upon existing fears than existing facts—it seems to me, sir, that we have but one duty to perform. One of the most philosophical of modern writers has said that the most useful and important of all legislation in the world's history has been legislation in repeal of existing obnoxious law. The prompt and unconditional repeal of the silver-purchasing enactment will add another illustration to the truth of this statement. [Applause.] Let us leave for further and more deliberate consideration affirmative legislation for the strengthening and building up of silver as currency.

I repeat, in conclusion, Mr. Speaker, that the first, the greatest, the most imperative duty on our part as a self-respecting people, is to preserve at all hazards our national credit at home and abroad, and to maintain now and for all time our national honor unspotted and unstained. [Applause.]

Mr. FITCH. Mr. Speaker, this has been an exhaustive debate. I have no desire to add to the tables of figures which made the RECORD for the last week look like an old arithmetic, or to the passages of poetry which have made it resemble a Fourth Reader. The Old and the New Testament, and the works of Shakespeare and Sir Walter Scott, of Goldsmith, Whittier, Pope, Dickens, and Mark Twain have all been quoted, and as it seems to me quite as fully as is necessary in the discussion of a financial measure. All the text-books in the library of the House have been cited with approval by gentlemen on both sides

of the debate, and the most opposite views sustained by each of them.

It is true that the lines—

> Ill fares the land, to hastening ills a prey,
> Where wealth accumulates, and men decay—

which are always read several times with great effect in these debates, have been quoted but twice in this discussion. [Laughter.] But to make up for this accidental omission my friend, Mr. SIMPSON of Kansas, who is soon to be the leader of the gentlemen who are too wise and too patriotic to follow Grover Cleveland, John G. Carlisle, and WM. L. WILSON, embroidered his most instructive essay with quotations from Wendell Phillips, and the Prophet Nehemiah; from Froude, the English historian, and from the New York World; and from Francis A. Walker, John Locke, Hume, Fichte, John Stuart Mill, Ricardo, J. R. McCullough, Sir Archibald Alison, Mr. Gladstone, Alexander H. Stephens of Georgia, and Mr. HARTER of Ohio. [Laughter.]

I regret very much to notice, Mr. Speaker, that most of these persons so honored were Englishmen, and that my friend from Kansas seemed to consider them safe and sufficient authorities on finance. [Laughter.] I trust that the time will soon come when the gentleman from Kansas will cease to look to England for inspiration, and as a true American to disregard the teachings of the prime minister of England and the works of Sir Archibald Alison, and find such support as he needs for his theories from the financial authorities at Topeka and Medicine Lodge. [Laughter.]

What I do desire to consider are the reasons which are given by Democrats on this floor why the earnest recommendation of the Democratic President, who has just been elected, should not be carried out by the Democratic majority in this House. There seem to be three of these reasons. The first of them is the wording of the Democratic platform. It is admitted on all hands that the platform demanded just what the President has recommended; but it is argued with great seriousness that as the platform contains some other provisions, these must also be carried into effect, or else it is impossible for us to act at all.

I am frank to say, Mr. Speaker, that in such an emergency as this, an emergency unforeseen at the time when the platform was made, and for the occurrence of which it did not provide, that the wording of a platform would never frighten me out of giving relief to the hundred of thousands of people who are unexpectedly drifting toward bankruptcy or are deprived of the chance to labor. As between the demands of a political platform and the united demands of the workingmen and the business people, who are in sore distress and serious danger in my district, if I had to make the choice I should let the platform go. [Applause.]

Knowing, as most of us do, a little of how party platforms are made and why, I decline altogether to believe that any of them are of inspired origin, or that they can lay down for us any line of conduct or rule of legislation to which there can in no case be any exception. [Applause.] A platform, for instance, which declared that we desired to be at peace with all the world would not prevent me from voting, in a sudden foreign war, the money for guns to be aimed at the defenses of Liverpool or for men to hold the forts at Sandy Hook. And I sincerely doubt very much whether any foreign war could injure our industries or cripple our commerce any more than this state of affairs, to which the President has earnestly called our attention.

But, aside from all this, it seems to me that the real platform on which the Democracy carried all of the doubtful States, including the decisive State of New York, in the late election was the character and record of Grover Cleveland. [Applause.] What did the people who elected him know of his character? They knew that he had, in as marked degree as any man who was ever in public life, the rarest and finest of political virtues—I mean the virtue of political courage and consistency. They knew he would stand or fall by his convictions. He lost the Presidency once because of this trait of character. Because of this trait of character the people gave back to him in 1892 the splendid gift which he had lost in 1888 because on account of his fidelity to principle. [Applause.]

What did the people who elected him know of his record on this subject? They knew that from the beginning, in public and private life, whenever he had the opportunity to do so, he had steadfastly pointed out the dangers which have now come upon us, and earnestly advised against the further purchase of silver bullion and its enforced coinage by law. [Applause.]

I read what Grover Cleveland said before he took the Presidential office; when he wrote that famous letter from Albany on February 24, 1885. After reciting the conditions in regard to the coinage of silver, he said:

> These being the facts of our present condition, our danger, and our duty to avert that danger, would seem to be plain. I hope that you concur with me, and with the great majority of our fellow-citizens, in deeming it most desirable at the present juncture to maintain and continue in use the mass of our gold coin as well as the mass of silver already coined. This is possible by a present suspension of the purchase and coinage of silver.
>
> * * * * * * *
>
> Such a financial crisis as these events would certainly precipitate, were it now to follow upon so long a period of commercial depression, would involve the people of every city and every State in the Union in a prolonged and disastrous trouble. The revival of business enterprise and prosperity, so ardently desired and apparently so near, would be hopelessly postponed. Gold would be withdrawn to its hoarding places, and an unprecedented contraction in the actual volume of our currency would speedily take place. Saddest of all, in every workshop, mill, factory, store, and on every railroad and farm the wages of labor, already depressed, would suffer still further depression by a scaling down of the purchasing power of every so-called dollar paid into the hand of toil. From these impending calamities it is surely a most patriotic and grateful duty of the representatives of the people to deliver them.
>
> * * * * * * *

In his first annual message he said:

> Nothing more important than the present condition of our currency and coinage can claim your attention.
>
> * * * * * * *
>
> Those who do not fear any disastrous consequences arising from the continued compulsory coinage of silver as now directed by law, and who suppose that the addition to the currency of the country intended as its result will be a public benefit, are reminded that history demonstrates that the point is easily reached in the attempt to float at the same time two sorts of money of different excellence, when the better will cease to be in general circulation.
>
> * * * * * * *
>
> There is certainly not enough silver now in circulation to cause uneasiness, and the whole amount coined and now on hand might, after a time, be absorbed by the people without apprehension; but it is the ceaseless stream that threatens to overflow the land which causes fear and uncertainty.
>
> The so-called debtor class, for whose benefit the continued compulsory coinage of silver is insisted upon, are not dishonest because they are in debt: and they should not be suspected of a desire to jeopardize the financial safety of the country in order that they may cancel their present debts by paying the same in depreciated dollars. Nor should it be forgotten that it is not the rich nor the money-lender alone that must submit to such a readjustment enforced by the Government and their debtors.
>
> The pittance of the widow and the orphan and the income of helpless beneficiaries of all kinds would be disastrously reduced. The depositors in savings banks and in other institutions which hold in trust the savings of the poor, when their little accumulations are scaled down to meet the new order of things, would, in their distress, painfully realize the delusion of the promise made to them that plentiful money would improve their condition.
>
> * * * * * * *
>
> That disaster has not already overtaken us furnishes no proof that danger does not wait upon a continuation of the present silver coinage. We have been saved by the most careful management and unusual expedients, by a combination of fortunate conditions, and by a confident expectation that the course of the Government in regard to silver coinage would be speedily changed by the action of Congress.
>
> Prosperity hesitates upon the threshold because of the dangers and uncertainties surrounding this question. Capital timidly shrinks from trade, and investors are unwilling to take the chance of the questionable shape in which their money will be returned to them, while enterprise halts at a risk against which care and sagacious management do not protect.
>
> * * * * * * * *
>
> I recommend the suspension of the compulsory coinage of silver dollars, directed by the law passed in February, 1878.

I ask your special attention to this language.

Again, in his third annual message he said:

> I have seen no reason to change the views expressed in my last annual message on the subject of this compulsory coinage; and I again urge its suspension on all the grounds contained in my former recommendation, reenforced by the significant increase of our gold exportations during the last year, as appears by the comparative statement herewith presented, and for the further reasons that the more this currency is distributed among the people the greater becomes our duty to protect it from disaster; that we now have abundance for all our needs; and that there seems but little propriety in building vaults to store such currency when the only pretense for its coinage is the necessity of its use by the people as a circulating medium.

The following letter was addressed to the Reform Club, February 10, 1891:

> E. ELLERY ANDERSON, *Chairman:*
>
> DEAR SIR: I have this afternoon received your note inviting me to attend to-morrow evening the meeting called for the purpose of voicing the opposition of the business men of our city to the "free coinage of silver in the United States."
>
> I shall not be able to attend and address the meeting as you request, but I am glad that the business interests of New York are at last to be heard on this subject. It surely can not be necessary for me to make a formal expression of my agreement with those who believe that the greatest peril would be invited by the adoption of the scheme, embraced in the measure now pending in Congress, for the unlimited coinage of silver at our mints.
>
> If we have developed an unexpected capacity for the assimilation of a largely increased volume of this currency, and even if we have demonstrated the usefulness of such an increase, these conditions fall far short of insuring us against disaster if, in the present situation, we enter upon the dangerous and reckless experiment of free, unlimited, and independent silver coinage.
>
> Yours, very truly,
>
> GROVER CLEVELAND.

They knew all these things before the election.

Gentlemen, you may argue about the platform as learnedly and as long as you please, the fact remains that you did not vote in the dark. There is nobody in this country, intelligent enough to know anything about politics, who does not know that your pretense of having been deceived is absurd; who does not know that Mr. Cleveland has long predicted the state of affairs which he described in his message, and that the vast majority of the people who voted for him did so because they knew what his views were and knew that he would never be afraid to reiterate them and to act on them if the emergency came.

In connection with your claims that the Democratic party was committed at the Chicago convention to free coinage of silver, look at the official record of the convention. When Mr. Patterson, of Colorado, failed to get his resolution for free coinage embodied in the party platform, the question was decided. When he offered the same resolution in the convention and it was beaten the decision was affirmed on appeal. You can find in the action of that convention no excuse for your refusal to sustain the President in the measure of relief which he recommends, and which the interests of the country so earnestly demand. [Applause.]

The second argument which gentlemen make use of as a reason why this proper and necessary request of the Democratic President can not have their support seems to consist generally in a long account of various alleged crimes against silver perpetrated by Democrats and Republicans alike, and the allegation of a conspiracy in England by which the votes of all the Democrats and Republicans in favor of the Wilson bill are controlled. This is alleged to be a conspiracy in which we are all engaged, which is directed against our own countrymen, the object of which is the financial ruin of a large portion of our own country. With the historical part of this discussion it seems to me we have little concern.

What Mr. SHERMAN ought or ought not to have done twenty year ago, or what the Democratic or Republican party did or omitted to do ten years ago, is not the question. The question is, What shall we do now and here? [Applause.] The conspiracy argument has two defects. In the first place it is not believable; in the next place it is not original. We on the Democratic side, in the manufacturing States, have heard it all before a great many times. [Laughter.]

Whenever we proposed to change a line in a tariff bill in the interest of our people, as it seemed to us, we were promptly charged by some of our friends, the Republicans, with being in a conspiracy in the interest of England against the country in which we lived and the business interests with which we were identified. I do not know whether this old scarecrow has been used much in the States of Missouri or Nebraska. But we in New York have seen it very often, and it ceases to have any terrors for us. Our people know, for instance, that England has about as many adherents in Harlem as has China.

Besides this, I desire to say to my friends, who urged the conspiracy issue, that they do not do it half as well or half as strongly as it can be done. If you can enlist our friend Porter, late of the Census, now of the New York Press, and two or three other editorial writers of the Republican party, you will be able to improve vastly on the "British gold" arguments which we have had in this debate. [Laughter.] There is a fullness of detail, a particularity of statement, and a deep enthusiasm in their allegations against us which you have not yet reached. [Laughter.] They have had experience in three Presidential and six Congressional campaigns.

It is true that they have not had much success with this argument, but that is, perhaps, no reason why you should not unite with them in trying it on us once more. Of course, if you have the imagination necessary to believe in it, argument on the question will be useless. Anybody who will believe, for instance, that all the Democrats and all the Republicans in Congress from the State of New York could be induced to vote together against what they thought to be the true interests of the whole of their country would believe anything that even Mr. Thomas Watson, late of the House of Representatives, might charge against us. "*Gegen Dummheit Kampfen Götter selbst vergebens.*" [Applause.]

The third argument which is given as a reason why repeal can not be voted seems to be that it will be unpopular in the districts which gentlemen represent, and that a vote for it will result in the defeat for reëlection of some of those from the South and West who, but for this, would be willing to sustain the President. This is an argument which everybody can understand and appreciate. There is, of course, nothing so valuable as a seat in Congress, and there is no instinct higher than that of self-preservation. [Laughter.]

There are, however, several things to be said even about this argument. In the first place, it is sometimes the unexpected that happens. We all remember distinctly with what certainty my distinguished friend, Mr. Pierce, of Tennessee, predicted the defeat of his colleague, Judge PATTERSON, of that State, when the latter manfully voted against free coinage in the last Congress because he thought that the right course. Somehow it happened that the prophet was mistaken, and he is practicing law, with great success, I hope, in Tennessee, while Judge PATTERSON, after a triumphant reëlection, is here with us. [Applause.]

In the next place, the success of this argument depends something on how this strange and eventful situation may operate to affect the people in your own district. It is easy, and it may be popular, sometimes to denounce New York; but the list of the securities in which our money is invested is substantially a list of all your cities and towns. You can not injure the great business interests of this country without injuring yourselves any more than these interests can help themselves without helping you. The misery and disaster which this legislation, which you refuse to repeal, is causing in our homes and workshops will inevitably reach to your farms and plantations. When that time comes you may find that the phantom popularity which you have sought has, after all, evaded you. Why not join with us in sustaining our own President? [Prolonged applause.]

Mr. DALZELL. Mr. Speaker, when the President of the United States, in the exercise of a constitutional right, recently called together the representatives of the people, he assigned as a reason for his action the existence of an extraordinary and alarming business situation, not to be accounted for by natural conditions. That situation he charged to the existence of unwise legislation on the money question.

Almost every gentleman who has taken part in this discussion has announced his disagreement with the President as to the cause of the present deplorable condition of things. In my judgment the want of confidence that underlies the present depression is due in large measure to the declared hostility of the party now in possession of all branches of the Government to that great economic system by whose agency the country during the last quarter of a century has marched to unexampled prosperity.

There is, however, to some extent, a popular impression indorsing the President's views, and the remedy for fancied, as for real evils, is a removal of the supposed cause. And whether the President be right or not, his summons brings us face to face with the necessity of legislating with respect to the immediate future financial policy of the United States, and places upon our shoulders the grave responsibility of determining what that policy shall be.

Under these circumstances, Mr. Speaker, it was to have been expected that every reasonable facility would be afforded for debate, and the largest liberty accorded for suggestion, to the end that whatever should be finally determined upon might be the ripe fruit of the mature judgment of all the representatives of the people, and not the preconceived scheme of any one man or set of men.

Unfortunately, however, the majority party in this House did not adopt this view. Separated by an impassable gulf of opinion, as the two sections of that party are upon the main question, they were agreed on this: that no suggestion should be allowed from this side of the Chamber, no opportunity offered for amendment; no chance given to vote, save and except upon certain alternative schemes formulated by them in advance of deliberation and debate. If the country can be saved only in such way that the Republican party shall be entitled to some share of credit in its salvation, the Democratic programme seems to be that it would be preferable to let the country go to ruin.

The majority of Republicans, however, careless in the face of danger of the personnel of their leadership, are found to-day, and will be found when this vote is taken, where the Republican party always has been found in the presence of national peril, following along the pathway that leads to national safety and national honor. [Applause on the Republican side.]

What, now, Mr. Speaker, are the questions to the deliberation and discussion and decision of which the arbitrary action of the majority limits us? They are these: Shall we inaugurate the policy of the free and unlimited coinage of silver at some legally defined but not commercially accurate ratio, or shall we return to the policy of the Bland-Allison act and monthly emit a limited number of fiat silver dollars; or, lastly, shall we unconditionally repeal the purchase clause of the so-called Sherman act, approved July 14, 1890?

Now, I assume in the first place that almost every one, except the free silver men, who are really monometallists, is desirous of seeing both gold and silver the standard money of the commercial nations of the world: that almost all are in favor, in other words, of international bimetallism. But as we can not now at this time have that, it is material to be borne in mind in this discussion that we are here not to legislate internationally; we are here to legislate simply for the United States of America. And it is material to be borne in mind also that our existing monetary system does not conform to the monetary system of any other commercial nation at the present time.

The year 1873, when silver was demonetized, marked a revolution in monetary history. In the results of that revolution all the commercial nations of Europe acquiesce. We alone dissent. Except in silver standard countries, ours are the only mints that are open to the coinage of silver.

Now, whether it was wise to demonetize silver, how silver was demonetized, whether surreptitiously or openly, are questions which have no pertinence in this discussion except for the pur-

poses of declamation. "It is a condition, and not a theory, that confronts us." The question is, can the United States, single-handed and alone, remonetize silver under existing conditions?

And this brings me naturally to the first question, Shall we repeal the purchase clause of the Sherman act? Now, what is that act, and what have been its results? By its terms the United States Treasury is made a storehouse for silver purchased at the rate of 4,500,000 ounces per month, at its market price, and paid for in legal-tender Treasury notes, there being a provision in the act that these notes shall be payable in gold or silver coin, at the discretion of the Secretary of the Treasury.

But by the terms of this same act the important declaration is made that it is the established policy of the United States to maintain the two metals, gold and silver, on a parity with each other at the existing legal ratio, or at some other ratio to be defined by law.

As the President of the United States says in substance, this second clause is really a control of the discretion of the Secretary of the Treasury, so that these Treasury notes are practically payable in gold. The consequence is that the gold obligations of the Government are being increased each month to the extent of the value of 4,500,000 ounces of silver.

In other words, we are paying each month gold for silver. This act has been in operation since the 13th day of August, 1890, thirty days after its passage.

Mr. WALKER. It was passed on the 14th of July.

Mr. DALZELL. The act was passed on the 14th of July, and went into operation on the 13th of August. And what has been the result? I have here a statement from the Treasury Department showing the amounts of gold and silver coin and certificates, United States notes and national bank notes in circulation August 1, 1893. How many of our obligations are payable in gold? These: first, gold certificates, amounting to $87,704,739; second, Treasury notes under act of July 14, 1890, amounting to $148,286,348; third, United States notes, amounting to $346,681,016; in other words, there is now payable in gold by the United States $582,672,103. These are our gold obligations, and how much gold have we to pay them with? Only $100,000,000 in gold.

Why, my friends, if you put aside the immense resources and the credit of the American people, the national Treasury is to-day, according to legal definition, bankrupt. Such being the state of our accounts, what does it mean to continue this policy? It means simply to widen the breach between our liabilities and our assets, and the time must ultimately come when our gold reserve, in proportion to the burden it has to bear, will be simply an insignificant bagatelle. Do we want to continue that policy indefinitely? Do we want to continue to buy 54,000,000 ounces of silver each year without limit as to time, and pay for them in gold?

How long do you suppose that even the imperial resources of our magnificent domain, the energy and interprise, the honesty of purpose of the American people, will persuade the world of our ultimate solvency measured in the world's standard of value—gold? It is not the monthly addition for a few months of silver purchases under the act of 1890 that has shaken confidence; so far as the money question has anything to do with the existing depression its influence is derived from the dreary prospect of the indefinite continuance of such violation of the laws of sound finance.

We were told when the Sherman law passed that the effect of it would be to put up the price of silver. We were told that silver and gold would approach each other towards the legally defined ratio of 16 to 1. What has been the result? I have here from the Treasury Department, Bureau of the Mint, under date August 1—this present month—a statement of the highest, lowest, and average price of silver bullion, and value of a fine ounce, bullion value of a United States silver dollar, and so on.

I find that in 1878 the value of the fine ounce, based on an average price of exchange, was $1.11; and I find, coming on down the list, that in the month of July of this present year the value of the same quantity of silver was 72 cents.

The schedule showing fall in values is as follows:

1878-'79	$1.11616	1884-'85	$1.03226	1890-'91	$1.04780
1879-'80	1.14397	1885-'86	1.03295	1891-'92	.93723
1880-'81	1.13508	1886-'87	.98148	1892-'93	.84263
1881-'82	1.13817	1887-'88	.95617	July	.72037
1882-'83	1.11912	1888-'89	.93510		
1883-'84	1.11629	1889-'90	.96839		

In the meantime, while the price of silver has been going down from day to day and from month to month and week to week, the production of silver has been increasing until this precious metal is every day getting to be less and less precious.

I have also, here, issued by the Treasury Department, a schedule showing the production of gold and silver in the world, and I find that whereas in 1873 silver was produced to the extent of $81,800,000, it was produced in the year 1892 to the extent of $196,605,000. The schedule showing the increase in production is as follows:

1873	$81,800,000	1881	$102,000,000	1889	$162,159,000
1874	71,500,000	1882	111,800,000	1890	172,235,000
1875	89,500,000	1883	115,300,000	1891	186,733,000
1876	87,600,000	1884	105,500,000	1892	196,605,000
1877	81,000,000	1885	118,500,000		
1878	95,000,000	1886	120,600,000		5,104,961,000
1879	96,000,000	1887	124,281,000		
1880	93,700,000	1888	140,705,000		

The production of silver has quadrupled within the last three decades; it has more than doubled within the last two.

When this bill was under discussion, gentlemen advocating the free coinage of silver talked to us glibly about the double standard; how, under the double standard, silver went up and gold came down, until they got exactly together. They read to us, and gentlemen on the floor now read to us, from books, quoting axioms and illustrations and experiences that have no relation to the experience of the present time, nor any conformity to existing conditions. They read to us axioms founded upon the experience of the world prior to 1873, when it was in the practice of bimetallism. I put against their theories, their axioms, and their maxims our own actual experience, and quote to them the maxim, the homely maxim, that "example is better than precept."

Now, how much has this experiment with silver cost us? I have a letter from the Acting Director of the Mint, Mr. Preston, in which he says:

> The amount of silver purchased under the act of July 14, 1890, aggregated 161,521,000 fine ounces, at a cost of $150,663,000.

The value of the same at to-day's market price, 73 cents and a fraction, would be $118,714,000. In other words, we have lost by this experiment, or rather paid for this experiment, the sum of $31,955,000. Who pays that money?

Who but the people of the United States, including the poor people, whose self-vaunted champions on this floor threaten us with war if we do not break down the dikes and welcome to our mints the disasterous flood of European silver. Think of it—adding what the Bland act cost us, it amounts to $2 apiece, and more, as a tax upon every man, woman, and child within all our broad domain. This is the price that we pay for our experience with limited free coinage of silver. "If these things be done in the green tree, what shall be done in the dry?"

But this policy which we have been pursuing is dangerous in another direction. It is dangerous in the possibilities that it offers for the contraction instead of the expansion of our currency. Pour good money and bad money together into the channels of trade, and the bad money will drive out the good, in pursuance of a law as inexorable as the law of gravitation.

What is good money? Henri Cernuschi, one of the ablest and most distinguished of bimetallists says:

> That only is good money that will stand the test of fire, and which is worth as much as bullion when melted as it had been worth in the coin itself.

Take a gold dollar, for example, and subject it to the furnace, destroy every vestige of the Government stamp, and the bullion left is worth just 100 cents. Take a silver dollar and subject it to the furnace and destroy every vestige of the Government stamp, and the bullion left is worth 56 cents or thereabouts to-day. In this latter case you have destroyed the Government's promise to pay the other 44 cents.

Mr. BROSIUS. We "trust in God" for that.

Mr. DALZELL. Yes, as my colleague from Pennsylvania suggests, we "trust in God" for that.

Mr. BROSIUS (handing Mr. DALZELL a silver dollar). The legend on that dollar, "In God we trust," is supposed to sanctify the theft.

Mr. DALZELL. Now, if the proposition that I laid down a moment ago, that bad money will drive out good, be true—and it is an admitted axiom in political economy, and is known as Gresham's law, but it is the law of human nature, of selfishness, and of self-defense—if that be the law, then to continue this policy is to bring us to the situation where, as sure as pitiless fate, we shall part company with the leading commercial nations of the world and take our place beside Mexico, China, and Peru.

Let me call attention to a matter that has been referred to many times upon this floor—some of the facts of our own financial history. Because of what was afterwards proved to be an error in fixing the ratio of silver and gold in our original mint act of 1792, gold was undervalued and silver overvalued. Silver then was bad money and gold was good, and from 1805 until 1834 this nation was on a silver basis. Then the ratio was changed from 15 to 1 to 16 to 1. A mistake was then made in the other direction; silver was undervalued and gold was overvalued; gold became bad money and silver good; and from 1834 down to this present time, substantially, we have been on a gold basis.

Two standards, our free-coinage friends say. Impossible! as impossible as two yardsticks, two bushels differing in capacity, two pounds differing in weight. You can not have at the same time two measures of value, one of which is money, like gold, and the other of which is a commodity, like silver. You may have them, it is true, but you can not use both at the same time. One or other will prevail. That is the uniform and universal lesson of all monetary history. One other thing let me say. This silver that we are laying away in our Government storehouse is practically of no use for redemption. In times of panic no man who has a certificate payable in gold will take silver for it, and yet while you are paying out gold in redemption of those certificates you can not sell a single solitary ounce of that silver for the purpose of getting the gold required for the redemption.

I say, Mr. Speaker, that the purchase clause of the Sherman law ought to be repealed. That law has failed to raise the price of silver. It has a tendency to contract rather than expand the currency. It leads the way to an ultimate loss of credit. It is costly, and it violates fundamental principles of sound finance.

Mark you, I hold that they are deserving of credit who passed that law in the first instance, because it then offered to us the lesser of two evils, one of which we were bound to endure. It was passed to meet an emergency. It was passed as a temporary measure, and ought, for that reason, to be now repealed.

But, aside from that, I want to say here that the Sherman law on the statute book, with a Republican Administration in power, pledged by its party platforms, its party history, and its traditions to the cause of sound money, is one thing, and the Sherman law on the statute book, with a Democratic free-coinage Secretary of the Treasury in power, is another thing. Still another thing deplorable, but possible, would be the Sherman law on the statute book with a Democratic free-coinage Secretary in the Treasury Department and a Democratic free-coinage President in the White House.

Mr. BOWERS of California. Will the gentleman permit a question?

Mr. DALZELL. No, my time is too short. I can not yield to anybody.

And, Mr. Speaker, in that possible contingency I very much fear that many Democratic Senators and many Democratic Representatives would reflect only the opinions of the White House.

But, if the Sherman act is bad in principle and in practice, the Bland-Allison act is worse. Under the provisions of that act the Secretary of the Treasury was bound to purchase not less than $2,000,000 nor more than $4,000,000 worth of silver each month, and coin it into dollars of 412½ grains each of standard silver.

The Bland dollars are fiat dollars. Unlike the act of 1890, the act of 1878 contained no pledge of gold redemption, and for every cent in a Bland dollar in excess of its intrinsic value up to one hundred the holder has nothing but the honesty of purpose and the resources of the American people, and as the value of silver goes down the final draft on the honesty of purpose and the resources of the American people goes up.

And, more than that, the Bland-Allison act was a more expensive act than the Sherman act. In this same letter from which I quoted awhile ago from the Acting Director of the Mint, Mr. Preston, he says:

> The amount of silver purchased under the act of February 28, 1878, aggregated 291,292,000 ounces, costing $318,119,000. The value of the same at to-day's market price, 73 cents, would be $213,371,000.

We thus have a loss of $104,748,000.

But more than that, suppose we had been operating under the Bland-Allison act instead of under the Sherman act since 1890. In that event we would have purchased up to date 368,341,000 ounces of silver at a cost of $380,000,000; in other words, even the disadvantageous provisions of the Sherman law saved to us the enormous amount of $61,881,000. So that I conclude that the Sherman act must be repealed; but I conclude also that we can not go back to the provisions of the Bland-Allison act.

But, mark you, unconditional repeal of the purchase clause of the Sherman act means simply that we shall cease to pay out gold monthly for four and one-half million ounces of silver. All this that we hear about driving silver from our money system, destroying one-half of the people's money, as some put it, and one-half of the world's money, as others put it, and all that sort of thing is so much rant and fustian. Not a dollar of the existing silver in the currents of the world's trade will be eliminated nor a scintilla of its value affected. No existing American dollar will be less a good dollar according to the gold standard than it was before. Every American dollar, whether gold, silver, or paper, will be the equal of every other American dollar wherever the flag flies.

Now, only one other proposition remains, and that is the proposition for the free and unlimited coinage of silver at some one of several suggested ratios. I shall not stop to discuss rations for this reason: If you can fix the commercial ratio of that which is a commodity in the world in relation to gold by law you can fix it at anything you please. If you can not by law fix its real relation because it is a commodity, then it does not make any difference what ratio you put in your law. Now, what is this proposition for free and unlimited coinage of silver? Reduced to terms of plain English it is this: That every man who has 56 cents' worth of standard silver may go the United States mint and have it marked a dollar. "Resolved," it is proposed we shall say, "by the Senate and House of Representatives in Congress assembled, that 56 is equal to 100; that 1 is equal to 28.52."

But, you say, that is not a fair statement for the reason that gold has gone up instead of silver going down. You rail against the gold dollar as a "dishonest dollar;" and one gentleman here even went to the trouble of bringing in a book to quote from, as an authority to show that gold was not an absolute measure of value. He might have saved himself the trouble. Nobody claims that gold is an absolute stable measure of value. What we do claim and what is true is that it is the most stable measure of value.

Mr. WALKER. And the world has agreed on it.

Mr. DALZELL. And, as the gentleman from Massachusetts suggests, it is the measure of value all over the world. It fixes the value even in silver-standard countries. Now, on what basis do you assume that gold has gone up and that silver remains stationary? Because, you say, there are so many commodities that have fallen in price and silver has fallen in price with them, and, therefore, gold has gone up and silver has not moved. Was there ever a more patent *non sequitur*?

Why, you do not need to imagine a scarcity of gold to account for falling prices. New processes, improved machinery, inventive genius, new facilities for intercommunication—these and not the scarcity of gold are the causes of falling prices. The records of the Patent Office, the roll of the great captains of industry whose genius has wedded usefulness and beauty and cheapness, and made the luxury of the past the convenience of the present, refute your silly claim that gold is the only factor in fixing price.

Raw materials, food products, have fallen in price upon the same principle. New fields have been opened, their soil put under the plow. Civilization has pushed its resistless march into new territory, discovered new secrets of nature, opened new mines to the sunlight, bridged new streams, built highways to the hitherto inaccessible; introduced electricity and steam; annihilated time and space.

Why, sir, the history of our trunk-line railroads furnishes the key to falling prices. Let me show you just for a second. In 1865 the Pennsylvania Railroad Company and its lines west of Pittsburg, the New York Central and Hudson River Railroad, the Lake Shore and Michigan Southern, the Michigan Central, Boston and Albany, the New York, Lake Erie and Western, carried 11,151,701 tons of freight, or to express it in another way, moved of tons 1 mile 1,654,324,000. And how much did each ton cost for carriage? It cost 2.9 cents per mile. In 1885, twenty years afterwards, this same system of railroads moved of tons at the rate of 1 mile 11,331,306,000, at a cost of six-tenths of a cent a mile.

Now, these railway lines carried somewhat less than one-fourth of the tons moved 1 mile in 1885; yet they saved on the difference between cost of carriage in 1885 and the cost of carriage in 1865 $256,500,000. I might pursue this line of argument, to show the same results, with other roads, but it is not necessary. And yet, in the face of incontrovertible facts like these, you get up ingenious schedules to prove that silver has remained stationary and that gold has gone up.

Why, Mr. Speaker, the characteristic feature of this day is low price of necessaries and high wages. If the low price of necessaries is due to the scarcity of gold, why have not wages gone down also? And how comes it that the poor man's friend on this floor denounces a system under which the poor man gets the necessaries of life for less than they ever cost him before, and gets as a wage more money with which to buy them? [Applause.]

The fall in the price of silver is easily accounted for on the very simplest of economic principles. Increase the supply of any commodity, decrease the demand, and prices go down. Now, since 1873, when silver was demonetized, the production of silver has increased 150 per cent, and the demand has decreased by the amount theretofore called for by the mints of Europe, since that time closed against it like our own, except since 1878.

Mr. WALKER. And the cost of mining is not more than half what it was.

Mr. DALZELL. Yes; there is a difference in the cost of mining.

Now, Mr. Speaker, I am not going to stop to go into the question at any length of the scarcity of gold. I will merely state the facts and put the proof in the RECORD. Since 1873, when silver was demonetized, gold production has constantly increased,

and is increasing to-day. The probabilities are that it will continue to increase to a much greater extent in the future. Here are the figures as stated by the Bureau of the Mint of the Treasury Department:

1873	$96,200,000	1880	$106,500,000	1887	$105,775,000
1874	90,750,000	1881	103,000,000	1888	110,197,000
1875	97,500,000	1882	102,000,000	1889	123,489,000
1876	103,700,000	1883	95,400,000	1890	113,150,000
1877	114,000,000	1884	101,700,000	1891	120,519,000
1878	119,000,000	1885	108,400,000	1892	130,817,000
1879	109,000,000	1886	106,000,000		

In 1887 the Queen of England appointed a royal commission to inquire into the recent changes in the relation of the precious metals to each other. In the same year President Cleveland appointed Edward Atkinson, a distinguished statistician, to inquire as to the feasibility of bimetallism by international agreement. Mr. Atkinson states the results of the investigation of that royal commission as follows. He says:

I find in it abundant evidence sustaining the positions which I have taken, to wit:

1. The mass of gold in existence has been sufficient to enable Germany to adopt the gold standard of legal tender, the United States and Italy to resume specie payment substantially on a gold standard, the Latin Union to cease silver coinage and to maintain their existing stock of legal-tender silver at par in gold, without creating any apparent scarcity of gold and without any special influence in depressing the prices of commodities or services.

2. The reduction in the price of commodities has been no greater than would be warranted by and might have been expected from the improvements in the processes of production and distribution. This reduction, having been accompanied by a general maintenance or rise in the price or rate of wages, has been almost wholly beneficial, temporary hardship to special classes being admitted.

I have said that the probabilities are that the production of gold would increase. Let me read you some information contained in a recent edition of the Washington Post:

OUR GOLD PRODUCT.

The chief risk of dependence on gold as a standard is that the supply may not be sufficient, but the gold fields of South Africa now being developed promise to bring relief in that direction.—*Philadelphia Ledger.*

But what about our own gold fields? Wherever gold has been produced before in years gone by prospecting has been renewed with most encouraging results. New discoveries have been made in Oregon and other Western States that are reputed to be very valuable. Even in Colorado, the very heart of the silver industry, the outlook for gold is brightening daily. Says the Denver Republican of August 14:

"Already there has been a notable increase in the gold output. The gold deposits at the Denver mint in July exceeded by $60,000 the deposits in any previous month in the history of the mint. It shows that Colorado miners are not completely at the mercy of the men who are endeavoring to strike down silver as a money metal. There are promising gold districts in both Gunnison and Pitkin Counties. Telluride is one of the best gold camps in the Rocky Mountains, and during this summer a large amount of work has been done there in the development of gold claims, which, during the time of active silver mining, were more or less neglected. Gilpin County keeps up its reputation as a gold producer, and the camp on Yankee Hill, near the edge of Clear Creek County, is a very promising place."

The San Francisco Examiner of the 11th instant reports that gold is coming down from the mountains at the rate of $1,500,000 a month; that "the corner of the hard times" has been turned; that money enough is to be had for saving the bulk of the fruit crop, and that wheat is rushing to market, every cargo shipped yielding $50,000 to $100,000 in "English gold" as soon as it is cleared.

There is no cause of alarm because of a probable scarcity of gold for a currency reserve. What the country dosn't produce the Government can easily buy.

Now our friends on the other side say, "discontinue the use of silver; take it out of the world's money, and you necessarily appreciate gold to that extent."

What I have already said refutes the assertion. We have seen that the gold supply has kept pace with the gold demand, and promises to continue to do so in the future. This has been proven by the statistics of gold production, and by the evidence taken before the Royal Commission.

But in addition to this the free coinage argument wholly ignores the function of credit in our modern business life. The volume of money consists not simply of gold and silver and authorized issues of notes, but of credit also. This is an expanding and contracting instrument as the necessities of trade and commerce demand. It serves to conduct from 90 to 95 per cent of the world's business. It has been well said, the progress of civilization is towards diminishing instead of increasing the requirement of large amounts of bullion.

Much stress, Mr. Speaker, has been laid by our friends on the other side on the injustice of making the debtor pay in dearer money than that which he borrowed. If I have proven anything so far I have demonstrated that the only method to prevent such injustice, so far as it can be prevented, is to abide by the most stable of all measures of value, gold. And mark you the injustice to the debtor of paying his debt in dearer money than he borrowed is no greater than the injustice of making the lender take his loan in money which is less valuable than that which he loaned.

That aspect of the question seems not to have presented itself to our friends on the other side at all. They assume that all lenders are rich, millionaires, goldbugs, corporations, and that all the borrowers are poor farmers, and that such being the case it is no narm for the latter to cheat the former. Is there one rule of honesty for the rich man and another rule of honesty for the poor man?

Why, Mr. Speaker, I have been amused here listening to the self-styled champions of the poor man, advocates of the millionaire mine-owners of the West, denouncing millionaires; in one breath denouncing all moneyed institutions, aggregations of wealth, and corporations—the indices of national prosperity—and in the next demanding a market for the product of the Western mines and for the surplus silver of the world. Why not the same kind of legislation for the steel billets from the mills of Pennsylvania, for the pig iron from the furnaces of Tennessee, or the wheat from the fields of Dakota?

Mr. Speaker, I want to say to my friend who spoke here yesterday, representing what we call the "State" of Nevada, that there is not a silver-producing State in this Union, California excepted, that has as large a population as the county in which I have the honor to live; and all of the inhabitants, men, women, and children, in Nevada do not equal the number of voters in that county.

It seems to me, sir, that this indiscriminate denunciation of wealth, this arraying of the rich against the poor, is nothing more nor less than incipient anarchy. Whence can it lead but to a war of classes and the eventual overthrow of the State? And is not he an incendiary, against whom society has a right to protect itself, who raises the banner of rule or ruin and appeals to the basest passions of mankind?

Sir, the silver men pretending to be bimetallists are monometallists. What they would have is not a double, but a silver instead of a gold standard. This is plainly to be gathered from the speech of the gentleman from Nebraska [Mr. BRYAN]. I quote him:

If a single standard were really more desirable than a double standard, we are not free to choose gold and would be compelled to select silver. * * * If bimetallism is impossible, then we must make up our minds to a silver standard.

And then he paints the glories of a silver standard. He says:

A silver standard, too, would make us the trading center of all the silver-using countries of the world, and these countries contain far more than one-half of the world's population. What an impetus would be given to our Western and Southern seaports, such as San Francisco, Galveston, New Orleans, Mobile, Savannah, and Charleston.

That is to say, let us cut loose from England and France and Germany—from European civilization—and cast in our lot with India, China, the Straits, Japan, Mexico, and South and Central America.

Truly a suggestion worthy the mind that conceives it to be in the power of legislation to reverse the rules of arithmetic.

Now, Mr. Speaker, I have not time to discuss some other subjects that I had intended to discuss in this connection. But I want to say that the moment you declare that 56 cents' worth of silver is equal to a gold dollar, that moment you open your mints to all the silver of the world. You bid it welcome to come, and it will come; and when it comes gold will go, go into silver purchases, go into hiding, go abroad. With what result? With the result to defeat the very purpose for which free and unlimited silver coinage is urged; with the result suddenly and violently to contract instead of increase the circulation. The American dollar will buy in foreign exchange just as much as and no more than the bullion in it is worth. The United States will be on a silver basis.

Two things, I grant you, the free and unlimited coinage of silver will accomplish. First, debtors will be enabled to scale their debts to the extent of from 40 to 50 per cent and cheat their creditors to that extent; and, secondly, you will furnish a market for the silver mines of the West. But these results will be accomplished at the price of justice and to the eternal disgrace of the American name. [Applause.]

Now, sir, I believe in bimetallism, the use of both gold and silver as the standard money of the world, and I expect to see that system come in time. I believe that bimetallism is possible, however, only by international agreement, and I am in favor of every honest effort to bring about that agreement. The United States having been on a gold basis substantially for sixty years past, debts have been contracted on that basis, and prices fixed all over the world on that basis. I am opposed to any measure that would either suddenly or gradually put us on a silver basis. I am in favor of any needed measure for the expansion of the currency that will put behind every dollar issued the guaranty that it shall be equal in purchasing and in debt-paying power to every other dollar.

I believe, with the President of the United States, that this is a question which rises above the plane of party politics. Good men will laugh to scorn threats of party outlawry and treat with the contempt that they deserve low appeals in party interest. This question can be settled, but it must be settled by each man in the domain of conscience enlightened by patriotism. The interests at stake involve the financial future of this great people;

they are the interests of country, and country is above all. [Applause]. This is a proposition that will meet with commendation wherever patriotism is regarded as a virtue. But it is especially true with us.

Why, sir; with a pomp and circumstance of peace more glorious even than the pomp and circumstance of war, all nations and peoples and kindreds join to-day to celebrate the discovery of this western continent. In a city whose marvelous growth, wealth, and enterprise outrun the extravagance even of an Oriental imagination, the first fruits of the ripest civilization have been gathered to do honor to the name and rejoice in the achievement of the courageous mariner whose sublime faith carried him across unknown seas to unlock the gateway of the globe's richer half.

In this, the harvest of four hundred years of American history, it is not hard to discern the richest amongst all the golden sheaves. From the treasures of art and science and literature, from the charms of music, from the glories of architecture, from the gathered wealth of genius and labor, with thanksgiving in our hearts, we turn to the colossal Republic, that, founded in self-denial, maintained by struggle, purified by blood, sanctified by the graves of brave men, first and alone in all the annals of time, has demonstrated man's capacity for self-rule and in which under the folds of that flag all men are equally entitled to enjoy the blessings of liberty under law. [Prolonged applause.]

Mr. HATCH. Mr. Speaker, no representative of the American people can approach the discussion of the pending measures with a keener sense of appreciation of the responsibilities resting upon him, or can be more profoundly impressed with the far-reaching and grave consequences to follow the determination of the momentous issue involved in this legislation than myself. In my judgment, the results to follow can not be measured by finite man, nor can they be exaggerated by the most sanguine and enthusiastic supporter of either proposition now pending.

I feel that the prosperity of my country and the welfare and happiness of all the people are involved in this proposed legislation.

As I am permitted to see the truth my convictions are deep-seated and unalterably fixed. In the light of my own judgment, aided by twenty years of thoughtful study and business experience, I would be derelict and recreant to every obligation resting upon the Representative of an intelligent and honorable constituency, if I did not declare my convictions frankly, and courageously enforce them by my vote and action.

Involved in this duty is the obligation I owe to the great political organization with which I have been identified almost a lifetime. My personal convictions and the principles of my party as declared in national convention are identical. I am loyally following the last authoritative utterance of the Democratic party, in the Chicago national convention of 1892, on this subject.

This is a case of political history hastily repeating itself.

We had barely achieved a signal victory over the Democratic enemies of tariff reform, after twenty years of entreaty, education, and discipline, until we have on our hands another insurrection on the part of the minority against the plain and honest declaration of the platform on the subject of silver as money. The issue is squarely made and sharply drawn. It is monometallism, which has no part or lot in the Democratic platform, on one hand, or the plain declaration for a constitutional Democratic "coinage of both gold and silver," on the other.

Upon one side or the other each gentleman on this floor must ally himself. He can not escape by legislative subterfuges or homeopathic doses to his conscience. In the light of history and of his own pledges and explanations during the last campaign he will be judged. To the minority now in insurrection against the Democratic platform, I say mark well the lesson of the history I have alluded to.

The defiant minority surely and rapidly disappeared from public life and from the councils of their party, and to-day their voices are no longer heard in the land, and all, all save one, have disappeared even from the memories of their contemporaries. Randall alone lives in Democratic minds and hearts, because of the grandeur of his character, and of his great legislative achievements when in accord with the majority of his party.

It will not be many months or years before this part of our history will be again exemplified by experience, and the places that now know the insurrectionists will know them no more forever.

If there is any one thing that I admire in the members of the Republican party it is their absolute faith and loyalty to their own flag. I never saw a better exemplification of it than we had a few moments ago by the gentleman from Pennsylvania [Mr. DALZELL] when he won his first round of applause from his Republican brethren by asserting in the most eloquent terms that whenever the nation was in peril the Republican party could always be depended on for such legislation as would insure safety and prosperity to the people.

And the Republican party stands here to-day in almost solid ranks, swollen by a minority from this side of the House, to tear down the law that the Republicans put upon the statute books a little more than two years ago, a law which was passed by a unanimous Republican vote in this House and in the Senate, and signed by a Republican President! Always to be depended on for wise legislation that will bring the nation to safety and prosperity!

And there is not a gentleman on this floor who has spoken, not one who has uttered a single sentiment in regard to the pending legislation, who has not exhausted all his eloquence and his power in denunciation of this Sherman act, a child of Republicanism, fashioned after its own methods and denounced by the great Democratic party of the United States as a makeshift and a fraud; and yet the Republican party can always be depended on to legislate for the safety and the prosperity of the country! [Laughter.]

Mr. Speaker, I shall discuss this question from the standpoint of my own earnest and honest convictions, the result of twenty years of careful study, twenty years of experience; and not only from my standpoint of individual conscience and duty, but involved in it is the duty I owe to that political organization with which my entire life and manhood have been identified.

There is a test by which all of us can determine as to that question. If I am not on the Democratic platform to-day I want to get on it, for I have never been off of it in my life. Its last decisive utterance was in the Democratic platform of 1892, which I will read:

> We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets, and in payment of debt; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

There is a difference of interpretation as to what that platform means. I do not believe that it is susceptible of more than one earnest and honest construction. I never have believed that it was Janus-faced, or that it was made with the intent to deceive the people of the United States. But we can easily determine what construction the majority of the representatives of the people, elected by Democratic constituencies, place upon that platform.

Let us have a caucus of the members of this House and of the Senate who are Democrats, and let a majority of that caucus determine as to the interpretation to be placed upon that platform, and as to what our action shall be, and let every Democrat in the House pledge his life, his fortune, and his sacred honor to abide by that caucus action, and move such legislation as will carry it out. [Applause.] For one, I am willing to take that pledge here and now.

Mr. REED. Of course you are.

Mr. HATCH. I have no pride of opinion that I will not yield to a majority of my peers. If we were taught in that platform that the repeal of the purchasing clause of the Sherman act was all that was involved in our duty to our party, say so and I will join you.

No living man in this House or out of it has a more supreme contempt for the Sherman act, from the first word in it to its close, than I have. I denounced it on the floor of this House before it passed. I voted against it. I have never upheld one single one of its provisions from the time it was introduced in this House until this hour.

But here is a united Democratic party, not one single one among us who wants to retain the Sherman law upon the statute book, and the only difference between us at all is as to whether that other language of the Democratic platform shall be carried out at the same time—to give such legislation as will place gold and silver upon a perfect equality as to the coinage of bullion, and not only that, but to place the two metals upon a perfect equality as to the friendliness of the Treasury Department of the United States.

THE PRESENT FINANCIAL CONDITION OF THE WORLD AND ESPECIALLY OF THIS COUNTRY.

It is distressing and deplorable beyond expression. It is widespread and universal; it reaches every section, and embraces in

its folds all classes and conditions of men. It has shattered fortunes that were estimated by millions; it has invaded the homes of millionaires and money kings, the offices of bank presidents and railway magnates, the counting-houses of great importing firms and domestic trades-people, the retail dealer, and small distributer of the necessaries of life. It has stopped manufactories and paralyzed great enterprises.

In the East it has thrown out of employment thousands of operatives, mechanics, artisans, and skilled workmen in every conceivable industry, and turned from the mines of Pennsylvania an army of men whose sole occupation is suspended, and who must wait, and wait, perhaps for work, possibly for bread. In the Middle and Western States it has entered the peaceful and contented homes of over half our people and turned the contentment of the modest returns for labor which agriculture has produced in the past ten years to one of absolute despair and almost ruin. In the far West it has done its completest work; it has fulfilled its direst mission.

States bankrupted, whole communities idle, multitudes facing the coming winter with apprehension and dread, and men, women, and children already on short or insufficient daily rations of food. Is it any wonder that the entire country is profoundly impressed with the calamitous conditions and imploringly, prayerfully, and excitingly pleading for relief? And to meet such a condition of things, with famine both of money and food, the paralyzation of industries and destruction of credit and confidence, amid the tempest of all this comes the single admonition from the throne of political power—

"Repeal the Sherman act!"

Repeal the miserable makeshift, wipe out the legislative fraud which nobody defends, destroy the only source of an increase of our currency now being executed by the present Administration; administer one more blow to silver coinage, increase the purchasing power of gold, make money scarcer and harder to get, pull the millionaire and the bondholder out of the dilemma brought upon them by their own folly, and in thunder tones say to the multitudes of idle and hungry bread winners throughout the length and breadth of the land, "Let the people be damned."

I can not better express my own views on the magnitude and importance of the present controversy than by quoting from a recent editorial published in the Toledo Journal:

SILVER AND GOLD.

The great fight for honest money, now being waged at Washington in favor of honest money and rights of the people, is justly attracting attention of the civilized world.

Attempting to introduce a new standard of value; to strike down at once the larger half of the coin of ultimate payment, to double every debt and immeasurably burden the debtor class in the interests of those in power; the battle is the most important waged for centuries. Blinded and deceived by the specious pleas of those who hope to reap large gains by the crime; urged on by men who wish to retain their grasp on the sole coin of general use and recognition, many are joining in worshiping the golden calf, forgetful that to make any single commodity the sole arbiter of fortune places it within the power of a few to combine in hoarding that article, and, by withdrawing it from circulation, to retain their grasp on the throat of enterprise and effort.

None wish money to keep. Its sole use is to measure values in exchange. Those enjoying fixed incomes are not molested, except their position vanishes. But all others suffer incalculable loss from the debasement of the currency. Silver and gold provide a basis for currency which will satisfy the most insistent. Gold alone offers opportunity for scheming and corners. Cut off from its long-time continuous use as a basis for currency, silver has of necessity fallen in value, as would gold were it dethroned from its position. Gold alone serves well the wealthy, but leaves the poor man at the mercy of schemers at any time. It would be impossible to corner silver; gold is at the mercy of the gambler because of its inferior volume.

This latter fact alone supports the demands of the people that bimetallism be maintained. Shorn of its power, silver, in its downfall, has pulled down many a strong institution; restored to its honorable position by the United States, the nations of the world must follow our footsteps; else every silver-using nation of the globe will turn to us for trade, and without this England would soon follow our line of action. The struggle is a mighty one, and in it the entire world is deeply interested. What the outcome shall be lies in the womb of the future. Nations move by inexorable laws, whose force and direction we little understand. If reason and judgment prevail, we shall presently be out of our troubles; if the anarchy of gold wins we may look for darker times and greater woe and sorrow than we can now imagine.

What has produced, brought about, or contributed to this condition?

This question has been asked and answered one thousand times or more during this discussion, and always satisfactorily to the gentlemen who furnished the answer. I have studied this problem in many of its phases for the past twenty years. Writers, statesmen, legislators, and financiers have written and spoken volumes upon this subject during that time. Their convictions, arguments, and conclusions are multifarious and divergent to the extremest degree.

But they can be divided into two great classes—those who believe in making money scarce and hard to get, and keeping it below such a volume that the favored few, the select, the anointed of the Lord Mammon alone can possess and control it; and the more intelligent, patriotic, and numerous class, who believe that money should be kept at such a volume that all the people, from the humblest citizen to the wealthiest nabob in the land, could receive its benefits in proportion to his ability to work for it with brain and muscle.

I belong to the latter class. I believe in both gold and silver money without discrimination against either metal, and the parity between them to be maintained by the adoption of such ratio as Congress may agree upon from time to time under the mandate of the Constitution; and as no country on earth within a hundred years has had enough of such coin to meet the requirements of its domestic trade and foreign commerce, I believe in supplementing this inadequate supply by the issue of paper money by the Government, based on such coinage, in volume sufficient to meet all the requirements and demands of our vast internal and domestic trade and ever-increasing and vital foreign commerce, the volume and extent of this currency to be measured by the ability to keep it at an absolute par with our gold and silver coin throughout the Union.

As long as it can be thus maintained it can never reach the maximum. But what a spectacle confronts us to-day! With all our laws and efforts to maintain a circulating medium based on the integrity and unparalleled resources of the Government, the New York City and other bankers of the country are daily issuing an absolutely illegal fiat currency known as "clearing-house certificates," based alone on such securities as they now possess and which they have found absolutely inadequate and insufficient to maintain their own credit abroad or the confidence of their associates and co-conspirators.

Let me read from a circular letter of a New York banking house, under date of August 18, what they have to say about this wonderful exploit in banking:

The New York city bankers have $37,380,000 certificates outstanding. Boston has $11,100,000. Other bankers in the South and West perhaps have enough more out to make fifty millions of bank certificates. Adding these various amounts together, we find a possible increase of about one hundred millions since July 1 to replace the unknown amount of currency and gold drawn out of the banks and hoarded in vaults and other places since May last, "where it resembled the one talent more than the ten talents."

Currency commands 3 per cent premium, and has sold as high as 5 per cent. Exchange on this city from many Western cities has recently ranged from five to fifty dollars per $1,000. Many Western people claim the degree of credit desired by Eastern bankers is shown by their willingness to pay depositors. Eastern banks appear to have no sympathy for Western methods in not issuing bank certificates. Many individuals have sold their checks on the street for funds to meet maturing obligations or make needed purchases. Credit seems to have been strained from here to the Pacific coast, and attacked on all sides and benefiting but few.

Fifty dollars on a thousand dollars in exchange on New York! Why, sir, usually in the West New York exchange is at a small premium or at par. I received a few days ago a letter from the cashier of a bank in which I do my business at Hannibal, Mo. He informed me that he could not take New York exchange for anything less than $1 on the hundred dollars or $10 on the thousand dollars.

I thought that enormous; but here it appears by this New York circular that there are other cities in the country that have not as much confidence in the New York banking system as the bankers in my own town. In some of these other cities they will not take exchange on New York at less than $50 on $1,000.

What have the banks of New York been doing to keep up confidence? Nobody ever lost confidence in the banks of New York until after they entered into that conspiracy in April last to produce a panic in this country—a money famine and a panic. But they lost confidence in each other.

Let me tell my New York friends right now that, in my judgment, the most herculean task ever attempted in any legislative body on the face of God's green earth since the creation of Adam down to the present time will be to restore confidence between the New York bankers. They know each other too well. [Laughter.] And there is such a splendid minority of them that have embellished the pages of New York financial history in the last few years by moving across the line into Canada that I suppose the next step would be to establish confidence between the bankers of New York on this side and those on the other side of the Canadian border.

Mr. Speaker, I offered on yesterday evening to give my distinguished friend from New York [Mr. FELLOWS] part of my time, and I intended if he accepted it to make but one condition, because we all know him to be a splendid lawyer; but I wanted some legal ability to blaze the road along that way so as to point out in a clear manner the use of and the character of what is called "clearing-house certificates."

I ask the gentleman, or any other gentleman from New York when he gets the floor, to please tell us what a clearing-house certificate is, and how it can be used as money without violating the laws of the United States? Do you pay any tax on it? What is it? The promise to pay of a class of men who will not take even their own promises to each other! And tell me another thing. Why is it every national bank in the city of New York to-day, and for the past thirty days, has been doing busi-

ness in open and notorious violation of the law, absolutely refusing to pay its checks when presented at the counter? Why is that?

The financial object lesson of the world to-day is France, with the largest circulating medium both of gold and silver and paper money in the world, larger in proportion to her population; larger in proportion to her territorial limit; larger in proportion to the amount of business they do than any other nation of the earth; who stood within the last few years at the close of the Franco-German war a shock that would have bankrupted any other nation except the French nation, when it paid that indemnity fund; it never stopped their prosperity a month. They paid it in gold and used the silver that was left, supplemented by paper money, and in a few short years gold came back to the vaults of the banks of France and they have it there to-day. Every nation that has been in trouble financially from that day to this has had to draw upon France if it wanted gold.

I have no patience with the argument that has been gone over here and thrashed and thrashed from one day to another and during every hour of our session about a "dishonest dollar." The gentleman from Pennsylvania [Mr. DALZELL] has declared to-day that the silver dollar is only worth 60 cents, and he says there is no test for money except that of fire. Fire! Well, my friends, the Republican party in its financial system has come pretty near firing this whole country. What becomes of the silver or gold certificates and the greenbacks when you talk about fire?

It will not stand the furnace. It can be burned until you can not take the ashes to the Treasury and have it redeemed, and it is good so long as you can keep it out of the furnace; and so long as you can keep it out of the furnace a hundred dollars of it is as good as any hundred dollars in gold ever stamped on the face of the earth. The silver dollar dishonest! Is it true? If so, who made it dishonest? The Republican party dishonored it first. They dishonored it in 1873, when they demonetized it.

But the gentleman from Mississippi [Mr. CATCHINGS], whom I do not see in his seat, says "they did not demonetize it." No, they simply annihilated it. He says "to demonetize silver would be simply to take away from it its legal-tender quality." He says they did not do that. They simply crushed it, annihilated it, dropped it out of coinage. Why, he says, that is not demonetization; that is not demonetizing it. That would be merely maiming it. They have done worse than that, they have killed it.

From my standpoint I now answer the question, What has produced or largely contributed to the present condition throughout the world? In my judgment, more than any one or all causes combined, it was the tyrannical, unholy, and damnable conspiracy that demonetized silver in 1873. But certain gentlemen say there was no conspiracy in 1873, and that this declaration is "rot." My reply is equally emphatic and unchaste in expression. The gentleman who has read the history of nations for the past twenty-five years and is capable of understanding what he reads, and so characterizes the charge of the wide-spread conspiracy to demonetize silver, is either a knave or an ignoramus.

Against his prejudiced and random, inconsidered statement I place the declaration of the painstaking student, the close and logical historian, the judicial and courteous controversialist, the intrepid and candid representative, John Griffin Carlisle, of Kentucky. Here is what he said on the floor of this House on the 21st day of February, 1878, when he represented an independent, fearless, and honorable Democratic constituency:

> I know that the world's stock of precious metals is none too large, and I see no reason to apprehend that it will ever be so. Mankind will be fortunate indeed if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my views of the subject the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise from three-sevenths to one-half the metallic money of the world is the most gigantic crime of this or any other age. The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilences, and famines that ever occurred in the history of the world.
>
> The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half the metallic money of the world.

The flippant denials made here now can not overturn the solemn declarations of such a representative.

It has since been proven by facts and declarations and arguments that embrace volumes of testimony to sustain Mr. Carlisle's then position. But, has the conspiracy been broken? Or have the conspirators against the use of silver as money ceased from their labors? I answer, no. The conspiracy still exists, and the conspirators have increased in numbers and influence.

And if you desire to know the present, direct, and most potential cause of the present panic and money famine, it can be traced directly to the action and declared purposes of the bankers of New York City and other large money centers of the Government. And shrewd, astute, and able as they arrogantly claim to be, their babbling and bullying declarations furnish the most damaging testimony against them.

I will read some extracts from a great New York paper, one which is at the very head of New York journalism—my friend from New York [Mr. CUMMINGS] will not controvert that statement—a paper that claims to have the courage of its own convictions, a paper independent in all things, consistent in but few [laughter], though claiming to be in the main Democratic. I read from the New York Sun of Friday, April 28. After reciting some of the incidents of the enjoyable conference between Secretary Carlisle and the bankers, it says:

> As the Secretary outlined the policy of the Government, it was that nothing would be done that in any way would retard or check the determination of the Cleveland Administration concerning the repeal of the Sherman law. The Secretary went over the currency laws of the country, and said that they were in bad shape, and needed revision. He said the revision should start with the Sherman law. There is a determination, also, to show to the miners of silver the evil effects of the Sherman law on their fortunes.
>
> President Cleveland's advisers have told him that the only way to induce the Western and Southwestern Senators and Congressmen to consent to the repeal of the Sherman law, is to demonstrate to their constituents that they are losing money every day that this law is in operation. The missionary work in that direction has been started by a number of the banks in the solid communities of the East. They are daily refusing credits to the South, Southwest and West, fearing the effects of the Sherman law.
>
> The Chicago bankers, it was said, are carrying out the same line of policy. Secretary Carlisle, in his talk with the bank presidents, made his stand very clear. It is to be heroic treatment all the way through on the Sherman law, and possibly by the next session of Congress the silver mine owners and the adherents of silver in the Senate and House will be ready to consent to a repeal of the law.
>
> The bank presidents, replying to Secretary Carlisle, cordially informed him that they would be ready at all times to coöperate with him in the successful administration of the financial policy of the Government. Everybody shook hands, and there was harmony all round.

[Laughter.]

The New York Sun of Saturday, April 29, in its financial column, says:

> The conference yesterday between Secretary Carlisle and a number of the bankers of this city was of great value in that it resulted in a definite understanding of the financial policy of the Administration, as indicated in this column last Tuesday. That policy is to interpose no obstacle to the natural operations and logical results of the Sherman law. In a word, the Administration proposes to allow the people to reap the rewards of their own folly.

Was my friend from New York [Mr. CUMMINGS] in the city of Washington on the 1st day of May last?

Mr. CUMMINGS. I was.

Mr. HATCH. I thank the gentleman for giving me that information, because it furnishes a key to the whole situation. The New York Sun, in its Washington letter, published May 1, 1893, says——

Mr. CUMMINGS. Will the gentleman permit an interruption?

Mr. HATCH. Yes, sir.

Mr. CUMMINGS. The gentleman's statement is correct, but his assumption is erroneous. [Laughter.]

Mr. HATCH. That remark is simply evoked by the gentleman's modesty. [Laughter.] I will read this statement:

> The statement of Mr. Carlisle to the New York bankers makes it clear that, while Mr. Cleveland works in Congress, the bankers will be expected to work, not in New York only, but throughout the country, doing their utmost to pinch business everywhere in the expectation of causing a money crisis that will affect Congress powerfully from every quarter. There is an explicitness in these declarations and a boldness in making them that would be astounding were not the country too familiar with Mr. Cleveland and his methods to be astonished by anything from him.

The circulation and importance of this paper warrant the assertion that Mr. Carlisle read these statements. I have watched in vain for any denial or even modification of them. On the contrary, proofs as strong as Holy Writ are accumulating to justify and prove their correctness.

Now, my friends, there is the beginning of this money crisis. It was determined by the New York banks, in aid of the policy of the Secretary of the Treasury to secure repeal of the Sherman act, to create a money panic, to make the shoe pinch down South, and out West, and all over the land; but when they had set the ball in motion they found its velocity such that they could not stop it for a moment, and they have not been able to do so up to this time.

Therefore we are to-day plunged into a money panic the most deplorable that has been seen in the past century. Fortunes that were counted by millions have been partially or wholly wiped out, business is prostrated everywhere, manufactories and great enterprises all over this land have been stopped, small tradespeople have been ruined, the prices of everything that the people have for sale have been almost destroyed because there is no circulating medium in the country with which to buy them. And these gentlemen under these conditions, to "restore confidence," have brought in the little bill proposed by the gentleman from West Virginia simply to repeal the purchasing clause of the Sherman act!

Amidst the ruin of the industries of our people, brought about

by this panic, we in this Hall can not get higher than that. We can not reach above the plane of simply repealing the purchasing clause of a makeshift and a fraud that stands on our statute book. Not a single word is said, in connection with this proposition about any measure for the relief of the general distress; nothing about any measure to enable the people to move the crops which are now languishing in the fields and the barns of the producers because there is no circulating medium. Restore confidence!

Why, my friends, I cut from that great daily, the Post of Washington City, of Sunday morning last, a "bill to restore confidence," drafted by a distinguished satirist of this city, and I pledge myself to-day that if this were offered as a substitute in this House for the Wilson bill I would vote for it in preference; for it would be just as feasible a way for restoring confidence as the repeal of the purchasing clause of the Sherman act. Here is the bill as published in the Post:

A bill to restore confidence and relieve the country of its financial panic.

Be it enacted by the Senate and House of Representatives of the United States in Congress assembled:

SECTION 1. That confidence in the financial condition of all business affairs throughout the domain of the Republic is hereby declared to be fully restored—

[Laughter.]

And all persons are commanded to forthwith conduct their financial and commercial transactions in conformity with this enactment.

SEC. 2. That any person whose business is in any way injured or embarrassed by reason of the neglect or failure on the part of individuals, associations, or corporations to maintain implicit confidence in the responsibility and business integrity of such person, such offending party or parties shall be liable for all damages resulting therefrom by judgment rendered in any of the courts of the United States.

[Laughter.]

SEC. 3. This act is to go into effect immediately.

If you only want confidence restored, why not pass an enactment of that kind? Do you expect to restore confidence simply by lessening the whole volume of the currency, when there is not enough in the city of New York or in any city of the United States to keep up credit among themselves for a day or a week?

My friends, I would not care about the details of this money question just at this time if I did not believe that it is impossible to establish a money system in this country based upon gold alone without destroying the industries of every agricultural class in the United States from the lakes to the Gulf, including the producers of all of our great staples.

I have here a chart, which I have received the permission of its author to use—one of the best and plainest I have ever seen; and, strange to say, the distinguished gentleman who is the author of this chart is a New Yorker. That fact ought to give it weight with the other side. I refer to Jones's Chart and Tables, No. 5, published by George O. Jones, of the State of New York. This chart embraces a table, which I have compared carefully with the one which was laid before my committee during the last Congress by a distinguished gentleman from Louisiana—a table coming from the royal commission of Great Britain, held three or four years ago, showing the prices of silver in the world and the prices of all the great agricultural products imported into England from America, such as cotton, wheat, etc.

[For chart see next page.]

But I want to read a few of the figures from Mr. Jones's chart. Beginning in 1872, before silver was demonetized, the average export price of wheat was $1.40 per bushel; the average price of silver was $1.32 per ounce; the average export price for cotton was 18 cents per pound.

Then during President Grant's second term (for as the headlines show these exhibits are made by Presidential terms), from 1873 to 1876, the average export price of wheat was $1.24 per bushel, while the price of silver was $1.21 per ounce; cotton, 13¾ cents per pound. Under the Administration of Mr. Hayes from 1877 to 1880, the average price of wheat was $1.19 per bushel; the average price of silver was $1.12⅝ per ounce; cotton, 11 cents a pound.

I will not run through the whole of these figures, for I do not want to weary the House; but under Harrison's Administration, from 1889 to 1892, the average price of wheat was 90 cents a bushel: silver, 98 cents per ounce; cotton, 9⅛ cents per pound. On the 20th of March last the price of silver was 84 cents an ounce; wheat at Chicago on the 20th of March sold for 74⅛ cents per bushel, on August 1st at 55¼ cents per bushel; on August 20th cotton sold for 7¼ cents a pound.

From 1872 down to the present hour the average prices of cotton, wheat, and all farm products have kept pace with the price of silver per ounce; I do not refer to the money value of silver, but the price of silver bullion. This has controlled the price of every farm product that has been sent from this country to Europe. This is as demonstrable as any mathematical proposition that ever was submitted.

Now, my friends, we can discuss this question here for a month longer; you can absolutely exhaust it day after day; and you can not drive the average farmer from the knowledge that he has acquired in the last twenty years, that it is silver, not gold, that fixes the value of his commodities. And not only that, but in every emergency that has arisen in the United States, in every panic, you have got to depress the price of his products to induce Europe to take them in sufficient quantities to ease the money market in New York.

My friend from Kentucky here on the right suggests that I ought to tell the price of wheat now, not at New York, but the price in the West. When I left my home, on the 2d of August, I saw farmers, men whom I know, some of them personal friends, my own neighbors, driving up into the city of Hannibal and selling their wheat to our mills at from 30 to 45 cents a bushel, 45 being the highest price paid. We not only had a very short crop, but its quality had been damaged by rust just before harvest, and the mills were grading it down to absolute rejection up to No. 3. But none sold higher than 45 cents. Just think of it now, 35 cents a bushel for wheat to keep up public confidence and restore credit!

My distinguished friend from Pennsylvania [Mr. SIBLEY] read the names of some of the exporters of gold the other day, the men who have aided largely in producing this panic, these bankers who held this distinguished conference with the Secretary of the Treasury in New York, and amongst the whole list I can pronounce but one of the names, and do not know that I can get that correctly—Ickelheimer, I believe—and the average farmer in the United States has not money enough, after paying his taxes, to keep his children long enough at school to learn how to pronounce perfectly the names of all of them. Not an American name amongst the whole list.

But how easily this spelling of names and the pronunciation of the names of men is made when we look to the men who have brought the gold back from Europe when we needed it. They are the names of the American farmers, citizens of the United States. It was our wheat and our cotton, our tobacco and meat products that brought back gold in sufficient quantities to retain the balance of trade in our favor once more.

In my judgment the greatest conspiracy that ever existed against silver has culminated in this present crisis. The Treasury Department has done more to dishonor and degrade it than all other causes combined. It has used the power of a great and beloved Government to discredit the money of its own people.

With all these adverse conditions the wonder is not that silver is depreciated in value, but that it has any value whatever. The fact that it passes current to-day throughout the land, that the people still accept, and that its slanderers and oppressors are paying a premium for it, is the greatest tribute ever paid to any circulating medium on earth.

Let me read the last justification of these serious and terrible charges that a conspiracy has existed from the statement of Mr. Carlisle himself, in his reply to a resolution of the Senate which is found in the CONGRESSIONAL RECORD of August 19, page 246:

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,
Washington, D. C., August 17, 1893.

To the President of the Senate:

I have the honor to acknowledge the receipt of the following resolution, adopted by the Senate on the 16th instant, viz:

"*Resolved*, That the Secretary of the Treasury be, and he is hereby, directed to report to the Senate what amount, if any, of the Treasury notes issued under the act of July 14, 1890, commonly called the Sherman act, have been during the present month redeemed by the Government at the request of the holders thereof in silver dollars, and whether the holders of such notes were advised at the time of such redemption that they could have gold instead of silver, if they so desired.

"The Secretary of the Treasury is also directed to inform the Senate whether gold coin has been presented recently to the Treasury Department or any subtreasury and silver dollars asked in exchange therefor, and, if so, if such exchanges have been made, and whether the Department would or could exchange silver dollars for gold coin, if requested to do so by holders of gold."

In response thereto, I have the honor to say that during the present month Treasury notes issued under the act of July 14, 1890, amounting to $714,636, have been redeemed by the Government in silver dollars. While I do not pretend to have knowledge of the degree of information possessed by the holders of the notes so redeemed, I am of the opinion that they were fully advised at the time of such redemption that they could have gold instead of silver, if they so desired. I base this opinion upon the general publicity which has been given to the terms of the act, no less than upon the instructions of this Department to the Treasurer and assistant treasurers of the United States, which have been to the effect that such notes were redeemable in silver dollars at the option of the holders. I am also supported in my belief by the fact that in the circular of this Department, issued to the public for their guidance in their dealings with the Treasury, and containing the regulations which govern the issue, redemption, and exchange of the paper currency and the gold, silver, and minor coins of the United States, there is a paragraph which reads as follows:

"4. Gold coin is issued in redemption of United States notes, in sums not less than $50, by the assistant treasurers in New York and San Francisco, and in redemption of Treasury notes of 1890, in like sums, by the Treasurer and all the assistant treasurers."

In further response to the resolution, I have to say that recently gold coin has been presented to an office of this Department, and silver dollars asked in exchange therefor, and that the exchange was not made for the reason that all the silver dollars in the Treasury at that time were required under

the provisions of the laws relating to the currency to be held in the Treasury to cover outstanding silver certificates and Treasury notes issued under the act of July 14, 1890. At present the Department would not and could not exchange silver dollars for gold coin if requested to do so by holders of gold, for the same reason; but if the condition of the funds of the Treasury were such as to afford a margin of the silver dollars in excess of silver certificates and Treasury notes outstanding, such exchanges would be made.

Respectfully, yours,

J. G. CARLISLE, *Secretary.*

Just think of it, the Government of the United States so poor that it has not got silver dollars enough to exchange for gold coin at any subtreasury in the United States, and yet this dollar is "debased and degraded," and called a "54-cent dollar." It is the most ridiculous position that any people ever occupied in the history of any country. Here are these New York bankers doing everything to beat it down and debase it for the last twenty years, and yet they have been paying a premium of from 3 to 7 per cent for these despised and debased silver dollars to keep them from going to protest week after week.

Coin the bullion in the Treasury. If the Wilson bill was changed now to a plain mandate on the Secretary of the Treasury to coin that bullion and treat silver with the same friendliness that you do gold, there would not be any question about the parity of the two metals.

But, no, my friends, not a single action will be taken by the present Secretary of the Treasury in the interest of silver. They intend to keep the ban of the Treasury Department on it until, driven almost to death, the people of the United States will rise in their wrath in such numbers as never before under political banners, until they clean out this House and the Senate of every man who is opposed to the free and unlimited coinage of silver. [Applause.]

The Secretary of the Treasury, as we have seen, comes before Congress declaring that he has not got silver dollars to exchange even for gold, and when he was offered gold dollars for silver he could not permit his subordinates to make the exchange, because, he says, we have not got the authority to exchange silver dollars for gold coin. Then, let us give him the authority and issue more silver dollars at once.

But I will tell you what will put a stop to this thing quicker than anything else. Coin your silver bullion in the Treasury at this time, and let the Secretary of the Treasury, the moment he issues that order to the Mint, receive the seigniorage of $50,000,000 that would accrue to the Government of the United States by virtue of the coinage of the bullion. There would be $50,000,000 at once. It was pointed out in a letter of the ex-Secretary, Mr. Tracey, from New York, which was published widespread throughout the country a week or ten days ago, a bold, manly, incisive statement of a man just out of the late Cabinet, who knows what he is talking of:

The Administration has ample power to relieve the currency famine in forty-eight hours by exercising authority with which it is clothed by statute. The act of July 14, 1890, known as the Sherman act, directs the purchase of 4,500,000 ounces of silver bullion monthly, and in the third section provides that the Secretary of the Treasury shall each month coin 2,000,000 ounces of silver bullion purchased under the provisions of this act into standard silver dollars, until the 1st day of July, 1891, and after that time he shall coin of the silver bullion purchased under the provisions of this act as much as may be necessary to provide for the redemption of the Treasury notes herein provided for, and any gain of seigniorage arising from said coinage shall be accounted for and paid into the Treasury.

The amount of bullion purchased, but not coined, under the above provision, prior to July, 1891, was about 30,000,000 ounces. At that date President Harrison's Administration suspended the coinage of silver dollars. The accumulated purchase of bullion since that date amounts to 110,000,000 ounces, making a total of 140,000,000 ounces of uncoined silver in the Treasury to-day. Against this silver Treasury notes have been issued to its bullion value, but no standard silver dollars have been coined with which to redeem them. The Secretary of the Treasury is therefore at liberty to direct that all or any portion of these 140,000,000 ounces be coined into silver dollars.

The profits of seigniorage for the coinage of this bullion would make upward of $50,000,000 if the whole amount was coined. The moment the Secretary of the Treasury decides to coin this bullion, and puts it at the Mint for that purpose, he can treat the gain of seigniorage thereon as already secured. The profit is so much additional cash in the Treasury. To coin the whole amount would, therefore, set free, not only for circulation, but for disbursements, $50,000,000 of the silver coin now held in the Treasury for the redemption of silver certificates issued against it from time to time, and would set it free immediately, for the coin so held would be replaced by the bullion in process of coinage at the mint.

The coin thus made available could be immediately deposited at national depositories, and being there deposited would at once enter upon the circulation of the country. The present falling off in the receipts of the Government indicate that unless the step is taken of increasing its resources by the profits to be derived from the coinage of the bullion now in the Treasury, it will be under the necessity of selling bonds if it would escape a deficiency of at least $50,000,000 at the close of the current fiscal year.

I am not attempting to indicate what the present Administration should do, or to express an opinion as to what it may be wise for it to do; I limit myself to suggesting what it may do if it chooses to exercise the powers vested by the statutes in the Secretary of the Treasury.

If the Secretary of the Treasury really desires to break the conspiracy against silver and relieve, to a great extent, the present money famine, let him comply strictly and honestly with the law of 1890 and execute all its provisions in a spirit of fairness and patriotism. I contend that the parity between the two metals has never been broken, in fact, the disparity is only in name, not in fact. Silver dollars pass current throughout the country as readily and in a thousandfold larger numbers than gold. They have the same purchasing power and the same legal-tender quality. It is as sound and honest a dollar as was ever issued by any country on earth, and our people demand that it shall be maintained.

As to the ratio that shall be adopted by this Congress, I shall vote for 16 to 1. If that fails I shall vote steadily for each succeeding amendment of the substitute offered by my colleague [Mr. BLAND]. I believe that the ratio of 16 to 1 is the fairest and surest of any other proposed, and can be maintained by this Government as perfectly as any departure from it. It is not an "experiment." It has been tried and never found wanting. Our people have grown accustomed to it, and demand it. I quote from a letter of recent date sent to me from Denver, and which I think most admirably and fairly states the position as to ratio, and the dangers and hardships of changing it:

If we change the present legal ratio of silver to gold, which is 16 to 1, and make that ratio more favorable to the purchasing power of British gold, how much more cotton and wheat would our cotton-growers and farmers have to give for 1 ounce of gold? Granted that we had free coinage of silver to-day at 16 to 1, 1 ounce of gold would buy 16 ounces of silver, or $20.67 worth of wheat or cotton.

At 17 to 1, 1 ounce of gold would buy 17 ounces of silver; and as England buys her wheat and cotton in silver-using countries, notably India, with silver, she is thus enabled to buy one-sixteenth more wheat and cotton with 1 ounce of gold; or, in other words, that $20.67 in gold buys one-sixteenth more of wheat and cotton.

At the ratio of 18 to 1, England buys two-sixteenths more wheat and cotton with 1 once of gold bullion or coin.

At 20 to 1 England buys four-sixteenths, or 25 per cent, more wheat and cotton in India and other silver-using countries with 1 ounce of gold bullion or coin. So that we must produce 25 per cent more wheat and cotton to get the same amount of gold. Although that standard ounce of gold is worth $20.67, the instant we change or lessen the purchasing power of silver that ounce of gold will buy one-sixteenth more of wheat and cotton for every one part you increase the ratio against silver in silver-using countries. At 20 to 1 England can take 1 ounce of gold and buy 20 ounces of silver. This ounce of gold, in the shape of 20 ounces of silver, taken to a silver-using country, such as India, will buy 4 more ounces of silver's worth of wheat or cotton.

Thus, you see, gold is appreciated in purchasing power 25 per cent, and so we must raise 25 per cent more wheat and cotton to compete for that ounce of gold. Tell this to the wheat and cotton growers. What will they say about ratio? The difference in the ratio of 16 to 1 and 20 to 1 enables England to produce her manufactured goods 25 per cent cheaper at 20 to 1, because her raw material costs her 25 per cent less in India and other silver-using countries, and she can feed her factory hands 25 per cent cheaper. Yet we legislate for England's benefit against the interests of our own producers and manufacturers.

Mr. Speaker, as my time is nearly up, I have one lesson to commend to this House. I would like the undivided attention of every Democrat. I may not know exactly what is the matter with the financial system of the country, because I admit I am not the best expert on finance in the world, by any means, and while I have studied this question for years very carefully, I do not pretend to know all about it. But I think I know the House of Representatives well enough to tell the men on this side of the House what we lack.

I can count upon the fingers of my two hands in this House of 356 members the names of those gentlemen who have served with me continuously through seven consecutive terms. By reason of my age and long experience in this House I think I have the right to say a kindly word to my Democratic brethren. I never have forsaken you in my life in any political struggle or in any legislation in which this side of the House was involved, and I am going to give you a lesson that comes in my judgment from a member of one of the grandest bodies of men on the American continent.

Of all the organized bodies of men on the earth to-day I believe that the Brotherhood of Locomotive Engineers stands as high for magnificent character and courage as any men who ever lived—the coolest and the bravest of us all. It is composed of men on whose magnificent nerve and splendid courage and on whose devotion to duty rest the lives and the property of our people every hour of the day and of the night. There is no body of men to-day for whom I have a more profound admiration than I have for that body of men. Here is what one of them said, Mr. Speaker, in a great emergency:

At a recent convention of religious workers among railway men the chairman stated that the proceedings would terminate with prayer by two railway workers, a conductor and an engineer. The conductor led off in an earnest appeal for the Divine blessing, and was followed by the engineer, a man of strong convictions and great determination, and possessed of moral courage to an unusual degree. He is as earnest and active in serving the Lord as formerly he was in the service of Satan, and prayed with great fervency, after this manner:

"We are here, O Lord, to ask thy blessing on this work. The obstacles have been removed. The locomotive is on the track, the water is in the boiler, steam is up, but, O Lord, give us more sand; it is sand we want, sand in going up hill to keep us from slipping; sand in coming down hill to make us hold. What we want is more sand, O Lord!"

[Applause and laughter.]

What we want is more sand. O Lord, give it to the Democratic members of the House of Representatives. [Applause and laughter.] Give us sand enough, O Lord, to hold us on to the

Democratic platform and to our pledges to the people in 1892. [Applause.]

Mr. CUMMINGS. Mr. Speaker, first I desire to thank my colleagues [Messrs. FITCH and COVERT] for their kindness in reserving ten minutes of their time for me.

Sir, I recognize the fact that the people of this country demand action and not talk. I had not intended to trespass upon the indulgence of the House until I heard the arraignment of the New York Democracy by the gentleman from Mississippi [Mr. STOCKDALE], night before last. Silence is no longer golden. The New York Democracy need no vindication. Their fealty to the party is proverbial. But the Southern Democracy need vindication before the people when they arraign the New York Democracy for their support of Grover Cleveland in this House.

Mr. Speaker, I represent a district in which there are very few banks—fewer, perhaps, than in any other Congressional district in the United States. I represent one of the centers of the teeming and toiling millions of New York. It has in some of its precincts what you find nowhere else on the face of the earth, a population at a ratio of a million to the square mile. No farmer in the land, however poor, lives in the squalor and the misery of some of these men. Over six thousand working men and women are crowded into one block. Some of them have raised the black flag—not the red flag—with the yellow flag in the offing at quarantine. It has been inscribed with the words, "Work or bread."

In standing here and speaking to this House I represent that cry for bread, for work. The only work these people can get is from the manufacturers and merchants of New York City, and they tell them they can not give them work until this purchasing clause of the Sherman law is repealed. President Cleveland, in consonance with the plain letter of the national Democratic platform, has asked for its repeal, and the New York Democracy unanimously sustains him in his request. This is the sole head and front of their offending. [Applause.]

But, sir, I return to the arraignment of the distinguished gentleman from Mississippi, born and reared in the Republican State of Pennsylvania, but representing a Mississippi district. Sir, the country is suffering in more senses than one. It seems to be suffering from a fearful surplus of statesmen and from a dearth of politicians. [Applause.] The gentleman from Mississippi went back to the Chicago convention in his assault upon the New York Democracy. I am loth to follow in his footsteps, but justice to the New York Democracy, in my opinion, demands it. He said that two-thirds of the votes from the South were given for the nomination of Grover Cleveland at Chicago. He might have made it four-fifths, and still have been within the limits of truth.

These votes were cast in the face of letters from Grover Cleveland defining unqualifiedly his attitude upon the propositions before the House. [Applause.] I will not quote them. You all recognize them. They were against free coinage.

You men of the South have ears to hear, and eyes to see. You have at least common-school educations. You understand Grover Cleveland's attitude. No man, friend or foe, has ever accused him of being untrue to his convictions. He is as firm here as the rock of Gibraltar. He abates not a jot or a tittle of them. Yet, sir, in the face of a repeated protest of the New York Democracy, over two-thirds of the Southern delegates to the Chicago convention forced Mr. Cleveland's nomination for the Presidency. Missouri voted solidly for him; Arkansas voted solidly for him, and other Southern States in due proportion.

A committee sent from the New York delegation tried in vain to obtain a hearing from the Arkansas delegation, and on that committee, sir, were two delegates who had voted for free silver in the Fifty-first Congress to preserve the South from the horrors of a force bill. [Applause.] Yet they failed to get the poor courtesy of a hearing.

Now, sir, the time for these gentlemen from the South to enter their protest was then, not to-day. [Great applause.] The time for you men from Missouri to say that you would desert the standard of the Democracy unless free coinage was accepted was then, not to-day. [Renewed applause.]

The New York Democracy, sir, bowed humbly to the will of that convention. They loyally accepted its candidate and its platform. They did more. I say to you men of the South here to-day, that it was their vote that gave you the plank for tariff for revenue only. [Applause.] They have never deserted the South in her hours of trial. They stood by her years ago even to the brink of rebellion, and they were among the first to extend the right hand of fellowship after the war. They stood by you in crucial moments in the Fifty-first Congress; but they will not stand by any man in a treasonable attitude toward the Democratic party. Common honor, let alone chivalry, requires that the South shall not desert them after placing them in the situation which they occupy to-day. [Applause.] We are supporting your candidate and your President honestly, loyally, and proudly. We merit praise, not denunciation. [Renewed applause.]

I will except one Southern State from the list, Mr. Speaker—the plucky little Commonwealth of South Carolina. Her delegates at Chicago, apparently awake to the realities of the situation, cast every vote but one against the nomination of Mr. Cleveland. They ought to bow to the will of the convention, as New York has done; but they, unlike the most of the Southern States, have at least the shadow of an excuse for their attitude to-day, if they desire to avail themselves of it. [Applause.] South Carolina in this House to-day occupies the same attitude. All but one of her representatives in this Congress refuse to accept the recommendation of the President's message.

But, sir, the New York Democracy obeyed the mandate of the Chicago convention. They went to the front in line of battle. They led a charge like that of MacDonald at Wagram. They pierced the enemy's center, and the Democrats of the West and South closed in upon the flanks and routed them. Sir, the New York Democracy to-day stands by the pledges that she made at Chicago. She accepted not only the nominee, but the platform, and——

The SPEAKER *pro tempore* (Mr. BROOKSHIRE in the chair). The time of the gentleman has expired.

Mr. BOATNER. I move that the time of the gentleman be extended.

Mr. CUMMINGS. They do not——

Mr. KYLE. I object to the extension of time.

Mr. CUMMINGS. Mr. Speaker, mark that a distinguished gentleman from Mississippi made this unprovoked attack on the New York Democracy, and a gentleman from Mississippi [Mr. KYLE] objects to any reply.

Mr. TURNER. How much time does the gentleman from New York desire?

Mr. CUMMINGS. Three minutes.

Mr. TURNER. Mr. Speaker, if I may be recognized I will yield to the gentleman the three minutes he desires. [Cries of "Good!" and applause.]

Mr. CUMMINGS. I heartily thank the gentleman from Georgia. Now, Mr. Speaker, I want to say that New York, in accepting the nominee, accepted the platform. She stands by its letter and its law. She finds no "glittering catchwords" in its construction. She stands by the nominee and platform loyally. What is the platform? Did it declare in favor of the repeal of the Sherman act, with free coinage at 16 to 1 or 17 to 1, or any other ratio? No, sir; a free coinage amendment was lost there by a decisive vote. Then, why is it that gentlemen here who advocate this qualification of the President's recommendation, under a threat of betrayal of the party, are to-day accusing New York Democrats of repudiating the platform?

Mr. BOATNER. Because you would not agree to give us free coinage at any ratio.

Mr. CUMMINGS. The National Democratic Convention refused you, and we humbly bow to the will of the convention. The convention almost unanimously refused to give you free coinage. You yourselves are the repudiators of the work of the convention, and not the New York Democracy. You yourselves are confessedly responsible for the selection of the President of the United States, and you yourselves, in view of his letters before the nomination, ought to have the manliness and the common honesty to stand by the Democracy of New York in carrying out his recommendations. We accepted your choice, and you ought to stand by it. [Loud applause.]

Mr. BOATNER. After you have got off the platform.

Mr. CUMMINGS. Are you on the platform, my friend?

Mr. BOATNER. I think I am.

Mr. CUMMINGS. Can you show where the platform declares for the free coinage of silver at any ratio at all?

Mr. BOATNER. No; because you are all against free coinage, and will not give us free coinage at any ratio.

Mr. CUMMINGS. We stand by the platform, but you are not willing to trust the President you selected in the face of the protest of the New York Democracy. We trust him. You do not. Is this honorable? Sir, I thank the Southern Democracy, who after reading the New York Democracy a lesson, are teaching themselves the lesson they are learning here to-day.

Mr. BOATNER. We will try to give you a better one next time. [Laughter.]

Mr. CUMMINGS. He is a poor doctor who refuses his own medicine. Take it like men. Stand by your party. Never desert your colors. The gentleman from Missouri [Mr. HATCH] had something to say about sand. Save your sand. You need more of it. Follow the example of the engineer, and pray for it. Don't get up here, as we have seen Southern Democrats do, day after day and night after night, coached by guerrillas from Colorado and Populist Jayhawkers from Kansas, arraigning and condemn-

ing the Democratic President of the United States for standing by the people on the platform of the national Democracy in convention assembled. [Loud applause.] Stand by the New York Democracy as the New York Democracy stands by your President and its President and our President, and the black financial cloud will soon roll away and the nation resume the road to prosperity.

Mr. TURNER. Mr. Speaker, it is quite apparent from remarks which have been delivered on this floor within the last hour that there exists within the Democratic party a serious difference of opinion upon currency questions. That difference of opinion has existed for the last twenty years, and yet during that long period the statesmen of the Democratic party, in view of their great responsibility to the country, have been able to mold these discordant elements into an invincible host, which has in eight out of the ten last elections carried the country, and in November last seized upon all the citadels of political power by an unprecedented majority.

I am one of those, Mr. Speaker, who hope that the genius which has been adequate to this great task may not forsake my party associates in the face of the great emergency which confronts us in this crisis. There is due from each member of this great organization towards every other the toleration which has hitherto characterized the deliberation of our great conventions. In 1892 there met in the city of Chicago delegates representing every shade of Democratic opinion. There was formed the committee on the platforms and resolutions, who undertook to make the treaty on which we should appeal to the country.

The delegate from New York sat side by side with the delegate who represented Colorado. The Democrat from Maine sat side by side with the Democrat who represented Nevada. All these extremes of opinions met together to arrange a common basis on which all Democrats could stand, and upon which Grover Cleveland could be elected President, and the gentleman from Missouri [Mr. BLAND] as well as the gentleman from Maryland [Mr. RAYNER] could be elected to the Congress of the United States. Are we inadequate to the high trusts which have been reposed in us by the people of the United States under that platform?

I believe, Mr. Speaker, that an adjustment of this matter can be made which will enable the Democratic party to step up on a still higher plane and to add to the list of its triumphs an achievement unparalleled in the history of American politics. How is that to be done, sir? By the simple lesson of fidelity to our pledges, by keeping faith with the people who have elected us.

Our platform, Mr. Speaker, requires that we should regard the party to which we belong as having denounced the Sherman act as a "cowardly makeshift, fraught with perils to the country." Who is there, whether he stands on the one side or the other of this great question, who does not know that that scheme called the Sherman act was a device to tide over a popular election?

Who does not know that that act makes of silver a mere commodity and converts the Secretary of the Treasury and the Director of the Mint into mere traffickers in transactions which might as well be conducted in corn or wheat or cotton so far as the conversion of the commodity into money is concerned?

And the redemption of the notes issued in payment for the silver purchased was imposed, under another clause of the act and under the practice of the Treasury, on the gold reserve.

I feel sure, sir, that there is no one who occupies a seat on this floor who does not know that that act has not only disappointed its friends but has fulfilled the predictions of its enemies. It is a "subtreasury" scheme. It ought to be stamped out without delay. It ought not to exist longer on our statute books. But, sir, I am constrained to believe that there are other provisions of the platform adopted at Chicago which require fulfillment on our part. Nobody contends that it requires the free coinage of silver on the ratio of 16 to 1, for at that time silver had been depreciated in the market, and its commercial value was only from 74 to 72 cents on the dollar as compared with gold.

That charter of the Democratic faith, on which we all went to our constituents, requires a dollar of equal intrinsic and exchangeable value with every other dollar. Nobody on this floor doubts that that provision was put into the platform in order to allay the fears of those members of the committee, of the convention, and of the Democratic party who thought that the existing ratio was not a sufficient basis on which to conduct the currency of the country. I believe that the special order now pending confines us within too narrow a range of ratios. I believe in a sound currency for laborers and farmers as well as for capitalists. I believe that these silver dollars should be made equal with every dollar in the country, and for that reason I shall vote for the highest ratio proposed in the amendments offered by the gentleman from Missouri [Mr. BLAND].

But gentlemen say that that is impracticable, that it is absurd, that it leads to inconveniences and difficulties. Mr. Speaker, there is no way out of this situation which does not present great difficulties. Men can not affright us from doing our duty by the suggestion that this way or that way leads to inconvenience. The first question is, what is right, what is our duty? After that we will inquire what is practicable. Mr. Speaker, the mints of India to-day are coining silver at a ratio of 22 to 1, and is there any reason we, here in the United States, should not recognize the existing conditions and conform to the declarations with which we appealed to the country last year?

It would take time, it would take a great deal of silver to make this change, and the silver dollars would be large. These things are admitted. But after a somewhat careful study of this matter I beg to say that no country in the world ever undertook to recoin its silver as England did under William, or to recoin any of its currency, under conditions so favorable as those which exist to-day in the Treasury of the United States. Nearly all our silver dollars are in the Treasury; and they are represented by certificates which circulate from hand to hand.

What is there to prevent us from making a declaration by statute that each of these certificates shall represent a dollar of the requisite weight and shall, so fast as the business of the mints will permit, be redeemed in the larger and more valuable coin that we propose at this increased ratio? I am one of those who believe that such a declaration would make the present silver dollars and the certificates which represent them circulate side by side at complete parity with the new silver coins which would be authorized under this increase of ratio.

It is said that it will cost over $80,000,000. According to the arguments of my friends on the side of the single gold standard, that loss has already overtaken the Treasury. And we already have in our Treasury, according to the coinage value of the silver, somewhere about $50,000,000 of free bullion, which might be coined either into new dollars or added, by recoinage, to outstanding dollars. This would put silver into actual use and consumption, as it were, instead of storing it like cotton, as a menace to the market value of that metal. As to the inconvenient size of such new silver coins, neither gold nor silver coins at the present rate circulate from hand to hand. The people prefer the paper representatives of these coins, for the sake of convenience.

Mr. Speaker, we have assembled here under extraordinary conditions. The pecuniary stringency which has existed for years at the South now infests the North in even a worse form. There is not in all the world at this time a single prosperous community. The sun in his course looks not down upon a single prosperous city or state or nation. Every industry is prostrated. What are the causes which have led to this state of depression? In Chile it is attributed to the bad consequences of a disastrous civil conflict. In Buenos Ayres hard times are supposed to result from undue inflation under certain forms of credit. In Brazil hard times exist on account of the evil consequences of a hasty and ill-considered revolution, followed by extravagance.

In France the pressure of hard times is felt on account of the collapse of that great enterprise, the Panama Canal. In eastern Europe the hard pressure of adversity is felt, along with famine and pestilence. In England there is the vacuum caused by the extraordinary failure of the Baring Brothers. And when we reach our own shores conditions exist which every one admits indicate the greatest distress.

Mr. Speaker, no single one of these causes has brought about these conditions throughout the world and made hard times encompass all mankind like a new plague and pestilence.

It is because all the currents of financial woe, under the inscrutable law of panics, have united their forces, sweeping every shore and engulfing all the people. The mere repeal of the Sherman act, or, on the other hand, the free and unlimited coinage of silver at any ratio, will not, in my opinion, completely and at once obliterate these hard conditions. We can do our part towards the restoration of confidence; but I infer from my study of our situation there is necessary, on the part of the people, and on the part of the bankers, not only a great deal of patience, but a little patriotism. But I believe that the country will slowly emerge from this storm and enter on a new era of prosperity.

Mr. Speaker, I am one of those who believe that for every emergency the genius of our public men will in some way or other be competent. I have no epithets to-day for those who differ with me. I have no denunciations for those who devised this mischief. But, as a citizen, desiring not only the welfare of my party, and its unimpaired adequacy to the great tasks which lie before it, but as a citizen desiring the prosperity of our common country, I ask that we shall meet together in a spirit of concession and forbearance, and, like men, settle these difficulties as become us. [Applause.]

I regretted profoundly to hear my veteran friend from Missouri

[Mr. BLAND], who bears on his front the scars of many a hard campaign, say that in a certain contingency he would come to "the parting of the ways." I would welcome rather the declaration of my other friend from Missouri [Mr. HATCH], who proposes that the Democrats of this country as represented in Congress shall, if need be, meet apart and settle these differences which have existed within our ranks, so that we can not only relieve the country of its present pressure but go forward with a united front to relieve the people of the burdens of unjust taxation, so that it will take less of the unprotected products of this country, and in our scant currency, to buy the protected products whose cost enhanced by statute measures in these hard times the oppression of the poor. [Loud applause.]

Mr. COFFEEN. Mr. Speaker, it is with no great degree of assurance that I arise to address this body, and I should not have ventured at all, perhaps, if I had not observed the uniform courtesy and good humor with which all speakers are received.

And I can say of the gentlemen who have preceded me that some of them have brought to this question great and convincing arguments. Some have brought carefully prepared and elaborate statistics; some have brought wit and invective and anecdote; some have brought brilliant oratory.

I do not know that I shall be able to bring any of these things. I know I shall not be able to bring some of them.

Yet in behalf of an honorable, intelligent, and patriotic constituency in the State of Wyoming, which I have the honor to represent, I wish to talk with you plainly and yet earnestly on this, the greatest of all questions that concern the people of my State at this present time.

Our people, with their varied experiences and practical common sense, are not willing longer to be deceived by such catch words and phrases as "honest money," "sound money," "money of the world," and other boastful terms used constantly by those who favor the confiscation of the property of the debtors through schemes of demonetization and contraction; and they realize, as I do, also, that before this Congress are pending questions fraught with far-reaching consequences and involving no less than the freedom and prosperity of the workers throughout the nation.

The power that controls and establishes the money of a people controls the people themselves.

If we are suffering the agonies of monetary starvation the legislation that will provide a prompt and sufficient money for circulation and investment to add to the too scant and insufficient circulation now existing and acknowledged by all, will be the legislation that will redeem the people and revive their hopes, their industries, and their prosperity.

But a scarcity of debt-paying money can not be cured by taking away and destroying a large portion of the present supply.

We are not, therefore, Mr. Speaker, in favor of the bill of unconditional repeal of the purchasing clause of the so-called Sherman act, as offered by the gentleman from West Virginia [Mr. WILSON].

This again would complete the demonetization of silver and cut off the supply of full legal-tender Treasury notes that now, even though an inadequate supply, is yet furnishing good money to the people at the rate of nearly $40,000,000 per year.

Even this scant supply of Treasury notes, with the silver purchased uncoined, is far better than an unconditional repeal that makes no provision whatever for supplying any kind of money to the people in their hour of need.

But on the other hand we are in favor of the substitute offered by the gentleman from Missouri [Mr. BLAND] which provides for the coinage of all the silver offered at our mints into safe, honest, and reliable dollars; not the highest and dearest dollars, for they are often and always too great in their purchasing power and force down prices and rob the debtors, but into safe and standard dollars of 412½ grains of standard silver.

The following is the full text of the free-coinage and repeal bill for which I shall cast my vote.

Be it enacted, etc., That from and after the passage of this act all holders of silver bullion to the amount of one hundred dollars or more, of standard weight and fineness, shall be entitled to have the same coined at the Mint of the United States into silver dollars of the weight and fineness provided for in the second section of this act.

SEC. 2. That the silver dollar provided for in this act shall consist of four hundred and twelve and one-half grains of standard silver; said dollars to be a legal tender for all debts, dues, and demands, both public and private.

SEC. 3. That the holder of the silver dollars herein provided for shall be entitled to deposit the same and to receive silver certificates in the manner now provided by law for the standard silver dollars.

SEC. 4. That so much of the act of July fourteenth, eighteen hundred and ninety, entitled, "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes," as requires the monthly purchase of four million five hundred thousand ounces of silver bullion, be, and the same is hereby, repealed.

We must not misunderstand the issue nor the elements engaged in this conflict.

The measures before the House clearly bring before us the question of bimetallism or gold monometallism. I favor the use of both gold and silver freely coined into the standard money of our country, as before the enactment of that other Sherman law which in 1873 accomplished the unlooked-for demonetization of silver.

This present attack on silver is by the same forces practically—the gold power—that invaded our halls in the interest of money dealers before, in 1873, although now they come not stealthily as then.

The monarchies and monetary agencies of Europe, as well as their allies in Wall street, are now back of this effort here and trying to fasten upon our people the gold standard and force the prices of all products down still lower, impoverishing our industries and enslaving our people forever if they can do so.

THE TREACHERY OF GOLD.

It is truly said that silver has been the money of the common people in every age and country, and that gold is the money loved and hoarded by the rich.

But in this Republic, where there is to be no distinctions between the rich and the poor, we must have free coinage of both metals on equal terms, and thus have an American system and basis of money broad enough and sure enough within the reach of all. Gold is the money of kings and aristocracies; silver and the double standard is the money of republics.

Monometallism and the centralizing gold standard is the choice weapon of monarchies.

Bimetallism is the money basis of free countries and their protection against the tyrannies of shylocks and toll-gatherers.

And now, an attempt is made boldly in this House to fasten upon this, the greatest of all republics, a monarchial system of money—a centralized, narrow, and contracted money basis, through which a centralized plutocracy or a subtile sort of monarchical power, can manipulate and control the lives, the labors, and the destinies of a subjugated people.

If the famous Hazzard circular had not been sent into this country, as now verified by living testimony to have been done, still by other means it is not difficult to detect the European plutocratic idea of controlling labor, not by owning slaves bodily, as in chattel slavery, but by securing the fruitage of enslaved labor by control of prices and wages through financial measures.

THE HAZZARD CIRCULAR.

I ask to read a printed copy of the contents of that secret and confidential circular sent to bankers in this country in 1862 from Europe.

Slavery is likely to be abolished by the war power and chattel slavery destroyed. This, I and my European friends are in favor of, for slavery is but the owning of labor and carries with it the care of the laborer, while the European plan, led on by England, is capital control of labor, by controlling wages. This can be done by controlling the money. The great debt that capitalists will see to it is made out of the war, must be used as a measure to control the volume of money. To accomplish this, the bonds must be used as a banking basis. We are now waiting to get the Secretary of the Treasury to make this recommendation to Congress. It will not do to allow the "greenbacks," as it is called, to circulate as money any length of time, for we can not control them. But we can control the bonds, and through them the bank issue.

PLUTOCRACY AGAINST DEMOCRACY.

Be not deceived, gentlemen; the system of money, the gold standard which our opponents urge for the adoption of this Congress, is a monarchical system used in Europe to prop up the thrones and empires and aristocracies against the progressive spirit of the half-subdued democracies of those countries.

So I hold (and I believe I comprehend the situation) that this is another struggle between the plutocracies of the Old World and the democracies of the New. The crisis is imminent, the dangers involve not less than the overthrow of the essential elements of good government. The plutocracy is against the democracy. All America and the financial freedom of our people and of the republics of the world are involved in this present struggle.

They have, unfortunately for our cause, caught us at a disadvantage, as the gold power always seeks to do; chiefly in this, that our own Executive has not yet seen proper to declare for the people against the plutocracy on this question.

But shall we stop by the mount of human freedom wherein shall dwell the hopes of mankind and from whence shall descend the law of justice? And turning away from our onward march toward the industrial and financial emancipation of mankind shall we bow down before the golden calf with the descendents of those same ancient votaries who builded themselves false gods out of the gold stolen from the Egyptians, whom they had despoiled? And who here and now, true to their instincts, with strong and subtle alliances, hope to use this nation also in building their new Empire of Wealth, and by methods of diplomacy and monetary legislation gather in the wealth of the world by enthroning gold and making all other things to bow down before it.

Choose you this day whom you will serve.

If the single gold standard and the money of oppression and the petty idols mounted on this car of Juggernaut, pushed on over the hopes and lives of our own people, shall command your worship, then bow down, bow down.

But we believe there is a power and a virtue greater than your golden idols in the strength and intelligence and patriotic hearts of an unpurchasable people.

In regard to the treachery of gold compared to silver, I call attention to the very able characterization on this subject in the speech

of Senator John J. Ingalls on February 15, 1878, which I ask leave to insert in my remarks:

THE TREACHERY OF GOLD.

Senator Ingalls, of Kansas, in a speech in 1878 in the United States Senate, depicted it in graphic language, as follows (Congressional Record, Volume 28, page 1052):

The original American idea was a single standard of silver. Gold was an innovation, and, in my judgment, a grave mistake. * * * If we are to have a monometallic standard, I believe silver to be immeasurably preferable to gold. It is less subject to fluctuation; its production is more steady; its cost more uniform.

No enduring fabric of national prosperity can be builded on gold. Gold is the money of monarchs; kings covet it; the exchanges of nations are effected by it. Its tendency is to accumulate in vast masses in the commercial centers, and to move from kingdom to kingdom in such volumes as to unsettle values and disturb the finances of the world. It is the instrument of gamblers and speculators, and the idol of the miser and the thief. Being the object of so much adoration, it becomes haughty and sensitive and shrinks at the approach of danger, and whenever it is most needed it always disappears. At the slightest alarm it begins to look for a refuge. It flies from the nation at war to the nation at peace. War makes it a fugitive.

No people in a great emergency ever found a faithful ally in gold. It is the most cowardly and treacherous of all metals. It makes no treaty that it does not break. It has no friend whom it does not sooner or later betray. Armies and navies are not maintained by gold. In times of panic and calamity, shipwreck and disaster, it becomes the chief agent and minister of ruin. No nation ever fought a great war by the aid of gold. On the contrary, in the crisis of greater peril it becomes an enemy more potent than the foe in the field; but when the battle is won and peace has been secured gold reappears and claims the fruits of victory. In our own civil war it is doubtful if the gold of New York and London did not work us greater injury than the powder and lead and iron of the rebels. It was the most invincible enemy of the public credit. Gold paid no soldier or sailor. It refused the national obligation. It was worth most when our fortunes were lowest. Every defeat gave it increased value. It was in open alliance with our enemies the world over, and all its energies were evoked for our destruction. But, as usual when danger has been averted and the victory secured, gold swaggers to the front and asserts the supremacy. But silver is the money of the people. It is the money of wages and retail. Its tendency is toward diffusion and dissemination. It enters into the minute concerns of traffic and is exchanged day by day for daily bread. It penetrates the remotest channels of commerce, and its abundance, bulk, and small subdivision prevent its deportation in sufficient amount to disturb or unsettle values. If it retires at the approach of danger or from the presence of an inferior currency, it still remains at home ready to respond to the first summons for its return.

THE DEMOCRACY AGAINST THE PLUTOCRACY.

In the same speech in 1878 Senator Ingalls foresaw the coming alliance between the creditor classes of New England and the East with the gold power of Europe, and said with boldness:

It is the East against the West and South combined. It is the corn and wheat and beef and cotton of the country against its bonds and its gold; its productive industry against its accumulations. It is the men who own the public debt against those who are to pay it, if it is to be paid at all. If the bonds of this Government are ever paid, they will be paid by the labor of the country, and not by its capital. They are exempt from taxation and bear none of the burdens of society.

The alliance between the West and the South upon all matters affecting their material welfare hereafter is inevitable. Their interests are mutual and identical. With the removal of the causes of political dissension that have so long separated them, they must coalesce, and united they will be invincible. The valleys of the Mississippi and Missouri, with their tributaries, form an empire that must have a homogeneous population and a common destiny from the Yellowstone to the Gulf.

These great communities have been alienated by factions that have estranged them only to prey upon them and to maintain political supremacy by their separation. Unfriendly legislation has imposed intolerable burdens upon their energies; invidious discriminations have been made against their products; unjust tariffs have repressed their industries. While vast appropriations have been made to protect the harbors of the Atlantic and to erect beacons upon every headland to warn the mariner with silent admonition from the "merchant-marring rocks," the Mississippi was left choked with its drifting sands till the daring genius of Eads undertook the gigantic labor of compelling the great stream to dredge its own channel to the sea. The opening of this avenue of commerce marks the epoch of the emancipation of the West and South from their bondage to the capital of the East. In asking the passage of this bill they are asking less than they will ever ask again. When I reflect upon the burdens they have borne, the wrongs they have suffered, I am astonished at their moderation.

FUNDAMENTAL MONETARY PRINCIPLES.

Now, Mr. Speaker, I propose to point out some features of the question that are too often left obscure.

You can not use any piece of money for any other general purpose without first destroying its monetary quality. In other words, to use it as a commodity and manufacture it into anything valuable as an article of merchandise, it ceases to be money.

Money is not commodity or merchandise, and should not be so treated; except it might be regarded possibly as a form of stored commodity.

A gold eagle ceases to be money when it is manufactured into a finger ring or into other useful article.

A silver dollar ceases to be a dollar when it is useful as a spoon or a watch chain.

Again, the money of one nation ceases to be money when it is passed over to another without a special law legalizing the coin or money in that other country, which is rarely done.

The importing nation receives the coins of any other as commodity, not as money, and estimate their weight and quality, and hence their value within and for their own nation, as they would the weight and value of wheat, wool, coal, cotton, or any other commodity.

Gold and silver, then, let us understand, when monetized and coined, are in the form and force of money within the nation coining there only, and is entirely a matter of local concern within that nation alone, not for the market place as a commodity, but for use in the market and elsewhere as a measure of values of all other things and for the legal settlement of debt.

But gold and silver, let me state again, whether coined or not, when exported to any other nation at once cease to be money and at once become property to be bought and sold and valued in the money of the receiving nation as any other commodity.

Hence we affirm that there is no such thing, properly speaking, as money of the world.

No nation has power or authority to coin such money or to enforce it if it were attemped, and no nation has been so foolish as to attempt it.

The advocates of a gold standard who talk sonorously of the "money of the world" are liable therefore to deceive others if they be not themselves deceived by such a term.

PARITY.

Again, the word parity should not be used in reference to the value of things used for different and dissimilar purposes.

The parity between silver and gold used in legal-tender coins, that is, as money, is one thing.

The parity between them used as commodities is another and entirely different thing.

Hence, keeping this distinction clearly in mind when we are talking of the parity between silver and gold in relation to coinage, it must apply to their value as money, not property.

Now, I assert that the only way to secure the parity between the metals for use in legal-tender money is to coin them by law on a fixed ratio, and they can not be otherwise when so coined, than at a parity on that ratio. But by the use of these metals outside of money, that is, as commodity, they are subject to fluctuations as all other commodities, and variations in the demand may cause a variation in the ratio every twenty-four hours.

If, however, it is desired to secure a parity between the money metals as money, and at the same time as commodities, there is only one way possible in which it can be done, and that is by free and unlimited coinage at the mints.

This will do it, and this only, for this reason: There is a universal or boundless demand for money in any great nation like ours, and from this boundless demand the commodity value of silver must and will rise at once to its coinage value at the mints, saving only the trivial expense of transportation to the mints, if all the supply offered is freely coined at a fixed ratio of 16 to 1, as in this country, or 15½ to 1, as in Europe.

I trust I have made this sufficiently clear to all.

Free coinage of the two great and reliable money metals at a fixed ratio by law into legal-tender dollars at once brings silver up to the value of that dollar and all other legal-tender dollars without regard to the material of which they are composed.

This, let me repeat again, arises surely from the fact that while the *supply is limited* to the product of the mines, added to the unimportant item of uncoined silver bullion that may be offered, the *demand will be unlimited and universal* throughout the nation, as is always the demand for money if the mints are opened freely to coinage of silver.

THE SO-CALLED DECLINE OF SILVER.

All important fluctuations, therefore, in the bullion value of silver, measured in the terms of gold prices since 1873, the time of demonetization, have been caused by limitations on the use of silver for coinage at the mints.

I present extracts from evidence in the report of the Select Committee on the Depreciation of Silver, made to the British Parliament in 1876.

In the testimony before the committee given by Ernest Seyd, who was called as one of the most notable experts on the subject, I quote the following questions and answers:

By Mr. HUBBARD:

Q. The depreciation in the price of silver was an event which was acknowledged throughout the world and not peculiar to the United States?

A. Yes; it is an international matter, it is a question of international value.

Q. Has not silver fallen all over the world?

A. All over the world it has.

Q. Therefore it has fallen in the United States as well as in Germany, France, and England?

A. Quite so.

Q. Why, therefore, do you reproach the United States with wantonly debasing silver? Silver has fallen because it was more abundantly produced, and the demand for it was not equal to the improved supply.

A. That would raise the entire theory of the case, *which you are anxious to avoid*, i. e., what caused or who started the debasement of silver? The United States have contributed towards the fall in the price of silver; they were the first, at all events, who contributed officially to the fall in the price of silver. The Germans merely demonetized it, but the Americans deliberately adopted a lower price by their mint law. It is for that reason, I think, I am justified in saying they practically were the first to debase its value.

By Mr. FAWCETT:

Q. Using the word debased as applying to the conduct of the United States, although that word usually implies censure, when you say the Government has debased the coinage, you do not mean in this case in the slightest degree to censure the United States, do you?

A. I do mean to censure them.

Q. Why?

A. The question asked is, what was the object of the United States in making this change? There is a legitimate object and there is an object not legitimate, but that is a matter of opinion.

I consider that the United States did wrong in first lowering the price of silver by their mint law.

In the group of very able papers by Ernest Seyd, the French expert, placed before the British commission in their report on the deprecia-

tion of silver, he sums up with the following report, page 9 of appendix:

The true cause of the depreciation in the value of silver is its *demonetization by law* and *that only*.

England took the initiative in 1816, but as long as Germany maintained silver the equilibrium was maintained. Germany having followed England's course that equilibrium was lost.

An appeal to the natural laws of supply and demand as likely to settle this matter, or as tending to show that the depreciation must be due to an increased natural supply can not be made in this case; for it is the *demand* which, not by any natural cause, but by *deliberate legislation* has here been forcibly restricted to a very narrow limit. In all questions where the natural law of supply and demand are invoked, that of the demand is as important, if not not more so, than that of the supply. Under the force of legislation a matter under direct human control or intelligence, it is the case of the demand which here has precedence. If the demand had not been so influenced by an agency apart from the natural laws of supply and demand and the status quo hitherto existing had not been forcibly changed thereby, it follows—

Firstly. That there would be no surplus stock of silver to dispose of.

Secondly. That the fresh natural supplies of silver would be absorbed, as together with those of gold they have always been absorbed before.

Figuratively speaking if the abolition of the demand for silver for the purposes of legal tender money contributes 50 per cent of the decline in its value, the secondary causes, that of the surplus stocks, contributes another 25 per cent; and that of the fresh supplies yet 12½ per cent to such decline; but the two latter causes would have no *raison d'être* but for the first.

This represents, in my opinion, the true order of the causes of the depreciation of silver, in total independence of all matters of theory or practice involved in the general problem.

It is with a sort of irony of fate that the very man who was employed by the gold power to accomplish the demonetization of silver in America in 1873 should become so strong a witness against the crime of demonetization in 1876.

Restricted coinage and demonetization of silver have broken the old-time parity between gold and silver as articles of commerce.

But the parity between gold dollars and silver dollars in legal-tender coin is not broken, and can not be, for every legal-tender dollar is a dollar, and worth one hundred cents, whether gold or silver—always has been, always will be, while the authority of our Government endures.

NO SIXTY-FIVE CENT DOLLARS.

There are no 65-cent legal-tender dollars. The term is a misnomer and misleading, and I fear often used for the purpose of deceiving.

You can not buy legal-tender silver dollars of any of these gentlemen who seem to be so wroth against silver at 65 cents, nor 75 cents, nor 95 cents, nor any other price below 100 cents on the dollar.

They are even now, in the extreme scarcity of money in circulation, paying a premium, in certified checks on the strongest banks in New York, for silver dollars, that they may obtain what they try to make the people believe nobody wants.

Legal-tender silver dollars, then, as well as legal-tender gold dollars, are always at par and worth, as the law directs, 100 cents on the dollar.

But may not one kind or other of these metallic dollars be worth more than 100 cents on the dollar?

I answer without hesitation—as money, no; as commodity, yes; for the distinction between money value and commodity value must always be kept in mind to avoid confusion.

The value of legal-tender coins as money never goes above or below par. As commodity either one may go above par, but not below par under free coinage.

From this fact arises the statement, which is in part correct, that the dearer metal hides away or is exported, while the cheaper metal stays at home.

The cheaper metal stays at home solely because it is just as good, as sound, as valuable, for money as the other. The dearer metal is more liable to export simply because it is worth more as a commodity abroad than it is at home as money.

MAKE FOREIGNERS PAY THE PROFIT.

If gold is at a premium of 25 per cent it goes abroad because it brings 125 cents worth of property in exchange from the foreign countries for every 100 cents in gold money exported. Here is a profit of 25 per cent on gold exported. I have no objections. Let our people make all the profit they can out of foreign countries on gold or any other commodities.

What I object to is that the gold and bullion dealers seek to make that 25 per cent profit out of our own people multiplied by as many millions as their credits and the credit holders generally hold against us and at the same time making nothing out of the foreigner. They even divide with him the millions they make and gather from us in the operation. Indeed, the foreign money dealers are in the scheme.

By forcing up or appreciating all money in our country to the gold standard, which is their purpose, they have already increased the power of money, even by the admissions of some of their own advocates, 25 per cent, and will appreciate it 25 to 50 per cent more if they shall carry their policy through this Congress and fasten upon us the gold standard.

It is estimated that the creditors in Europe and America hold against our people in various forms of indebtedness $20,000,000,000.

The rise of 25 per cent in money is a sure and unfailing demand for $5,000,000,000 more of our property required to pay them than justly belongs to them. This is injustice, this is dishonest, this is robbery under the form of law, and I shall stand against them and plead with my people in and out of Congress to fight them by every means honorable and creditable to patriots, and when once aroused, as now seems the fair promise they shall be, our country shall never surrender to the unjust tributary demands of the European gold power.

We lift the warning voice and catch up the patriotic words of our fathers and answer them "Millions for defense but not one cent for tribute."

The operations and methods by which the money power seek to accomplish, and do too often accomplish their purposes of spoliation and financial robbery, are so subtle and unobserved in their workings that it is not easy for some people to understand. Yet I shall undertake to make one or two points plain and comprehensible.

The chiefest wrongs are not accomplished against the debtor classes by changing the terms or words of the contract, payble in so many dollars, but by changing the power of the contract and changing its effect by changing the standard. It is done by changing the value of money, appreciating the dollar of the contract or greatly increasing its purchasing power.

ILLUSTRATIONS.

If you owe me 1,000 bushels of wheat, payable next year, when the time comes around and you deliver me the wheat I am satisfied, or ought to be, and you are satisfied. I have what equitably belongs to me, and you have what equitably belongs to you, being that which is left after paying me. Perhaps you have another thousand bushels left. But, in the meantime, while the payment of the debt is pending, if I can prevail on Congress to change the standard of measurement, not the name but the power of the bushel, so that a bushel is twice as great, and will contain say 8 pecks instead of 4, as it was when you entered into the contract, is it not clear that when I call on you to deliver the 1,000 bushels of wheat with the measuring capacity appreciated and doubled I will get all your wheat? I will get the 1,000 bushels that belonged to me and the 1 000 bushels that belonged equitably to you, and yet the words "1,000 bushels" in the contract has not been changed. The bushel has been appreciated, its measuring power increased. I have robbed you under the form of law.

Do you think you would be soothed and quieted for the advocates of the appreciated bushel to come and tell you that the new bushel was a sound, safe bushel—the bushel demanded by commerce, the bushel recommended by the great boards of trade, the honest bushel, the bushel of the world?

Do you think I could keep you voting the same old ticket for Congress by telling you the purpose was to make the poor man's bushel of beans and the farmer's bushel of wheat twice as great as it was, so that when his crop was good it would be twice as good?

O, no; you would vote to turn out that set of Congressmen and that administration, and elect one that would preseve the standards of money and measure uniform, and protect the debtors against the robbers of the people.

ROBBERY UNDER FORM OF LAW.

Such is the money question. Such is the scheme to force upon our people the gold standard of payment.

Such is the demand of the gold power and such would be the effect to again demonetize silver, give up the fight for bimetallism and allow the most gigantic step to be taken for the appreciation of the dollar and doubling its power over property that the world has ever seen.

And if the longing hope of the oppressed peoples of all the earth shall behold the accomplishment of such a far-reaching and measureless iniquity in this the greatest parliament of man, it shall work a double iniquity, retard progress for half a century, and cause despair to settle down upon those who seek for liberty and light, and give boldness to those who hope to see free government perish from the face of the earth.

It is too great a calamity to believe possible.

APPRECIATION VS. DEPRECIATION.

As in payment of debts in bushels, so in payment of debts in dollars.

We are beginning to comprehend everywhere among my people this simple axiomatic principle or monetary law.

The appreciation of the dollar insures the depreciation in price of everything the dollar measures.

And since the dollar measures or values or prices all things produced or manufactured or owned by man, to show the bearings of this principle on the interests of all we say, in general terms, that the appreciation of the dollar is the depreciation of all property.

As the purchasing power of money goes up the purchasing power of property goes down.

And the converse of these propositions is also true, although the terms for expressing the converse are not so popular nor so frequently used. Let us not, however, run away from the truth—it is not courageous nor profitable.

The appreciation of property (the rise in prices) is the depreciation of the dollar. This is the unpopular part of it, to talk or even whisper in the presence of the gold advocates about the possibility of benefits to arise to all the holders of property, all labor and wages, all productive industries, by a depreciation of the dollar.

They fear even that the people, if they once realize the probability,

aye, the certainty of the facts that benefits can arise and will arise to the owners and producers of property by holding the dollar down or even bringing it down when it gets too high, then the people might insist, if the ratio is to be changed and gold kept at home for purpose of strengthening the metallic basis for our paper-money circulation, they might insist in taking a little of the commodity out of the gold dollar and making it thereby less valuable for export in relation to its monetary value, and at the same time cut off its too great and increasing purchasing power over wheat and cotton and manufactures and productions generally.

So they, in advocating the gold standard, do constantly rail against silver as *"cheap money," "dishonest money," "depreciated money," "sixty-five cent dollars,"* and so on.

I call attention here to the words of one of the great Senators from Illinois—Logan—regarding cheap money:

Senator John A. Logan, in his great speech of March 17, 1874, discussing the hard times and the panic of 1873, said:

But, sir, that the panic was not due to the character of the currency is proved by the history of the panic itself. * * * No, sir; the panic was not attributable to the character of the currency, but to a money famine, and to nothing else. In the very midst of the panic we saw the leading bankers and business men of New York pressing and urging the President and the Secretary of the Treasury to let loose twenty or twenty-five millions more of the same paper for their relief, the very same men who to-day denounce it as a disgrace to our Government. It was good enough for them when they were in trouble.

He also quotes approvingly from Hon. Isaac Buchanan, of Ontario, Canada, as follows:

It is seen that the question of money and the question of labor are one question, the solution of the one being the solution of the other, plentiful and therefore cheap money being a convertible term for plentiful and well-paid employment.

He then goes on to say:

Why is it that Representatives forget the interests of their own section and stand up here as the advocates of the gold-brokers and money-lenders and sharks, the same class of men whose tables Christ turned over and whom he lashed out of the temple of Jerusalem. * * * Carry out the theory of the contractionists and what must be the inevitable result? Every enterprise and industry must be dwarfed in like proportion.

Speaking of the progressive contraction of the currency then going on, Senator John Sherman, in 1869, said:

The contraction of the currency is a far more distressing thing than Senators suppose. Our own and other nations have gone through that process before. It is not possible to take that voyage without the sorest distress. To every person except a capitalist out of debt, or a salaried officer, or an annuitant, it is a period of loss, danger, lassitude of trade, fall of wages, suspension of enterprise, bankruptcy, and disaster. * * * To attempt this is to impose upon our people by arresting them in the midst of their lawful business, and applying a new standard of value to their property, without any deduction of their debts, or giving them any opportunity to compound with their creditors, or to distribute their losses, and would be an act of folly without example of evil in modern times.

We state this converse proposition again, not to flaunt it as a red rag before the bulls of Bashan and the bears of Wall street, but to assist in familiarizing the people and this Congress with an economic law that is not denied by any competent authority, but clearly set forth by the noted authors and monetary commissions expressly appointed to examine into such questions.

The appreciation of property (indicated by a general rise in prices) marks the depreciation of money—not the unsoundness of money, but the decrease of its purchasing power.

As prices go up, money comes down.

As property appreciates, money depreciates.

VALUE OF MONEY DEPENDS ON VOLUME.

Now we pass to the brief consideration of another economic law and one well understood and generally acknowledged by all competent authorities.

The value of monetary units, as, for instance, the dollar, in relation to prices is dependent not on the material of which they are composed, but on the volume or number in circulation.

To increase the volume of money in circulation diminishes the value or purchasing power of money, depreciates the dollar, if you please.

To diminish or lessen or contract the volume in circulation, on the other hand, increases the purchasing power or appreciates the dollar.

These principles are in perfect accord with what is frequently mentioned as the law of supply and demand.

Increase the supply of any commodity or decrease the demand and prices go lower. Decrease the supply or increase the demand and values go up.

Money is no exception to the rule.

Those whose business is to make the greatest profit possible out of money or credits on hand are interested on the side of scarcity of money and generally favor policies of contraction. To enforce the importance of keeping in view the volume of money in circulation, and above all things the avoidance of a shrinking and declining volume, let me read in your hearing extracts from the very able report of the silver commission, appointed in 1876, for the purpose of investigating questions in regard to the demonetization of silver. And I charge here and now that the advocates of unconditional repeal of the silver purchasing act of 1890 are either wittingly or unwittingly aiding the foreign and domestic extortioners to force again and for ever, if possible, a scheme of demonetization, contraction, and confiscation upon this country.

We read the first paragraph on page 10, and also a paragraph beginning at bottom of page 49, and then a short paragraph on page 38:

The philosophy of the double standard is that a rise in the value of money and a fall in general prices are the greatest evils which can befall the world, and its object is to prevent, as far as possible, the occurrence of these evils.

It takes no precautions against a fall in the value of money, because in the whole history of the human race not a single instance can be pointed out of a fall in the value of either or both of the metals which has not proved a benefaction to mankind; while, on the other hand, during every period and whenever a rise in the value of metallic money has occurred it has been attended by financial, industrial, political, and social disaster.

An increasing value of money and falling prices have been and are more fruitful of human misery than war, pestilence, or famine. They have wrought more injustice than all the bad laws ever enacted. Under the double standard these evils could never occur, except by a rise in the value of both metals, while under the single standard they might be caused by a rise in the value of one of them.

* * * * * *

At the Christian era the metallic money of the Roman Empire amounted to $1,800,000,000. By the end of the fifteenth century it had shrunk to less than $200,000,000. During this period a most extraordinary and baleful change took place in the condition of the world.

Population dwindled, and commerce, arts, wealth, and freedom all disappeared. The people were reduced by poverty and misery to the most degraded conditions of serfdom and slavery.

The disintegration of society was almost complete. The conditions of life were so hard, that individual selfishness was the only thing consistent with instinct of self-preservation.

All public spirit, all generous emotions, all the noble aspirations of man shriveled and disappeared as the value of money shrunk and as prices fell.

History records no such disastrous transaction as that from the Roman Empire to the dark ages.

* * * * * * *

In the whole history of the world every great and general fall of prices has been preceded by a decrease in the volume of money. There never has been a decrease in the volume of money, nor has there ever been a stationary volume of money, unless accompanied by a stationary population and commerce, which has not sooner or later resulted in a general fall of prices, and there has never been a recovery therefrom except through a preceding increase in the volume of money.

The findings of this commission are in general accord with evidences appearing in the reports of nearly all the monetary commissions, whether European or international. But the recommendations of creditor nations you may well expect will frequently be different, as their interests lie in the direction of gold appreciation.

FREE COINAGE THE REMEDY.

Then what must be the remedy for existing evils? What the cure for the scarcity of money and its attendant evils? What the relief from the sudden and general fall of prices which so clearly mark the rise of money.

The enemies of our welfare and commercial prosperity in Europe and the enemies of silver on the floor of this House tell us we must repeal the last fragment of law that looks toward a larger use of silver, stop the issue of between three and four millions of legal-tender Treasury notes—good, safe Government money—now furnished the people every month and lower our prices and bow our heads to the yoke of the gold standard and do it immediately by voting for an unconditional repeal.

They acknowledge that our country is crippled and our commercial and financial affairs panic stricken, but they propose to cure the crippled patient at once by cutting off another one of his arms, and taking the right foot that they have bruised and hobbled for many years and cut it off close to the hips, and then they say he will be sound and perfect and beautiful to behold.

We say let him stand sound and perfect on both feet—gold and silver—and have the right and proper help of both arms, greenbacks and silver certificates, and then he can run toward victory with great assurance in the race for commercial and industrial prosperity. We want no one-sided and one-legged monetary systems here in America.

And we will take no further prescriptions from European sources.

GOLD EXPORT.

Bimetallism best prepares us to maintain our independence among the commercial nations of the world.

If we have the broad and doubly sure foundation of both gold and silver as the basis and standard of our monetary system we are in a position then to meet all probable demands for export of either metal with ease and safety. We are doubly sure that we can maintain a coin basis for ultimate redemption of any reasonable amount of paper circulation. If there is a scramble for gold in the gold-using monarchies of Europe and they will give enough to satisfy our people in other commodities, they can have our gold, a hundred millions of it, or more, enough to double the central stock of England or the entire stock of Austria, and we are safe. We still have silver, which, under free coinage, will answer every purpose. But if we are on a gold standard we, too, must then enter into the general scramble which so appreciates gold again that our prices drop and our debtors are robbed of their property, even if we succeed in outbidding Europe for gold. If, as some argue, our gold will all leave us for a time, still we have a compensating supply of silver, and gold will be at once cheapened throughout Europe and the world and therefore return when specially needed.

RATIO.

I had intended to discuss the question of ratio, but time will not permit further than for me to say that Europe is now maintaining $1,500,000,000 in silver coin at a parity with gold on a ratio so low as 15½ of silver to 1 of gold. That overvalues silver nearly 100 per cent, yet gold men do not protest. Germany, that was pointed out by one of the advocates of a gold standard, the gentleman from Ohio

[Mr. Harter,] as a sort of Eldorado and model in the workings of her monetary system, maintains over a hundred million dollars in legal-tender silver at a ratio of only 15½ to 1, and over another hundred million dollars in silver-limited tender at a ratio of less than 14 to 1, and yet no one of these gold advocates has urged upon Germany the importance of changing her ratio to 28 to 1, nor have I heard them calling their European friends dishonest or base, or charge them with endeavoring to cheat their creditors or the poor of their lands by palming off $1,500,000,000 of cheap silver upon them at a ratio of 15½ of silver to 1 of gold. It seems that their only attack is on our own country.

Our legal-tender silver is already at a better ratio, that is, more favorable to gold than theirs, for we have coined at the ratio of 16 to 1 for over fifty years. Let us not then foolishly change our ratio. Let us in the matter of ratio take our opponents at their word for one time and await till Europe changes her ratio before we change ours, and crowd more silver into the dollars for the benefit of creditors and creditor nations than was in the old standard dollar promised them when the debts were made and bonds given. I will present in proof of my remarks the recent Treasury Department table of the monetary systems, ratios, and stocks of money in the leading countries of the world.

Monetary systems and approximate stocks of money in the aggregate and per capita in the principal countries of the world.

Countries.	Monetary system.	Ratio between gold and full legal-tender silver.	Ratio between gold and limited tender silver.	Population.	Stock of gold.	Stock of silver.			Uncovered paper.	Per capita.			
						Full tender.	Limited tender.	Total.		Gold.	Silver.	Paper.	Total.
United States	Gold and silver.	1 to 15.98	1 to 14.95	67,000,000	$604,000,000	$538,000,000	$77,000,000	$615,000,000	$412,000,000	$9.01	$9.18	$6.15	$24.34

From this table (the most recent official table published) we can at a glance see—

1. That there is more silver money in the world than there is gold.
2. That the gold standard countries are all in Western Europe or in provinces subject to the rule of England, except West Indies.
3. That they are all under monarchical form of government.
4. That France, whose government is Republican and whose people seem always prosperous, has more silver money of full legal-tender quality than there is of gold in either England or Germany, the leading gold standard countries, and at the same time has more gold also than either of them and a larger per capita circulation of either gold or silver than either of them, and more than double the per capita circulation counting paper money as well.
5. That there is over $1,500,000,000 in silver in circulation at a ratio of less than 16 to 1 (that is 15½ to 1) in Europe and indeed nearly all the silver in the world is coined on a smaller ratio (that is, a higher valuation for silver) than our old standard ratio of 16 of silver to 1 of gold.
6. To change our ratio, therefore, to anything above 16 to 1 would be to depreciate silver by mint law lower than any other nation of importance in the world.
7. To again demonetize silver would be to furnish England with cheap silver to trade with silver countries and deprive our own people of their best money.
8. To remonetize silver with free coinage would at once give us the trade advantages with all silver-using countries, embracing over 800,000,000 people, or two-thirds of the trading people of the world.

APPRECIATION OF GOLD.

As to there being serious fluctuations in the market between gold and silver bullion and a great fall in silver and all other property when measured in the highly appreciated gold prices, the facts accord with what bimetallists have taught for years and still teach.

Doubling the demand for gold, that ensues by requiring it alone to serve as money of ultimate redemption and take on the additional use of filling the place of demonetized silver, while yet doing duty also in its own place as a money metal, *must appreciate gold.* On the other hand, cutting off the demand for silver by demonetization or restricted coinage would tend to lower the bullion price of silver. Hence the rise of gold, the fall of silver and the variation of ratio price between them as commodities is thus brought about. If all the conditions were reversed no one need doubt that silver would rise and gold would go down, and the variation would probably be even greater, for silver has always been more stable and constant in relation to property values than gold. Free coinage of both metals on the old ratios will cure all these evils and keep them substantially free from fluctuations.

SILVER THE RELIABLE STANDARD.

To prove beyond serious question that silver is the more reliable measure of values, and that, measured in gold prices, all other prices on staple products have fallen with silver, keeping almost constant ratio to silver prices, we introduce the following tables giving in parallel columns the American computation on prices and the foreign, prepared by Mr. Sauerbeck, and covering a range of forty-five leading articles of commerce which he also compares with silver.

This proves beyond all doubt that gold has appreciated while silver, measured in the prices of commodities, which is the only scientific method of testing the question, has kept a substantially uniform value with all other leading commodities.

We conclude, therefore, that silver and not gold is the world's truest measure of the world's values and moving commodities.

Year.	American computation, price of—			European computation—Mr. Sauerbeck's index numbers.	
	Silver.	Wheat.	Cotton.	Index number of 45 principal commodities.	Index number of silver.
1872	1.32	1.47	19.3	.....	99.2
1873	1.29	1.31	18.8	.....	97.4
1874	1.27	1.43	15.4	102	95.8
1875	1.24	1.12	15.0	96	93.3
1876	1.15	1.24	12.9	95	86.7
1877	1.20	1.17	11.8	94	90.2
1878	1.15	1.34	11.1	87	86.4
1879	1.12	1.07	9.9	83	84.2
1880	1.14	1.25	11.5	88	85.9
1881	1.13	1.11	11.4	85	85.0

1893	.75	.68	7.2	.....	.....

Sir William Houldsworth, deriving his information chiefly from the United States mint authorities, has recently stated in the discussion at the Manchester Chamber of Commerce that from 1687 to 1873, the year of silver demonetization, a period of nearly two hundred years, there was only a variation of 1.8 in the ratio between silver and gold, while in the next nineteen years, under the period of demonetization, 1873 to 1892, there was a variation of 8.1 in the ratio.

ACTION OF COUNCIL OF INDIA.

Now, since the demonetization or limited coinage act forced upon helpless India by England, through the Indian council, we have another violent fall in silver; another violent fall in prices of all other staples, or in other terms, a still further appreciation of gold, and a still further variation in the commercial ratio, and a financial panic and a period of enforced liquidation, as it is mildly termed throughout the civilized world. What can you call a period of liquidation in times of panic but a period of giving up and transferring the property of debtors to creditors at a ruinous sacrifice to the debtors and an enormous gain to the creditors?

While on this subject of the recent action of the British India council in closing her mints and precipitating such great losses upon her subject peoples, how, I wish to ask you, do they excuse themselves for it? Do you not know that their excuse was that they feared the United States might do so also and complete the demonetization of silver by unconditionally repealing the Sherman law? And now you seek to do that similar act in this country, to strike down silver again, and excuse yourselves to your constituency by pointing to what the council of India have done. Does not this look like conspiracy with England? Do you not, gentlemen of the gold standard, fear that you may yet have to meet the scorn and ridicule of your constituency? Why, sir, the very tramps your panic-breeding processes have forced from the paths of happy industries into the public streets and highways, when they once comprehend the legislative sources of their misery and degradation, are liable to turn away from you and your flimsy excuses, and thank God they are not yet so low as to have purposely brought ruin and starvation upon their fellow men.

But I hope yet, in the midst of all discouragements, to see this country rescued from the intolerable grasp of the great conspiracy.

The songs and salvos of my fellow countrymen redeemed—even though sung and sounded above my grave—shall be sweeter to me than any division of spoils that your proposed empire of wealth can give.

BIMETALLISM THE ONLY SAFE BASIS.

On the necessity of bimetallism as the only safe basis of maintaining a proper superstructure of paper currency, I ask leave to insert my remarks on this subject before the World's Fair Congress of Bankers and Financiers in Chicago last June.

MR. PRESIDENT, LADIES, AND GENTLEMEN: As representative of the State of Wyoming in this world's congress of bankers and financiers, I can bring to you but little of interest regarding the special features of banking in our State.

Wyoming is the youngest of the States, and has accepted nearly all of its features in banking from the older States.

Regarding its resources, much might be said, as they are prospectively very great. In iron, soda, petroleum, and coal our resources are marvellous. In precious metals we are midway between the more largely developed mines of Colorado and Montana, and no one is daring enough to deny but that the resources of Wyoming, when extensively prospected and developed, may be found to contain the same mineral wealth that enriches our bordering States.

But a more interesting and vital question to the people of Wyoming is this:

If money of intrinsic value qualities is to be the money of ultimate redemption, if the specie basis of paper money is to be maintained in the future as in the past by the great banking interests of the world, then shall we strengthen or weaken that base, shall we broaden or contract the metallic foundations of the currency of civilization? Shall we eliminate and demonetize one-half of the metallic and specie basis of paper money and then expect the people of our State and country to have the same confidence in the integrity of our national finances as they could if the old standard foundations were maintained?

It is all very well to cry out to the people, "Have more confidence," but if at the same time you seek to take away from them the half, and more abundant and sure half, of their specie basis and intrinsic value foundations of money, how can you expect them to maintain confidence in you or the monetary system you advocate?

Confidence in any system of financial legislation among a free people must have an intelligent basis. The principles of finance must be clear and well grounded in the convictions of the people, and the people of Wyoming are no exception to the rule.

We know in Wyoming that the appreciation of a dollar, our national monetary unit, is the depreciation of every species of our products and property, excepting that little item of gold.

We do not have to guess at this, for money measures the price of all things else, and to appreciate the standand of measure must necessarily depreciate all that is measured.

If you lengthen the yardstick you shorten the number of yards in any piece of cloth measured by it.

Again, to discuss the appreciation and depreciation of gold and silver, he is not yet qualified to discuss the question before such an intelligent body as this who ignores the element of demand and only considers the element of supply.

To demoralize silver and cut off all demand for it as a money metal is at once to seriously derange and lower the price, and then to turn around with the argument that the low price of silver as a commodity, with its chiefest demand cut off, is a reason for cutting off its use, a reason for perpetuating its demonetization, is a folly that would not be indulged in any body of American citizens where self-interest is subjected to reason and fairness.

Again, that European countries have discarded the use of silver in part is no reason why the American Government should do so any more than that a creditor should seek to bind a debtor to a more extensive form of payment is a reason that the debtor should clamor for the same thing.

The true and just relation between creditor and debtor is maintained by keeping a uniform volume, and, therefore, a uniform value of currency in circulation.

Whoever seeks to interfere with this is either ignorant or intentionally seeking to interfere with the equities of the contracts of the world, and, therefore, substituting injustice for justice.

How can this body, then, favor striking down half the money metal of the world, which necessitates, to be consistent, cutting down also one-half the superstructure of paper money resting thereon. And to shorten the money supply of the world one-half if to force an injury upon the industrial interests that is greater than any other calamity that can befall civilization.

To accomplish this by slow gradations may induce mankind to submit to it with less danger of successful resistance, but the aggregate of injustice is the same in the end. But to speak more particularly to Americans and of America.

As a national policy, when we find our resources in silver mining very great, how foolish indeed it must seem for us to enter upon a policy of cutting off silver as a money metal.

In ancient days great armies have been collected and wars carried on to obtain possession and control of mines of the precious metals. And behold here in our country a crusade organized for the exact opposite, a crusade to destroy the value of our own mines. This crusade would not be so dangerous to the American people if it did not interfere with the supply of good legal-tender money, and, therefore, depress prices, discourage industries, and destroy the hopes of prosperity among the people.

The bankers of our country should be slow to place themselves in opposition to the general welfare.

Every great institution in the world's history that has allowed its self-interests to carry it forward in direct antagonism with the prosperity and wellbeing of society, has ultimately been overthrown, and it is one of the necessities of mankind's existence that it should be so.

The people must live, and justice must live, too. I warn you, therefore, not only from the standpoint of equity and patriotism, but also from the standpoint of ultimate maintenance of your own self-interest, that you do not too far press the fight against either of the old standard and reliable money metals of the world.

There is an awakening of the people throughout the civilized world to the necessities of a broader basis and fuller volume of legal tender money with which mankind can carry forward the work and obligations of this enlightened age, and feed and clothe itself with both the material and spiritual comforts requisite to its highest existence. Let us not plant ourselves in the way of the world's progress. Let us, on the other hand, show ourselves, too, in the great march of civilization, worthy of both confidence and honor for the bold stand we take for absolute equity between the world's workers and the world's money dealers.

Mr. TRACEY. Mr. Speaker, I ask unanimous consent that the session this evening be extended until half-past 5 o'clock. It s done by agreement between the two sides.

The SPEAKER *pro tempore* (Mr. BROOKSHIRE in the chair). The gentleman from New York asks unanimous consent that the session be extended until half-past 5 o'clock this evening. Is there objection? [After a pause.] The Chair hears none, and it is so ordered.

Mr. TAYLOR of Tennessee. Mr. Speaker, with all proper respect for the opinions of some distinguished Republican leaders in the House and in the Senate, I coincide with my friend from Iowa [Gen. HEPBURN] who so eloquently addressed the House on yesterday, in the belief that the safest position for Republicans to occupy, in this emergency, is to stand on the Republican platform; and I wish to place on record, as briefly as I can, my reasons for this view and the vote I shall give when the voting is reached.

Some of us on this side of the House desired to introduce a bill, or an amendment to the pending bill, looking to the settlement of this question on some middle ground, but we are deprived of the opportunity of offering such a bill, or such an amendment, or any amendment whatever, by the special order under which the subject is being considered, dictated by the Democratic caucus and adopted by the Democratic majority of this House. In other words, the imperial Democracy has commanded us to "eat what is set before us, asking no questions for conscience' sake"—not for its conscience' sake, however, for it has already crucified its conscience on its own platform, and is now holding power under false pretenses. [Applause on the Republican side.]

If the bill introduced by the gentleman from West Virginia, providing for the unconditional repeal of the purchasing clause of the Sherman law, passes Congress without amendment and is approved by the President, and no legislation follows, I understand that, so far as this Congress is concerned, excepting that which is already coined, which, of course, will not be disturbed, silver will be destroyed as a money metal of the future, and that the unit of value will hereafter be attached to gold. It is true that we are assured that silver is not to be "discredited," and that further legislation is to follow.

If the destruction of silver was not intended, why did not you embody in this repeal bill some provision for its liberal use as money in the future? What reliance can be placed in promises now made by a party whose leaders regard the declarations of the platform on which they were elected as glittering "catchwords of politics?" And this is the remedial legislation insisted upon by the unconditional-repeal advocates, in the interest of a restoration of confidence and a return to better times.

With my friend from Louisiana [Mr. BOATNER] and my friend from Iowa [Gen. HEPBURN], I do not believe that all our ills are traceable to the operation of the Sherman law, for we know that under it, for two years prior to November last, the country prospered as it had never prospered before. Commerce and manufactures marched hand in hand with the thrift and prosperity of the mechanic arts. Labor reaped its reward and the country was happy in the possession of peace and plenty.

To show that this is not a false picture and that another question has played some part in bringing about the crisis which is upon us, I desire to read some Democratic authorities. The first is an admission from the New York Sun, and reads as follows:

Last year, in a season of general prosperity such as never blessed a nation living in the light of civilization, the prevailing industrial system was condemned with an almost revolutionary show of disapproval. All visible facts argued for a popular verdict directly opposite to that deliberately recorded by the immense majority.

The next is from the New York World, and is as follows:

Until the financial question is settled, and in the present condition of business, there must be no tariff agitation. It is vitally important that no new issue should be raised that will increase the apprehension already felt.

The third is from the New York Evening Post, and reads as follows:

We are willing, in the first place, to admit that anticipation of tariff changes may have had its influence in inducing caution among manufacturers. Expectation of such legislation, whether slight or radical, must in a measure operate thus.

Whatever may be the action of Congress in this matter, for one I do not believe that a full and substantial restoration of confidence and return to permanent prosperity can take place until it is known, with certainty, throughout the length and breadth of the land that our industrial system is to be let alone and not disturbed by hostile legislation.

Notwithstanding there is every reason existing for the expansion instead of the contraction of the currency—for we know that as the business and population of a country increase, its volume of currency should be increased in like proportion—it is now proposed to contract the currency by abolishing silver and adopting the single gold standard, thereby making money still dearer, the wages of labor still lower, and the price of every species of property still cheaper, and the ability to pay debts absolutely out of the question.

Mr. Speaker, I am unalterably opposed to the remedy offered by the gentleman from West Virginia. It means the demonetization of silver. I will never vote to demonetize silver. It means the establishment of the single standard. I will never vote to make gold the sole unit of value.

Such a policy, in my judgment, would not only contract the currency, would not only leave the volume of money insufficient to meet the demands of commerce and trade, thereby paralyzing enterprise and crushing the millions who are in debt, but it would annihilate one of the greatest American industries and reduce to starvation rates the wages of labor everywhere.

Mr. Hamilton, who will never be questioned as an authority in this country, in his report in 1791 on the establishment of a mint, declared that:

To annul the use of either gold or silver as money is to abridge the quantity of the circulating medium, and is liable to all the objections which arise from a comparison of the benefits of a full circulation with the evils of a scanty circulation.

Arguing in the same report in favor of a double standard, Hamilton drew his conclusions as follows:

On the whole it seems most advisable not to attach the unit exclusively to either of the metals, because this can not be done effectually without destroying the office and character of one of them as money, and reducing it to the situation of mere merchandise.

He who was nearest the heart of the American people has spoken on this subject.

The weighty words of James G. Blaine are as pertinent to-day as they were the day they were uttered on the floor of the Senate, February 7, 1878. Advocating a bimetallic standard with all the strength and vigor of his great mind, he said:

I believe the struggle now going on in this country, and in other countries, for a single gold standard, would, if successful, produce disaster in the end throughout the commercial world.

The destruction of silver as money and the establishment of gold as the sole unit of value, must have a ruinous effect on all forms of property except those investments which yield a fixed return in money. These would be enormously enhanced in value, and would gain a disproportionate, and therefore unfair advantage over every other species of property.

In the same great speech Mr. Blaine declared that—

It is impossible to strike silver out of existence as money without results which—

would—

prove distressing to millions, and utterly disastrous to tens of thousands.

Mr. Speaker, I believe the double standard of gold and silver ought to be maintained, because the striking down of silver, as Mr. Blaine has argued, would enormously enhance the value of gold and destroy a world of wealth in our own country. Gold is already enhanced beyond the reach of business and labor—the bulk of it is hid away in vaults—it is the natural inclination of those who have it to hoard it; besides, its volume is not great enough to make it the sole basis of our circulation: there is not a sufficient amount of it in existence, if it were all coined into money, to meet the demands of the commercial world. Above all other people I think the American people can least afford to join in the effort to rob silver of its equality with gold as a money metal—for America produces at least one-third of the world's supply of silver.

If we have millions of bushels of wheat and millions of pounds of cotton, let us thank God for the rich fields that produced them; if we have millions of bushels of corn and millions of bushels of oats and rye and barley, let us rejoice that we live in a land that yields such abundant harvests; if we have gold mines—let us coin the shining metal to increase our national prosperity and happiness—and if streams of silver flow from inexhaustible fountains in the mountains of America, let us coin it, too, and be thankful that we can supply the world with the silver half of the double standard. [Applause.]

Why should we enact law that will impoverish the farmer and stop his plow because he raises more grain than we can use? Why should we enact law that will shut down the furnaces and factories of America because they produce more goods than we can consume? Why should we enact law that will close our silver mines and at a single blow bring poverty to the doors of thousands of our people who but yesterday were contented and happy, and leave them without bread to eat, because we have more silver in America than is compatible with the financial ideas of England and Germany?

Gentlemen of the House of Representatives, we should approach this grave question with reverential care, since it involves that which should be most sacred to every public servant—the welfare of the American people.

Sir, this Republic is a grand mosaic work of empires, the last triumph of the genius and wisdom of the ages. Every State of this Union, itself a superb mosaic, was joined to every other State on the straight, smooth lines of one common and harmonious destiny. Every block inlaid in this glorious picture is the embodiment of some American interest. If you destroy one you disturb the relations of each to each, and you destroy the harmony of the whole. If you assume the right to destroy one, you may assume the right to destroy the whole.

Mr. Speaker, I have hitherto voted in the Fifty-first and Fifty-second Congresses for protective laws which have made New England rich. With my distinguished friend from Maine [Mr. REED], who sits near by me here, I have never faltered in my loyalty to the American system of protection; I have always voted for measures, as a representative of the people, which I thought would encourage the development of the untold wealth of my own native State of Tennessee. Whatever may be the course of others, I will never be guilty in the Fifty-third Congress of the inconsistency of aiding in the destruction of Colorado, and Montana, and Nevada, and their sister States and Territories, by the wiping out of their greatest industry and the impoverishment of their people. [Applause.]

I believe that the protection and maintenance of the double standard of the two money metals of the world, which have come down to us from Abraham through forty centuries, with a fair and honest ratio existing between them, will give more business, more wages, more contentment, more happiness, more wealth, and more power to our country than any other legislation that can be enacted.

I believe that the wisest statesmanship is that which protects American labor, American industries; and every American interest. [Applause.]

Mr. CANNON of Illinois. How much time have I, Mr. Speaker?

The SPEAKER *pro tempore*. The gentleman has twenty minutes.

Mr. CANNON of Illinois. Mr. Speaker, in twenty minutes' time I can hope to do little more than briefly to give some of the reasons for my vote as it will be cast on Monday next. We are in extraordinary session. The country is in an extraordinary panic. The President convened the Congress, and, as in duty bound, sent to us his message, in which he gave his reasons for calling us together, and told us, what we all knew, that there was panic and depression abroad in the land.

The disease all recognized, he told us the cause of the disease as he understood it, and stated it to be the purchase of silver under the so-called Sherman act. He gave no uncertain sound, and the remedy that he recommends is the immediate repeal of the purchase clause of that act. If the President has diagnosed the disease properly and advised the proper remedy, then, without respect to that side of the House or this side of the House, patriotism demands that we should apply that remedy. But if he is not correct in his diagnosis and we apply the remedy, not understanding the real cause of the disease, we shall but aggravate it. The President has performed his duty; we are now to perform ours. I do not agree—and I say it with respect and modestly—I do not agree with the President in his diagnosis of the disease.

I do not believe that the purchase of silver under the Sherman act or its coinage under the Bland act is responsible for the pres-

ent depression throughout this country; and, not so believing, I am not ready to help in giving the medicine which the President recommends. I may be mistaken. If so, I honestly mistake.

We are told that this cheap silver money is driving gold out of the country. Is that true? I think not. True, we lost a large amount of gold from the 1st of January last to the 1st of July; but the silver did not drive it out; we paid our debts with it. Great Britain, under depression almost as great as ours (and while ours has lasted but three or four months, hers has lasted for three or four years), needed the money; we were in debt to her; and she said "Pay"; and we did pay. And here is proof, strong as that of Holy Writ, that I am correct in this statement, because while eighty odd millions of gold journeyed to the other side to pay our debts, side by side with it went $17,000,000 of silver for the same purpose.

Now, did the gold drive the silver out or did the silver drive the gold out, or did they both go to pay the balance that was against us? I need only to ask the question; the answer is obvious.

Again, within the last month nearly $30,000,000 of gold has returned to the United States from abroad. What brought it back? It came in payment for our exports, largely wheat and provisions.

It is said that good money hides because of the cheap Treasury note issued under the Sherman act. I deny it. You can not find with a search warrant amongst capitalists or laborers anywhere in this country anybody who is afraid that his currency will not be as good as gold, is not as good as gold now. I measure my words when I so speak. Why? Because under the law, the United States is bound to, and does day by day when demanded, give the gold for any currency that we have. There has been but very little of redemption—why? Because, first, the people are satisfied of the honesty of the United States; and, second, they are satisfied of its ability in the premises.

Think a minute. We have a panic the like of which I have no recollection of (and I am on the wrong side of fifty). We have a President (and I speak of him respectfully) that for eight long years in office and out of office has followed the silver currency of the country with as great ferocity as Herod followed the infant Savior when he commanded that all children under two years of age should be put to death in order to make sure of the destruction of the Infant King.

By letter, by message, in season and out of season, before the Chicago convention and after the Chicago convention—all the time he has been against it. He is charged with the execution of the law. We have a Secretary of the Treasury who, whatever he may have done himself, was reported in the public prints throughout the length and breadth of the country as having said that he would redeem Treasury notes under the Sherman act in silver alone. He does redeem them in gold. But that report begat doubt and fear.

Yet in the midst of all these surroundings, without the sale of one dollar of bonds with which to obtain gold to maintain the parity of our money, although there was full power in the premises, with an unfriendly administration, in the height of panic—all this money—$1,600,000,000, nickel, copper, silver, paper, gold—is all good; and from one ocean to the other you can not find anybody who has any fear with regard to the ability or honesty of the Government in so maintaining this money according to the pledge of the law. [Applause.] I submit that in view of these facts the President's diagnosis of the disease is not correct.

What are we called upon to do? To repeal the purchasing clause of the Sherman act. I wish I had time to talk about that much-abused act. It is not perfect. I have rarely seen any legislation that was perfect. Now, the Democrats are fully in power. I expect to see soon some legislation that is absolutely perfect. [Laughter.] Yet that Sherman act is a good act; it serves a good purpose. Under the Bland act, so much condemned, and the Sherman act, there has gone into the currency of this country since 1885, when Grover Cleveland was first elected, $300,000,000 of money as good as gold and redemable in gold and circulating side by side with it.

But, asks somebody, are you in favor of "cheap money?" No; God knows I am not in favor of cheap money. The little record I have made in the Congress of the United States shows that I am not in favor of cheap money. I am not here to abuse people who have money. I frequently wish I had more of it myself. Abuse of that kind is no argument. I am here in view of all the interests of all the people, to "cry aloud and spare not" in favor of good money.

Why, think of it. The total deposits in the banks, according to the last official report, were over $4,600,000,000; in the saving banks alone the deposits were over $1,700,000,000, with nearly five million depositors, representing nearly twenty-five million beneficiaries, counting each depositor as representing a family. Think of it! The life insurance companies (stock and mutual) are under obligation to pay their policy-holders this day over $3,000,000,000.

Those policy-holders represent 1,000,000 families, scattered throughout the length and breadth of the country. The assessment life-insurance companies are bound under their agreements to pay their policy-holders nearly $5,000,000,000 to 5,000,000 of people. These men are to be paid in good money; and in the aggregate the credits and property of the common people of the United States by the side of the credit and the property of the capitalists are as the mountain to the molehill. If there is anybody in God's world who is interested in stable and sound money it is the people who live through the sweat of their face. The people who are in the mine, on the railway, on farm, and in factory produce annually in the United States products to the value of $12,000,000,000. Oh, no.

I am not here to degrade the currency; but, while that is true, I am not here to obey the command of the extreme people who want gold and gold alone for currency; that means contraction and wrongs the debtor. Nor am I here to obey the command of the extreme people who want silver and silver alone for currency, and only 60 cents' worth in a dollar; that would wrong the creditor. One would bring us to the yellow metal alone for money; the other, in the name of bimetallism, would bring us to the white metal alone for money. I want both metals. My party, in a national platform, pledges me to both metals. Good politics pledge me to both metals. I believe it is entirely practicable to have them.

What would I do in the meantime? I would let the purchase clause of the Sherman act stand until the other side of the House can meet this side of the House calmly and cooly; not under the influence of panic or excitement or prejudice; not without power even to offer an amendment, but with the full power of amendment and debate, and after full consideration enact a provision that would utilize all the silver that may be offered for use as money at its commercial value. In my judgment this can be done by allowing any and all owners of silver bullion to deposit the same in the United States Treasury at the world's market price and receive therefor certificates or Treasury notes redeemable on demand, in sums of $100 or any multiple thereof, in silver bullion at the market price, or gold coin, at the option of the Government, making the Treasury notes a legal tender for all debts, public or private.

I believe it can be done. But why do you not offer the amendment, says some one. Because, Mr. Speaker, the extreme silver and fiat money men in this House met and shook hands with the extreme gold men on the Democratic side of the House, and adopted the rule under which you are now proceeding, that says I shall not have, as the representative of my people, the poor opportunity of offering a single amendment of any character on this subject. [Applause.] That is the reason. I am powerless. The ship is at sea, and I can not help it. Sixty-five millions of our people are on board ship, and we stand here to-day without power to help man a boat or unfurl a sail.

I listened with much interest to one of Georgia's favorite sons [Mr. TURNER], strong on that side of the House and strong always, a few moments ago, when he proceeded to exhort the Democratic party to come together and unite upon a proposition that would solve the question and be just to all. Oh, how my ear was inclined, watching and waiting for that proposition. But, Mr. Speaker, he hid his proposition under a bushel. If he had proposed it, the House could not consider it under this cast-iron rule, made by the Democratic side of the House, cutting off all amendments. What does wisdom counsel us to do? I will answer in a sentence. There are six hundred millions of gold and about that much silver in this country; we have over 65,000,000 of people; the population is increasing at the rate of 2,000,000 every year; we now have power to sell bonds to maintain all the money at a parity.

Without the sale of one dollar of bonds, I am satisfied that during the Administration of Grover Cleveland under existing law we can go on and have an increase in the currency of nearly $40,000,000 a year, and that all the money will be as good as gold after four years of the Democracy under President Cleveland. I think the people, having tried a new experiment, will turn back to their first love. [Applause on the Republican side.] In any event I will not help change existing law unless you put something better in its place.

Gentlemen say there is a congestion of the currency. Yes; but the great trouble is a congestion of credits. Nine-tenths and over of the business of this country is done on credit. That credit being destroyed, that much more work is thrown on the currency. Of course, then the currency is scarce and inadequate. But with all that—with this scarcity of currency, with money all good and millions to follow just as good, under the operation of the present Sherman law—it is gravely proposed to stop that increase of the currency by a repeal of the purchasing

clause of that law which puts it in circulation and substitute nothing in its stead. Mr. Speaker, for one, my judgment from every standpoint is against it, and I will vote against it. [Applause.]

But, says somebody, will you vote for free coinage of silver? No; not under existing conditions unless you put a dollars' worth of silver in a silver dollar. And I will tell you why. With the nonuse of silver by the principal commercial nations in the world, and the late action of England with regard to the India mints, I do not believe that the free coinage of silver on the ratio of either 16 to 1 or 20 to 1 will assure us both gold and silver.

My judgment is that such coinage of silver would drive the gold out of the country, and we would have silver in cheap dollars alone for money. In the fullness of time I believe the coinage ratio of gold and silver will be settled by agreement between the principal commercial nations of the world. When that is done, we can safely have free coinage of silver. In the meantime it is our duty to utilize silver at its commercial value for currency. Silver always has been, is now, and in my opinion always will be, one of the money metals. [Applause.]

"Ah! but," says somebody, "we want to repeal this act to strengthen our credit." Strengthen it where? I ask; in Europe or at home? Mr. Speaker, the Government's credit does not need strengthening at home. You can not find any citizen of the United States who does not believe that the credit of the United States is now first class; in Europe the credit of the United States is first class. I put it to you, Mr. Speaker, and gentlemen present, when the obligations of your and my Government, standing side by side in London, are worth as much money as is the English consol, that our credit is as good abroad as their credit is at home.

Oh! But says somebody, They are afraid they are going to be paid in cheap silver. Oh, no; the laws of this country can be read of all men, and the construction given to those laws by both Democrat and Republican administrations, tells everybody everywhere that all the money Uncle Sam has in his hands, and all his obligations, as well as all the circulating medium, is to be gold and that which can look gold in the face and say, "I am as good as you are." [Applause.]

[Here the hammer fell.]

Mr. WALKER was recognized and yielded five minutes to Mr. CANNON of Illinois.

Mr. CANNON of Illinois. My friend is always very kind to me. I do not know that I can enlighten the House in five minutes much further in addition to what I have already said. There are many things to strengthen my position in my own mind, that, given time and opportunity, it seemed to me I might have urged. But to conclude in that five minutes the matter of which I was talking when the hammer fell. They say, repeal the Sherman law in order that you may strengthen our credit abroad.

I repeat, it is already as good as that of any nation on this earth. "Well," but say some of these gentlemen, "repeal the Sherman law and we will give you something to go in its place." Will you? Is there a man on that side of the House who can say that any proposition touching the utilization of silver as money can be written upon the statute book with the approval of your President, Grover Cleveland? I pause for an answer; if anybody is authorized to speak for him let him answer here and now.

The gentlemen from New York [Mr. WARNER] and from Ohio [Mr. HARTER] both stand pledged to repeal the tax on the circulation of the State banks. The last Democratic national platform pledges such legislation. That would give us old-fashioned Democratic wild-cat money. Mr. Speaker, for myself I am free to say that if I have to choose between silver at the ratio of either 16 to 1 or 20 to 1 of gold on the one hand, or the revival of the wild-cat currency that cursed this country up to 1860 on the other, I will be found for silver every time. [Applause.]

To my Republican friends, in conclusion, I say, to what feast are we invited? To the repeal of this act that we wrote upon the statute book, and that has been beneficent in its operation; and when it is repealed, with a contracting currency and an increasing population, we have full notice that there is to follow fast and furious upon its track the performance of the pledge made by the Democracy, upon which they say they won full power, namely, to strike down the last vestige of protection to American industries and American labor, and place upon the statute books in lieu thereof a tariff that will yield revenue only, but no protection to any American citizen who walks upon our soil and breathes our air.

In full competition with labor abroad, importing that which we heretofore made, with a contracting currency instead of an expanding, safe currency—that is the feast to which we are invited by our Democratic friends. For one I will go hungry before I dine at such a table, for that matter I would go hungry if I dined at such a table. [Applause on Republican side.]

[Here the hammer fell.]

Mr. WALKER. Mr. Speaker, my friend from Illinois [Mr. CANNON] has just asked, to what feast are we as Republicans invited? Let me say to him that we have been complaining for many years, and are now complaining, that the feast the Democratic party provides is not a feast fit for our attendance; but if they have now provided a feast fit for our attendance, I am willing to go, and to go joyfully, and propose to go; and they certainly have done so in their proposition to repeal the purchasing clause of the silver act of July 14, 1890.

The great complaint which is made against our monetary system is the lack of currency. That is the burden of the song of my friend [Mr. CANNON] who has just taken his seat. Let me say to this House that it is impossible to have "enough" currency unless the currency is flexible. We have now $1,100,000,000 of currency of various denominations, ring-streaked and speckled.

We have a financial system that is a disgrace to the United States, as is our currency. Our bank exchanges are about $400,000,000 a day. Three and a half per cent of these exchanges are made in currency and we are short of currency. Yes! And we would be short of currency, and just as short, and suffer from it still more by the law that governs all finance, if every dollar of this $400,000,000 a day was transacted in currency.

Were a law passed to-morrow that forbade the use of any check, draft, or bill of exchange, or any personal paper money of any name or nature, except paper money issued either by the Government or by the banks, so that every merchant had to keep in the form of currency in his safe what now he keeps to his credit in a bank and draws upon with his check, and if we had one hundred billions of paper money instead of one billion, we still would be short of currency in times like these, and suffer more, for the lack of currency in such times than we do today. No currency is sufficient, or can be sufficient, that is not elastic.

Why are we short? Because all the currency in circulation, be it more or less, will be used in the normal trade of everyday life. No man now gives a check for $1,000 who has a thousand dollars in bills in his safe, that he wishes to dispose of, because he does not wish the trouble and risk of keeping it.

REORGPNIZE THE BANKING SYSTEM

Therefore our remedy is to reorganize our whole banking system of shreds and patches. Pass the banking bill that your Democratic committee reported to the House at the close of the Fifty-second Congress, reported by that staunch Democrat, the gentleman from New York [Mr. BACON], and your financial ills will be cured. Under that bill the currency of the country, as such, would not cost the people one farthing, and it would give you a leeway of from $100,000,000 to $200,000,000 that might be used in any crisis or when any exceptional demand was made upon it. What makes us short of currency? Is it that the banks lock it up?

We are told on this floor, out of the same mouths that tell us that the banks lock up currency to injure the people, that the banks are paying anywhere from 1 to 3 per cent premium for the use of currency. Who then is locking it up? It is the man who is thrown out of employment by this financial crisis, who, drawing his wages, locks the money up in his pocket. And when you count these cases by the hundreds of thousands, you account for the disappearance of the currency.

The pocket becomes his place of deposit instead of the bank. The moment these men have employment this currency will again flow into the channels of trade. I have no especial objection to the bill of my friend from Ohio [Mr. JOHNSON], allowing bonds to be deposited and money to be taken out when the interest on them stops for the time they are allowed to lie in the Treasury. That would be paying interest on the currency taken, but it is an expedient that never would be availed of to any great extent, and I do not think it would be particularly a valuable addition to our banking statutes. But one additional patch to our present patch banking system will do no particular hurt if not positively injurious.

THE DUTY OF THE HOUR.

Mr. Speaker, we are called together to legislate in the midst of what threatens to be one of the most serious seasons of liquidation the country has ever seen. I shall not, at this time, stop to consider what has caused it. At another time and on the appropriate theme, I shall have some observations to make upon it. The duty of the hour is so plain that no serious-minded man can fail to see it and bend his utmost effort to the task of relieving the country from its trouble.

That the purchase clause of the silver law of July 14, 1890, is a menace to the best economic conditions of our people and ought to be at once repealed is practically unanimously agreed to by all. None see its uneconomic provisions or are more earnest to wipe them from the statute books than those who framed it. They see them now no more clearly than they did on the day they framed it and secured its passage.

As I said in this House on July 6, 1890, of a similar bill, it was not in itself wise financial legislation. It was pure politics. Not party politics, but wise statesmanship. In the then condition of financial opinion in the country it was one of the wisest pieces of statesmanship ever accomplished to stay impending calamity.

The situation that confronted us was that of one political party voting nearly unanimously for the free and unlimited coinage of silver, with a few of the other party. Not an additional one could then be saved to honest money in the Democratic party, and a majority of the constituents of scores of the Republican Congressman, who had been voting against free coinage, were determined to force their representatives to vote for free coinage against their personal convictions, as too many others had done. They must have some safe delivery from the free-silver majority in their districts, or free-coinage Republicans or free-coinage Democrats would take their places. Had two or three score more of such Congressmen gone home from the Fifty-first Congress to defend their votes for free coinage, instead of defending their votes for the silver act of July 14, 1890, and to condemn the free coinage of silver, the next Congress was about as sure to pass a free coinage of silver bill over a veto, by a two-thirds vote in both Houses, as it was to assemble.

The sensible financial men in the country did not then believe free coinage of silver was imminent. No begging or pleading could induce a single banker or economist to render the slightest assistance to the friends of sound money on the Coinage Committee in the first session of the Fifty-first Congress, while the free coinage of silver men confessed to spending thousands of dollars on a powerful lobby during the whole session. Time to arouse the country was absolutely necessary. That, and more, we safely got in the so-called Sherman bill. That bill gave the silver miner all the advantages he could possibly get from the free and unlimited coinage of silver, and all others all they could justly get from free coinage, while fully maintaining the existing measure of value. It was our deliverance through a truce, with its advantages almost wholly with the sound money side, and fatal to the free coinage of silver. Never was any legislative act more fully justified by the results.

It was framed and passed to repeal the far worse Bland-Allison act of 1878, and to break up and defeat the free-coinage forces of 1890; to be itself destroyed, after having done its work, which is already accomplished. It now stands as the last fortress of error, in which are massed all the forces of unsound financial theories. When its walls are leveled to the ground the enemies of sound money, who were skillfully allured within its walls in 1890, will be dispersed, never again to win another strategic position.

CLAIMS OF FREE COINAGE ADVOCATES NOT BASED ON FACTS.

Never did any party fight its battles on such an array of statements for truth that were utterly without foundation in fact. Never did any party so completely rely upon figments of the mind. Never did the devotees of any cause know so many things that are not so as the advocates of the free and unlimited coinage of silver. Nothing that they can conceive of as damaging to the cause of sound money do they fail to assert. They never stop to ask whether they are true or not, or seem to care to prove any of them by sober facts.

The demand for the free coinage of silver is a rebellion against human progress. Progress is possible from savage to barbarous conditions, or from barbarism to civilized man, excepting as man commands more in kind, quantity, and quality of commodities for each day's labor, and this is impossible unless nominal wages rise or prices of products fall, or both.

For centuries man remained stationary. No progress was made in material things, and therefore no progress was possible in intellectual or moral things. It is as impossible for nations to make intellectual and moral progress, excepting through material progress, as it is for a man to get broader views from a greater height while chained on the plains below.

Again, one of the prime conditions of progress is the certainty to man of his having personal possession of and a personal advantage for the things he produces. And the greater personal advantage a man can get from exchanging the things he produces, as well as the more things he can produce, acts and reacts to send him forward to happier conditions.

It is because of the greater volume and better quality of products that a day's work will buy, alike on the farm, in the shop, as well as in the silver mine, the gold mine, coal and iron mines, that this rebellion against the "world's measure of value" was begun and has gained such a momentum. Man has advanced in social well-being since 1860 as 168 of 1891 is to the 100 of 1860, as shown by his average wages. Mature manhood, and more especially the young, just entering on life's work, have in that proportion a brighter future before them than their fathers had. The struggle for free coinage of silver is a struggle to put man back from a condition represented by the 168 of 1891 to the conditions represented by the 100 of 1860.

We have the highest authority for believing that "he that oppresseth the poor to increase riches, and he that giveth to the rich shall surely come to want;" and the free coinage of silver will do both.

THE QUESTION NOT ONE OF COINING SILVER.

This question is not one of simply coining silver, or of coining gold. Never have so many silver dollars been actually coined in this country, relatively or in number, as in the last fifteen years. It is purely a question of continuing our present measure of value.

For forty years, from 1834 to 1873, there were only 6,591,713 silver dollars coined, an average of 164,793 each year, while we now have more than $400,000,000, not one of which will be made any the less "full legal-tender money" by repealing the purchase clause of the silver law of July 14, 1890.

It is purely and only a question as to what shall be the "money of account," and what shall be the metal in which banks shall pay to each other the balances due; and whether we will continue to exchange commodities, at the international world's measure of value, or whether we will descend to the monetary condition of Mexico, India, and China. Not a member of either House of Congress can be found who favors an "all gold coinage," but every one of them protests against an "all silver coinage," which is what free silver coinage means. Every member who favors the repeal of the silver-purchase clause of the law of July 14, 1890, favors the use of silver as "full legal-tender money" to the last dollar that can be economically used.

The silver coinage men wholly mistake the nature and work of money. None but misers ever borrow gold or silver money, excepting to immediately exchange it for other commodities they desire, and every other form of money is only an order for products as a deed is an order for the delivery of the farm.

Gold stands in precisely the same relation to trade and commerce that the regulator to an engine does to the steam that moves it. A desire for and the exchange of products, not money, is what moves the world. Importing or exporting gold is never done except as a corrective to bring trade back to its normal and safe condition.

It has no more relation to, and affects trade no more than, the increased radius of the balls of the regulator on the engine has to the work accomplished in the factory by the means of the steam. Coin, excepting that carried in the pockets of the people and doing only the work of currency, and doing it no better or safer than paper money, is purely a regulator. First, products are shipped: secondly, stocks; third, bonds; and lastly and infinitesimally, like medicine to man to correct disease, gold, and only in abnormal conditions. No nation can long ship or receive anything but consumable products.

SILVER WAS NOT SECRETLY DEMONITIZED IN 1873.

The most universal and blood-curdling statement made and reason given for the demand for the free coinage of silver is, that in 1873 silver was demonetized secretly and fraudulently. Not only is this without the shadow of foundation in fact, but the very opposite is true, as has been shown a thousand times. Never has there been more pains taken to make the country thoroughly familiar with an act than in the rearranging and codifying the coinage laws, which were completed in 1873 and passed unanimously. It was then thoroughly understood that gold and gold only was to continue to be our measure of value metal, as it surely has been since 1834. Silver dollars were then at 3.22 per cent premium and had been for forty years.

I ask to have read from the Clerk's desk an extract from the speech of the Hon. JOHN P. JONES of Nevada, made in the Senate April 1, 1874. Senator JONES was then, as now, as much interested in silver as any man in the United States.

The Clerk read as follows:

Does this Congress mean now to leave entirely out of view and discard forever a standard of value? Did any country ever accumulate wealth, achieve greatness, or attain a high civilization without such a standard? And what but gold can be that standard? What other thing on earth possesses the requisite qualities? Gold is the articulation of commerce. It is the most potent agent of civilization. It is gold that has lifted the nations from barbarism. So exact a measure is it of human effort that when it is exclusively used as a money it teaches the very habit of honesty. It neither deals in nor tolerates false pretenses. It can not lie. It keeps its promises to rich and poor alike.

Mr. WALKER. I will read an extract from a speech of Hon. WILLIAM M. STEWART, of Nevada, made in the Senate February 11, 1874. Senator STEWART was then, and is now, as much interested in silver as any man in this country.

I want the standard gold, and no paper money not redeemable in gold; no paper money the value of which is not ascertained; no paper money that will organize a gold board to speculate in it.

Also, on February 20, 1874, he said:

By this process we shall come to a specie basis, and when the laboring man receives a dollar it will have the purchasing power of a dollar, and he will

not be called upon to do what is impossible for him or the producing classes to do, figure upon the exchanges, figure upon the fluctuations, figure upon the gambling in New York; but he will know what his money is worth. Everybody knows what a dollar in gold is worth.

Mr. HOOKER of Mississippi. Will my friend allow me to make an inquiry of him?

Mr. WALKER. Certainly.

Mr. HOOKER of Mississippi. I understand you to say that the coinage act of 1873, in the revised code, they had passed the law. Is it not the fact that the act of 1873 never passed into the codified laws of the country at all until 1874; and that it then passed in the House and Senate without discussion?

Mr. WALKER. Mr. Speaker, that bill passed with the unanimous consent of the House and Senate, and was subsequently referred to repeatedly upon this floor and in the Senate as establishing a gold measure of value, without objection from any man in either body, having passed unanimously, and not only passed unanimously, but received unanimous assent. It was explained time and again, not on the day of its passage precisely, because it was as thoroughly understood at that time as nine-tenths of the legislation of Congress without discussion.

Mr. HOOKER of Mississippi. Without discussion?

Mr. WALKER. Without discussion on that day. I can not yield further.

Mr. HOOKER of Mississippi. That is the fact.

Mr. WALKER. In 1873 these men, and every other man in the country who discussed coinage or finance, excepting the advocates of fiat money, knew that only by reversing the natural laws of the universe could the commercial ratio of value between the two metals be changed or influenced to the smallest degree by law or by coinage.

ERNEST SEYD A BI-METALLIST.

Another reason given for free coinage is, that one Ernest Seyd was brought over from Europe by the "gold bugs of Wall street" with an immense corruption fund which he freely spent in lobbying through Congress the codified coinage laws of 1873. Like every other pretended fact against that law, the very opposite is true. Ernest Seyd was one of the most earnest, honest, self-sacrificing, determined believers in silver as money, and one of the most persistent workers against the action of Germany, France, and the United States on silver that ever appeared in Washington from this or any other country.

I ask to have read a paragraph from a writer on finance concerning Ernest Seyd.

The Clerk read as follows:

Who was Mr. Seyd? Mr. Seyd was an English banker, a man of means and widely known as an author on finance. He was a bimetallist, and the most zealous champion for and the best friend of silver that England has produced in this century. Long before 1873 and until his death, in 1881, he earnestly preached to the European nations the necessity and the advantage of opening their mints to the free coinage of silver. At the Paris International Conference of 1881 the United States was represented by Mr. Evarts, Mr. Thurman, Mr. Howe, and Mr. Dana Horton. At the fifth session of that conference Mr. Horton, after commenting on the death of the eminent Swiss financier, Mr. Feer-Herzog, said:

"I can not, however, now pass to our discussion without having mentioned another occurrence of a similar nature. I speak of the death of Mr. Ernest Seyd, the monetary writer, whose works are well known to you, and which took place at Paris since the convening of our conference. It was the profound interest which he took in the conference which brought him here, and which, I believe, hastened his death. How intense that interest was may be well understood when we remember that but a very few years have passed since the day when there was no serious opposition to the general adoption of the gold standard, except on the part of Prof. Wolowski, at Paris, and of Ernest Seyd, at London." [See letter of Ernest Seyd, Senate, *Congressional Record*, Aug. 22, 1893.

WALL STREET CAN NOT CORNER GOLD.

Mr. WALKER. Another reason given is that Wall street corners and controls gold. Here, again, a thing impossible to do is charged, and the exact opposite of the fact. How, I ask, is it possible to corner gold? It is as free to every man, rich or poor, wise or ignorant, if he has a dollar of paper money, as the air we breathe is to anyone who has lungs to breathe it. Corner and control a thing which every man, who owes a debt of any kind, must deliver for the asking, or deliver a greenback that will surely command it? Any man who talks such nonsense does not compliment his own intelligence or those he addresses. Periods of liquidation, attended with more or less of fear, and disorganized business are inevitable in highly civilized countries, and are dreaded by, and do more injury to, the men of Wall street than to any other class in the community. They do not have them in China, or in Korea, or among the Comanche Indians. They are an evil attending highly civilized conditions.

Another reason given on a par with the others is that Wall street makes money scarce and causes panics to enable it to rob the Western and Southern farmer. What a compliment to the great American nation that there are men in Congress to repeat such utter nonsense, and constituents to believe a thing that would seem incredible to the dullest mind! It is patent to every man who will give a moment's serious thought to it that the men of Wall street are more interested in having money plenty and payments sure and prompt than any other men on the face of the earth. Their destruction is in money stringencies and in panics. To illustrate their extent, and how Wall street suffers by panics, I present a table showing the prices of only thirty-three of the leading securities on the 7th of November last and on the 1st day of the current month, with a computation of the shrinkage of values in that period:

	Shares.	Prices.		Shrinkage.
		Nov. 7, 1892.	Aug. 1, 1893.	
Atchison	1,020,000	39¼	13¼	$26,775,000
Bos. and Alb	250,000	204½	196	4,175,000
Bos. and Maine	187,384	175	133	7,870,068
Ches. and Ohio	601,842	23½	13¾	5,717,499
C., B. and Q	764,070	103⅝	72	24,138,713
C., M. and St. P	460,272	81	50½	14,383,512
Chi. and Northern	390,542	116	90½	9,958,846
C., R. I. and Pa	461,560	83½	55	12,866,985
C., C., C. and St. L	280,000	64½	30½	9,520,000
Den. and Rio. G	380,009	16½	9½	2,660,000
Illinois Central	500,000	103⅛	89½	7,062,500
Lake Shore	494,695	134	108½	12,490,291
Louis. and Nash	528,000	70	52⅝	9,353,142
Mich. Central	187,382	110	75	6,558,370
Missouri Pacific	474,305	61¼	18¾	20,397,605
N. Y. Central	1,000,000	111	97½	13,250,000
Erie	774,275	27½	10½	13,065,860
N. Y. and N. E	198,090	45	18	5,347,430
Northern Pacific	490,000	18½	7	5,512,500
Old Colony	137,676	178½	172½	826,056
Oregon S. Line	262,448	23	7½	4,033,556
Reading	798,500	58½	12½	36,231,937
Pullman	360,000	198½	135	22,500,000
Union Pacific	608,685	40½	18½	13,619,226
Wisconsin Central	120,000	16½	6½	12,000,000
General Electric	300,672	115¼	40½	22,560,400
Ch. Junction	65,000	108	54	3,510,000
Bell	175,000	207½	173	6,037,500
Sugar	350,000	111½	65½	16,000,000
Sugar Preferred	350,000	103⅜	70	11,681,250
Calumet and Hecla	100,000	283	245	3,800,000
Western Union	948,198	98	73⅜	23,374,374
Southern Pacific	651,353	36¼	17	12,598,876
Total, 33 stocks				400,408,616

Here we have in only thirty-three Wall street properties, out of many hundreds, a shrinkage, on the basis of market quotations, of more than $400,000,000 to persons included in the term "Wall street," in these few months of liquidation.

How much have the farmers lost, or will lose, against these millions upon millions already lost in Wall street, and many more millions that it will surely lose before the present crisis ends?

Who does not remember the liquidation attending the long agony of redemption of 1873 to 1878. Scarcely a man in Wall street survived the shock. These disturbances in financial circles trouble the farmer less than any other citizen. He reposes under his own vine and figtree on the mountain side and in the valleys, watching the pomp of gaudy wealth and the show and vanity of the thousands passing by him to the mountain top. He also sees its return, dusty, worn, sick, poor, and in rags, cursing the day it was born, bequeathing nothing to the children in its train, while the farmers average to leave more property, a better training for life, and a promise of higher position for their children, than any other American citizens.

THE WORLD'S MEASURE OF VALUE.

Their next reason for the free coinage of silver is of like character with the others, and is that there is no "par of exchange" between countries; that there is no "world's price level" for the commodities of commerce; that there is no "world's, or international, measure of value," therefore this country can as well make silver bullion the measure of value as gold bullion; that the use of gold by other nations is a "notion," and our notions are as good for us to act on as their notions are for them. These wild assertions dispute every fact of the relation of money to the internal and external commerce of every country on the face of the earth. Again, the facts are the exact opposite of what the advocates of free coinage say is true.

A grain of gold is now the "par of exchange" of every country in its internal commerce and between all countries of the world, and has been, without a single exception, for a hundred years. Never in the history of the world has any coin of any nation been regarded. Everywhere it has been the single grain of gold. For eighty years the "money of account" in exchange has been the aggregate of 113 grains of pure gold, called a "pound," to insure the full weight of 113 grains, which is coined in England as the "sovereign."

Not the slightest attention was ever paid in a single instance in the world's history, or is now paid, to the coinage of England or any other country, excepting as it is a guaranty of the weight

and fineness of the piece of gold offered. England is as helpless to influence values of metals by coinage laws as the weakest potentate in the South Sea Islands. Take the four richest, most prosperous, and powerful nations to illustrate this statement:

The five-dollar gold coin of the United States contains 116.-09985 grains of gold; the sovereign of England contains 113.0016 grains of gold; the 20-mark piece of Germany contains 110.6268 grains of gold; the 25-franc piece of France contains 112.006 grains of gold.

Not one of these pieces passes in its own country or anywhere else in buying commodities for the slightest percentage over its bullion value, and never has since the world began. Take a French 25-franc piece or an English sovereign or an American five-dollar gold piece into any shop in Brussels, or the smallest hamlet in Germany, and they will give you the difference in its bullion value over the German 20-mark piece in change.

Take the 25-franc piece, the 20-mark piece, or the sovereign into any store in this country to pay the price of $5, and the difference in gold bullion value between either and the $5 American gold coin will be demanded and paid as a matter of course. Every dollar of silver that is current here, or in any country not a "monometallic silver country," is current as paper money, is current because, like paper money, it can be exchanged for a gold dollar, and for that reason only.

INTERNATIONAL COMMERCE ON A GOLD BASIS FOR ONE HUNDRED YEARS.

Again it is said there is not gold enough to do the business, as "measure of value money," of the world. Here again they draw upon their imaginations for their facts. How do they know there is not enough? Every dollar's worth of the international commerce of the world is now done on a gold bullion measure of value, and has been so done for a hundred years.

What reason has any man to think that prescribing by law that existing customs and habits shall be legal will cause men to change their desire or doings—desires which are embedded in them by a hundred years of universal custom?

If there is any one thing, in finance, more certain than any other, it is that if every nation should make gold the "money of account," by making it the "measure of value," at 1 of gold to 28 of silver, the present price, and stop the free coinage of silver, stop issuing silver certificates, and then every government should thereafter buy and coin every silver piece, of any denomination it could induce its people to use, as all European governments and the United States are now doing, while it would require some slight adjustment in national holdings of gold, it would not increase the world's demand for gold coin or increase or diminish the prices of a single commodity in any country by the smallest fraction.

Neither would it diminish the legitimate demand for or use of silver coin. We know such action would at once add to the available gold coin an immense sum from the hoards now secretly held in every "silver measure of value" country probably hundreds of millions, and many times more, than the added demand for it. It would have the same effect of immensely increasing the quantity of money in those countries, and from gold hoards that resumption of specie payments had in this country, when hundreds of millions of gold coin that had been held as merchandise for years went immediately upon resumption into the channels of trade as money.

THE INCREASE IN THE COMMERCIAL EFFICIENCY OF GOLD.

What are the facts? First, we know the commercial efficiency of each dollar in gold increases a hundred-fold faster than commerce increases, by means of the railway, the steamship, the telegraph, the telephone, and still more, by the improved commercial methods of 1893. We know that $1,000 to-day is as efficient as $10,000,000 would be by the methods of sixty years ago, and the amount of gold coin alone, as coin is now used, is many times larger in amount proportioned to the commerce of to-day, measured by its efficiency, than four times the total silver and gold coinage of the world was to the methods of commerce of 1860.

We say we know this, because we believe that what has been, without a single exception for a hundred years, will continue to be. The fiat-money men, and those who advocate the free coinage of silver, assert that by the breath of their nostrils they can instantly change opinions and habits that have been ingrained by universal custom of a hundred years and reaching back to the beginning of time—customs that are imbedded in the natural laws of the universe.

1. Every international exchange of a hundred years has been made in gold.

2. In not a single case in that time has the coin of any country been regarded. The gold coinage of every country has been valued and figured by the 113 grains in the English pound, and accepted in payment in exact proportion to the grains of pure gold in each. Silver coins have been accepted in payment by the value of the grains of pure silver in each at its gold bullion price in London. Coin carried in the pockets is never counted; only visible coin is available for commerce.

As to quantity of gold: France maintains a gold standard of accounts and measure of value on visible gold, $264,000,000; Germany with only $206,000,000; England has of visible gold only $125,000,000; while the United States has of visible gold $337,-000,000.

Only foreign commerce tests the "measure of value coin" strength of the financial system of any country. England's foreign trade is $25 to each $1 in visible gold. Our foreign trade is only $2.20 to each dollar of visible gold in this country. The utmost limit to which the whole power of the United States Government has been able to force the actual use of gold and silver coin, in our internal commerce, is six millions a day, with a daily exchange of $400,000,000, while we have a total of over eight hundred millions of visible coin. We now have more than double the coined dollars we can possibly economically use, and the free coinage of silver men are frantically calling for more. We are not a nation of barbarians, restricted to metal money, and the utmost power of the advocates of free silver coinage can not force us into barbaric monetary conditions.

The tide has turned, never again to overwhelm the sound sense of the country.

THE EXPERIMENT HAS TWICE BEEN TRIED IN THIS COUNTRY.

But, says the free silver coinage advocate, we have never tried it, and therefore we can not tell what the effect would be. This again is wholly untrue, and there is no other country that has not tried it in some form. France tried it from 1873 to 1876 as efficiently and as determinedly as any experiment was ever tried by any nation, and was compelled to abandon it when silver was at only 10 per cent discount, while now it is at 28 to 1 of gold, a discount of 43 per cent.

This country tried this identical experiment twice, once with silver and once with gold, once from 1793 to 1834, by overvaluing silver, not at 43 per cent difference, but at only 3.22 per cent, and every gold dollar disappeared for the whole forty years. Again we tried it by overvaluing gold, not 43 per cent, but only 3.125 per cent, and every silver dollar disappeared up to 1873, at which time silver dollars were 3.22 per cent premium in gold, and we have had only a gold measure of value for sixty years.

To-day every dollar's worth of goods imported into a silver-standard country from Europe costs the people of the silver country 75 per cent more than they cost citizens of this country. What will your people say to you, free-trader advocates of free coinage, when you tell them you have taken the duty off European goods to make them cheap, and have voted for free coinage of silver to make them dear by adding 75 per cent to their free-trade cost? They will surely find that the $10 they receive at the end of the week will buy less than $6 now buys. That is what they surely will find, unless every habit, every custom of merchants and traders, and every element of the known law of internal and international trade abrogates itself at your command.

PRODUCTS NOT A SAFE "MEASURE OF VALUE."

But the free-coinage advocate comes back again with the statement that while the prices of products, reckoned in grains of gold, have gone down, if reckoned in grains of silver, prices have not depreciated, adding, further, that products are the true measure of value, and because products will command nearly the same number of grains of silver they would thirty years ago, when the market price of silver was 15½ to 1 of gold, they are justified in demanding that every farmer, every wage-worker, every savings-bank depositor, every member of a benevolent order, every holder of a life-insurance policy, and every creditor of every name and nature, shall be compelled by law to take 16 grains of silver for every grain of gold they actually gave or its equivalent into the custody of some man or institution of their little capital or labor savings when silver has gone down from 15½ to 1 of gold to 28 to 1 of gold. This is exactly what free coinage of silver means if there is the slightest hint of the future in the past.

We know that large as are the holdings of the Vanderbilts and the Jay Goulds in railway bonds, their holdings are mostly in stocks. We know, also, that nearly all bonds of all kinds are held in trust funds, savings banks, etc., largely for widows and orphans, or by old people to support their declining years. These silver-standard men propose to oppress millions of the poor, in their small savings, by changing their value, by changing the law under which every dollar of this money was loaned, and making the returning, to them, the value of more than $57 for every $100 of value they surrendered to their trustees impossible. The other $43 they propose to give to the Jay Goulds, the Vanderbilts, to rich corporations of all kinds, to the United States Government, State governments, county, city, and town governments, and to men rich enough to own farms, corner lots, stores—the richer men in the country. If such action is not both "op-

pressing the poor to increase riches and giving to the rich," then language has no meaning.

To substitute silver at 28 to 1 of gold in the United States, when every payment is now made and every existing obligation was contracted for a given number of grains of gold or its equivalent, seems to me as base as it would be for Mexico to substitute gold at 1 to 16 of silver in payment of every obligation in Mexico, or India and China, where every obligation was entered into with the full knowledge of the creditors that payment was to be made to them in a specified number of grains of silver, as payments are agreed to be made in this country in a specified number of grains of gold or its equivalent. This would no more surely disorganize the whole economic condition in Mexico or India than the free coinage of silver here at 16 to 1 would bring chaos into every business interest in this country.

But this claim for silver and products not only does violence to every equity of the situation, but, like all their other assertions, is contrary to the fact.

Products are not the true or safe measure of value. Products were only suggested by any economist as such because, for centuries, there was no improvement in methods of utilizing human labor, either in the shop or in agriculture, and products were the economic expression and equal of economic man, as expressed in a day's work. Now, it is clearly seen that a day's work of the average worker is the true measure of value. Man has assumed his true place in economics, as in nature, as the most valuable created thing, and if this is true of man in nature, it surely must be true in economics, for true economics are but the records of natural law.

GOLD AND SILVER AS MEASURE OF VALUE METALT.o

All economists agree that 1860 is the dividing line of the century. In 1860 the same average day's work that commanded 100 in gold, now commands 168 in gold. The relative decrease in the use of gold in commerce before mentioned and the increased efficiency of more modern chemical and mechanical appliances, has so cheapened gold that where an average day's labor commanded 23.22 grains of gold in 1860 now, in the shop, in the factory, in the gold mine, the silver mine, coal, and every other mine, the same day's work will command 39.15 grains of gold. Not only is this true of the United States but the same percentage of increase in gold wages holds in every leading country in the world.

The wages men get to-day, being 68.6 per cent more in gold measure than they received in 1860 in every leading nation, clearly shows that gold has depreciated 40.69 per cent, measured by the labor of man. A day's work in 1860 commanding 359.91 grains of silver, the increase in wages, in grains of silver, at 25 to 1, would be 618.18 more than in 1860. This clearly shows that silver has depreciated 63.23 per cent, measured by the labor of man. If gold has not depreciated, then silver has not depreciated. Admitting the one, candor compels you to admit the other.

Gold has averaged to fall steadily and absolutely without fluctuation, 1.22 per cent each year on its price of thirty years ago, while silver has constantly fluctuated and averaged to fall in the same time 2 per cent, all of which, however, is since 1873. Since 1873 silver has averaged to fall 3.15 per cent each year, fluctuating in price like the waves of the sea. Within three years silver has been 82 per cent higher than it is to-day. Such a decline takes it out of the realm of a "measure of value metal," but its fluctuation is tenfold more damaging than its decline. This fall in silver could not possibly come from any affirmative action of this country, for we did not use a silver dollar in trade from 1834 to 1878. During that whole forty years we had simply continued on in the even tenor of our way.

The increased income, from the labor of the farmer, when figured in gold, as shown by the income he derives from a day's work on the farm, shows very nearly the same proportional increase, in income, to the farmer, as to the wage-worker. Prices in a year of panic, like the present, furnish no basis for comparison, and the whole period of inflation, and its influence after, must be passed over. Taking 1891 for comparison, precisely the same leading farm products taken together, wheat, corn, oats, cotton, barley, hemp, rye, tobacco, and meats, selling at the farm, that sold for 100, in 1860, sold for 98.4 in 1891.

THE EFFECT OF MODERN MACHINERY ON PRICES.

While some of the modern farm machinery was invented before 1860, none of it came into common use until after that date. It is conceded that, taking all these farm products together, a day's labor plus modern machinery will produce double what it would produce in 1860. Of course meats are represented in grain. If labor on the farm represented 100 in 1860, labor would represent in 1891 one-half, or 50; wear and tear of machinery, 5; total, 55. Price, 98.4. Gain over 1860 is 43.4. Cost, 55. Shows a gain in income to the farmer of 64 per cent for each day's labor done.

Why should not farm products, in the production of which machinery has made each day's labor twice as efficient as formerly, producing 2 bushels or pounds where it produced 1 before, go down in gold price as well as the products of the shop and the factory? The labor cost in farm products, because of machinery, is reduced one-half.

Take set screws, one-half inch diameter, 2 inches long, for illustration. They cost $4.40 per hundred in 1870; they now cost $1.20. A few years ago these same set screws were made in a lathe, and cost $20 per hundred. Take nuts that were formerly made in blacksmith's shops, and are now made by ingeniously constructed machines. It would cost to make the 2-inch square nut $10 per 100 pounds; made by machinery they sell for $2.90. One-inch square nuts made by hand would cost $20 per 100 pounds; they now sell for $3.70 a hundred pounds. One-half-inch square nuts, hand made, would cost $50 per 100 pounds; machine made, they now sell for $8.50 per 100 pounds. It is as irrational to attempt to prove that silver has not gone down, but gold has risen by these things as by farm products.

It is plain there is no valid reason why farm products should be taken as the real measure of value, rather than the products of the factory, since machinery has increased and made cheaper and as variable the labor cost of farm products, as the average of most other products.

Do the advocates of free coinage claim that the act of 1873 caused the price of the farmer's plow to go down from $6.50 in 1873 to $2.75 in 1890, or gold to go up at that rate; the two-horse plow from $13 in 1873 to $8 in 1890; mowing-machines from $90 to $50; a reaper from $120 to $75; shovels from $20.50 per dozen in 1873 to $9.50 in 1890; and so on through the whole list of farmers' supplies? Will they tell us how it is that these prices went down fully 50 per cent on the average, every cent of which price represented labor; and the men who produced them from the ore out of the ground, and trees out of the forest, to the completed article, received the same or increased wages from those of 1873, if it was not by the use of improved machinery and improved methods, and not by the appreciation of gold? The depreciation of silver had no more to do with it than with the eclipse of the moon.

No man, living or dead, has ever shown that this country, or any class in this country, has ever suffered a farthing by our using a "gold measure of value" rather than a "silver measure of value." No; man is the primary measure of all economic values by the unit of the average day's work expressed in gold, and gold is the "money of all account" and exponent of all economic values.

There seems to be no fallacy in economics that free-silver coinage men do not seize upon. They insist that the more money a nation coins the richer it is, with Mexico before their eyes, that has coined more money, proportionately, than England, France, Germany, and the United States combined.

THE VALUATION OF THE NEWER STATES TO THE OLDER.

It is also boldly proclaimed on this floor, and especially from the newer States of the West, that this contest for the free coinage of silver is a contest between the debtor and the creditor classes; as though the accumulation of property was robbery and the permitting of a neighbor to use one's property was a crime, and every facility and encouragement was to be furnished the borrower to rob the lender. Such statements only serve to reveal the enormity of the injustice proposed in the free coinage of silver. Look at some of these States. Many of them had no existence, even, in 1860. They have been filled up with some of the best blood and brawn of the older States and of foreign countries. Most of their people went into them with only their bare hands. Had they not been assisted by the earnings of the wage-workers of the older States in loans their wealth, even after paying every debt, would not now be one-quarter what it is.

Capital was what they needed and what the people of the older States furnished them. Their citizens are too honorable to rob their benefactors of half that was loaned them, under the guise of honestly paying that debt in silver which has depreciated nearly one-half. Every one of these debts was contracted in values of gold standard measure. The United States census shows that the total wealth of New York State has increased less than two and three-fifths times since 1860. That of Kansas has increased more than fifteen-fold, and that of Nebraska twenty-fivefold. The wealth of Massachusetts has increased threefold in thirty years; that of Washington forty-six fold, and that of the Dakotas has increased fifty-eight fold in only twenty years, and is now $170,000,000.

I believe every advantage should be conceded by the strong to the weak, by the wise to the ignorant, and by the creditor to the debtor, that can be justly given, and that fiscal law should be so framed as to favor the weaker party; but to go beyond this, as is now proposed in silver coinage, corrupts right and justice and poisons the springs of all right action at their very fountain-

head. It is sure to bring him who suggests such things and him who acts upon them down in a common ruin.

Finally, the free-coinage men most untruthfully charge the defenders of the existing measure of value with being determined to force an "all-gold coinage," with being determined to prevent the use of silver as money. They ought to know that the adoption of the free coinage of silver law would surely and at once throw gold out of circulation and make this a silver monometallic country, and they ought to know that the repeal of the purchase clause of the act of July 14, 1890, would not make us a "monometallic gold country." We would still have a larger proportion of full legal-tender silver dollars in circulation than France or Germany think safe to bimetallism.

HONESTY TRUE ECONOMY.

The defenders of the existing standard of value and the integrity of all existing money and all existing contracts are determined to provide for the people, through the Government, every silver dollar they wish to use. They are equally determined, if possible, to prevent the confiscation of nearly half the savings of the plain people of the country, and nearly half the daily pay of the wage-earner and half the pay of every man in the country with a fixed salary. Exact justice is true economy for each one of us as it is for our country and for each section of our country. [Loud applause.]

Mr. MAGUIRE. Mr. Speaker, this extra session of Congress has been called upon the theory that the industrial and commercial depression prevailing in this country has been caused by the silver-purchase provision of the so-called Sherman act of 1890, and that good times can be restored by the repeal of that provision.

I have carefully read and reread the President's message on that subject, and I have patiently listened to all of the arguments thus far presented by the advocates of unconditional repeal, without finding anything in them to justify a belief that the act in question has materially contributed to produce the deplorable condition in trade and industry now unquestionably existing.

It is undoubtedly our duty to discover, if possible, the cause of the widespread ruin which has overtaken our commercial and industrial interests, and if we find that such cause has its root in Federal laws we should promptly repeal or modify those disaster-breeding laws. But it is equally our duty to legislate intelligently, and to fully measure, before acting, the necessity for our action, and the consequences which will flow from it. Impatience cries out again and again, "Let us stop talking and *do* something. Let us act! act! act!"

We should remember that safe action is infinitely better than hasty action; that there are times when "doing something" is infinitely worse than the delay necessary to secure the best possible information. A stranger in a powder magazine should not be told to "do something" until the danger of doing particular things has been very thoroughly impressed upon his mind. We are in a veritable powder magazine, and in the darkness that enshrouds us hasty action may cause an explosion which will be extremely disastrous.

The gentleman from Ohio [Mr. HARTER] compares Uncle Sam's disorder to a case of alcoholism. I do not know why he selected that simile unless it was to justify his proposed "gold cure." Assuming his diagnosis to be correct we should be careful in applying the remedy not to use fulminate of gold instead of bichloride of gold. [Laughter.] Their effects, I am told, are quite dissimilar. To my mind Uncle Sam in his present situation might better be compared to a man suffering the excruciating pains of a severe toothache rushing to his dentist and eagerly demanding that the offending tooth should be hastily pulled, without giving the dentist time to examine the tooth charged with the mischief. Such hasty dentistry has very often resulted in the pulling of the wrong tooth, leaving the patient in a very much worse condition than he would have been in if the dentist had rationally declined to "do something" in the matter until he had satisfied himself what should be done.

The danger of action by half-informed doctors in the present case is that we may pull the wrong tooth, and leave Uncle Sam in a worse condition than that in which we found him. We are not only asked to legislate hastily on the *ipse dixit* of men who display little better knowledge of the situation than our own, but we are asked to legislate in such a manner as to violate the platform pledges on which we were elected less than one year ago.

THE PARTY PLATFORMS.

The last national Democratic platform contained two distinct pledges on the question of finance. First, to repeal the silver-purchase provision of the Sherman act. Second, to establish the coinage of gold and silver upon equal terms, without discrimination against either.

The President's message recommends the immediate execution of the first of these pledges, and clearly intimates that no legislation for the extension of silver coinage will thereafter be favorably considered by him, unless an impossible international agreement shall be reached. We are therefore forced to the alternative of coupling such legislation as we are pledged to adopt for the extension of silver coinage with the act of repeal or to abandon the fulfillment of our second promise.

The gentleman from Maryland [Mr. RAYNER] admits the obligation of the platform, but from the pedestal of a higher law, discovered by his inward light, declares that he will not hold himself bound by "the glittering catchwords of political conventions."

The gentleman from Ohio [Mr. HARTER] when called upon to reconcile his gold-standard position with the bimetallic promise of the Chicago platform, upon which it was then supposed that he had been elected to Congress, declared that he had refused to run for Congress on the money plank of the Chicago platform, and had made for himself a single-standard platform upon which he was elected. This was his complete justification, but it only increases the embarrassment of those who ran for Congress on the Chicago platform, and now attempt for the first time to stand on the Harter platform.

The gentleman from New York [Mr. COOMBS] acknowledges the obligation of the Chicago platform, but justifies his departure from it on the ground that the interests of his country, according to his judgment, require him to break the promise.

The President in his message tells us, too, that the proposition to repeal the silver-purchase act "rises above the plane of party politics." If, by that expression, the President means that this question ought not to be settled according to the grand and eternal principles of equity among men, upon which the Democratic party was founded, and the promotion of which is her only justification for existence, he has certainly underestimated the grandeur and universality of those principles. [Applause.]

But I assume that by his suggestion he meant only to admonish our Republican brethren to abandon their bushwhacking for small political advantages (exemplified in the speech of the gentleman from Iowa [Mr. HENDERSON] on Wednesday last) in face of the national calamity which made this extra session of Congress necessary.

Some gentlemen on the other side of the House have, upon this floor, questioned the good faith of that suggestion in the President's message; but we should all be quite willing to credit the President with sincerity in that declaration, because we have had frequent occasion to realize that, with him, all public functions rise above party considerations. [Laughter.]

The Republican national platform contained a pledge substantially identical with the second pledge, on the question of finance, in the Democratic national platform. But the Republicans represented in the national convention saw no occasion to declare in favor of repealing the silver-purchase act, so that the Republicans here stand pledged to the second promise of the Democrats only, but not to the first. They may, therefore, be expected to vote in favor of the extension of silver coinage, but not for the Democratic proposition to repeal the silver-purchase act.

THE QUESTIONS AT ISSUE.

Is the silver-purchase act the cause, or the principal cause, or a materially contributing cause of the present industrial depression and financial crisis? What would be the effect of its unconditional repeal? Before deciding that it is our duty to our country to violate a solemn pledge made to our constituents in order to secure our election, we ought to determine to the satisfaction of our minds and consciences that the silver-purchase act is at least a materially contributing cause of the present crisis, and that its unconditional repeal would be of substantial benefit to the country. The effect of repealing the act in question without making provision for the extension of silver coinage has been very ably discussed by the gentleman from Nebraska [Mr. BRYAN], and by other eloquent and logical speakers on this floor. I shall, therefore, devote but little time to that phase of the general question, and will proceed as speedily as possible to a discussion of the causes which have led to the present crisis, and to consider the relation of the silver-purchase act to those great primary causes.

EFFECTS OF CONTRACTION AND INFLATION OF CURRENCY.

It is laid down by political economists, as a well authenticated if not an absolutely established principle that the *media* of exchange required for the business of a given country bears a certain proportion to the entire value of the exchanges of such country, and that the volume of the *media* of exchange will always bear the same proportion in value to the entire value of such exchanges. According to this principle, if the value of *media* of exchange required for business purposes be one-fiftieth of the value of all exchanges within a given period, that proportion will be maintained, whether the volume of the *media* be

increased or diminished; that is to say, if the volume of the *media* be doubled, the purchasing power of the whole volume is not thereby increased, and the purchasing power of each unit of the *media* is diminished one-half. If, on the other hand, the volume of the *media* be contracted one-half, the purchasing power of the whole volume is not thereby diminished. It bears the same proportion to the value of the exchanges which the double volume of *media* did before, but the purchasing power of each unit would thereby be doubled.

The simile suggested by the gentleman from Ohio [Mr. HARTER] when he compared the silver advocates to a wasteful farmer employing four plows, with horses and equipments complete for each, to do the work of one plow, fairly illustrates this rule. Let us assume that the plowing of a certain quantity of land is worth $100, and that one plow is sufficient for the work. Clearly, it will not be worth any more to have the same ground plowed by four plows, and if four plows be used they will be worth just the value of the service, and no more.

Multiplying the investment in plows does not increase the value of the service which they perform. So, if one horse instead of two should be employed to plow the same ground, the value of the service would not be diminished by lessening the number of horses engaged in doing the work. From this principle the rule is deduced that an inflation of the currency of the country diminishes the market value of each unit of such currency, while a contraction of the currency correspondingly increases the value of each unit with reference to the average price of all other commodities. Contraction of the currency in which debts are to be paid correspondingly increases the burden of such debts and enriches the creditor at the expense of the debtor, while an inflation of the currency has the opposite effect upon debtors and creditors.

For these reasons the creditor classes have always, and everywhere, been on the alert to bring about contractions of the currency in order that the value of their credits might be increased, while the debtor classes have always manifested the same interest in bringing about inflations of the currency in order that the burden of their debts might be made less oppressive. No government should ever legislate with a view to accomplishing the purposes of either the debtor or the creditor class. But if the interest of either class is to be made the care of the Government, the debtors are entitled to first consideration.

The debtor classes are, as a rule, the producing classes, whose debts have been contracted for the purpose of enabling them to carry on their productive enterprises while the creditor classes; as such, are nonproducers, entitled to the return of what they have loaned, with its accretion of interest, but nothing more. To award them anything more, either directly or as an indirect result of legislation, such as that now contemplated, is an outrageous and indefensible robbery of the debtor. The unmistakable effect of the unconditional repeal of the silver-purchase act is to practically limit the metallic coinage of this country to gold, because the powerful interests which favor the contraction of our currency will always be able negatively to prevent legislation, while they might be wholly unable to bring about affirmative legislation favoring their own interests upon the same subject.

I do not question the sincerity of the advocates of a single gold standard. A scarcity of money will tend to their enrichment, and the human mind is so constituted that it generally conceives the public interests to be in harmony with its personal interests.

THE SCARCITY THEORY.

To the hoarders of gold and the monopolists of the sources of gold production any law which will create a scarcity of money will tend to make them rich, and they are therefore easily persuaded that what will serve their interests must be the best thing for all citizens. This is the theory upon which the tariff legislation of this country has been conducted for thirty years.

The timber-land monopolist saw in a scarcity of timber his own enrichment. The coal-land monopolist saw in a scarcity of coal the same advantage to himself. So they combined with the monopolists of other resources to create, by tariff barriers, a scarcity of all of the commodities in which they were interested. They saw in those laws their own aggrandizement, and failing to see the general impoverishment of the rest of the people through their operation, they did not hesitate to use their powerful influences to maintain the barriers which created the scarcity, and actually convinced a majority of the people of this country, for nearly thirty years, that a scarcity of the articles required by the people for general consumption was a better thing for those peopeople than an abundance of such articles.

The effect of the unconditional repeal of the Sherman act will be to contract the circulating medium of this country about $40,000,000 per annum and enrich the creditor classes and gold-mine owners at the expense of the debtor classes of our country, leaving the country afterwards with a circulating medium confessedly insufficient for its business necessities.

The volume of the private indebtedness of our people is about $17,000,000,000, while our national, State, and municipal debts bring the grand total considerably above $20,000,000,000. On all of these debts the people are obliged to pay interest, amounting to more than $1,000,000,000 per annum, while their net savings amount to only $2,000,000,000 per annum.

This enormous indebtedness, increasing in volume and in proportion to population year by year, in spite of all efforts of industry and frugality to reduce it, is to be affected by our legislation. We should pause before voting to increase its burden.

SILVER-PURCHASE ACT WRONG.

I do not justify either the principle or the purpose of the silver-purchase act. It was an attempt to create an artificial market for the product of silver mines, and was intended to give profit to a class of producers in our country at the expense of the masses of the people. It has involved the contemplated expense to the people without bringing the advantages to the silver-mine owners which its promoters expected. But it has increased the circulating medium of the country to the extent of about $150,000,000 beyond what it would have been if the act had not been passed. And it will continue to provide us with a greater volume of the circulating medium than will be afforded in case of its repeal.

It is not a good law, but it is better than the contraction of our currency to gold coinage. But, say the advocates of unconditional repeal, gold is the standard coin of the first-class nations of the earth, and we can not rank with them unless we use gold coin as our medium of exchange, and have gold coin with which to pay our trade balances. The laws of trade recognize no such difficulty. It is not necessary for us to use gold as our coin in order to trade with England any more than it is necessary to use cowrie shells as coin in our country in order to trade with the tribes of Central Africa. If our coin were silver only, the laws of trade would instantly fix its price relation to gold in the market, and we could buy gold with which to pay our trade balances to England just as readily and just as easily as we could buy cowrie shells with which to pay our trade balances to the tribes of Africa.

THE BEST SYSTEM OF FINANCE.

Indeed it has long appeared to me that in the matter of finance, as in most matters relating to production and exchange, the world is governed too much; that governments in attempting to fix the values of commodities, whether they be gold or silver, or wheat or potatoes, always create more confusion and inconvenience than their efforts were intended to avoid. The establishment of *media* of exchange is purely a commercial function, and should be left to the jurisdiction of the flexible and unerring laws of trade. If commerce selects gold and silver as the most convenient commodities to serve as *media* of exchange, the only function of the Government, with respect to such *media*, should be to freely coin the pieces of either metal, placing upon each coin a stamp indicating its weight and fineness, leaving the laws of trade to determine when and where and in what proportions and at what ratios the metals should be used in exchange.

The Government should have no money but its own Treasury notes, issued to the extent of its annual requirement for revenue, receivable in payment of its taxes of all forms, and made legal tender in the course of business, on an equality with the kind of money in which such taxes are levied. This would do away with all the struggles for business advantages to debtors and creditors and mine owners, by the alternate contraction and inflation of currency through acts of Congress. It would do away with the periodical appeals on the part of business this year to contract the currency in order to strengthen securities and establish confidence in the stability of our money; next year to inflate the currency, in order to afford a sufficient circulating medium to meet the requirement of commerce. It would leave the regulation of all those matters to the wiser and more certain laws of trade, which arise naturally out of the business relations and transactions of men, and do not depend for their correctness upon the information or the prejudices or the fears of arbitrary legislators.

CAUSES OF INDUSTRIAL DEPRESSION.

For temporary relief in the present crisis, the plan of the gentleman from Ohio [Mr. JOHNSON] to issue Treasury notes to the par value of all United States bonds deposited by any and all holders of such bonds is the best that has been suggested.

The advocates of a single gold standard have made a desperate attempt to convince the people that the prevailing hard times are due to the disposition manifested on the part of our Government to favor an extension of silver coinage, and to the fear that the displacement of gold in our National Treasury by silver bullion, under the provisions of the silver-purchase act, will naturally and necessarily force our Government to a largely extended coinage of silver, and thus enable the debtors of this country to

pay their obligations in a depreciated silver currency. But the evidences of history and of contemporaneous events are all against that claim. They show as conclusively as human evidence can show that our present industrial and commercial condition is not due to any legislation in this or any other country subsequent to the year 1837.

They further show that our deplorable industrial condition, with all its symptoms of crisis and panic, is very like the periodically recurring industrial depressions of the last sixty years. They show that the social upas tree, whose bitter fruit is now spreading ruin and desolation throughout our fair land, had its root and origin in laws or conditions which have existed in this country for at least sixty years. Our industrial depressions may be increasing in intensity, but they are not all changing in kind.

This is the seventh industrial depression through which we have passed in this country within sixty years, and each of these depressions has extended to all of the leading civilized nations of the earth. They have become a feature of modern civilization, and recur at intervals of from eight to ten years, with almost the regularity of changes in the moon's phases. They produce greater havoc and misery than the periodical wars and pestilences of the earlier civilization. They were unknown in the earlier stages of our civilization, and they are growing more frequent and more severe with the development of all that is considered good and glorious and useful in this era of unexampled progress. In earlier ages they had no hard times, except when crops failed, resulting in famine, or when wars or pestilences interrupted the industries of the people.

But industrial depressions come upon us now when nature smiles, when our harvests are most prolific, when we are at peace with the world, in the enjoyment of general good health, and when every natural condition seems radiant with the promise of prosperity and plenty. Suddenly thriving industrial and commercial enterprises become unprofitable. The capitalists who conduct them find that when their rents and wages have been paid out of their production they are not getting interest upon the capital which they have invested. They call a halt. They economize. They demand that labor shall share the loss which they are suffering. A conflict between capital and labor ensues, with its incidents of strikes, boycotts, and lockouts, unhappily sometimes attended with bloodshed and destruction of property. Compromises are from time to time reached, which are in turn broken as new conditions offer advantages to either of the contending parties.

The waste of the conflict takes away whatever return might otherwise come to business. Production is checked in that quarter and the producing laborers are thrown out of employment. The purchasing power of the laborers thrown out of employment is destroyed. Their demand for other commodities is checked by the destruction of their purchasing power, and the production of such other commodities is likewise checked. These effects of the great primary cause speedily communicate their influence through the whole network of the world's productive agencies, diminishing profit by checking demand for productive effort. With the cessation of production in one quarter or in one line comes a corresponding suspension of demand for commodities of other kinds. The merchant can not sell his wares because his customers have lost their purchasing power. He can not collect the obligations due him for the same reason, and he can not pay his debts to the wholesale merchant because he can not collect his dues from his customers.

The wholesalers have arranged for commercial credit on a basis perfectly safe so long as sales continue and payments are made within the periods of ordinary trade credit, but wholly unsafe when collections from retail merchants fail. The wholesaler is pressed for the payment of his obligations. He in turn presses the retail merchant. The retail merchant presses his customers, but his customers are out of employment, not only unable to make further purchases according to their necessities, but unable to pay their comparatively small debts for past purchases.

Universal stagnation ensues. Merchants and manufacturers continue nominally to carry on business, although profits are gone. They pay rent out of their capital for the sole purpose of saving their locations, which have become an important part of their business. The glimmering taper of hope allures them even to the vortex of general bankruptcy. Financiers become alarmed for the safety of their investments and for the sufficiency of securities. They insist upon the sacrifice of securities for the satisfaction of their claims. The millions of small depositors in savings banks are forced to draw upon their bank savings to meet their obligations and to pay the expense of living, which in good times are paid out of their daily wages.

Those who do not need their deposits for such immediate use begin to feel that the risk of the bank's stability is too great for the interest which the deposits yield. They attempt to withdraw their deposits, panic seizes upon the minds of depositors generally, and run after run is precipitated upon such banks, which, having the bulk of the deposits loaned upon securities on which they can not immediately realize, are forced to the wall. Their suspension of payment increases the panic and adds to the general distrust. Credit, upon which nine-tenths of our business is done in good times, is entirely withdrawn.

Every firm, corporation, and individual is employed in gathering and hoarding such money as can be obtained to meet the exigencies of his or its own business, for in the best of times our industrial and commercial systems are honeycombed with debt, and a capital of $10,000 floats a credit of at least $30,000. This enormous contraction of the instrument of exchange is fatal to what remains of business. The business of the whole country finally collapses under the strain. Then a new adjustment of rent, interest, and wages is made, and the wheels of industry and commerce revolve again, bringing the blessings of prosperity and peace. This is the history of every industrial depression, and the present depression is not in any respect exceptional.

Russell Sage, a distinguished financier, is reported as saying that this depression is exceptional because it has "touched bottom," as he expresses it. But every industrial depression of which I speak has "touched bottom;" that is to say, it has ultimately reached the land-owning class and has compelled that class to largely reduce its ground rent in order to give business a chance to pick up again. That is "touching bottom." Then by some process, as mysterious to the general observer as the beginning of the depression, times improve, business gets better, credit grows stronger, and an era of prosperity ensues which gives promise of perpetuity. For four or five years it continues to rise, then it is changed again, and the history of the former depression, through the course of another three or four years, repeats itself with marvelous exactness.

It is idle to attribute these depressions to local or temporary causes. Their cause must be as general as its results. A cause affecting this country alone will not explain an industrial depression existing at the same time in England, France, Germany, Belgium, and in all of the English colonies that girdle the world. Neither is it reasonable to attribute one of these depressions to a cause which manifestly did not contribute to any of the other precisely similar depressions occurring before it. During the past fifty-six years there were six of these industrial depressions in the United States, extending with equal virulence to Great Britain, including her colonies, to France, to Germany, and to Belgium.

A brief history of all of these depressions will be found in a volume entitled "Industrial Depressions," published by Hon. Carroll D. Wright, our National Commissioner of Labor Statistics, in 1866. The first of these depressions reached its climax in 1837; the second about the year 1847; the third about the year 1857; the fourth in 1866; the fifth commenced in 1873 and continued to 1879, reaching its climax about the year 1877; the sixth reached its climax about the year 1884. All of these depressions swept over all of the countries which I have named. The present depression likewise prevails in all of these countries. It commenced in the latter part of 1889, and has, we may reasonably hope, reached its climax at this time.

Indeed, while we have been discussing this bill the telegraphic columns of our daily papers show that industrial, commercial, and banking institutions all over our country are resuming business operations. The Washington Post of this morning contains the following editorial notice of the manifest change for the better in our situation:

> Yesterday's dispatches from all parts of the country show a most gratifying change in the commercial tide. The number of business failures was comparatively small, and the number of resumptions among the banks and manufacturing establishments was so large as to warrant the belief that the worst has been experienced and that the country is gradually but surely making its way out of the wilderness.

Let this fact never be forgotten in future discussions of the effects of our legislation.

It has been stated by gentlemen on both sides of this discussion that the present industrial depression did not commence until after the passage of the Sherman act in 1890; the advocates of unconditional repeal claiming that the relation of the passage of the act to the depression, being prior in time, is some evidence that the prior act was the cause of the subsequent depression, following so soon after its passage. The silver advocates point to the fact that the crisis did not come on for more than two years after the passage of the Sherman act. In truth, the industrial depression through which we are passing had commenced and was perceptibly advanced before the passage of the Sherman act, although the financial crisis was not reached until the summer of 1892.

In the discussion of the bill for which that act was a substitute, Senator JONES of Nevada reviewed the commercial and in-

dustrial situation existing at that time, and, in summing up his review, said:

Instead of finding, as we should find, happiness and contentment broadcast throughout this great domain, there are heard from all directions, even in this Republic, resounding cries of distress and dissatisfaction. Every trade and occupation exhibits symptoms of uneasiness and distress. The farmer, the artisan, the merchant—all share in the general complaint that times are hard, that business is dull; the farmer is in debt, and is not realizing on the products of his labor the wherewithal to meet fully his deferred or his current obligations. The artisan when at work finds himself compelled to share his earnings with some relative or friend who is out of employment. The merchant who buys his goods on time finds little profit in sales and difficulty in making his payments.

There was no denial of Senator JONES' statement concerning the conditions existing at that time. We were then entering the depression of which the crisis is the natural and inevitable culmination; but the crisis was not reached for two years after the passage of the Sherman act, and it is doubtful if the silver-purchase clause of that act hastened in the least the crisis which was inevitably coming.

The silver-purchase act has not created any distrust in the integrity of this nation. It did not cause any doubt to arise anywhere concerning the soundness of any money which this nation has put forth. It has not discredited any of our Government obligations.

The distinguished Senator from Indiana [Mr. VORHEES], the acknowledged leader of the repeal forces in the Senate, said in the course of his great argument yesterday:

Sir, no candid observer of existing public facts can believe that this attempted panic and business distress has been inspired by any real fear or genuine want of confidence in the credit of the Government or in the soundness and stability of its various kinds of currency. It is true that among the ugly assets of a former administration which came over on the 4th of last March were an empty Treasury and the record of a billion-dollar Congress in its expenditures, but despite so heavy a handicap the public credit of the United States has not faltered for a single moment, nor has the faith of the civilized world been lessened by the breadth of a hair in American honor and American resources in this year of 1893, and in the custody of the Administration now in power.

The national credit of the American Republic, tried by every test which can be applied, is better and stronger to-day than the credit of any other government on the globe. Her bonds, her promissory notes to pay her debts, as they may be called, bearing a low rate of interest, stand at a premium in the money markets of the whole earth, and even the cold, cowardly instinct of hoarded, inactive, interest-hunting capital, in its cautious search for permanent investments, seizes upon them with swift greed wherever they can be found. The safety of the security appeases somewhat even the usurer's highly seasoned appetite for richer profits.

Not only do the traffickers in money and the permanent investors of capital hunger and thirst after all the Government bonds now in existence, but their chief complaint against the present Administration is that the President and his able Secretary of the Treasury have refused their demand to issue at least three hundred millions more. This additional block of national indebtedness, increasing in a time of profound peace the interest-eating burdens of American labor, would be hailed with the keenest delight and swept with miserly enjoyment and avidity into unpatriotic vaults by the very parties who have most loudly and continously declared ever since the present Administration came into power that the credit of the Government was in deadly peril and its Treasury practically bankrupt.

Yet, Mr. Speaker, the whole argument in this House in favor of unconditional repeal has proceeded upon the theory that the silver-purchase act has destroyed our national credit.

The securities which have been depreciated are private securities, and they have fallen because the financial soundness of the institutions behind them has been doubted. The industrial depression would have caused all this, as similar depressions have frequently heretofore caused financial crises. I do not say that the crisis was not in any way accelerated by the Sherman act; but I do say that, with or without the Sherman act, it was inevitable. A much more important factor in intensifying the depression and hastening the crisis was "the culminating atrocity of class legislation" known as the McKinley tariff law, for the prompt repeal of which the people put the Democratic party in power.

I quite agree with our Republican friends, that it is the duty of the Democratic party to get through with this question of finance at the earliest possible moment, not for the purpose of adjourning and going home, but in order that we may proceed to the more important work of tariff reform with all possible dispatch. Our great manufacturing interests expect the Democratic party to give them free raw material and free fuel for the prosecution of their industries, and other great interests are largely concerned in knowing the exact basis upon which their investments shall hereafter be made. We should not willingly consent to any delay in the fulfillment of our pledges on the tariff question, but neither the tariff nor the silver-purchase act, nor both of them, can be said to account for the prevailing industrial depression.

The McKinley tariff came into effect shortly after this depression began, but it did not cause the depression. We had similar depressions under the low tariffs of 1847 and 1857, and under the high tariffs of 1866, 1877, and 1884. At most, the McKinley act has intensified the present depression. The cause of these depressions must be immediately associated with the primary factors in the production and distribution of wealth, and it must pervade the whole system of wealth distribution throughout the civilized world.

SPECULATIVE GROUND RENT THE PRIMARY AND UNIVERSAL CAUSE OF INDUSTRIAL DEPRESSIONS.

Philosophers, faithful in the pursuit of truth and daring to follow her wherever she may lead, have traced to their primary and universal cause these periodical calamities which blast the happiness and desolate the homes of half the people of the civilized world once in every decade. That cause is the constantly recurring pressure of ground rent, as a factor in the distribution of wealth, against the profits of capital and the wages of labor.

The factors of all production are land, labor, and capital; land being the passive factor, freely provided, with all of its potential elements, by the Creator. Labor and capital are the active factors, contributed by human energy.

The factors of distribution are landlords, laborers, and capitalists, and their shares are called rent, wages, and interest.

It is manifestly of the utmost importance that the distribution of the wealth produced among these factors should be equitable.

If the distribution be inequitable it will certainly discourage the productive effort of the factor which receives less than its share.

For example: If labor should insist upon taking the entire product in wages, landlords and capitalists would not assist it in production, because it would cease to be profitable to them.

If capitalists should insist upon taking the whole product, landlords and laborers would not assist in production because it would cease to be profitable to them.

If landlords should insist upon taking the whole product as rent, laborers and capitalists would not further assist in production, because it would be unprofitable to them. And, as labor and capital are the only active factors in wealth production, productive effort would thus be brought to an absolute standstill.

These, of course, are extreme suppositions, but they bring strongly into view the universal rule that whatever tends to make wealth production unprofitable to any of the active factors in such production, tends to check and finally to stop productive effort on the part of that factor.

Laborers will work as long as they can get for their labor the standard wages fixed by competition, although they know full well that such wages are greatly less than their equitable share.

Capitalists will invest in productive enterprise and will continue such enterprise just as long as it yields, with ordinary security, the standard interest fixed by competition among capitalists.

Ground rent is the margin which production in any locality yields above the standard wages and standard interest necessary to induce laborers and capitalists to carry on the productive enterprise. When production yields no such margin there should be no ground rent. This law of rent, as accepted by all political economists, is thus stated by Ricardo, the illustrious economist by whom it was formulated:

The rent of land is determined by the excess of its produce over that which the same application can secure from the least productive land in use.

This law is universal and applies to the locations or sites of stores and factories on which wealth is produced, as well as to rural lands from which wealth is produced.

If ground rent at any time rises above the margin of production, it is manifest that it must do so by eating into the standard wages of labor, or the standard interest (sometimes called profit) of capital, or into both wages and interest.

It is a matter of common observation that rent always advances in good times; that it keeps advancing while times are improving, and that it is always very high when times begin to get hard.

Ground rent is a tide that rises with prosperity and as high as prosperity, absorbing its fruits, without in any way contributing to their production, and it finally strangles the productive forces upon which it feeds. It takes such a large share of the wealth produced by labor and capital that it makes production unprofitable to the factors—labor and capital—which produce all wealth.

Labor and capital struggle with each other in vain attempts to shift the burden of excessive rent. The land monopolist who exacts the rent tribute is so strongly intrenched that neither labor nor capital thinks of trying to beat down the speculative rent tide which is strangling them both. Soon the wasteful struggle between capital and labor ceases by the abandonment of production. In the midst of conditions which ought to make production uncommonly profitable, excessive toll in the form of ground rent has made it absolutely unprofitable. The laborer, willing to work, is forced to stand aside with his arms folded in unwilling idleness, consuming the small savings of his short period of prosperity, and trembling for the fate of his once happy family when his little store shall be exhausted.

The capitalist, with his investment idle, paying the exorbitant rent out of his wasting capital in order to save his location,

stands half hoping, half despairing, waiting for the uncertain issue of bankruptcy or a return of good times.

The prior prosperity has brought the same pressure home to every other commercial and industrial enterprise in the civilized world. The checking of production at one point reacts upon the wages and profits of industry and commerce at all other points.

This destruction of the purchasing power of producers of one commodity lessens demand for other commodities, and consequently lessens the profits of their production; while the speculative rent, or toll, for the privilege of producing remains undiminished.

Production, by reason of this unnatural pressure of speculative or excessive rent, gradually becomes unprofitable everywhere. Stagnation ensues, and labor and capital, in utter helplessness, await the inevitable hour of their universal bankruptcy—the hour when landlordism, having absorbed their substance, driven thousands to suicide, hundreds of thousands to pauperism, and ruined and dismembered untold numbers of families whom God had blessed with love and happiness, finally reduces ground rent to the economic line and thus gives another breathing spell to the wealth-producing classes.

The moment that rent is reduced to the economic line business of every useful kind becomes profitable again, because every industry can, at all times, afford to pay, as rent, the margin of its production, while no business on earth can afford to pay more than that margin.

I have now given you, in general outline, the history and the philosophy of our industrial depressions. There is no mystery about them. They have been accurately prophesied upon scientific principles. They have been watched and studied in their courses. They have all disclosed the same symptoms, and have all produced the same results.

Their first outward symptoms are conflicts between capital and labor (natural allies in production), and they all end in financial panic—the natural and reasonable outcome of the prospective or present general bankruptcy of the debtor classes.

Amid the desolating depression of the last three years, rents have been collected at the rates prevailing during the prosperous year 1889. Every merchant and producer in the land (except the insignificantly small number of land owners among them) has been paying more than the margin of his production in ground rent.

Gentlemen upon this floor have called attention to the splendid and inexhaustible natural resources of this country as an unquestionable guaranty of permanent prosperity to our people.

Our natural resources are indeed ample. They are sufficient, in the present state of the arts of wealth production, to support in uninterrupted comfort a thousand million of people. Yet, with a population of less than 70,000,000, we are half the time suffering the horrible privations that are supposed to result only from overpopulation.

Gentlemen forget that our splendid and inexhaustible natural resources are all monopolized, and that nine-tenths of our people are obliged to pay tribute to less than half of the other tenth for the privilege of living in this country.

The small percentage of land monopolists, who own this country, exercise an absolute despotism over the masses of the people of this country and fix the conditions upon which they shall live. [Loud applause.]

The census of 1890 shows approximately that the land of this great country is owned by about 10 per cent of our people. That about three-fourths of that 10 per cent own no land but their homes, upon which there is an aggregate mortgage indebtedness of $6,000,000,000. The present crisis will bring about the foreclosure of thousands of these mortgages, and will largely reduce percentage of land owners in this country.

This is a terrible showing for our new country "of inexhaustible resources." It speaks ill indeed of our land system, which, intended to secure an independent home to every American citizen, has really reduced us to a nation of landlords and tenants.

We have placed our entire industrial and commercial systems under the absolute dominion of an irresponsible landlord class, who are legally clothed with powers over them more absolute and destructive than the powers of any political rulers in the civilized world.

We speak of our country, and we deplore the decline of patriotism among her citizens, but we forget that love of country has its root and its strength in the deeper sentiment—love of home. Love of home is graven on the heart of man. It is the mother of patriotism and the handmaid of courage.

We forget that our country consists of the splendid natural resources within her borders, and that those resources are absolutely owned by a few monopolists. The owners of those resources are in fact the owners of our country, and to the rest of the people it is a mere boarding house to which, fortunately, home sentiments are still attached.

Not the silver-purchase act, not even the still worse Republican tariff, but land monopoly, is the curse and canker of modern civilization.

To cure and prevent industrial depressions it must be stricken down. Its robbery of labor must be stopped. The constant policy of this country—the only policy which can long maintain her free institutions—must henceforth be to secure to all of her citizens independent homes.

The land of this country belongs of natural right to the people of this country, and the Creator's will is their inalienable title.

God did not make the land for landlords. He made it for His people, and the greatest and truest function of this Government is to preserve that natural heritage to the people.

REMEDY FOR INDUSTRIAL DEPRESSIONS.

Not in legislation for the contraction or inflation of our currency, but in legislation to prevent and destroy land monopoly, lies the cure of industrial depressions and the salvation of our free institutions.

In the term "land monopoly" I include the rights of way of railroad and telegraph lines. These, like all other really great monopolies, are special privileges in land.

It would be irrelevant to the present discussion to treat at length of any remedy for the deplorable calamities, in the form of industrial depressions, which periodically fill our land with distress, other than the one now before the House.

It is enough at this juncture to show that the silver-purchase act is not the cause of, and that its repeal will not even tend to cure, our country's present malady.

Briefly stated, the true remedies for the evils arising from the present unjust distribution of wealth are these:

First. Take for public use, by the forms of taxation, all of the unearned increment which attaches to land as a result of the presence, industry, and virtues of the general population of every community leaving to landlords only such values as result from their own improvements upon the land.

Second. Nationalize all railroads, telegraph lines, and such other necessary public conveniences as in their nature must become monopolies if left to private control.

The adoption of my first proposition would absolutely do away with the monopoly of land, by taking away the only incentive to its monopoly. That incentive is the right of the landowner to appropriate to his own use the ever-increasing value which is given to land by the growth, industry, intelligence, inventiveness, and virtues of the whole people.

That increment of value produced by the whole people and attaching to the natural, God-given earth, which is their inalienable heritage, belongs to the whole people, who have produced it, and who continue, year by year, to produce it by the same sacred natural right of property which gives everything of value to him whose labor produces it, and without whose labor it would not have existed at all.

There is no such thing as an accrued rental value attaching to land. Next year's rental value will be entirely produced by next year's people.

If the people should disappear, or should lapse into idleness, rental values would disappear with them, or would shrink in exact proportion to their cessation of industry.

Landlordism is a mere privilege of collecting toll from the producers of wealth. It has never contributed the value of a farthing to the wealth of the world, yet it has caused nine-tenths of the miseries of the laboring classes ever since it was substituted for the grosser forms of extortion and robbery which preceded it.

The time has come, in the order of social evolution, when this system must pass away.

Then, and never until then, can we satisfactorily "vindicate the ways of God to men."

Then will repentance come to those who blasphemously attribute to the will and design of a just and merciful and bountiful Creator the human miseries that flow from unjust special privileges, created and supported by human laws, as well-meaning gentlemen have done in this debate.

The change may not come at once. It may not come in time to prevent another industrial depression. But it is coming, and the morning of the twentieth century will bring to us an era of justice and liberty, and peace, and permanent prosperity, such as the world has never known.

In that era mere privilege shall cease to collect toll from the producers of wealth, and service alone shall command a distributive share in the wealth produced by labor.

In speaking of the nationalization of railroads, I do not wish to be understood as advocating the operation of the rolling stock of railroads by the Government.

The monopoly lies in the roadbeds and rights of way. They should be owned and controlled by the Government, and private capitalists should be allowed, under Government regulations, to freely compete with each other in the transportation of passengers and freight.

This would secure at once the greatest possible competition in the railroad carrying trade and the least possible governmental interference with the proper functions of private business.

The telegraph monopoly seems to have no solution but in making it a public function, as a part and parcel of our postal system.

But, enough of this digression from the proper subject of our present discussion.

I believe I have satisfactorily shown that the silver-purchase provision of the Sherman act, unsound as it is in principle, is not a materially contributing cause of the present crisis, and that the mere repeal of that provision, without other legislation looking to the extended coinage of silver, would result in more harm than good.

I am not satisfied that the free coinage of silver at any fixed ratio can be so maintained by this country alone as to secure the general use of both gold and silver coins at a parity. But I prefer such an experiment to the legislative elimination of silver from our currency.

I am opposed to any change from the present ratio in the coinage of gold and silver, because such a change would involve infinite confusion and great expense.

I shall, therefore, vote:

First. For the amendment of the gentleman from Missouri [Mr. BLAND], providing for the free and unlimited coinage of gold and silver at the ratio of 16 to 1.

Second. That amendment failing, I will vote for the extended coinage of silver according to the terms of the "Bland-Allison act" of 1878.

Third. If both of these propositions fail, I will, as a choice between evils, vote against the unconditional repeal of the silver-purchase act.

I have no idea that we shall be able to do anything at this session of Congress to relieve the existing depression.

Laws wiser and more universal than ours will cause a reaction to better times, as the same laws brought the reactions after the crises of 1837, 1847, 1857, 1876 and 1884.

This reaction will come regardless of what we may do or fail to do.

Some day it will be the province of this Congress, and of our State Legislatures, to remove the primary cause of these periodical scourges of our country and of our civilization.

In that day the triumph and the vindication of Democratic principles, of the principles of Thomas Jefferson and his illustrious disciples, will be complete, and equal rights and natural justice will be irrevocally established among men. [Applause.]

Mr. BROOKSHIRE. Mr. Speaker, the subject of our inquiry is worthy of the best thought and the fullest investigation by the representatives of the people. It is fair to say that upon one side in this debate are arrayed those who argue that the Government should, at least for a time, perhaps forever, refuse to use any more silver as a basis and foundation for its circulating medium, and upon the other side are arrayed those who contend that much silver should be used from time to time for the purpose of making money for the people. Upon one side are those who believe that our monetary system should rest upon a gold foundation alone. Upon the other are those who believe it should rest upon a foundation of both gold and silver, upon a bimetallic base.

Speaking for myself, I desire to say that in this contest, as in the past, I have taken a stand with those who are friendly to silver; and in doing so, I feel that I will faithfully represent the preference of a very large majority of my constituents and fellow-citizens. Shall we strike down and demonetize silver and further enhance in all the world the value of gold coin, and thus increase the burdens of our indebtedness, both public and private? To use the language of Alexander Hamilton—

> Let us compare the benefits of a full, with the evils of a scanty circulation.

The two countries on the continent of Europe where the masses of the people are said to be best housed, best fed, and best clothed, are France and Holland. The circulation of France is $40.56 to each person, and Holland nearly $29. The Treasury statement, bearing date of the 16th of this month, which gives the amount of money in circulation to each person in the twenty-six leading nations of the world, shows that those two countries have the fullest volume of money in the world. Not only are the people of the countries named the most prosperous on the continent, and have the largest circulating medium, but they have more wealth to each person:

WEALTH IN EUROPE.

France to each person	£218
Germany to each person	140
Russia to each person	53
Austria to each person	95
Italy to each person	82
Spain to each person	93
Portugal to each person	86
Belgium to each person	145
Holland to each person	240
Denmark to each person	198
Sweden to each person	152
Greece to each person	107

If all the wealth of France and Holland were divided equally among their people, each person would have about $1,000. No other nationalities in all Europe, according to statistics, can make such a favorable showing.

When we strike down silver as a commodity out of which to make money, we have taken a step toward the destruction of one-half of the money of the world; and right here let me ask what do we mean by a standard of value? I understand a standard of value to be a common measure of commodities.

The two commodities which the nations of the world have generally used through all the period of civilization to measure the value of other commodities, are silver and gold. When these commodities have been coined into money, they are given a new use. The value of a thing depends upon its use; the value of any commodity is increased by being put to additional and more important uses. Thus silver and gold, when coined take on an additional value, which can only be measured by the strength and the power of the government which coins them into money, and the confidence which the people have in their government. I believe the way to use silver for monetary purposes is to coin it into money, and thus raise it above the plane of a mere commodity.

This is the principal reason why I voted against the bill of July 14, 1890, commonly called the Sherman bill. I believed then, as I believe now, that the principle of that bill was bad and vicious. It empowered the Secretary of the Treasury to purchase four and one-half millions ounces of silver bullion each month and stack it up in the Treasury vaults, and to issue to the market value thereof Treasury notes. Believing that this so-called Sherman bill was both wrong in practice and in theory, and would ultimately prove injurious to the cause of bimetallism, I voted against its passage on the 12th day of July, 1890.

But again returning to my thread of argument, I want to say that the great majority of the people whom I have the honor to represent do not have fixed salaries, do not have bonds or money in large amounts to be enhanced in value by a contraction of the circulation. The majority of them are engaged in the production of those commodities such as are produced at the coal mines, on the farms, and in the shops and manufactories.

Sirs, what is the effect of destroying one of the commodities out of which coined money is made? Is it not to increase and enhance the price of the other commodity, gold? Let us illustrate this proposition by its apparent effect upon the commodities produced in the mines and on the farms of our country. Four of the principal commodities which are produced in my district are coal, corn, wheat, and pork. Suppose farmer A should sell farmer B 100 bushels of wheat worth $50, and 100 bushels of corn worth $40, and 100 pounds of pork worth $10.

What would constitute the most perfect standard of value with which to pay for these commodities? The same quantity and quality of these commodities? Mr. B says to A, "Ten years from now, if you do not desire money, I will pay you for these commodities in 100 bushels of wheat, 100 bushels of corn, and 100 pounds of pork of the same quality." When the ten years have rolled around B comes to A and says, "I am ready to pay you for the wheat, corn, and pork." A says, "I would prefer the money; my taxes are due." "Very well," says B, "here are $50." A says, "At the time I sold you these commodities they would have brought $100;" but B says, "Do you not know that silver is no longer used in the world as a commodity out of which to make money? Silver money is no longer used; all nations of the world are using and demanding gold. It has been placed upon the auction block, and all the nations of the earth are bidding for it. Gold coin has greatly enhanced in value; in fact its purchasing power has doubled, and now it only takes half as much money to pay debts as it did ten years ago." Sirs, you say this is an overdrawn illustration; but might it not occur in the course of human events if mankind were to set about to accomplish such a result: but of this I will have more to say further on in the course of our remarks. I am simply giving this illustration to show the possible effects of contraction.

Mr. Speaker, the great majority of the people whom I have

the honor to represent are engaged in the production of those agricultural commodities, with many others, to which I have adverted, and any legislation which would reduce the value of those commodities will meet their heartiest and severest disapproval. But the gold monometallist says that we want an honest dollar, and that the only honest dollar is a gold dollar. I am frank to say that I believe the gold dollar is the most cruel, not to say dishonest, dollar the world has ever seen. The increase of the purchasing power of the gold dollar has brought upon the masses of the people of the world more wreck and ruin and debt and loss of homes than can ever be comprehended or described by the genius of man.

The increase in the value of gold has no doubt produced riots, bloodshed, and murder in many periods of the world's history. That is what I believe concerning the so-called honest dollar, and the commodity out of which it is made. If I had my way about it I would send along with every gold dollar coined by our Government a silver dollar to act as a sort of policeman to keep the gold dollar from terrorizing and oppressing the poor; and while I am permitted to occupy a seat in this body I shall never knowingly cast a vote for any proposition which will tend to enhance the price of gold. I think I know where the interests of the masses of my people lie, and I am sure I would be unfaithful to their interests if I should cast their vote in favor of any proposition which would tend to decrease the price of the products of their farms, mines, and shops.

We can but dimly and imperfectly comprehend the gravity and consequences of the destruction of one-half of the money of the world, or of measures which will tend to reduce its volume. Mr. M. L. Muhleman, Acting Assistant Treasurer of the United States at the subtreasury in New York, is credited with saying that on January 1, 1893, there were $3,900,000,000 of gold in the world, and $3,900,000,000 of silver. But then, it is argued that volume is not important, provided the circulating medium be sound.

On last Saturday one week ago the gentleman from Ohio [Mr. HARTER] said:

> England at no time since 1844 has had any provision for the increase of her currency; and I go further and say that as long as we keep our currency sound we can never have too little or too much.

Our friend seems to have his heart set upon the financial policy of old England. Why has England had no provisions for the increase of her circulating medium for nearly fifty years? I will let Mr. Gladstone answer this question. Mr. Gladstone, when discussing in the English Parliament a motion relative to the monetary conference at Brussels on March 1, 1893 (as reported in the London Times), said:

> The complaint is a complaint of low prices. The desired condition which it (bimetallism) is sought to bring about is a state of rising prices; the means to be adopted are to supply the people who require money for the payment of debts or the purchase of commodities with a currency to which they will have access on easier terms. They are to get that currency cheaper. Very well, the consequence of that will be if that currency is to be obtained cheaper, that any given normal amount will be worth less in that currency than it is in the present currency. * * * I think Mr. Giffen, the highest living authority—though there are many living authorities well acquainted with this subject—estimates that the sum out at call is about six hundred million pounds ($3,000,000,000), and I want to know what is to be the effect of saying to the owners of that six hundred million pounds, "allow your money to remain where it is, and you will have to take ninety or ninety-five pounds for every one hundred pounds; but before a given date you could get one hundred pounds." * * *
>
> I am almost afraid to estimate the total amount of property which the United Kingdom holds beyond the limits of the United Kingdom. But of this I am well convinced, that it is not to be counted by tens or hundreds of millions. One thousand millions probably would be an extremely low and inadequate estimate. Two thousand million pounds ($10,000,000,000), or some thing even more than that is very likely to be nearer the mark. I think under these circumstances it is rather a serious matter to ask this country to consider whether we are going to perform this supreme act of self-sacrifice.

What lessons are to be drawn from the words of Mr. Gladstone: He says that by bimetallism it is sought to bring about a state of rising prices. Are the people of the Mississippi Valley and of the South and the great Northwest interested in rising values? I submit that that is what they are now contending for. He says bimetallism proposes to give the people more money upon easier terms.

Are the people we represent entitled to more money upon easier terms? Then, if the use of silver in making money means cheaper money, the destruction of silver means dearer money, and dearer money means lower prices for the commodities of our mines, shops, and farms. He gives us a reason why money should not be made cheaper, that England is the great crediting nation of the world. He says, in the event of bimetallism, that any given normal amount of the currency which we have to-day will be worth less then than now. He says that there are three thousand million dollars on call in England liable to be collected in a day, and that, in the event of bimetallism, the persons to whom this large sum of money is due would demand its payment at once. He says, furthermore, that the people in the nations outside of the United Kingdom owe the people of England ten thousand million dollars. He closed his remarks by saying, "Shall we perform this supreme act of self-sacrifice."

Mr. Speaker, the supreme act of self-sacrifice to which the great English statesman refers, is a proposition looking to an enlargement of the circulating medium of the nations of the world. In a word, the old English statesman does propose that English creditors shall receive the largest possible amount of the commodities, and labor of mankind, in payment of debts due them. It is said that bimetallism is impossible without the assistance of England, and I would ask, in all seriousness, Mr. Speaker, what hope can we have of the assistance of England in the light of the condition of her people and the judgment of her public men?

The statisticians of our own country estimate that the people of the United States owe the capitalists abroad from two to four thousand million dollars. If this were all the indebtedness this proposition would not seem so appalling, but when we comprehend that there is an indebtedness existing among the citizens of our own country which amounts to many billions, we begin dimly to understand the probable misfortunes that would attend the adoption of a gold currency. Are the people who live in the vast agricultural empire known as the Mississippi Valley prepared for such a change?

Sirs, I declare to you that in my judgment they are less prepared to-day than at any time in the history of the United States. That part of our common country has substantially seen its development within the last fifty years. Our fathers moved there because they were too poor to live in the East. They went there to procure homes for themselves and their children. They have developed the country with amazing rapidity; ditches, roads, fences, houses and cities have been constructed upon almost every hill and in almost every valley.

The people along the Atlantic seaboard were the first in our country to amass large fortunes; they own the railroads, the stock of the insurance companies, express companies, telegraph companies, which are doing the business for our people. When we insure our property, ship our freight, send our telegrams, express our goods, the money gravitates to the East and to the homes of those who hold the mortgages and bonds and stocks. Thus our people are enormously in debt, and they now feel that there is an insufficient volume of money necessary to the transaction of business. The report of the Comptroller of the Treasury shows that the available assets held by the banks and trust companies exceed $300 to each person in some of the Eastern States, while there are only $3 to each person in the State of Arkansas; and this dearth of money generally obtains in the Mississippi Valley.

The consequences which are liable to follow upon the heels of a further contraction of our currency, or a cessation of its legitimate expansion, fill me with the apprehension of great discontent, and the further destruction of values. As long as I am permitted to remain here I shall persistently insist in faithfully representing those who have been kind enough to intrust me with their confidence. This much, Mr. Speaker, I have seen fit to say with reference to the volume of money and the standards of value.

Mr. Speaker, much has been said in this debate about the finances of the Old World, and especial reference has frequently been made to the manner in which silver is used in France. The finances of the French Republic, as well as the finances in the other nationalities of the Old World, are very largely controlled and directed by large banks. To illustrate, the Bank of France is controlled by the Government of France. It became essentially a government institution in 1843, and in 1857 the charter of the bank was extended to 1897. The bank has power to issue bills of credit to the extent of 4,000,000,000 francs. A franc on exchange is equal, I believe, to about 19.3 cents of our money. The bank furnishes a paper circulation now of about 3,488,000,000 francs.

This paper currency amounts, when the bank has issued to its full capacity, about $21 to each person in the Republic of France. To redeem this paper issue of currency there was held on the 3d of this month in the bank, as a metallic reserve, 1,720,000,000 francs gold, and 1,277,000,000 francs silver. The bank redeems its notes with either gold or silver at its option.

In consequence of the Franco-German war, the notes of the Bank of France were declared to be legal tender in August, 1870. The largest depreciation of the notes of the bank was 2½ per cent, as compared with gold in November, 1871.

There were, as measured by our money, in the Bank of France on the 1st of this month about $332,000,000 of gold coin and $247,000,000 of silver coin, and the paper currency of the bank in circulation at that time amounted to about $671,000,000. Therefore the paper currency not covered by the coin reserve in the bank amounted, in round numbers, to $92,000,000. So the uncovered paper currency of the Bank of France amounted to a little over $2 to each person living in the French Republic;

but the whole paper currency of the Bank of France, covered and uncovered, amounted to between seventeen and eighteen dollars to each person in that country.

The circulation of France consists of the paper currency of its bank and such an amount of gold and silver coin as is not absolutely held in the vaults of the Bank of France as a gold and silver reserve. As I have said before, on the 1st of this month such reserve amounted to about $580,000,000.

France, with her full volume of currency, stands as fair before the world as any other nation, and when any of the nations of the Old World have been involved in trouble within the last few years they have drawn upon France for financial assistance. This tends to illustrate the benefits of a full volume of money as compared with the evils of a scanty circulation. In the Bank of Holland there were recently $34,000,000 of silver and $15,000,000 of gold coin. The two banks of the two most prosperous countries in Europe—France and Holland—hold the largest silver reserves of almost any national banks on the continent of Europe.

Mr. Speaker, I can see no reason why the Government of the United States should not so arrange its financial policy and so administer it that every paper dollar issued by the Government could be redeemed in either gold or silver coin at the option of the Secretary of the Treasury. Sirs, in this regard, I think that our Government could imitate with profit the financial management of France, as administered by her national bank.

But that I may not be misunderstood, I desire to say with emphasis that I do not approve of the policy of our Government, or any other, in permitting a bank or banks to control the issue and volume of the circulating medium. The issue of money should be controlled absolutely by the Government itself. Generally speaking I think that all our money should be issued by the Federal Government directly to the people, and that all our money should be made legal tender.

The Bank of France not only exercises the option of redeeming its circulating notes in either gold or silver coin at its pleasure, but it carries the option to the extent of paying silver coin to those persons who are threatening to take the coin abroad, when such a course will best subserve the interests of the financial policy of France. That bank also, out of its gold and silver coin reserve, redeems its notes ordinarily in that coin—gold or silver—of which it has the largest amount. How very different is the policy of our financial management as made manifest by the action of the Secretary of the Treasury.

We now have in the Treasury and in circulation about $1,100,000,000 of paper currency—six kinds of paper money—consisting of gold certificates, silver certificates, Treasury notes of the act of 1890, currency certificates act of June, 1872, United States notes commonly known as greenbacks, and national-bank notes. We have a sort of mixed paper currency of numerous denominations and divers series. While looking at the face of this paper currency we would take it that at least a part of it was redeemable in silver coin, but under the rulings of the Secretary of the Treasury it is redeemable in gold coin.

Thus, every advantage and option is given to the creditors of our Government instead of being exercised by the Secretary of the Treasury. It has frequently occurred to me that all our paper currency should be of one kind of money, and redeemable by the Secretary of the Treasury at his option in either gold or silver coin, in such a manner as would best subserve the convenience and prudent management of our financial system. It is insisted that we have silver coin enough now. Let me submit this inquiry, for to my mind it comes with great force:

If the French Republic—not over five times as large in area as the State of Ohio, impoverished as it was and tramped into the earth not over twenty-five years ago by the invading armies of Germany, paying as it did an indemnity of $1,000,000,000 to the German Government—a little nation with two-thirds the population of the United States and only two-thirds the estimated wealth, can carry along on a parity $700,000,000 of silver, $800,000,000 in gold, and nearly $700,000,000 of paper currency, redeemable in either gold or silver coin at the option of the Government, why can not the United States, standing in strength and power the superior of any nation in the world, maintain on a parity with gold a thousand millions of silver, even at the ratio of 16 to 1?

The Franco-German war was begun in the middle of the year 1870, and was fought in 1871. The amount of the indemnity, at the time of payment in 1872 was $1,060,000,000. France was credited with the value of certain railroads in Alsace and Lorraine. This reduced the amount of the indemnity to be paid to $998,000,000. Of this amount $182,000,000 was paid in gold, and $816,000,000 in silver; and the enterprising, patriotic people of France raised this sum of money by a loan in less than six months from the time the Government appealed to them for help. The fact that the French Government has such high financial standing among the nations of the earth, in the light of her numerous reverses, certainly makes her financial system worthy of study and high consideration.

I have before me a statement sent out from the Treasury Department which shows that France has in circulation and in her bank $20.52 in gold per capita and $17.95 in silver. According to this same statement we have in the banks and in circulation in the United States $9.01 in gold and $9.18 in silver per capita. If we had as much coin silver in this country in proportion to our population as France has, we would have now nearly $1,200,000,000 of silver in our banks and in circulation, instead of about $600,000,000, as we have. But it is said that we do more business with checks and drafts through the banks than is done in France.

It occurs to me that the masses of our people would be benefited if more of the business were done with money. It is claimed that nineteen dollars in twenty of the business of the United States is done with drafts and checks. During a period like this, when there seems to be a lack of confidence, the business of our country is in a large measure done upon this one dollar in twenty. Therefore, does it not follow that a full and ample volume of money at least tends to prevent a lack of confidence, and to keep the wheels of business going, even in the face of panicky conditions?

Mr. Speaker, it does occur to me, all things considered, that no nation in the world has a population better adapted to the absorption and assimilation of a full and ample volume of money than the United States. In many sections of the country the population is very thin. In fact, in France, there are over one hundred and eighty-seven people to the square mile, while in the United States we have but twenty-one. Therefore, in a country largely agricultural, new and sparsely settled, it would seem that there are great opportunities for the assimilation of a full volume of currency.

Mr. William P. St. John, president of the Mercantile National Bank of New York, in an article upon silver, recently said:

> The increase of our population in the brief period of ten years, from 1880 to 1890, exceeds the entire population of Mexico; an increase of population in the United States in ten years of more than 30 per cent of the entire population of France, more than 40 per cent of the population of Italy, nearly 70 per cent of the population of Spain; an increase equal to twice the population of Belgium, three times the population of the Netherlands or European Turkey, four times the population of Switzerland, and six times the entire population of Denmark or of Greece.

Mr. Speaker, the increase in population of the United States from 1880 to 1890 was 12,234,000 people. This is more than twice as many people as there are in the Dominion of Canada, and five times the present population of the State of Indiana.

Nations upon nations are thus being added to our population each decade, and that there should be a gradual and prudent expansion of the volume of our currency there can be no doubt.

Mr. Speaker, what I am contending for is a financial policy which will make every dollar issued by the Government equal in value to every other dollar. I believe in a sound and stable currency, which increases in volume as the population and business interests of the country expand and grow. In the report of the Director of the Mint, which gives us the last information with reference to the world's coinage of silver, I find that of the forty-four leading nations in the world but fourteen coined silver in the year 1891, and that in the year 1891 there were coined in the world 135,000,000 silver dollars, as against $119,000,000 of gold, as measured in our own money.

In the year 1890 there were coined in the world, as this report shows, $149,000,000 of gold, and $151,000,000 of silver. Now, nearly all of this coinage, as I am informed, was in a ratio below 16 to 1. In no instance has there been a coinage of silver anywhere which has any considerable influence upon the monetary system of the world in a ratio exceeding 16 to 1.

In a word, I do not believe that if our mints were thrown open to coinage of the product of the silver mines of the United States at a ratio of 16 to 1 there would be coined at our mints a sufficient amount of silver to increase the volume of silver coin in our Republic to $1,000,000,000 within the present century. It is scarcely necessary for me to state that the product of our silver mines is only sufficient to provide silver enough to coin fifty or sixty million dollars per year, and I am not impressed with the idea that silver will be brought from abroad in considerable amounts for the purpose of coinage.

Secretary Windom, in his report to the Fifty-first Congress, stated that there is no known accumulation of silver bullion anywhere in the world, and that all the silver coined in Europe is needed and employed there for money purposes. And it is also true, as I have just shown, that more money is being added to the world's volume each year by the coinage of silver than by the coinage of gold.

It has been argued with very great force, especially by the gentleman from Tennessee [Mr. PATTERSON], that silver is being

overvalued under our coinage system and will drive gold out of circulation. It is the duty of the friends of silver to meet every argument advanced by their adversaries in an open field with the weapons of reason. My friend from Tennessee stated that under the coinage act of 1792 silver and gold were coined in the ratio of 15 to 1; that silver was overvalued under the act, and that the cheaper money, silver, drove the dearer money, gold, out of circulation; that is to say, that silver drove gold out of active circulation. He also stated that in 1834 the size of the gold dollar was decreased; that the ratio between silver and gold was then fixed at sixteen to one; that by this act gold was overvalued and became the cheaper money, and in turn drove silver out of circulation.

My friend seems to have overlooked the fact that his argument has its real application to our monetary system as it existed prior to the war, when the whole volume of our Federal money consisted solely of gold and silver. I claim that it has been substantially demonstrated that the rule to which he refers, and to which he called our attention with such a show of learning, is not applicable to the financial system of any country having a large paper currency circulation which is being redeemed in either gold or silver coin at the option of the government. But that my remarks may not be prolonged, I shall now pass to a brief consideration of the effects wrought upon our financial system, due to the late war.

It is now over thirty years since our Government first issued circulating notes with the legal-tender quality. The effect of introducing a paper currency at the beginning of the war was to drive both gold and silver out of circulation. There was so little silver in circulation in 1873 that the demonetization act had no perceptible effect on silver, so far as the general public could observe, and it was not until about the year 1876 that the people began to fully realize that the silver dollar of the fathers had been mercilessly and secretly struck down.

If gold had been demonetized soon after the war stealthfully and quietly as was silver in 1873, it would no doubt have taken the general public a considerable length of time to have fully realized the fact, because gold was not in circulation for a long time during and after the war. No doubt many people believed, during the period when these legal-tender promises to pay seemed to be the basis and foundation of our circulating medium, that the Government would, at no distant time, return to a specie basis for its whole circulation.

During the period when gold and silver were out of circulation the people became so much accustomed to rely upon a currency with no coin behind it that it awakened in the minds of a very large number of our fellow-citizens the belief that a coin reserve was wholly unnecessary to the successful maintenance of our circulating medium. In fact, it gave rise to that idea commonly known as the fiat money idea. Before the war, when the debtor and creditor classes were small, and when the masses of our people were but little in debt, changes with reference to the character and volume of our circulating medium were not attended with such great and far-reaching effects as have attended changes since the war.

In 1860 the whole public debt was but $65,000,000, and in 1836 it was but $37,513. It is certainly fair to say that the Government of the United States was but little in debt prior to 1860, and that the Government's creditors were not numerous.

The Government's creditors prior to the war had but little to do, if anything, in shaping its financial policy. The war came, and by the year 1866 the public debt amounted in round numbers to $2,700,000,000.

By 1866 the national creditors had become a powerful and influential class; they were the first people in our country to discover that our circulating medium and all the Government issues should be made payable in gold. They insisted that the principal and the interest of their bonds should be paid in gold, and it was done; and from that hour there has been a persistent and never-ending night-and-day fight by the wealthy money-lending, mortgage-holding classes of our own and of foreign countries, where our bonds and securities have gone, to have all bills of credit, both public and private, made payable in gold, and thus a most momentous effort has been made to enhance the price of gold coin decrease the volume of our currency, and greatly increase the indebtedness of our people.

Mr. Speaker, I am a bimetallist, and I think nineteen men out of twenty in the district which I have the honor to represent are bimetallists. They are bimetallists because they know that one-half in value of the coin money of the world is silver. Can any man be anything less than a bimetallist when he knows financial history? The gold monometallist cites the fact that England demonetized silver in 1816, Germany in 1871, the United States in 1873, Belgium in 1875, and Austria in 1879. And he also argues that India, the greatest silver-consuming country in the world, has recently discontinued the coinage of silver. He forgets the fact that, notwithstanding these acts, which affect the silver coinage of the world, the world goes on, and that more silver is being coined in each succeeding year than gold.

I have just shown that more silver in value was coined in 1890 and 1891 than of gold, and I see from the last report of the Director of the Mint, which I have before me, that the world's gold production for 1892 was $130,800,000 and the silver production was $133,000,000, commercial value, and, while I have not the figures for the last calendar year, I take it that it is reasonably sure that more silver was coined the whole world over during that year than there was gold. The average production of the metals, one with the other, for each year of the present century is indicated in the following table:

1801–1820, 4 of silver to 1 of gold.
1821–1840, 2 of silver to 1 of gold.
1841–1860, 2½ of gold to 1 of silver.
1851–1880, 2 of gold to 1 of silver.
1881–1889, ½ more silver than gold.

Therefore, does not all history and all experience teach that the supply of gold in the world is largely insufficient, in fact scarcely half sufficient, to supply the nations of the world with necessary metallic money? It would seem from the last report of the Director of the Mint that of the forty-four leading nations on the globe, twenty-six coined no gold in the year 1891, and in the same year all of the said forty-four nations coined silver except fourteen. Why should the United States cease the coinage of silver, when we produce annually two-fifths or 40 per cent of the silver output of the world? Great Britain, with all of her resources, produces less than a half million dollars' worth of silver bullion each year, as this report shows. We produce annually about $33,000,000 worth of gold bullion and over $70,000,000 worth of silver bullion.

The Director of the Mint, in his last report, says:

> The estimated stock of our own gold coin, which should exist in the United States on the first of the present year (1893) was $567,951,000, and of silver $492,903,000. Of the latter, $417,876,000 were silver dollars, and $75,026,000 subsidiary coins.

For the nine years ending in 1891 the annual coinage of gold at our mints amounted to less than $26,000,000 a year. Mr. Speaker, in the light of the facts which I have detailed, I feel that there is more reason for the coinage of a large amount of silver each year in the United States than in any other country in the world.

I can see no reason why I should not vote for the amendment providing for the coinage of silver at the ratio of 16 to 1. And my investigation and research have led me to believe that there is no real occasion for changing the ratio that has existed since 1834. In the light of the coinage laws of other countries, I think we can as well coin silver in the ratio of 16 to 1 as at a higher ratio. In England and in the leading nationalities on the continent of Europe, silver is coined in the ratio of 15½ to 1.

I am unable to discover any good and satisfactory reason why the old ratio, so long established and recognized, should be changed. I have before me the statement recently sent to members of Congress by Secretary Carlisle, in which he estimates that the recoinage at the ratio of 20 to 1 of our present volume of silver money would cost about $113,000,000. I shall vote for the amendment offered by the gentleman from Missouri [Mr. BLAND] providing for the free coinage of silver at the ratio of 16 to 1, and shall vote against the amendments which provide for a change of the ratio.

Furthermore, Mr. Speaker, if the House shall see fit to vote down these several amendments proposing the free coinage of silver at various ratios, I shall vote for the amendment which will be offered by the gentleman from Missouri [Mr. BLAND] providing for a restoration of the Bland-Allison bill of 1878, which empowered the Secretary of the Treasury to purchase not less than $2,000,000 nor more than $4,000,000 worth of silver bullion each month, and have the same coined into standard silver dollars at the ratio of 16 to 1. What I am contending for, and what I hope to see, is the opening of the mints to the coinage of silver, and when they are opened, I think they ought to coin silver at the ratio of 16 to 1; at least, that is my present judgment.

I think the present law ought to be repealed, but it is unnecessary for me to state why I think it ought to be repealed in the light of the able message of the President of the United States to the people. He has pointed out in a more epigrammatic and sensible way the reasons why the Sherman law should be repealed than it is possible for me to give in the brief time now at my disposal. I always believed that that law would prove both wrong in principle and practice, and it has certainly been demonstrated that such is true. While I am very desirous to see it repealed, I would be very glad, indeed, to see some good substitute take its place.

I believed when the Sherman law was passed that it was a menace to the cause of bimetallism, and, as I have before re-

marked, I voted against its passage in July, 1890, and at the same time voted to keep in operation the Bland-Allison bill, passed in 1878, which was repealed by the passage of the Sherman act. My feelings and judgment, Mr. Speaker, at this time, in the light of present conditions, are in a measure expressed in the words of my dear old deceased friend, Senator Joseph E. McDonald, than whom I never know a kinder, a fairer, a more conservative, a more intelligent, a wiser.

Senator Joseph E. McDonald, on the floor of the Senate, February 12, 1878, said:

I do not think that the free-coinage feature of the House bill should be retained or the principle of free-coinage applied to the coinage of the silver dollar until the market value of silver bullion shall equal the money value of the legal-tender coin, and that whatever seigniorage or profit accrues by its coinage should be covered into the Treasury for the benefit of the whole people. Unlimited free-coinage seems to be a popular idea in connection with the remonetization of the silver dollar, but it must be because the operations of the measure are not clearly understood.

I can see no reason why the holder of the bullion should be entitled to receive the profits that would accrue from the difference between the market value of the bullion and the money value of the coin so long as there was any difference, and when the market value of the bullion should equal the money value of the coin have in its power to either stop the coinage of the silver dollar or throw upon the Government the expense of its coinage.

I think also that we should guard, if possible, against the imposition by the holders of foreign silver coin in those countries where silver has been either in whole or in part demonetized. It is very important to us as a people that, while we are laying anew the foundations of our money system, we should make them as secure and stable and as free from fluctuation as possible.

Yet, Mr. President, if a majority of the Senate should differ with me on these questions, I shall vote for the bill as it came from the House, and shall trust to future legislation to adopt such safeguards as may be necessary, believing speedy determination of the question in favor of the principle to be more important than the perfecting of its details.

Senator Beck of Kentucky, who was one of our greatest and best Democrats, in the same debate in which Senator McDonald uttered these words, said:

As long as silver bullion is 6, 8, or 10 per cent below gold, I do not want Congress to so vote as to give any private citizen, or any foreign nation, or any foreign corporation that seigniorage.

Mr. Speaker, here are two great Senators, either of whom was fit to be President of the United States, when speaking upon this subject in 1878, said that the Government ought to have whatever of profit there is from the coinage of silver. In other words, that the Government should have the difference between the market value of the bullion necessary to make a silver dollar and the coined dollar.

In order that we may appreciate the amount of this seigniorage, I will read a letter from the Acting Director of the Mint, which will explain itself, and ask that the same may be inserted in my remarks at this point:

TREASURY DEPARTMENT, BUREAU OF THE MINT,
Washington, D. C., August —, 1893.

SIR: In answer to your telegram of even date, regarding seigniorage, I have to refer you to "Director's Report, 1890," page 19, a copy of which I forward you to-day.

As will be seen, the seigniorage on the coinage of silver from 1878 to 1890 was $65,098,057, a yearly average of $5,474,838.

The seigniorage on $2,000,000 worth of silver bullion bought at the present market price—74 cents per fine ounce—would be, monthly, $1,494,402, and for the year $17,932,824, as the following will show:

2,702,702 fine ounces can be bought for	$2,000,000
2,702,702 fine ounces will coin	3,494,402
Monthly seigniorage	1,494,402
	12
Yearly seigniorage	17,932,824

Very respectfully,

R. E. PRESTON,
Acting Director of the Mint.

Hon. E. V. BROOKSHIRE,
House of Representatives.

This profit has been constantly increasing since 1873. The following table gives the average value during each fiscal year (ending June 30) since 1873 of the silver bullion necessary to make a coined silver dollar at the old ratio of 16 to 1. In other words, the following table gives the average bullion value in each fiscal year since 1873, of 371¼ grains of fine silver, the amount used in making the coined silver dollar since 1834:

Fiscal years.	Bullion value of silver in dollar, at average price of silver.	Fiscal years.	Bullion value of silver in dollar, at average price of silver.
1873–'74	$0.98865	1884–'85	$0.84507
1874–'75	.96777	1885–'86	.79750
1875–'76	.89087	1886–'87	.76029
1876–'77	.92931	1887–'88	.74008
1877–'78	.89116	1888–'89	.72055
1878–'79	.86152	1889–'90	.74932
1879–'80	.88509	1890–'91	.80588
1880–'81	.88057	1891–'92	.72430
1881–'82	.87880	1892–'93	.65063
1882–'83	.86490	July	.56052
1883–'84	.86115	August	.5600

Mr. Speaker, I am convinced that a very large number of our fellow-citizens who are friendly to silver, and who are bimetallists, are desirous that the Government shall receive the profit or seigniorage when silver is coined. Now, the free and unlimited coinage of silver is the proposition upon which we have ordinarily voted in this House. It contemplates giving this seigniorage to the producers and owners of the silver bullion. I feel reasonably sure that the sentiment of the country is against this.

There is another reason why some people friendly to bimetallism are not inclined to vote for the free and unlimited coinage of silver. They believe that some limitation ought to be placed upon the amount of silver to be coined at recurring intervals, so that the people and the Government could know in advance what the increase of our circulation would be from time to time. This idea was, no doubt, in the mind of the President when he put these words into his recent message addressed to Congress:

Possibly if the undertaking we have in hand were the maintenance of a specific known quantity of silver at a parity with gold, our ability to do so might be estimated and gauged, and perhaps in view of our unparalleled growth and resources might be favorably passed upon. But when our avowed endeavor is to maintain such parity in regard to an amount of silver increasing at the rate of $50,000,000 yearly, with no fixed termination to such increase, it can hardly be said that a problem is presented whose solution is free from doubt.

Mr. Speaker, this brings me to a direct discussion of some plan which would tend in a measure to meet these objections. I think of two plans, either of which would secure to the Government the seigniorage. If free and unlimited coinage is desired in the ratio of 16 to 1, and it is desired to secure to the people the seigniorage, why not require the owner of silver bullion presenting the same at the mints for coinage to first pay the seigniorage; that is to say, if he brings to the mint 371¼ grains of fine silver, which is the amount that we have been putting in a silver dollar for nearly sixty years, let him pay into the Treasury 45 cents—the seigniorage—and then let him receive a legal-tender paper dollar or a coin dollar.

By this plan we could secure to the Government the profit, and at the same time have the free and unlimited coinage of silver at the ratio of 16 to 1. But if a still more conservative course is insisted upon, then the Government could fix the amount of silver to be coined each month, as was provided in the Bland-Allison bill. The Government could also require those offering silver at the mints to pay the seigniorage in advance, or it could buy the bullion outright and coin the same, as was done under the Bland-Allison law.

What I am contending for is the opening of the mints to the coinage of silver. I am a bimetallist, and I want to see much of our silver used in making coin money for the people. In a word, Mr. Speaker, I think that the true friends of silver and of bimetallism are not those who insist upon the unattainable, but are rather those who favor legislation which will secure the Government against loss, and send forth to all our people a steady flow of coined silver money, to be used in the remotest ramifications of trade and commerce. I also think it would be a good idea to dispense with the use of paper currency in less denominations than $10, and let the whole volume of money in denominations less than $10 be coined silver, silver certificates, and gold.

Mr. Speaker, what I would like to see is a thorough revision and readjustment of our whole financial system. I would be glad to see some vigorous financial reform inaugurated by the present Congress. I know it is a task of great difficulty, and that any changes in our financial system tend to create distrust; but at the same time it does seem to me that some changes are so apparently necessary that the whole country ought to approve of such a revision as would simplify our confused and complex system of finance. And right along with this work of reform we ought to have our mints opened to the coinage of silver; for I am very desirous, indeed, that we have a prudent expansion of our money volume sufficient to meet the business needs of our country. I am a firm believer in that divine declaration which says that "a feast is made for laughter, and wine maketh merry, but money answereth all things."

Mr. BELL of Texas. Mr. Speaker, I had not expected to have an opportunity of addressing this body on the pending question, and would not have done so but for the fact that there are certain points which have been frequently alluded to, but which, I think, have not been amplified and elucidated with that degree of care and detail which their importance justifies, and indeed demands.

The discussion has taken a very wide range, and the speeches of the gentlemen who have addressed us have been both instructive and entertaining; but it has seemed to me that the issues upon which we are to vote have not, at all times, been clearly stated, and perhaps not always thoroughly understood. I shall endeavor to restate the real issues.

In 1873 the use of silver as a standard of values was discontinued in the United States. In 1878, by a law known as the

Bland act, silver was made again a legal tender in payment of debts, and a certain quantity of it was required to be coined monthly. This law was repealed in 1890, and the act known as the Sherman law took its place. If the deplorable state of affairs, which we all recognize to exist, was brought about by this legislation, then, I think, it is the duty of every Congressman and Senator to vote to remove every vestige of it from our statutes, regardless of party platforms and ante-election pledges.

But if, on the other hand, the hard times which are upon us have been postponed by what is known as the silver legislation; and if there is a reasonable ground for believing that a return to prosperity can be brought about by a more extended use of silver as a standard of values, then I take it to be the duty of every Congressman and Senator to assist in restoring it to the position which it formerly occupied in our monetary system. I will consider these propositions in the order in which they are stated.

First, then, let us see what was the cause of our present troubles. For several years prior to the fall of 1890 the whole civilized world was enjoying what appeared to be an unexampled degree of prosperity. Money could be obtained in almost unlimited quantities for all purposes, regardless of the prospects of its being repaid. In our country this caused an unwarranted degree of inflation. Fields which should have remained in the possession of the husbandman were divided into town lots; industrial enterprises of all kinds were capitalized for many times their cost, and at figures at which it was impossible that a reasonable return for the money invested could be realized. Speculation of all kinds was rife in the land; and the man was not only wise, but extremely fortunate, who avoided being drawn into the devastating whirlpool.

If these enterprises, wild and senseless as many of them were, had been conducted on home capital, the result would not have been so disastrous when the bubble burst, for it would only have eventuated in a change of the ownership of that capital. But much, if not most, of the means on which these undertakings were conducted had been directly and indirectly borrowed from the money centers of Europe. As long as the principal was not called in, and as long as the speculators could borrow money with which to pay interest on the principal, all went as merry as a marriage bell; and it seemed as if man had at least solved the problem of making a dollar without earning it.

History repeats itself, and as all previous periods of abnormal inflation have been followed up by a corresponding period of liquidation and depression, so must the one I have been describing. However, bad as was the overinvestment of borrowed capital in unproductive enterprises, still it may be that we would have safely passed the crisis if the same misfortune had not overtaken others upon whom we were compelled to rely for assistance. Unfortunately, the people of all the other civilized nations of the earth had been and were recklessly treading the same paths, utterly oblivious of the fact that the day of reckoning and settlement was near at hand.

In staid and sober England, where they had no inflated currency to act as an unhealthy stimulus, the corporate capital brought into existence in 1889 was £189,000,000, as against £98,000,000 in 1887. The French had put millions into the Panama Canal and similar schemes on which no returns could be realized.

The Germans were straining every nerve to maintain their immense army which yielded no revenue in return.

Just at this time, while credit was expanded far beyond the danger limit, and when the people of the United States were indebted to Europeans in an amount variously estimated at from two to six billion dollars, the failures in the Argentines occurred, and those who had loaned money in that Republic were unable to call in their principal or interest. This caused lenders to lose confidence in the security of their loans elsewhere, and also compelled many who could live on their interest when it was paid to call for the principal of the loans which they had made to others.

The old and well-established banking house of Baring Brothers, which was supposed to be one of the most reliable and safe institutions in existence, was closed. The Bank of England appeared to be on the verge of bankruptcy. Consternation and fright took possession of financiers and business men. Deposits were withdrawn; uncertainty prevailed; debts must be collected; securities must be realized upon, or disaster would become universal.

Under these circumstances, the eyes of the people of Europe were turned upon the young republic. Our creditors demanded payment of their debts; and such are the wonderful resources of our country, and such the wonderful recuperative energies of our people, that we met their demands with a promptness which challenged the admiration and excited the envy of the world. The process of paying our debts and absorbing our securities, which is the principal means of paying them, has been continued and still continues. But, just as the financial skies were clearing and the dawning of a better day could be seen on the business horizon came the disastrous failures in Australia.

In that single-standard gold country, in six weeks, banks whose capital exceeded the aggregate capital of all the banks in our great metropolis were compelled to suspend, and there was a complete collapse in all business enterprises. This would not have effected us in the least if it had not been that Australia had borrowed money in the markets where we still owed so much. The holders of our securities, who were also creditors of Australia, were compelled to sell whatever they could realize upon; and the return of our securities continued with accelerated speed, and so rapidly that we could not absorb them in a healthy manner.

With securities as with everything else, when the supply exceeds the demand prices depreciate; and hence, there was a great shrinkage in value. This caused some to market their holdings, and compelled others to do so. Overcapitalized enterprises were unable to pay interest on their mortgages and stocks. Insolvent banks failed; some solvent banks suspended; depositors withdrew their deposits, and the banks were consequently unable to extend the usual accommodations to their customers, and the necessary result was stagnation in all kinds of enterprises. This is the history of the financial trouble from which we are now suffering.

My first proposition is, that our silver legislation has not brought about our financial trouble nor contributed to it, and in support of this I wish to submit a few facts and figures. It has not been contended that we have, or have had, too much money. The complaint has been that the trouble was occasioned by the fear of the quality of the money. There are several complete and perfect answers to this assertion. In Australia they have had reverses, in comparison with which we have been, and are, in the enjoyment of unbounded prosperity. Yet, in that country, the gold circulation of full legal-tender quality is $25 per capita, and the silver circulation only $1.75 per capita, and all of that of a limited legal-tender quality. Now, I ask, if the fear of our coming to a silver basis has caused all or any of the distrust which prevails in this country, what has been the cause of the trouble in Australia?

Again, in Great Britain they are affected with the same paralysis of trade and the same stagnation in manufacturing industries from which we are suffering. The papers tell us that on last Saturday in Wales alone there were 500,000 unemployed men. The suffering at Manchester and other manufacturing centers in England is said to be without a parallel, and yet it is to these single-standard gold countries we are pointed as the ones upon which we should model our financial system.

But it is said that the evil is not that we have a bad or depreciated money but the fear that it will become so. Then, I ask, when did this fear begin? The laws complained of, as has been stated, were enacted in 1878, and the bill was vetoed by the President, who predicted then, as those who entertain the same views have predicted ever since, that gold would leave the country, and that we would soon be on a silver basis; that our people would not invest, and that foreigners would not loan, where they would be liable to be paid in a depreciated unit of values. By the report of the Director of the Mint, from which I read, I find that in 1879, there was in this country, including what was in the Treasury, $245,741,837 in gold.

This amount has been augmented since until on the 1st day of July of the present year, it amounted to the sum of $513,743,623, and this is true, although for the fiscal year ending June 30, 1893, the exports of gold exceeded the imports by the amount of $86,000,000, and the balance has been against us since 1890, to the amount of $196,000,000. The reasons for this I have already explained. We have been paying our debts, absorbing our securities; and, so far as I can see, it would be a good thing for us if nearly all the remaining gold coin was put to the same use. But it may be said that now that the tide has turned, the yellow metal will leave us.

This statement might have frightened some persons a short time ago; but, as I am informed by Mr. Preston, who is the present Director of the Mint, from the 1st to the middle of the present month the importation of gold has amounted to the enormous sum of $16,500,000; and the daily press informs us that it is still coming. If our silver legislation accounts for the shipment of gold to Europe from 1890 to the 1st day of July, 1893, what accounts for the return of gold after the 1st of August for the same year, while the laws remain unchanged? But we were not only told that gold would leave us, but that silver would come to us.

By the table from which I now read, and which I wish incorporated in the RECORD as part of my remarks, it appears that since 1878 we have exported the enormous sum of $126,000,000 more of silver than we have imported; while at the same time our importations of gold have exceeded our exportations, and

our importations of gold have exceeded our importations of silver for the same time in the enormous sum of $221,000,000.

Statement showing the imports and exports of gold and silver into and from the United States by fiscal years from 1878 to 1893, inclusive.

Fiscal years.	Gold.		Silver.	
	Imports.	Exports.	Imports.	Exports.
1878	$12,976,281	$9,204,455	$16,491,099	$24,535,670
1879	5,624,948	4,587,614	14,671,052	20,409,827
1880	80,758,398	3,639,025	12,275,914	13,503,894
1881	100,031,259	2,565,132	10,544,238	16,841,715
1882	34,377,054	32,587,880	8,095,336	18,829,599
1883	17,734,149	11,000,888	10,755,242	20,219,445
1884	22,831,317	41,081,957	14,594,945	26,051,426
1885	26,691,696	8,477,892	16,550,627	33,753,633
1886	20,742,349	42,932,191	17,850,307	29,511,219
1887	42,910,601	9,701,187	17,260,191	26,296,504
1888	43,934,317	18,376,234	20,514,232	28,146,510
1889	10,372,145	60,033,246	24,682,380	36,716,782
1890	13,097,146	17,350,193	27,524,147	36,069,602
1891	18,516,112	86,462,880	26,278,916	23,533,551
1892	50,162,879	50,305,533	28,764,724	32,800,562
1893	22,069,380	108,663,116	34,292,011	41,100,491
Total	522,831,031	507,589,423	301,145,371	427,320,431

BUREAU OF THE MINT, *August 16, 1893.*

The net imports of gold from August 1 to August 15, inclusive, was $16,250,000.

In view of these facts, I think the fear of this country being placed on a silver basis could not have frightened even timid foreigners, who have been informed by our Eastern friends that we are on the eve of repudiation and the brink of ruin. Again, we are told that the amount of gold in this country is so small in comparison with the amount which we might have to redeem with it, that our ability to maintain a parity between gold and silver is questioned.

Let us examine this statement. In 1879 the stock of gold in this country was $245,741,837, and the money which this gold might be called upon to redeem was $805,779,704; that is, there were three and one-third times as much money of other kinds as there was of gold. In 1893, although we had in the previous five years exported $196,000,000 more gold than we had imported, there was in this country, in gold, $513,743,623; and the money which this might be called upon to redeem was $1,506,537,470; that is, there was two and nine-tenths times as much money of other kinds as there was of gold. Is it possible that any man, who would have trusted us at any other time, would be afraid of our money now?

Another matter of great importance to be considered in this connection is that our courts have always held that a contract for the payment of gold dollars could be enforced, and that the debtor could be compelled to pay in the coin of his contract. If the European money-lender fears that he might get back a less valuable money than that which he loaned, all he would have to do to make himself secure on this score would be to take his note payable in gold. This has been done in many cases. Most of the industrial stocks and railroad and other bonds are payable in gold; and yet, as if to show the absurity of the statement that any one fears that our money is not sufficiently stable, the highest priced stocks and bonds on the market are payable in currency.

Having, as I think, by a mere recital of these undisputed and well-authenticated facts and figures demonstrated the correctness of the first proposition laid down, I will proceed to a consideration of the other—that is, that our silver legislation has materially assisted in enabling us to weather the financial storms. As stated before, no one claims that the volume of money is too great. In 1878 we had a circulation of $766,253,576, or $15.32 per capita. This amount was made up principally of $346,881,016 United States notes, which have remained in circulation ever since, and of $324,514,284 national-bank notes.

At the present time the volume of the national-bank notes has been reduced to $172,683,850, while the silver and silver certificates have supplied the vacuum occasioned by their retirement, and, together with the increase in gold, has swelled the circulation up to $24.47 per capita. Does any man suppose that if we had not added to our circulation we could have received and absorbed the immense amount of securities which have been returned to us from Europe, moved our enormous crops, supplied our increased population with the necessary circulating medium, and continued to develop our resources during the past three years?

But it has been said that if we had not inflated our currency with silver more gold would have been shipped to us. My reply to this is, that the table from which I have read shows that each year since the resumption of specie payments, when the international financial balances have been in our favor, the difference has been paid to us in gold, except for the year 1891, when we imported less than three million dollars more of silver than we exported. But why should we want to import gold? If owing to a scarcity of money in this country which would have prevailed but for the increase of our silver circulation, we had drawn from across the waters more gold, in what way would that have benefited us?

In Europe, as elsewhere, the price of commodities is affected by the volume of the circulating medium, and if we take from those people their money, to that extent we decrease their ability to buy, and thereby lower the price of the surplus products of our industries which must find a market in foreign countries; and would anyone contend that the satisfaction of having a larger amount of gold than we have or need would compensate us for this deplorable result? As it was, instead of being compelled to take their gold, which we did not need, we bought from them things which we did need; thus affording them a market, which in turn enabled them to buy from us. After all, the only commercial need of gold as applied to this country is in the settlement of adverse international balances. Our other forms of currency, which are a full legal tender in all domestic transactions, are more convenient and more acceptable to our people so long as their parity with gold is maintained by the Government. That we have sufficient gold to do this I think I have shown.

The remaining proposition which I desire to discuss is, that silver ought to be restored to its former condition as a money metal and placed on an exact equality at the mints of the country with gold. The justness of this has not been questioned by anyone, and the only point at issue seems to be. Is it practicable; and if so, at what ratio? I shall endeavor to show that it is practicable, and at the present and long-established ratio of 16 to 1. The contention of those who take an opposite view is that if free coinage of silver prevails, silver now in foreign countries would be shipped into the United States, coined into dollars, exchanged for gold, and the gold shipped out of the country, and this process repeated until we would have no gold left. This is a very important matter, and a point that must be carefully examined.

The first thing to be considered is the supply of silver and the use it is being put to. Manifestly, if an article is being used in any other country more advantageously than it could be here, it will remain there. I am informed by the Director of the Mint that outside of the United States there is practically no bullion silver in existence, and very little in the United States besides that which is in her vaults; that nearly all the silver, except that which is owned by this Government, has been used in the arts or coined into money. No considerable part of that which is manufactured into the various articles for which silver is used will be presented at our mints, because it would then only be worth the number of dollars it would make; and hence the owner would have to lose the additional value which the article possesses, owing to the work that had been done upon it. How would it be, then, with the silver in use in other countries as coin?

In this connection I wish to digress long enough to refer to that supremely ridiculous expression which we hear used so much—the 60-cent dollar. Why not refer to the greenback dollar as the 1-mill dollar, as that amount would cover the cost of producing the bill. The truth is, that since the Government maintains the parity between the dollars by redeeming the one in the other, at the option of the holder, a gold dollar is worth just one silver dollar and no more, and the silver dollar is worth just one gold dollar and no less, and the greenback and the bank-note dollar is worth just the same as either.

But it is said that in the foreign markets the silver dollar is worth only about 60 cents, as that is the value of the metal in it. Then, according to the same reasoning, the greenback dollar is worth in a foreign market nothing. The truth is that our silver dollar and our greenback dollar are each worth, in any part of the world, just 100 cents in gold, less the interest on the money while in transit to and from the United States, plus the cost of transportation, and the same thing applies to the money of all other countries.

Mr. BYNUM. Will the gentleman answer a question right there?

Mr. BELL of Texas. I will try to.

Mr. BYNUM. Why is it that the Mexican dollar does not sell for the same amount in London as the United States dollar? It contains 6 cents more silver.

Mr. BELL of Texas. I have just explained that. It is because you can send a silver dollar back here and get a gold dollar for it, and if you send it back all anybody would be out would be the interest on it for two weeks and the cost of getting the silver dollar over here and getting the gold dollar back. So we must remember that while there is in use in the world silver coin to

the enormous amount of $4,000,000,000, all of it is worth in the countries where it is coined, not its bullion value, but its coin value.

Let us then see where the silver which is to flood our country and drive away our gold is to come from. France has silver coin of the value of $700,000,000. It is on an exact parity with gold: it pays debts, serves as bank reserves, and in every other way is just as valuable as gold; and yet the ratio between gold and silver in France is 15½ to 1, while the ratio in this country is 16 to 1. To express it in a different way: The equivalent of an American dollar in French coin contains 359.91 grains of silver, while the American dollar contains 371.25 grains. Would any one be so silly as to think that French silver coin would come to this country when the owner of it would lose 11 grains on each dollar's worth, regardless of the loss from abrasion; and if it did, and the owner offered to have it recoined in our country, would not some one inform him that by returning it to France it could be utilized in payment of debts or in exchange for gold at a ratio of 15½ to 1, while here he could only exchange it at the ratio of 16 to 1?

Exactly the same thing applies to all the nations of Europe which have any silver; the ratio being in each of them 15½ to 1, while in India, which has nearly one-fourth of the coined silver in the world, the ratio is 15 to 1. This, I think, shows very clearly that we can, without driving gold from our country, maintain the free coinage of silver at the present ratio of 16 to 1, as long as other people have a lower ratio, and there will be plenty of time for us to adopt a higher ratio than we now have when the other nations of the world change their coinage laws.

Mr. Speaker, the benefits which would flow to the people of the United States from the free and unlimited coinage of silver, and the evils which would result from its less extensive use as a money of the country, have been so fully explained by other gentlemen on this floor that it is impossible for me to add anything to what has been so well said. However, I deem it but proper to state that even if our views do not prevail, I do not indulge in the gloomy forebodings so often and so sorrowfully expressed by the gentlemen with whom I am associated on this measure.

It is not recommended by the President, or suggested by any one here, that we should destroy the silver dollar we have, or take away from it its legal-tender character. Hence, there will be no contraction of our currency. The trouble is, that while our population increases, and our business expands, our circulating medium will remain stationary, except so far as it may be augmented by the importation of gold or the issuance of national-bank notes. I think I have shown that the former method of adding to our supply of the precious metal is not promotive of the substantial welfare of the American people; and my fondest political hope is to see the day when it will not be in the power of any number of our private citizens to increase, diminish, or in any way regulate the volume of the nation's money.

Mr. Speaker, I do not wish to be misunderstood on this point. I am no enemy to banks or bankers. I recognize their business as being just as legitimate and fully as honest and honorable as any other secular calling. The idea expressed by so many, that our financial difficulties were brought about by a conspiracy of bankers, I repudiate utterly. I believe that but for the assistance which has been rendered, and which is being rendered, the business public by the bankers, many times at the jeopardy of their private means, the collapse in our land would have been complete. In their good work I bid them Godspeed.

Mr. Speaker, I am not one of those who think that the free coinage of silver will prove a panacea for all, or much of, our ills. I believe it would be the least beneficial of any of the economic measures to which the party of which I am a member is committed; but, because I regard it as a step in the right direction, I shall cast my vote for every proposition which is calculated to promote a return to the system founded by our fathers and under which they lived and prospered.

I am aware that many others wish to explain their views on this absorbing question, and will therefore bring my remarks to a speedy close. In doing so, I desire to express the hope that we may be guided by wisdom, as I am sure we will be prompted by patriotism, in whatever course we may adopt, and that our action will turn back the tide of adversity, revive confidence, restore credit, and cause the country of our pride, like a young giant refreshed by slumber, to shake off her lethargy, and stand proudly up at the head of the nations of the universe. [Applause.]

The table referred to is as follows:

Monetary systems and approximate stocks of money in the aggregate and per capita in the principal countries of the world.

Countries.	Monetary system.	Ratio between gold and full legal-tender silver.	Ratio between gold and limited tender silver.	Population.	Stock of gold.	Stock of silver.			Uncovered paper.	Per capita.			
						Full tender.	Limited tender.	Total.		Gold.	Silver.	Paper.	Total.
United States	Gold and silver	1 to 15.98	1 to 14.95	67,000,000	$604,000,000	$538,000,000	$77,000,000	$615,000,000	$412,000,000	$9.01	$9.18	$6.15	$24.34

TREASURY DEPARTMENT, *Bureau of the Mint, August 16, 1893.*

Mr. HICKS. Mr. Speaker, I desire before commencing my prepared remarks on the subject under consideration to answer a question that was asked by the learned gentleman who preceded me, in which he stated this proposition: Why is a silver dollar an honest dollar? It is because it has the broad seal of the Government of this country that stamps it as honest; and without that seal it would not be an honest dollar. Just here I will relate a little incident that proves what a silver dollar or a certificate that calls for a silver dollar is worth in Germany as compared with the greenback money. I had a friend who, about two months ago, offered a $5 note in Bremen, Germany, as payment for some purchases that he had made. It was immediately discovered by the person to whom he offered the note that it called for five silver dollars, and my friend was compelled to take the actual value of the silver as it was in Germany on that particular day.

Mr. HEINER. The bullion value?

Mr. HICKS. The bullion value; and on the same day he offered a five-dollar greenback note in payment for a purchase that he had made, and it was taken at its gold value. That is the difference, I take it, between silver money and the money that we call gold money, if you choose; and it would be foolish and useless for this Government, in the face of all the nations

with whom we deal, to undertake to maintain the parity between gold and silver, unless those nations with whom we do business will agree with us.

Mr. Speaker, the question and the substitute under consideration is in no sense a question that appeals to party spirit or party prejudice, but one which concerns the business interests of the entire country—East, West, North, and South. Whether or not the so-called purchasing of silver has caused the present stagnation of trade and financial distress, reports of which reach us from all parts of the country, is directly chargeable to the Sherman law must necessarily enter more or less into the intelligent discussion of the question, and of this one fact we may rest assured, that no matter how much we may differ as to the causes of the present distress, the most of us agree that at least a part of it is chargeable to the distrust and uneasiness caused by the purchasing of silver in the quantities that are directed by law.

There are none of us but understand that what is called money is that which passes freely from hand to hand throughout the community in final discharge of debts and full payment for all commodities, and the most important function which it discharges is that of facilitating exchanges and of affording a ready means of establishing the comparative value of different commodities. Indeed, the idea of general value can not be fixed without the existence of money; and as a medium of exchange and measure of value it acts as a standard in the regulation of contracts. Its three functions are, first, as a medium of exchange; second, as a measure by which the comparative values of exchange can be estimated; third, as the standard by which obligations are determined.

Money must be a fixed and unchangeable measure, and must be so recognized by all countries which exchange commodities or enjoy commercial relations with each other; and any changing of its value, or debasement of it that causes a reduction of its value as a purchasing power, destroys public confidence and causes distrust. If the legal money is debased, he who has services to sell, or is the owner of property, can raise the price to suit the occasion. But legal debts and legal money go side by side. These are well-established principles governing money and its uses upon which we all agree.

By the Constitution of the United States Congress has power to coin money and regulate the value thereof. Hence Congress has full command over all the legal debts of the nation, and any abuse of this power, like the debasing of money, causes distrust. This same power that can debase or enrich the legal tender of the country also has the power to increase or decrease all legal debts. From 1794 to 1873 there was no change in our silver dollar, except in 1837, when the ratio was reduced from 416 grains to 412½ grains. In 1873, silver coinage not being provided for, its legal-tender power was taken away. In 1878 it was restored to its former condition as full legal tender for all debts, except when otherwise stipulated in the contract.

Mr. John A. Grier, of Pennsylvania, in his pamphlet—a little book written a few years ago, entitled "Our Silver Coinage," in which he ably reviews the subject as an advocate of silver—says the demonetization of silver in 1873-'74 was a huge blunder, and in the law restoring silver to its old place in 1878 the law of 1873, wherein gold is recognized as the unit of value, remained unchanged and was not repealed in that particular, therefore the restoring of silver creates a new unit of value; hence he claims that we have two units of value—the gold dollar and the silver dollar. And one of the principal reasons urged for the enactment of the law demonetizing silver by the gentleman who had charge of the measure in 1873-'74 [Mr. Hooper] was that the Government could get gold at that time 3 per cent cheaper than silver, and as we then had heavy coin obligations to meet it was wise to provide for the coinage of gold alone.

This, we must remember, was at a time when our people had nearly forgotten that there was such a thing as gold and silver money, as it was then distinctively an age of paper money. So that from 1793 to 1873 we were under a double standard, and from 1873 to 1878 we were under a single or gold standard, and the law of 1873 distinctly states that the gold dollar shall be the unit of value.

Mr. Grier argues with great clearness and force for the continuance of silver coin as money, and, indeed, the overwhelming sentiment of the entire country is, we believe, to-day for the use of silver as a part of our currency; but by reason of the cheapness of silver the difficulty of maintaining it on a parity with gold presents itself, especially so in our dealings with foreign nations who do business only on a gold basis, and to do this, it is contended, a new ratio must be established, and there must be no compulsion upon the Government to purchase it for the purpose of creating a market for the owners and producers of silver. But even a new ratio with a constantly changing market will not cure the evil so long as we stand, almost alone, among the nations of the world to maintain both gold and silver as money on a parity with each other.

The heaping up of large quantities of bar silver in the vaults of the Treasury can not impress any one as a proper measure, and its enactment into law was one of those peculiar compromises that at times have to be resorted to, to bring extremes together, or to prevent, as was the case at that time, the enactment of what was claimed to be a worse measure.

This part of the law, *i. e.*, the purchasing clause, having caused so much adverse comment and distrust, it is now sought to repeal, first, by those who deem the legislation unwise; second, by those who think it responsible for our money stringency; and third, by those who believe that gold alone should be our standard of money; and those who favor silver legislation have offered as a substitute a measure providing for free and unlimited coinage. Neither of these measures, it is claimed, seek to discard silver as a legal-tender money.

The one law, however, contemplates a stoppage, temporarily, of the coinage of silver, except possibly the coinage of what we have on hand. The others claim in their measure, that is, the free-coinage measure, that those who urge the repeal of the Sherman act are in the wrong, and that our present financial disturbances are not chargeable to this, but to some other cause (which other cause they fail to give us), but contend that a more liberal measure of coinage and treatment of silver is demanded instead of the present law; and this new measure will, they claim, at once restore confidence and cure us of all our present ills.

One gentleman [Mr. GOLDZIER] in his address against the free coinage of silver upon the floor of this House likens the country to a sick patient, and says: "We," meaning the Democratic party, of course, "are the doctors," and as such, and he as one of them, prescribe a remedy. I fear, Mr. Speaker, if the remedy proposed by the gentleman, to wit, the repeal of the Sherman law, depended on the Democratic party, the patient would die before the doctors could agree.

The fact is, Mr. Speaker, the Democratic party can not administer the proper medicine to this distressed country, for the reasons, first, they have not properly diagnosed the case; second, they do not have the proper medicine in store; and third, they are hopelessly disagreed as to the remedy needed, and it is against their school of medicine to administer the only remedy that can restore suspended animation to the great body politic of this country that now exists; but, sirs, call in the other school, the old tried and reliable Republican doctors, and in a few days time you will see such a change in the appearance of things that will astonish you. Why, the very presence of the old doctor, the old familiar family physician, will at once act as a stimulant and as a restorer, without applying a remedy. [Applause.]

The question of what is the proper thing to do is now before us for action. Patriotism demands in this crisis its careful consideration and an honest and conscientious vote, for the best interests of the whole country, as we understand it, and each for himself must answer to his constituency if he is in error in his final judgment. The agricultural community and the entire business interests of the country, including the manufacturing interests, and especially the latter, are at a standstill, and individuals and parties are divided as to which is the right thing to do; and there are many of us who believe that if a free-coinage measure would add one cent additional to the value of a bushel of wheat, or any additional value to farming lands, or would in any way relieve the present distress that pervades the entire country, we would cheerfully vote for it, and no one would be more willing to vote for such a measure than myself.

Yet, after careful consideration and a patient and careful as well as considerate hearing of all that has been urged by the gentlemen who have advocated the free coinage of silver, I am free to say that, although open to conviction and anxious to learn and do the right, I have been unable to come to a conclusion that will favor the measure offered by Mr. BLAND: and if the limited coinage that has been tried as an experiment since the enactment of the Sherman law has brought about so much distrust and financial distress as is claimed, by the same process of reasoning we must conclude that free and unlimited coinage would cause greater distrust, greater depression in business, and greater financial distress, with its attendant consequences.

The President of the United States has chosen to say to Congress that the so-called Sherman law is responsible for the present condition of affairs. With this position assumed by the President—and we all accord to him honesty and sincerity of purpose—a great many of the distinguished gentlemen on the floor of the House have taken issue, and in the excellent and learned discussion of the subject as given to the House a few days since by Gen. GROSVENOR, of Ohio, that distinguished gentleman said, in language that was unmistakable and to my mind unanswerable, that the Sherman law had very little to do with the present condition of affairs.

Indeed, it was but a subterfuge and a scapegoat, so to speak, on which those who have the direction of affairs choose to place our present depressed condition, and the real cause of the difficulty was the disposition on the part of the President and his advisers to tamper with the well-known protection policy [applause] that has been the distinguishing feature of the Government of this great country for the past thirty years, and under which it has so wonderfully progressed, and that by the attack that is intended to be made upon this policy, which has done so much to make this the greatest country on the face of the earth, the manufacturing interests of the country have become alarmed, and the fear of their business being ruined and the product of their manufactures being depreciated in value, has compelled them to suspend work and discharge their labor, and the smoke of the stacks that was so welcome during the year 1892, and the music of the spindles and looms, the hum of which meant work for the laborer and means of support to his family and happiness and contentment everywhere, is now heard no more, and instead from all our manufacturing districts comes up the complaint that the wheels of industry have stopped. And in all these idleness reigns supreme.

In the city af Altoona, where I reside, in the month of August, 1892, the Pennsylvania Railroad Company paid to its employés about $460,000, and in the month of August, 1893, they paid about $160,000.

A MEMBER. For wages?

Mr. HICKS. For wages. In the month of September, 1892, the same corporation paid out $498,000, within $2,000 of half a million: while for the month of September of this year, the estimate they have upon their pay roll is about $140,000; and in the city of Johnstown the Cambria Iron Company has been compelled to suspend from 7,000 to 10,000 of its employés.

What has caused this depression in business? The President has said it is the Sherman law; but, sir, it is the threat of the Democratic party, and the belief of the business and manufacturing people of the country that they intend to interfere with the protective policy that for so many years has done so much to build up the manufacturing interests of our country, and which protective policy has been fostered by the great Republican party. [Applause.]

And in this connection, Mr. Speaker, I desire to have the Clerk read an extract from the New York Press, which very vividly portrays the condition of the country in 1892 and the condition of the country at its present time.

The Clerk read as follows:

DARE DEMOCRATS DENY IT?

One year ago the prosperity of this nation was at high-water mark. Eighteen hundred and ninety-two was the banner year of American industrial progess. During the twelve months ending at midnight on the 31st day of last December the American people produced more and consumed more than in any year of their history. Our foreign trade broke all records by its magnitude. The volume of our industrial production and our exchange of products among ourselves went far beyond all precedent. We produced a million tons more of pig iron than in 1891, and 2,000,000 tons more than Great Britain. We produced 200,000 tons of steel rails more than in the preceding year. We consumed 59,000,000 pounds more wool than in 1891.

Capital and labor were alike fully and profitably employed. The factory wheels revolved unceasingly. Wages were higher than ever before. Confidence was universal. Credit was freely extended. The integrity of the currency was assured. There were fewer commercial failures than in any year since 1882. The creation of wealth for the nation and competence for the toiler went on apace under the shield of America's second Declaration of Independence, the McKinley law.

Until the Bourbons and the Socialists elected Grover Cleveland there was every prospect that the same conditions would prevail during 1893. The capital of the nation, the executive ability of its leaders of industry, the enterprise of its merchants, and the skill of its trained workers were at the highest point on November 8, when the Democratic party triumphed on a platform that declared war on every American interest.

With the election of Cleveland manufacturers and merchants began to trim their sails in anticipation of the coming storm. With the inauguration of Cleveland the storm burst. Confidence vanished. Credit fled. Capital hid itself. Securities in which a large proportion of the country's wealth was invested rapidly dwindled in value till the loss to the people exceeded $1,000,000,000. Bank after bank went to the wall. The liabilities of commercial failures for the first six months of the year were more than double those of the corresponding period of 1892. Menaced by revolution, American industries ceased to expand and began to retrograde. Production has fallen and wages have fallen with it. Every plate-glass factory in the country has shut down. The great iron mines of the Northwest have suspended operations. Blast-furnace fires are being banked. Trade balances are against us. Textile mills are everywhere closing, or restricting their product. The prices of wool and wheat have sunk to a ruinous figure. The farmer suffers with the merchant and the manufacturer. Tens of thousands of American workingmen who last year were busy and prosperous are idle and facing destitution to-day.

The Press asserts explicitly and directly that the prevailing conditions of disaster have been brought about by the threat of Democratic free trade. It asserts that the loss of the people through the depreciation of securities, the paralysis of credit, and the stagnation of industries would not have taken place had Benjamin Harrison been elected instead of Grover Cleveland. The Press challenges Democratic newspapers to deny this statement. Is there one Democratic organ that dares to assert that the disaster which has come upon the country since March 4 would have occurred if the Republican party had continued to control the Government?

Mr. HICKS. In all that is said by the New York Press, in the article just read and in the discussion of this question by the many distinguished gentlemen on the floor of this House—in nothing that has been said has an explanation been made that denies the statement asserted therein.

And to those of us who can remember what has frequently been referred to by some gentlemen on the other side as to the good old Democratic days before the war, we beg to remind the gentlemen that about the same condition of affairs existed from 1856 to 1860 under Democratic administration that exists to-day: and the message of President James Buchanan to the Congress assembled in 1856, in describing the condition of the country at that time, used language very similar to that which was used by the present President of the United States in his recent message to this Congress.

Indeed, one of the most flagrant acts of betrayal of public trust by the Democratic party that led to the condition of affairs referred to by President Buchanan was the act of George M. Dallas of Pennsylvania, when he in opposition to the interests of his State, and in violation of the pledges of his party, cast his vote as Vice-President of this country, and as the representative of the Democratic party against the tariff of 1842, thereby bringing about its repeal, and the sufferings and distress that culminated from 1856 to 1860 were directly chargeable to the report of that measure.

The student of history who will take the pains to examine will discover that when this country was working under a policy of protection instead of a policy of tariff for revenue only it was in a far more prosperous condition. The Democratic party has always been, at least for the past thirty years, the pessimistic party of this great nation, and, as a Republican, I point with pride to the success and prosperity of the country during the days of Republican administration, and am willing at any time to have its policy contrasted, by any fair-minded person, with the policy of the Democratic party (if it has a policy).

Mr. Speaker, many of us well remember the so-called good old Democratic days of 1856 to 1860, of low wages, scarcity of work, and greater scarcity of money. The old rag-paper currency of State banks, dishonored and worthless, and the distress and suffering then existing, especially in the winter of 1857, was without parallel, before or since, especially in the iron districts of Pennsylvania, excepting, possibly, the present time. The great Cambria Iron Works, of Johnstown, with its army of from 7,000 to 10,000 workers, is almost at a standstill.

The miners of coal and manufacturers of coke on the Alleghanies have nothing to do; the great repair and machine shops of the Pennsylvania Railroad at Altoona are working only about one-third of the time, and instead of the pay roll for the month of August reaching the munificent sum of $450,000 (almost half a million), as it did in August, 1892, it did not reach half that amount; and it will be far less in September.

Is this the change that was desired and urged by the Democratic party? It is, sir, an additional and most convincing argument against the principles enunciated in their deluding platform. It is at variance with the best interests of, and is directly antagonistic to, the prosperity of the laboring man, as well as the manufacturer. Wheat was then, as now, at a very low price; but with no labor and no means of earning money, little does it matter how cheap are the necessaries of life.

Those good old Democratic days may well be boasted of, except to those who know the sad experience of those days and the misery and destitution then existing; and may God forbid that the working people of Pennsylvania, yea, of the whole country, may ever again see such a winter as the winter of the "good old Democratic days" of the winter of 1857.

Since the election the people have stopped to think, and are examining what was promised them by the Democratic party in order to induce them to make a change, and they have discovered that that party itself, which promised so much for the public good, is hopelessly divided, except in their desire for public office, and that to-day, instead of unanimously working for the best interests of the country, they are upon the floor of this House charging each other with bad faith; and you have the piteous spectacle of the President and the acknowledged leader of his party pointing out one line of policy, while many of its most distinguished leaders in the Senate and on the floor of this House take issue with him and say that if that line of policy is followed as he recommends it will be most ruinous and work far greater injury to the country than any other measure he might possibly suggest.

The fact is, Mr. Speaker, if this Congress would by resolution to-day declare that the protection policy which was fostered by the great Republican party should continue untouched, and would then adjourn without any action whatever upon the Sherman law, confidence would be at once restored, and the busy hum of the hives of industry would be heard again from ocean to ocean, and from North to South, and happiness and contentment would again reign supreme in the homes of our people.

This hopeless division of the Democratic party on the financial question of to-day proves the incapacity of that party to di-

rect the affairs of this great country, and demonstrates the fact that by the promise of too much they have succeeded in getting into power. What has happened since that time and is now pervading the entire country needs no further reference on my part, as it is too well known to even require repetition.

Nations, like individuals, must be honest, and the Democratic party, by reason of its dishonesty as a party and its failure to redeem its promises, has sown the seeds of distrust from which we now suffer.

Its hopeless division already referred to on the financial question proves its inability to keep its pledges and contracts to the people. They were made to be broken, and we say here, Mr. Speaker, without fear of successful contradiction, that another matter which has not yet been referred to by any gentleman on the floor of this House has also tended largely to create distrust in the minds of the people of the ability of the present Administration to properly conduct the business of the country; and that, sir, is the disposition manifested to violate the contracts which have been entered into on the part of the Government with the men who saved this country from eternal ruin.

The country loves its old soldiers and they want their contracts with them honestly observed. I speak, sir, with due regard for what I am about to say when I assert that Mr. Cleveland has not, either by his own personal acts or by the acts of the gentlemen whom he has called into his counsels, in any way proven himself or themselves to be friendly to the Union veterans of the country, and they have shown no disposition, either by word or act, to live up to the contracts of the Government to care for the old soldier and his family when old age and disease should overtake him.

Indeed, Mr. Speaker, it is to the disgrace of this great nation that we find a condition of affairs existing such as never before existed in this country, nor has its like existed in any other country. Claims against the Government upon a solemn contract, proven in due form of law, considered by a proper court after careful and patient hearing, and a judgment entered in each case, and the money justly due and owing, partly paid on account of said judgment, have, by the act of one man, been entirely overturned, and judgment reversed without a hearing and without notice, until after the decree of reversal was entered against the plaintiff in the case.

The present Secretary of the Interior has, by the stroke of his pen, decided that the solemn judgment entered by legal and proper authority and in accordance with law, in thousands of pension cases, by his honored predecessors, was entered, as he now declares, without authority of law, and he has reversed decrees for the payment of pensions that were granted in the manner indicated, and pensions have been stopped, and pensioners have been notified by thousands that they must again go through the forms prescribed by law and present again their claims before an unfriendly court, acting as judge and jury, to prove themselves entitled to the small pittance which the Government had already granted them upon cases heard and adjudicated.

Such a wholesale overturning of precedents was never before heard of, and the Union veteran who has had his pension stopped is held up before the community in which he resides as a fraud, impostor, perjurer, and cheat; and he is humiliated before his neighbors, and made to feel as though he has acted an unworthy part in securing for himself that which was his right; and thus in his old age the Government he faithfully served has turned its back upon him and has attempted to disgrace him. This violation of contract upon the part of the present Administration has been felt all over this land, and, in my humble judgment, it has had as much to do with sowing the seeds of distrust as any other act either omitted or committed by the present Administration.

I appeal to the gallant soldiers of the Confederacy who sit upon the other side of this House, and with whom the boys in blue at Appomattox divided rations and broke the bread of eternal fellowship and brotherhood, and as one of that army who wore the blue who helped to make it possible for these soldiers of the Confederacy to occupy the distinguished positions they now hold in the halls of Congress, and the many other places of honor and preferment in the gift of this great and generous people, and in the name of these thousands of men who have been denied this small pittance by the Government, and who have been held up as targets for public condemnation, I ask for fair play and justice.

It has never been in the heart of the Union soldier, and I challenge proof of it, to gloat over the defeat of our Southern brothers; but, trusting to their honor, we have aided so far as we could in restoring to you, my soldier friends on the other side, the right of the ballot; and by the exercise of that right, which grew out of our confidence and generosity, we ask you to see that fair play and honest dealing shall be given to the thousands of now old and infirm men who suffered in saving this country, the benefit of which you reap, which is represented in this most solemn obligation of the Government—the pension roll—that the Secretary of the Interior is now trying to make dishonorable.

In doing this I say it is but reasonable and just, Mr. Speaker, to expect that the gallant men who wore the gray will remember the debt of gratitude which is due the Union veteran—a debt which they in common with every other citizen of the Union, and their prospering section as well as every other section of the country, owes to the old blue soldier, now in the days of the sere and yellow leaf of old age.

As these pensions have been stopped in many homes all over this nation, the grocer has failed to receive his due, and he in turn would fail to meet his obligation, and thus it has extended from hamlet to town and from town to village and from village to county seat and from county seat to the cities and the great centers of trade until every artery of the great financial fabric of the nation has responded to this outrage. This is one of the many causes that have led the people to believe that their interests are not safe in the hands of the men who are now attempting to control the affairs of this great nation.

Mr. Speaker, I desire briefly to refer to another matter that is causing much anxiety and concern to the business interests of the country; that is, sir, the declaration in the platform of the Democratic party favoring the repeal of the tax upon State banks; this is a threat and menace to our present system of national currency, the system now in use by this Government, and which, barring the cheap silver dollar, is pronounced to be the best ever devised by man, and while it may be improved and strengthened, any serious changes made in it must work and cause serious disaster and confusion, and the threat as promulgated by the Democratic party is already bearing evil fruit and has aided to create the present prevailing distrust.

During the protective Administration of President Harrison the business of this country so prospered as to warrant an increase of 26,000 new business concerns. But notwithstanding this unprecedented increase of our mercantile institutions, the failures during the last year of Mr. Harrison's Administration were 335 less than the last year of President Cleveland's first Administration, and the total amount involved in such failures was less by $9,786,000.

Immediately after the election of President Cleveland in 1892 came the speedy contraction of business already referred to, and preparation was at once made, and sails were taken in by business men and manufacturers to be prepared for unknown impending dangers, and the amounts involved in commercial failures increased over 200 per cent in six months, comparing the first months of 1893 with the first months of 1892. From all parts of this country to-day we hear of idle men, most of whom are anxious and willing and ready to work, and no work to do. In New York but a day or two ago a riot was imminent, and unless something speedily be done the cry will soon come from all quarters of this great nation, "Give us bread."

Says a distinguished authority and writer in the New York Tribune:

> Financial distress and ruin must always follow the change from doing business with poor money to good money; hence, no nation should ever adopt a depreciated currency, and in the end the use of a depreciated or debased currency will inevitably result in disaster to any nation that adopts it, and so far as history discloses no nation has ever yet changed from a depreciated currency to a sound one whose people have not suffered.

This was primarily the cause of the panic in 1873, and our friends in the South can well take this picture home with them, and they can cite to you the fearful struggle that they have had to rebuild their beautiful country since the ravages of war and from the effect of their worthless money. Yet notwithstanding this lesson we are face to face with a currency (our silver coinage) that is not what it pretends or claims to be, but is of less real value than a dollar.

This fact causes distrust, which means and is soon followed by disaster. Yet notwithstanding these undeniable facts, which cause us to realize our present condition, we are asked by the gentlemen who are urging the enactment of the measure proposed by Mr. Bland to agree to the free and unlimited coinage of these same debased and dishonest dollars.

Mr. Speaker, if the Sherman act has one good feature above another, it is the limit fixed in its purchasing clause in which the Government is permitted to purchase a certain amount of silver. And, as we have already been informed by the President, this is in a great measure the cause of our present disturbed financial condition. If we do not choose to vote for its repeal, we must vote for the substitute presented by the gentleman from Missouri, which will continue the coinage of these same dollars for anyone who wants them, without stint or limit. And herein a great wrong has been done to the Republicans of this body; we are not permitted to suggest a remedy, but must choose between the two propositions submitted by the Democratic party.

Surely to vote for free coinage at this crisis would be a great mistake, and, if to purchase silver in a limited amount has caused the present distress (and the President says it has) and an almost total stagnation of business, what will be the result, sir, if we, in the face of this condition, declare for free and unlimited coinage? Public confidence has become impaired; distrust reigns supreme; every owner of money places it in his pocket and keeps it there; currency is sold as a commodity at a high rate of premium—and all this is caused, so we are informed by financiers, by this purchasing of silver, and from all parts of this great country comes the demand from farmers, from bankers, and from business men, for the repeal of this law by which they claim they will have relief.

Are the requests and demands of these men of experience and practical knowledge to be treated as unworthy of consideration, and are we to be led by men of no experience and who have no means of knowledge of the real situation except their own theories, and shall we, in disregard of the requests of practical men, do away with one experiment that has proven a failure merely to try another on the same line on a larger scale, and thus by the failure on our part to aid in restoring public confidence place ourselves in a much worse condition than we now are?

What can be urged, Mr. Speaker, and what has been urged by the advocates of free coinage that is better than the law we now have? The gentleman from Pennsylvania [Mr. SIBLEY] who has advocated free coinage upon the floor of this House failed to state in what way the enactment of that measure would enhance the value of farm products, or increase the value of a day's labor, or start again in operation a single manufacturing establishment or branch of industry. The same gentleman claims to represent the farmers of Pennsylvania, and in their name demands the continuance of the coinage of these debased and dishonest dollars.

I take issue with the gentleman right here, and assert that if there is one principle above another that the farmers of Pennsylvania are noted for, it is their honesty, integrity, and their belief in a sound currency; and they will authorize no man, here or elsewhere, to urge for them the coinage of a dollar that is intrinsically worth but little more than 50 cents. The farmers of Pennsylvania do not believe in fiat money. "Thou shalt not steal," says the gentleman. Is he not violating his own command when he robs the people by coining dishonest dollars to enrich the owners of silver mines? He further says, in advocacy of free coinage, that when silver goes up in price, wheat follows it, and when it goes down, wheat likewise goes down. Is not the gentleman by his own argument proving that such an unstable article as silver is not a fit standard upon which to measure values?

Therefore, in the absence of facts and in the face of the result of a well-tried experience, will not the theories of free coinage lead us to greater disaster and more extended financial distress than we are now suffering from? And must we in answer to the petitions and opinions of men of wisdom and experience turn a deaf ear and listen to and act with theorists only? Does not our best judgment dictate the immediate repeal of a law or that part of a law that is supposed to contribute in any way to our present distress, and by this action restore, or at least assist to restore, confidence?

This being done, it would be wisdom for us to then stop and give time for thought and further examination of the subject that is so potent for weal or woe to the country at large. Would it not be best for our friends who are so clamorous for the free coinage of silver to await the result indicated, and for the general good step aside from selfish and personal ends and personal upbuilding?

I respectfully contend, Mr. Speaker, that the repeal of the purchasing clause of the Sherman act does not impair the use of nor the value of silver as a money metal. The two great parties of this country alike promise the people that they favor bimetallism. As a Republican, sir, I say without fear of contradiction, that it is to the pride and credit of that great party that they have always adhered to the promises made in their party platforms, and many wise and wholesome laws attest the truth of my statements; and from the birth of the party in 1856 down to the present time it has always stood for a free ballot, fair elections, a protection policy, and an honest currency.

And are we not bound to keep faith and maintain silver on a parity with gold as per present ratio or standard, and doing that which honesty and fair-dealing demands must be done? In the maintenance of this double standard our Populist friends can also fall in line with us, and the only manner in which they and the silver advocates generally are restrained, is in suspending the purchase of the precious metal by the Government.

Patriotism demands that some sacrifice shall be made; and while the great iron, coal, cotton, and other manufacturing industries of the country generally are either stopped or largely affected by this depression, is it more than fair, or is it asking too much to say to the owners and producers of silver that they too must stand back and give the country time to recover its wonted condition and take breath for a new start; and by thus aiding to restore confidence, the time will soon come when with a proper ratio of a new standard established, and the new order of things that must ensue by a reëstablishment and renewal of confidence and business, the coinage of silver can again be resumed in such a manner, aided by the light of experience, as to avert ever again the loss of public confidence by reason of making a depreciated dollar, that in the end causes distrust, disaster, and financial ruin.

No, Mr. Speaker, the thing to be done to-day is to repeal the purchasing clause which compels the Government to buy silver. Whatever the material benefit of repealing may be will be far surpassed by the effect upon the restoration of confidence. The situation is such that something must be done. The stupendous piles of the manufacturing and banking establishments, leaning against and upon each other, depend upon confidence. An avalanche seldom begins suddenly. Here a piece comes away and there another, and between the last fallings of fragments and the stupendous crash there is often but an instant. There is money enough in the country, and it will pour out the moment something is done to restore confidence.

In the present situation the abstract question of bimetallism or monometallism must be postponed. The several conferences of delegates upon that subject have as yet brought forth nothing. Our methods are out of harmony with those that prevail in the world. That we can make silver other than an article of merchandise, circulating at its worth in grains in the market, without the help of other nations, none can suppose. If we could, we could not do it soon enough for the needs of the present situation.

There is but one way, Mr. Speaker, out of this difficulty. The eyes of the entire nation are directed toward these Halls. People have been led to believe, whether rightfully or not, that their present distress is chargeable upon the purchasing clause of the Sherman silver law. As patriots and as representatives of a great people it is our duty to repeal that law; and, as I have before stated, this is not the time to argue bimetallism or monometallism. We have but one plain duty, and that is not done until the purchasing clause of the Sherman silver act is erased from our statute books.

These other questions which must necessarily be considered in connection with the use of silver as money can be postponed, and with a restoration of public confidence these matters can be worked out in the future to the satisfaction of ourselves and to the satisfaction of the people whom we have the honor to represent. [Applause.]

Mr. ALDERSON. Mr. Speaker, I am a Democrat, and a bimetallist.

The platform of the Democratic party adopted at its last national convention, declares:

> We denounce the republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets, and in payment of debt; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

Mr. Cleveland, in his letter of acceptance of the Democratic nomination last year, uses this language:

> The people are entitled to sound and honest money, abundantly sufficient in volume to supply their business needs. But whatever may be the form of the people's currency, national or State—whether gold, silver, or paper—it should be so regulated and guarded by governmental action, or by wise and careful laws, that no one can be deluded as to the certainty and stability of its value. Every dollar put into the hands of the people should be of the same intrinsic value or purchasing power. With this condition absolutely guaranteed both gold and silver can be safely utilized, upon equal terms, in the adjustment of our currency.

On the faith of these declarations the Democratic party has been intrusted with power by the American people. Our party is committed to bimetallism, as well as to the repeal of the Sherman silver law, passed by a Republican Congress over the solid vote of the Democratic members of both the Senate and House of Representatives.

The Democrats in the Fifty-first Congress stood as one man against this measure, and in repealing it we but follow in the footsteps and voice the sentiments of those of our own political faith who were members of that Republican Congress which not only wronged the people by enacting this "cowardly makeshift," but by its lavish and extravagant appropriations and the passage of a McKinley tariff bill increased the burdens of an

oppressed and tax-ridden people, and attempted to add to its unenviable record by placing Federal bayonets around the voting places where freemen are expected to exercise unrestrained and untrammeled the right of franchise.

The Democratic party is not responsible for the Sherman silver law, and we are opposed to it, as we always have been. Even the Republicans themselves, smarting under the sanguinary defeat which but lately overtook them, and in fear of future chastisement for their political transgressions, assert that they are anxious to be rid of their own production, although they differ widely as to the motives which prompted them in fastening upon the country the ridiculous and ruinous policy emanating from their act of 1890 and its attending evils. Mr. SHERMAN, who gave his name to this measure, in his remarks in the Senate on the 8th instant, in excuse of the passage of this act, used the following language:

> I do not myself wish to enter into a political debate, but there is one fact I must impress upon my friend from Indiana [Mr. VOORHEES], and that is that the passage of the act to which he has referred was caused by the imminent danger of the two Houses of Congress agreeing to the free coinage of silver.

Mr. TELLER, another distinguished Republican Senator, replying to Mr. SHERMAN on the same day, said:

> I want to refer to the very subject mentioned by the Senator from Missouri [Mr. VEST], who has just taken his seat; that is, to the statement made by the Senator from Ohio [Mr. SHERMAN] that the Sherman law was passed to save the country from a free-coinage act. The Senator from Ohio [Mr. SHERMAN] was the chairman of the conference committee which framed that act, and on the floor of the Senate, when he made the report, he stated in the most emphatic manner that the House of Representatives had determined in a very positive way that no free-coinage bill could pass that body.
>
> Mr. President, I say here now, with all due deference to the honorable Senator, and trying to keep as closely within the rules of Senatorial decency and courtesy as the circumstances will admit, that that statement is an afterthought. The records will not support it. The matter was brought here in that shape for the reason that it was supposed it would quiet the agitation and would maintain intact in the Northwest the Republican column of States. We were told in plain, unmistakable language that this might be a sop to our people, which would save us and save our political organization in that great section of the country, and that we could get nothing better.

I care not, Mr. Speaker, whether the Sherman silver law was enacted to avoid the passage of an act providing for free coinage silver, as claimed by the Senator from Ohio, or whether it was placed on the statute books as a "sop" to the people of the West and to induce them to vote the Republican ticket, as averred by the Senator from Colorado; but this we do know, as is known of all men, that the Sherman law and other laws enacted by a Republican Congresses have carried ruin and disaster to the commercial interests of the country, and brought poverty and distress to our people; and at the door of the Republican party the responsibility and the blame must rest.

I do not understand that any Democratic member of this House favors the continuation of the Sherman act as the law of the land, and I do understand that we all favor its repeal.

The differences which exist among us relate solely to the questions: First, shall there be unconditional repeal of this law, or shall we provide at the same time for further coinage of silver? And, second, if silver is to be continued as one of the money metals, at what ratio shall it be coined?

That a most serious condition of affairs existed in this country was admitted in all quarters; financial depression, uncertainty, and uneasiness prevailed everywhere; ruin and disaster confronted the business interests of the country. The Executive gave heed to the demand which came up from all quarters, and exercised the prerogative vested in him by the Constitution to convene in special session the Congress of the United States "on extraordinary occasions." The representatives of the people have assembled; the eyes of the people are upon them; they are expected to enact such laws as will restore confidence, and to repeal or amend the laws enacted by Republican Congresses, and to which must be attributed the present deplorable condition of affairs existing throughout the country.

We are called upon to meet the situation for which the Democratic party is not responsible, and one which affects the whole people. I trust, Mr. Speaker, that in dealing with it we may be able to rise above party, and that in this hour of emergency we may be more of patriots than partisans, and in a conservative spirit unite in a common effort to relieve our common country of the unfortunate conditions now surrounding us.

The President, in a message bold and fearless, and couched in language characteristic of the man and of his every public utterance and expression, has recommended the repeal of the Sherman silver law—and there the message stops. He does not, as is claimed by many gentlemen, declare in favor of the unconditional repeal of the law in question. Gentlemen infer and argue that he favors unconditional repeal. After a careful reading and study of the President's message, I believe that it is unfair to him to assume that he would veto any measure which might pass Congress relating to the subject under discussion except such a measure as that introduced by the gentleman from West Virginia [Mr. WILSON].

In the face of a platform which flatfootedly and unqualifiedly commits his party to the use of both gold and silver as money, and upon which he was elected; in the face of the language employed by him in his letter of acceptance of the Democratic nomination, it is far fairer to the President to presume that he is ready to carry out the pledges his party has made to the people, and that he would not interpose the veto power to prevent the people's representatives from placing among the laws of the land a conservative and reasonable measure which would furnish to the country the money necessary in the transaction of the business of the people.

Mr. Speaker, Grover Cleveland is not the man to remain silent upon any public question in respect to which he has formed an opinion. The people of this country admire him most for his devotion to the right as he sees it, his fearlessness in the discharge of duty, and his boldness of expression upon public questions; and I again assert that it is unfair to the President to assume in advance that he would veto an act providing for the free coinage of silver at a safe and reasonable ratio.

But, Mr. Speaker, while I am a Democrat and a partisan, and have as strong a disposition as any other Democrat to support, sustain, and uphold a Democratic Executive, I must say for myself, in all frankness, that I will vote upon this question as I deem to be right, and in accordance with the best interests of the people, as I understand them. I will carry out the pledges my party has made to the country; I will keep faith with the people who have elected me, regardless of future results.

I have before voted for the free coinage of silver; I have in good faith told the people of our district that I favored the use of both metals as money; they have elected me understanding my position upon this question, and I will not now lay myself open to the charge of treachery and deceit, or that I have secured their suffrages by false pretenses. I have seen no cause to change my opinion upon the question at issue, but, on the contrary, the present scarcity of money convinces me more conclusively than ever before that any law which will retard an increase in volume of currency would have a most injurious effect, and to pass it would be bad policy in the extreme.

The bill introduced by the gentleman from West Virginia will stop the further coinage of silver—the only means now provided by law for an increase of the money of the country; and in my judgment there should be substituted for it some safe and conservative measure to insure to the people an increase in their circulating medium, commensurate with the increase in population and the requirements of increased business, traffic, and trade. It may be that some of us feel embarrassed and hampered in our action here by the rule which has been adopted confining the vote to certain ratios, and to a single other question, but we must meet the situation as it is presented and vote in accordance with our conscientious convictions.

The Wilson bill, so called, provides for the repeal of so much of the act approved July 14, 1890 (the Sherman act), as directs the Secretary of the Treasury "to purchase from time to time silver bullion to the aggregate amount of 4,500,000 ounces, or so much thereof as may be offered in each month, at the market price thereof, not exceeding $1 for 371.25 grains of pure silver, and to issue in payment for such purchase Treasury notes of the United States," but, curiously enough, leaves intact that portion of the act of July 14, 1890, which declares it to be "the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law."

In other words, it is proposed to repeal the only law in existence which authorizes the coinage of silver, and leave as a part of the statute, after they have amended it, the provision which commits our Government to the maintenance of both gold and silver on a parity with each other.

Gentlemen demand immediate action upon the bill to repeal the Sherman law and inveigh against delay. Mr. Speaker, this demand loses its force when we remenber that this House has already fixed a date when we take a vote upon every amendment and a final vote upon this bill. Gentlemen say they are bimetalists, and yet they notify us that they will vote against every amendment looking towards free coinage of silver. Under the rule adopted we can without delay repeal the Sherman law, and at the same time provide for further and free coinage of silver. Why not, then, provide for repeal and for silver coinage at one and the same time?

It does seem to me that if gentlemen are sincere in the claim that they are bimetallists, they will unite with us in dealing a blow which will both rid the people of an obnoxious and dangerous law and relieve the country by providing for further coinage of silver. Both can be done at one and the same time.

Why not then vote to accomplish both desirable ends? I see no good reason for a different policy.

Mr. Speaker, I will not impugn the motives of any gentleman, but I call the attention of the House and of the country to the fact that the battle against silver has never been an open warfare, and that every attack made upon the white metal, since it was by fraud and collusion demonetized in 1873, has been a covert assault, concealed under a pretense of friendship for its coinage; and we to-day find Representatives upon this floor, who in one breath declare they favor the preservation of both metals on a parity with each other, and in the next they declare themselves in readiness to vote for the repeal of the only statute in force which authorizes the coinage of silver. They are ready to strike down silver and stop its coinage, and at the same time insist that they favor bimetallism. Deplorable indeed is the condition of the money of the Constitution and of the people when it is left to the tender mercies of such uncertain friendship.

The question of free coinage of silver is not a new one for consideration by the people of my State, or of the district which I represent. The question has been discussed before our people in the past and will be discussed and considered in the future. The Democrats of West Virginia have time and again in their State, Congressional, District, and County platforms declared for free coinage, and Democrats have been united upon that question. Our late and lamented Senator Kenna, one of the ablest and most eloquent men our State has ever produced, as far back as May 16, 1879, when he represented upon this floor the people for whom I now speak, in discussing the subject now under consideration expressed himself in the following vigorous and eloquent language:

Mr. Speaker, I have no desire to discuss this particular amendment. I am and have always been in favor of every honest proposition to supply to the people of this vast country the currency which their business and welfare demand. I desire, however, to take advantage of this brief opportunity to state in a general way the reasons which actuate me in giving to the pending bill my hearty support. An epitome of the financial legislation enacted by the Republican party in the last sixteen years presents a singular and a heartless chapter of financial wrong.

In 1862 the bond system was inaugurated. In 1863 the national-bank system was adopted. By the legislation of that period the greenbacks were issued. The public debt, under the burdens of war, grew to over two billions. Of this immense sum three-fourths were represented by 5-20 bonds, payable in currency. In 1869 and 1870 the acts were passed which changed the nature of this immense debt and declared every dollar of it payable in coin. In 1873 silver was demonetized, and thus this debt was made payable in gold alone. In 1875 the resumption act was passed, and the work of destruction has been going on with relentless vigor.

Sir, it is due to the truth of history to say that these measures exempting the bonds from taxation, creating national banks, declaring currency bonds payable in coin, striking down silver and forcing the resumption of specie payments without regard to the consequent forced contraction of the currency, destruction of values, and suffering of the people, were Republican measures, matured and adopted by the Republican party in the face and in spite of the opposition of the Democratic vote in Congress. Thus, in 1865, the country had gold, silver, and greenbacks in which to pay its great debt, though the greenbacks themselves were eventually redeemable.

But the payment of the 5-20 bonds in greenbacks according to the contract would have saved to the taxpayers of this country the interest on fifteen hundred millions of their debt, which they are now paying on the bonds issued in funding the five-twenties, and this, sir, without any violation on their part of a contract as binding on the bondholder as on them. It can not be objected that this would have been excessive inflation, for the process could have been regulated by the demands of business. To put at rest this righteous agitation by the people to pay these bonds in currency, as agreed in the start, John Sherman, Secretary of the Treasury, has announced to the country that the last dollar of that class of bonds has been taken up and destroyed, and another bond, bearing interest, exempt from taxation, and payable in coin, issued in its stead! And all this has been done under pretense of lessening the burden of the people!

The act of 1873 demonetizing silver was in further pursuance of that Republican policy which in effect struck down the means of payment in the hands of the people and enhanced their obligations in the hands of their holders. I do not agree exactly with the gentleman from Ohio [Mr. Ewing] in the statement that no man could be found who could be shown to be directly or indirectly the author of that act. The record of that period shows that while the act was pending and under consideration the question was asked by Mr. Merriam, of New York, whether it had been submitted to the then Secretary of the Treasury, and Mr. Hooper, of Massachusetts, a Republican, having the bill in charge, answered that it had been submitted to that Republican official, and he not only approved, but strongly urged its passage. I believe, therefore, and avow here that the striking down of silver was a matured policy of the Republican party to which—the evidences are abundant all around—they stoutly and persistently adhere.

No man can measure the damage to the business, the property, and the labor of this country which this mischievous system inflicted. Why, sir, it may be truly said that the resumption act of 1875 was at the bottom of the financial panic of 1873. Coming events cast their shadows before, and two years in advance is a short period of time for information to reach Wall street of the course of action to be adopted in Washington under the past Republican financial rule. I have briefly run over these prime facts in the history of the financial legislation of the last sixteen years. The veto, which stands in the way of free elections, fair and impartial juries, and the inalienable right of a free people to vote untrammeled by bayonets and by bullets, stands ready to confront this bill. It was exercised to defeat the silver bill of the last Congress.

But these issues can not die. When the Democracy goes to the people demanding free elections, fair juries, the banishment of troops from the polls, and the restoration of an honest financial policy to the masses of this country, the rally will be great and the triumph grand. I am in favor of this bill because it represents one of these great issues; I am in favor of this bill because it restores to the people one of the means for the payment of their obligations, which was accepted as such by the holders of the obligations when they were created; I am in favor of this bill because it allows every holder of silver bullion to present it to the mints to have it coined free and returned to him in coin for general use.

Our product of silver is from thirty to forty millions annually. This bill will therefore put that amount in circulation instead of hoarding it in the vaults. I am in favor of this bill because it will increase the currency of the country, contribute to the relief of its people, and vindicate, at least to some extent, the right of the masses to hold even the bondholder, in his assumed lordly estate, to the sacred obligation of his voluntary contract.

It will not do for gentlemen to tell us that times, conditions, and circumstances have so changed since these eloquent words were uttered by our dead representative that we must reverse our past action and wipe out the record left behind us. The same battle which was fought by Kenna and the other friends of the people with whom he was associated is again upon us, and the same warfare will go on until the people of this country shall have accorded to them what they need and what they desire, what they demand and will have in the end—an honest dollar sufficient in volume to meet their necessities and conditions.

Many of the prominent and leading spirits of the Republic have given expression to their views respecting the demonetization of silver, and the use of silver as a money metal. The great Kentuckian, Hon. John G. Carlisle, then a Representative in this body, in a speech delivered upon this floor as far back as 1878, expressed himself upon this subject in language strong, eloquent, and logical. He said:

I know that the world's stock of the precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate, indeed, if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my views of the subject the conspiracy which seems to have been formed here and in Europe to destroy, by legislation and otherwise, from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age.

The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilences, and famines that ever occurred in the history of the world. The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of the metallic money in the world.

Sir, the conspiracy to which Mr. Carlisle referred is still in existence, and the conspirators have never turned from their original purpose; and the reasons now existing why they should be thwarted are even stronger than they were in 1878.

It is agreed by all candid persons, whether they advocate a single or a double standard, that the gold supply is inadequate and insufficient to furnish to the world a basis for values and for a circulating medium; and yet it is suggested that the only way to secure for our people a double standard is absolutely to wipe out the use of silver in so far as its coinage in our mints is concerned.

As well, Mr. Speaker, can you expect the patient to recover to whom the physician daily administers doses of poison, or the pig in the pen to grow fat if his food is kept from him, as to suppose that silver coinage can be secured by the unconditional repeal of the Sherman law. To adopt a single gold standard places the gold of the world on the block to be sold to the highest bidder. When we bid highest we will have the gold until next sale day, when some other country offers more for it, and then it goes to the purchaser and away from us.

The gold then would first be owned by one country and then by another, and would constantly increase in value, driving down continually the prices of all productions and of all commodities, making larger the debts of the debtor class, and increasing the business and purses of the "Shylocks" of the country. It is neither desirable, feasible, nor practicable for a single gold standard to be adopted for the whole world.

We are told that silver can not be maintained at a parity with gold without an agreement among the nations of the earth as to the ratio at which it is to be coined—without an intermonetary conference.

Mr. Speaker, I do not suppose there is an intelligent citizen of the Republic, except such as are the owners of dollars which would be valuable in proportion as the dollars in the world would be scarce, and whose selfish interests would prompt them to oppose an increase of circulation from any source, who would not favor an intermonetary conference; and everyone of our citizens knows that time and again our country has proposed and sought without avail such a conference, and that we now have no assurance that such a conference will ever be held, or if held that it will be prolific of results.

The emergency upon us is one that can not be satisfied with eloquent and theoretical appeals in behalf of intermonetary conferences which may never come. The danger is imminent, and it is our duty to meet the situation as it is presented—now, not next year or at some other uncertain period in the future. The business interests of the country are starving for want of a medium with which to carry on enterprises for the development of the richest land on the face of the earth; our workingmen are in want because they can not find employment for their labor; our agriculturists can not find sale for the products of their farms.

Let us authorize the holders of silver bullion, as we do those who own gold, to coin it into dollars and place them in circulation and relieve the distresses of the people by giving employment and comfort to the unemployed and destitute and a market for the products of the farm and of manufacture.

It will not answer their expectations or necessities, or fulfill the promises we have made, for us to tell the business man whose enterprises are paralyzed because he can not obtain money; the laboring man whose family is in want because he can not secure employment; or the farmer who can not meet his obligations for want of a market for his product, that they must wait for an intermonetary conference, dependent upon the whims of the rulers of the other countries of the globe.

Mr. Speaker, the people have not asked us for stone, but for bread, and they should have it now. The people are not afraid of the Government or of any money—gold, silver, or paper—to which the Government's faith is pledged. The time has not been for a century, and it will never in the future occur, that our people, and those of the whole world, will not rely upon and have faith in any money of any kind which our proud Government may agree to make good for its face value.

Mistakes may be made in providing ratios and securities for money coined, but the faith and credit of the American people will always be regarded and respected. The people have not taken their money out of the banks and have not made banks of their stockings because they feared the stability of the Government or of its money, but because they were afraid of the banks, some of which were so recently engaged in a scheme to force the Government to issue bonds, so that they could speculate in the bonds. I repeat it, the people have not been afraid of the money in circulation, but of the banks; hence the "runs" made upon banks and attending results.

The argument is made that we can not maintain silver at a parity with gold because there has been an increase and overproduction of silver. Mr. Speaker, there has not been an overproduction of silver. The report of the Director of the Mint for 1892 shows that 50,000,000 ounces were produced in the United States in 1889, 54,000,000 in 1890, 58,330,000 in 1891, and in 1892 58,000,000. The same authority says the whole world produced, in 1889, 125,420,000 ounces; in 1890, 133,212,600; in 1891, 144,426,200, and in 1892, 151,061,800. It is estimated that 27 per cent of the silver is used in the arts, which would to that extent reduce the quantum which can be used for the coinage of silver and absorbed in the commerce and the traffic of the world.

The increase in the population, wealth, and trade of the world has been and will continue to be much larger in proportion than the increase in silver production, and it is idle to claim that there has been or will be in the future an overproduction. If, sir, all the silver of the world should be "dumped" into the United States alone, it would not more than meet the increased demand for money incident to increased population, wealth, and business requirements, and would prove a blessing rather than a curse to our population if coined at a reasonable and safe ratio.

Sir, the French Republic, with its 39,000,000 of people, who have but recently paid so heavy a tribute to the German Empire, is able to maintain at a parity with gold $700,000,000 of silver coin, and yet we are told that proud America, with her boundless area and matchless resources and 65,000,000 of population, will commit a mistake if her lawmakers provide for any increase in our $600,000,000 of silver coin. There is neither reason nor logic in such contention.

Sir, it is an inexorable rule of finance and reason that the prices of products, whether of the farm or of the workshops, are high or low in proportion as money is scarce or plentiful. The protectionist has undertaken by means of a protective tariff to control the prices of products of manufactories, but the people of this country need more money and it will not do to cut off their supply.

A paper recently prepared by Mr. Preston, Acting Director of the Mint, shows that the gold stock is distributed among the principal countries as follows:

United States, $604,000,000; Great Britain, $550,000,000; France, $800,000,000; Germany, $300,000,000; Russia, $250,000,000.

The silver stock of these same countries is given as follows: United States, $515,000,000; Great Britain, $100,000,000; France, $700,000,000; Germany, $211,000,000; Russia, $60,000,000.

The per capita circulation of gold is: United States, $9.01; United Kingdom, $14.47; France, $20.52; Germany, $12.12; and Russia, $2.21. The per capita of all classes of money is: France, $40.56; Cuba, $31.00; Netherlands, $28.88; Australia, $26.75; Belgium, $25.53; United States, $24.34; United Kingdom, $18.42; Russia, $7.16, and Germany, $18.54.

Thus we see that France has more of gold than any other of these countries; more of silver, and a larger per capita circulation than any other of the countries named; and there are no happier or more prosperous people than the French. These figures, sir, speak in unanswerable argument in favor of increased circulation; in favor of free coinage of silver.

We are told that England controls the money markets of the world, and that we must needs enlist her concurrence and assistance before we adopt any financial policy; and this claim is made most persistently by gentlemen who but so recently charged those of my political faith with "aping after hateful English ways and English methods," when we insisted that the barriers should be stricken down which have crippled American trade and have driven the American flag from every sea.

Our Republican brethren have even charged us with lacking in the spirit and patriotism which animated our fathers at Bunker Hill, Valley Forge, and Yorktown, when we have dared to point to the commercial prosperity of England, resulting from its lack of restrictions upon trade. They have declared "for America and American institutions" as against the world; but when they come to adopt a financial policy for the American people they cringe before the British lion and on bended knee ask his advice, permission, and concurrence. We invoke the spirit of consistency, that it may find an abiding place in the public acts of our friends in the Republican party, to which it has so long been a stranger.

Sir, the American people are patriotic enough, and strong enough, and can afford to select for themselves a financial policy which the necessities of the hour invite and demand, and can and will maintain and support it, without dictation from any other power on the face of the earth.

We find engaged in the controversy now going on two opposite and extreme elements. On the one side is the "silver king," who is personally and pecuniarily interested in the free coinage of the white metal of his own production, at as low a ratio as possible, whereby the value of his product is increased, and his profits made larger.

On the other side we find arrayed the gentlemen who are designated as "gold bugs"—the men who have money which they know will be increased in value in proportion as money is scarce and hard to procure. They understand as well as we that when dollars are scarce dollars are high, and that when dollars are high they will purchase and pay for more of labor, sweat, and brawn, more of farm products, more of anything, more of everything than when dollars are plentiful and cheap.

Mr. Speaker, there is a middle stand to take, a conservative position to occupy upon this question as well as upon all others. There are other classes whose interests must be considered in all legislation, and these other classes make up the great masses of our population; there is another subject to be considered than the mere question of furnishing to the people a circulation sufficient in volume to meet the requirements of business and trade. We must establish our financial structure upon a fixed, fair, and equitable basis, having in view at all times the rights and best interest of all our citizens.

To the silver producer we say, "We must meet the conditions which are now presented and not those confronting our country twenty years ago, when your silver at a ratio of 16 to 1 was at a parity with gold. Your silver has depreciated in value from unfriendly legislation and increased production, and it is unfair to the people to allow you now to take 60 cents' worth of silver bullion and have a dollar manufactured from it, whereby the Government would give you 40 cents in each dollar, without consideration, at the present value of your silver bullion.

"This would, most certainly, be unfair to the taxpayers of the country, already burdened beyond measure, under a system which taxes the necessities of our people and not their wealth. You must furnish to the Government silver of the value approximately of $1 for each $1 coined, if you expect the Government to make dollars out of your product."

To the "money kings" we will say, "We are not here representing your interests exclusively. We will protect you in your rights and property, but we will not by legislation make your hoarded wealth more valuable. We will furnish to the people sufficient money, and will protect them as far as we can against your avarice and unreasonable demands."

The question with me, then, to be considered is, at what ratio should silver be coined? It is claimed that financial legislation is an experiment; a leap in the dark. Be this as it may, we can only now act in accordance with our experience in the past and the best lights before us. When a tax is levied upon subject of taxation, we can estimate very closely the revenue which will be derived, but when we come to enact legislation relating to the finances of the country, we can not find a safe, certain, arbitrary, and defined rule to govern us.

I have given to this subject all the thought and investigation of which I am capable, and have evolved from this study these two principles, to my mind incontrovertible, viz: Our country must have an increased circulation; and, second, there should be in or behind every dollar a dollar of intrinsic value. In 1873, when silver was demonetized, the quantum of silver, ascertained by the ratio of 16 to 1, was on a parity with and equal in value to the gold dollar. Because of intervening and un-

friendly legislation and increased production silver has become greatly depreciated, so that now the bullion value of silver in a silver dollar is estimated to be worth but about 60 cents.

While I favor free coinage of silver, I must take into consideration its reduced value, the surrounding circumstances and conditions. This I have done, with the result that I am led to favor free coinage at a ratio of 20 to 1, which, I believe, in the light of the past experience of the country, will place in or behind every silver dollar a dollar of intrinsic value. If unfriendly legislation has increased its value, legislation friendly and of a permanent nature will increase its value, but can not and will not enhance its value so as to make it feasible, proper, or fair to go back to the ratio of 16 to 1. To this extent, at least, silver and gold have parted company.

It has been stated by the gentleman from Tennessee [Mr. PATTERSON] that to increase the ratio to 20 to 1 would increase the value of bullion in a silver dollar to 81 cents. Is it not fair to estimate and assume that if we fix and keep the ratio at 20 to 1 that the value of silver in a dollar would increase so that it would be of the value of 81 in gold? I think it but a fair presumption. I am free to admit that I believe it would be more desirable to have free coinage at a ratio of 16 to 1 than to discontinue entirely the coinage of silver, and I would vote for free coinage of silver at that ratio in preference to a measure to absolutely demonetize silver; but I think it will be admitted that if silver coinage is now preserved it will be at an increased ratio. All indications and circumstances surrounding us point in that direction.

Mr. Speaker, I can not see any good reason why the silver coin now in existence would have to be recoined if there was a change of ratio. The laws of Congress promise for the Government that all silver coin shall be protected and made good, and it is adequate and all-sufficient that the silver now coined has the pledge of the Republic behind it, and that pledge will make it good as it now is held to be and considered good.

Entertaining these views, I will vote for the amendment providing for free coinage at a ratio of 20 to 1; and while I favor an amendment looking to the free coinage of silver, yet I am also opposed to the Sherman law, which I deem to be injurious in its operation to the whole of our people, not excepting the silver producer himself. If all amendments proposed are voted down, and I am driven to vote on the naked question of the repeal of the purchasing clause of the Sherman law, I will vote "aye," because we thereby carry out one of our pledges, and will with discouragement, trust to the future for legislation providing for free coinage of silver. If I can not here and now procure free coinage, I will not therefore vote to preserve as the law of the land a statute infamous in character and operation, and which all parties and classes unite in condemning.

Sir, I am not one of those who believe the Sherman law to be responsible for all the ills which have come upon us. We have among our people what some designate as "lack of confidence," and for this "lack of confidence" the Republican press and politicians are in a large measure responsible.

Sir, the smoke of battle had hardly cleared away from the battle fields of last year's election until the Republican press and politicians, for political purposes, began to prophesy ruin and disaster to the country and her institutions because of Democratic success, and every Republican, high and low, from their defeated and soured candidate for President to the cross-roads politician, united in a common effort to breed uneasiness and distrust among the people, and their continued "calamity howling" has had much to do with creating "lack of confidence" among the people, many of whom have been influenced in their action by these prognostications of evil.

In this connection, Mr. Speaker, it should not be forgotten that the balance of trade was against us until quite recently. We bought more than we sold, which sent out of the country more of money than was brought back to us, which naturally reduced the volume of our currency and affected our commercial interests.

We have had a system of tariff taxation which has paralyzed our trade and crippled the industries of the country beyond measure; and last, but not least, let me, in the language of the gentleman from Tennessee [Mr. PATTERSON], used in a speech delivered at Gallatin, Tenn., on July 28, 1891, attribute a part, at least, of the present deplorable condition—

to the demonetization of silver, whereby the owners of accumulated wealth in this country, as well as in England, the greatest of commercial nations, have been enabled to realize at the expense of the people the difference between the value of gold and silver.

While the Sherman law has hastened the end and is in part blamable, the present situation is not the result of one, but of many laws enacted by Republican Congresses, and the natural culmination of a vicious system of taxation and finance. Many things have combined to bring about the present condition of affairs.

It is claimed that all amendments to the "Wilson bill" will be voted down, and that there will be an unconditional repeal of the Sherman silver law, in so far as this House is concerned. Certain it is, if this result is achieved, it must be accomplished because the proposition for unconditional repeal secures practically the solid affirmative vote of the Republican members of this body; and yet the Republican party has said in its platform last year, viz:

The American people from tradition and interest favor bimetallism, and the Republican party demands the use of both gold and silver as standard money, such restrictions to be determined by contemplation of values of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be equal at all times.

If the Wilson bill passes this House without amendment, Republican votes will pass it, and the Republican party will again go on record as the friend of the money power and as opposed to such legislation as will benefit the great masses of our people.

Mr. Speaker, let us keep faith with the people: let us sacredly conform to the promises we have made to those who have elected us; let us furnish to the country money sufficient for the transaction of business in this, the hour of the country's need: let us tear down the wall of protection which has crippled our trade and retarded our prosperity, which has made princes or paupers of our people; let us wipe from the statute books the last vestige of every law which stands as a menace against home rule and the right of the people to control their own elections; let us conform to Democratic pledges and platforms; let us fearlessly and speedily do the work for which we have been commissioned, and then will each of us deserve and receive the grateful thanks of those to whom we are responsible for our public acts, and we will have that satisfaction which comes to those who have been responsive to every demand of duty and faithful to every trust.

Mr. DENSON. Mr. Speaker, under the constitutional authority conferred upon the President, he has called Congress together in extraordinary session.

The reasons that moved the President to this act, are set forth in his proclamation, as follows:

Whereas the distrust and apprehension concerning the financial situation which prevade all business circles have already caused great loss and damage to our people, and threaten to cripple our merchants, stop the wheels of manufacture, bring distress and privation to our farmers, and withhold from our workingmen the wage of labor; and

Whereas the present perilous condition is largely the result of a financial policy which the Executive branch of the Government finds embodied in unwise laws which must be executed until repealed by Congress.

In the opening of his message the President characterizes the condition now hanging over the country as "an alarming and extraordinary business situation, involving the welfare and prosperity of all our people."

Proceeding, he says:

Numerous moneyed institutions have suspended because abundant assets were not immediately available to meet the demands of frightened depositors. Surviving corporations and individuals are content to keep in hand the money they are usually anxious to loan, and those engaged in legitimate business are surprised to find that the securities that they offer for loans, though heretofore satisfactory, are no longer accepted. Values supposed to be fixed are fast becoming conjectural, and loss and failure have invaded every branch of business.

The President then says:

I believe these things are principally chargeable to Congressional legislation touching the purchase and coinage of silver by the General Government.

He then states that such legislation is embodied in the law of July 14, 1890, and which is known as the Sherman law.

The message contains the following language:

Suddenly financial distrust and fear have sprung up on every side.

The President further says that the purchase of 4,500,000 ounces per month of silver was regarded by those interested in silver production "as a certain guaranty of its increase in price," but this has been a failure, and such disappointment "has led to renewed and persistent effort in the direction of free silver coinage."

The President states in his message that the declared policy of the United States "to maintain two metals on a parity with each other upon the present legal ratio or such ratio as may be provided by law," so controls the action of the Secretary of the Treasury as to prevent his exercising the discretion nominally vested in him, to redeem said Treasury notes issued under the Sherman law in gold or silver, "if by such action the parity between gold and silver may be disturbed."

Manifestly—

Says the President—

a refusal by the Secretary to pay these Treasury notes in gold, if demanded, would necessarily result in their discredit and depreciation as obligations payable only in silver, and would destroy the parity between the two metals by establishing a discrimination in favor of gold.

I have quoted thus freely from the message, because I dissent from the conclusions of the President that the Sherman law is the source from which springs the financial distress and business paralysis that now seizes the energies and enterprises of all our people. I have given the President's reasons for concluding

the Sherman law is the Pandora box of our depression and stagnation.

Is he borne out by the facts in the case? He demands an unconditional repeal of this law, and finds hope for a settlement and stability in our financial affairs simply in the repeal of the purchasing clause of the Sherman law. So wedded is he to this idea that he fails to suggest any other remedy or point out any other legislation. His panacea is unconditional repeal of the Sherman law.

The Sherman law undoubtedly declares for bimetallism, and the President so admits in his message, when he states the enactment of the Sherman law, "may be considered a truce after a long struggle between the advocates of free-silver coinage and those intending to be more conservative."

Here were two parties that took part in enacting the Sherman law, the advocates of free coinage, and the bimetallist, that favored the use of silver but opposed a free coinage.

The free-coinage party certainly looked forward to the use of silver as money for final redemption under the Sherman law, and the President states a fact in his message showing it. He says:

> Undoubtedly the monthly purchases by the Government of 4,500,000 ounces of silver, enforced under that statute, were regarded by those interested in silver production as a certain guaranty of its increase.

No one knows better than the President that for silver to be deprived of its most valuable and extensive use, to wit, coinage into money, and used as such on a parity with gold in settling all governmental transactions would depress its price more than another single cause. I have made this argument to show that bimetallism was the intent of the Sherman law, and was so considered "as a truce" reaching to that end by both the opposing parties that enacted the law.

I state that any execution of the Sherman law that ignores silver as a fund or money for redemption of the Treasury notes issued under said law for silver bullion, and fails to make an effort to use silver as such, as a palpable and flagrant violation of the letter, spirit, and intent of the law, and a total disregard of the will of the people expressed in the law enacted by their representative.

I will more fully discuss this point in a subsequent part of my speech.

I mention this fact here to show that the bare judgment of the President, that the mere refusal to redeem said silver certificates or Treasury notes in gold when demanded by the holder, is at war with the letter, spirit, and intent of the law itself, and contrary to the effect of the practices of the French Government to-day, that redeems her obligations in silver at her option, regardless of the demand of the holder. There has never been a trial of such redemption by the Harrison or Cleveland Administration.

Congress did not believe the Sherman law would cause distrust, that the financial affairs of the Government would be embarrassed by an execution of the Sherman law.

Can it be said that Congress believed such a result manifest when it enacted such a law? To allege such would be to charge Congress with folly and tampering with the hopes, expectations, and the most potent and vital means of the people's prosperity and happiness, and charge it with being guilty of practicing a fraud and delusion upon the public and arousing hopes and expectations it knew could never be realized.

There has been no change in the financial and commercial affairs of the country, and none in the world, to affect this question since Congress enacted the law up to the minute the President penned his message. To accept the President's conclusions on this matter as true is to make the broad and very apparent implication that when Congress enacted the Sherman law they intended to practice a deceit and fraud upon the people and disappoint them in the belief that the Sherman law would secure to the country silver money and that it could and would be used as money in the redemption of the Government's obligations, and there would be no disturbance in the parity between gold and silver as money.

Everything upon this matter was as apparent to Congress when it legislated, as was apparent to the President when he wrote his message. The payment has never been tried, and there is nothing to support the President's conclusion, save his judgment.

In a subsequent part of this speech I will show the combination between the money power, the national banks, and the Treasury of the United States to destroy silver as money, and defeat the laws of the country and disappoint the people.

In a statement given by Secretary Carlisle to the public press, June 14, 1893, the following appears:

There was coined at the Mint of the United States from 1792, the time when the mint operations commenced, to 1873, when silver was demonetized	$8,045,838
Coined under Bland act, from 1878 to July 14, 1890—date of Sherman law	389,886,374
Coined under the Sherman act	29,408,461
Total	427,390,673

The Secretary's statement also shows that there was in actual circulation of silver money on the 1st June, 1893, $58,016,019.

According to the Secretary's statement, there was in the Treasury $369,324,654 of silver, or it was in the Treasury, or other places of deposit, national banks and subtreasuries, for instance. The people can only get money under our system as it comes through the banks. The cry is, there is no money. All business is depressed; industry is paralyzed; the prices for the products of the farm are so low that farming is unremunerated: "the people are starving, *yet the brigands are thriving.*"

Three hundred and sixty-nine million three hundred and twenty-four thousand six hundred and fifty-four dollars in the the public Treasury and under the control of the fiscal agents of the Government, and yet the cry comes up from the laboringman, the farmer, "Give us this money for our labor, for our products, that we may live and support our wives and little ones, and preserve our homes from the mortgage foreclosure." "No," says the Administration, the national banks, and the money power, "we intend to destroy silver as money, and if we do this we are to starve you, then you must starve."

The Government is in no way embarrassed because of the purchase of silver under the Sherman law; it has a clear balance-sheet on this account. The purchase and coinage of silver under the Sherman law certainly expanded the volume of the people's money, and while the people and country are prostrate because of the want of money it is now proposed to cut off this means of increase and expansion.

In September, 1892, when Grover Cleveland wanted the votes of the sturdy and honest farmers and laborers of the South and West, confiding and trusting in their nature, and patriotic in all their impulses and intentions, he did not believe the Sherman law was any cause for a want of confidence or alarm, and that the coinage and use of silver as money would in any manner jeopardize the financial matters of the Government or of the people. Here is the language of his letter of acceptance:

> The people are entitled to sound and honest currency, abundantly sufficient in volume to supply their business needs. But whatever may be the form of the people's currency, national or State, whether gold, silver, or paper, it should be so regulated and guarded by Governmental action or by wise and careful laws, that no one can be deluded as to the certainty and stability of its value. Every dollar put into the hands of the people should be of the same intrinsic value or purchasing power. With this condition absolutely guaranteed, both gold and silver can be safely utilized upon equal terms in the adjustment of our currency.

The representatives of the Democratic masses who assembled in Chicago in 1892 in convention, and nominated Mr. Cleveland as our standard-bearer, did not believe it "was manifest" that to pay out silver in redemption of Government obligations would depreciate silver. That convention adopted as one of the planks in its platform the following:

> We denounce the Republican legislation known as the Sherman act of 1890, as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters, as well as its author, anxious for its speedy repeal.
>
> We hold to the use of both gold and silver, without discriminating against either metal, or charge for mintage; but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equality of every dollar at all times in the markets, and in payment of debt; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

The denunciation of the Sherman law "as a makeshift" was not because the use of silver as a redemption fund would depreciate Government obligations. The cause of its denunciation was that it was a limitation upon the coinage of silver, and inhibited free coinage. This is clearly shown by the remainder of the plank in the platform.

Mr. Carlisle did not believe in 1878 that the use of silver as money on a parity with gold would cause silver obligations to depreciate and the credit of the Government to become involved and of doubtful integrity. Speaking in advocacy of the Bland bill, he said:

> I know that the world's stock of precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate, indeed, if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry.
>
> According to my view of the subject, the conspiracy which seems to have been formed here and in Europe to destroy, by legislation and otherwise, from three-sevenths to one-half of the metallic money of the world is the most gigantic crime of this or any other age. The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilence, and famine that ever occurred in the history of the world.
>
> The absolute and instantaneous destruction of half the entire movable property of the world, including houses, ships, railroads, and all appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half of the metallic money of the world.

The farmers, wage-earners, laborers, and plain people of this country entertain no such thoughts upon this matter as the President expresses in his message.

There is no evidence that anywhere in this extensive land there has been a meeting of the farmers, laborers, and workingmen of this country called to denounce silver and decry against the Sherman law and demand its unconditional repeal.

No meeting of merchants and manufacturers has been called to condemn the Sherman law and demand that it be expunged from the statute book, save in the larger cities, whose boards of trade and welfare are dominated and directed by the banking interest.

The brain and muscle, the bone and sinew, and the sweat and energy of the farmers, laborers, and producers of this country have in no way, manner, or form expressed any want of confidence, any distrust, or any fear of embarrassment or injury arising to them because of the purchase and coining of silver under the Sherman law.

They demand this silver money; they are anxious for its issue, and their distress and embarrassment arises alone because of its absence. They are willing to sell their toil, their products, and their commodities for this silver money, berated by the banks and the money power.

I desire to state in this place and I desire the country to know it, that it is not the Democratic party of the country that is demanding the repeal of the Sherman law unconditionally and fighting free coinage of silver; the Democratic party is not responsible for this delay in bringing that relief to the suffering thousands of this country, but it is an unholy alliance between the Eastern Democrats, and now and then a lonesome brother from the South and West, with the Republicans in this House to carry out the demands and orders of the national banks and money power of the East.

Baal may succeed for a while, and may scatter ruin, suffering, and starvation throughout the land, but the day of reckoning is near at hand. The outraged and indignant people of the South and West, as well as many in the East, will rectify this evil, more terrible than famine, pestilence, and war, in the language of the Secretary of the Treasury.

The people are the masters of this country yet, and they have not and will not consent to turn it over to the privileged classes, the banks and money power.

The courage and patriotism of their ancestors still courses through their veins and they will call to a terrible account those men who have betrayed the platform and pledges on which they were elected. The people are not defeated or whipped, they have only been misled and deceived: but next November you will hear the results coming from the South; from the golden shores of California and the Pacific slope; from the West; aye, even from the "dark and bloody grounds" of Kentucky, that the masters of this country, the plain, common people have risen up in their power and authority, relegated the deceivers and hypocrites to private life and sent men to this House who will scourge the money-changers from this Hall with scorpion-stripes and carry out the will of the people and establish the free coinage of silver and declare it money and place it upon an equality with gold.

Section 3 of the Sherman law is in the following language:

That the Secretary of the Treasury shall each month coin 2,000,000 ounces of the silver bullion purchased under the provisions of this act into standard silver dollars until the 1st day of July, 1891, and after that time he shall coin of the silver bullion purchased under the provisions of this act as much as may be necessary to provide for the redemption of the Treasury notes herein provided for, and any gain or seigniorage arising from such coinage shall be accounted for and paid into the Treasury.

Here is a section of this act, as mandatory as the English language can express any law, any thought, any purpose to convey the intention and desire of any law-making body that ever assembled under the sun. The language is plain, the words unambiguous, and no doubt lurks around the meaning of this simple English sentence.

The words are the language of command no discretion is left, no option allowed; but absolute obedience is demanded aud required. The auxiliary "shall" is used—"shall each month coin," until 1st July, 1891, "two millions of the silver bullion purchased under the provisions of this act into standard silver dollars." And after the 1st day of July, 1891, the act says:

"He shall coin of the silver bullion purchased under the provisions of this act as much as may be necessary to provide for the redemption of the Treasury notes herein provided for.

All lexicographers and grammarians agree that the auxiliary "shall" when used in speaking or writing of a third person, expresses a command or threat. Surely no one will contend that the duty and obligation placed upon the Secretary of the Treasury by said act was to be executed as a means to secure the circulation of said silver bullion as money among the people and in the channels of business. Such circulation had already been provided for by the first section of the act by directing the issue of the Treasury notes in payment for said silver bullion, and by the said law declaring in the second section that such Treasury notes "shall be a legal tender in payment of all debts, public and private, except where otherwise expressly stipulated in the contract."

To secure and provide the mode by which this silver bullion should be represented, and its value circulated as money in the channels of trade and as a circulating medium among the people, coinage of the silver bullion was not deemed necessary; the Treasury note was improvised as an instrumentality for this purpose. But when the law-making power came to consider the question of the redemption of said Treasury notes, and how and in what coin the same should be redeemed, and what part silver should play in our monetary affairs, commands the Secretary of the Treasury to coin the silver bullion purchased under said act into standard silver dollars, to provide for the redemption of the Treasury notes provided for in said act.

To coin the silver bullion into standard dollars is and was an imperative and an absolute command by Congress, and the coinage of said bullion was for only one purpose: the redemption of the Treasury notes issued under said act in payment for said silver bullion; and that the redemption of said Treasury notes in said silver dollars is as imperatively and absolutely commanded by said act as the coinage of the silver bullion is. The coinage of the silver bullion is the principal, and the use of the coinage is the incident. How can anyone, by any process of logic, separate the incident from the principal? It can only be done by a flagrant and palpable violation of the law expressly laid down, and obedience to which is expressly commanded.

Section 5 expressly repeals the Bland-Allison act, which required the monthly purchase and coinage of so much silver bullion into silver dollars.

The records of the Treasury Department and the President's message show that the silver bullion has never been coined as provided for in the Sherman law, and that silver money is not used in the redemption of said Treasury notes issued under said Sherman law.

There can not be any question among any intelligent and honest people at this late day that in construing a statute and interpreting its meaning, the grand, central, and controlling purpose is to arrive at the intention of the lawmakers in enacting the law. The intention of Congress in enacting the Sherman law is the great polar star, around which all other ideas and policies may cluster, but none can overturn, or substitute themselves in the place of such ascertained intent.

Another rule of construction that is of universal application in interpreting the language and ascertaining the meaning and intention of the lawmaker by enacting a law is, that every word, phrase, and sentence must be so construed as to give to each some operation and force in directing the mind in ascertaining the intention of the lawmaker from the language used.

Another rule of equal universality and force is that the meaning of the lawmakers must be made and derived from the whole bill or act, and not from disjointed parts of it: in other words, the whole law, each and every section of it, each and every sentence, each and every clause, and each and every word of it must be taken and considered and construed together to ascertain the meaning and intent of the lawmakers.

Another rule equally as important and equally as forceful is, that the meaning and intent of the lawmaker must be derived from and be generated and grow out of the language used in the act.

It would lead to unsuspected and disastrous results for those executing laws to adopt a policy not authorized by the law, or to exercise a discretion that brings ruin to the people when not clearly authorized by the law and contrary to its avowed policy. It has ever been the idea and principle controlling the people under a free government, with a written constitution and laws, to deny as firmly as possible and to limit as far as practicable all discretion in officers in administering government. Discretion of officials is but the beginning of tyranny and the downfall of free institutions.

The old law that existed prior to the Sherman law, upon the matter of silver coinage, was the Bland-Allison act. This act is expressly repealed by the Sherman law. The Bland act secured the free coinage of silver bullion to a limited amount per month, silver having been demonetized by the act of 1873.

Now it can not be contended successfully that the Sherman law, properly construed, in any manner intended to destroy the coinage of silver or the use of it as money. The Sherman law more than doubled the amount of silver to be coined each month, and made the Treasury notes issued in payment thereof legal tender in the payment of all claims, debts, and dues, both public and private. The Sherman law further required the coinage of the silver bullion so purchased with said Treasury notes to redeem the said notes.

In the construction and execution of this Sherman law, the Harrison Administration adopted the policy of using and paying out gold alone in the redemption of said Treasury notes.

This same policy has been taken up, adopted, and is now the rule of the Cleveland Administration.

The grounds and reasons upon which this policy is based, so far as the public can judge, are not very apparent. The Sherman law declares it to be "the established policy of the United States to maintain the two metals on a parity with each other."

This is a declaration of bimetallism without any ambiguity, any doubt, or any room for cavil between the advocates of monometallism and bimetallism. Congress, it seems, ex *industria*, intended to leave no doubt about this matter. With strong, terse, and simple words it declares it to be "the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law."

The fact that the law requires the coinage of the silver bullion to redeem the Treasury notes issued for its purchase, and makes a positive appropriation of the silver dollars so coined as a fund to redeem said Treasury notes, conclusively establishes the intention of Congress that both metals should be used as a redemption fund; that they should be actively employed in redeeming the obligations of the Government. Neither one of the two metals should be ignored and left in a passive condition, but both should be employed actively in carrying out the redemption of the Treasury notes.

The verb "maintain" operates upon and predicates action as to two metals, and the words "to maintain" is in the infinitive mode, which mode is always employed to denote action without limitation as to person or number. To maintain the two metals as money, not as bullion, not as a commodity: If gold is used as money and silver is not, then the established policy to maintain the two metals on a parity with each other is evaded, is ignored, broken, and destroyed. If silver was not to be used as money, why command the coinage of the silver bullion into silver dollars to redeem said Treasury notes?

It is plain to my mind from reading the law, and considering the old law and the evil to be remedied by the new law, that the policy of the Government is to maintain the two metals as money on a parity with each other; and when the statute is construed as a whole, giving effect and operation to each word, clause, phrase, and sentence, the policy of bimetallism, pure and simple, is established in the United States.

The trick in the law that the single-standard people have induced the Administration to believe is a controlling authority and limits the operation of the whole law, and is sufficient to overturn the established policy of bimetallism as declared in the Sherman law, is that the law says that the Secretary of the Treasury can redeem said Treasury notes in gold or silver at his discretion.

It is true, the law intended that silver should never be used as redemption money; and can it be maintained that because discretion is given the Treasurer to redeem said notes in gold or silver that such discretion can be used in an arbitrary manner, merely at the independent views and uncontrolled will of the Secretary without attempting the use and employment of the silver dollars provided for a redemption fund in said law.

Whenever discretion is conferred upon a public officer in the performance of a public duty it means a legal and judicial discretion in view of all the facts and circumstances surrounding the matter, and the adoption of such a course of conduct as will carry out the policy of the United States as declared by its laws, as prudence, sagacity, sound and cautious judgment will suggest to one desirous to execute the policy of the United States to protect, secure, and defend the rights and privileges of all the people of all localities, of all labor and industrial pursuits, of all enterprise, and to promote the general welfare.

This discretion was conferred upon the Secretary to maintain bimetallism, as such is the declared policy of the United States, and not to evade or destroy it, and neither to suspend it.

Congress never intended any such execution of the law as now interpreted and administered, until silver should be tried and used at its present ratio and found antagonistic and destructive to the policy of maintaining the two metals on a parity with each other, "upon the present legal ratio, or such ratio as may be provided by law."

If after the use of silver to maintain the two metals on a parity with each other it could not be established and preserved, and the inequality should arise from the use of the silver, then it would be time enough for the Administration to discard silver and the discretion of the Secretary to be exercised.

The Secretary has the same discretion to discard gold if he discovers by the use of the gold it destroys and antagonizes the policy of the United States as to the establishment of bimetallism.

We all know that the maintenance of the two metals on a parity with each other has been destroyed by the practice and policy employed by the Secretary in the use of the gold alone as a redemption fund. Why does not the Secretary execute and administer the law in good faith to the United States, which means all the people, all interests, all employments, all pursuits, all localities, and all sections, and commence the use of silver in connection with gold as a redemption fund, as France does, and ascertain if this does not secure and maintain the two metals on a parity with each other upon the present legal ratio, or such rates as may be provided by law?

It is now demonstrated the two metals can not be maintained on a parity by the use of gold alone. Let the Secretary make an honest effort to carry out the policy of the United States by the use of silver in connection with gold, and if after this the policy can not be carried out, then, as the single use of gold and the joint use of gold and silver has failed to preserve the established policy of the United States, let him try silver by itself and see what effect it will have as to maintaining the two metals on a parity with each other.

If after such trial there is a failure to maintain the two metals on a parity, then the policy has failed, so far as the present ratio is concerned, and as the law establishing the policy provides for some other ratio to be fixed by law, and as Congress alone has the power to fix the ratio between the two metals, then the time has arrived and the contingency has occurred when Congress should take the matter into consideration and enact such laws as will meet the public and general interests of all the people and of all sections and localities of our broad and extensive territory.

This is the policy laid down in the Chicago platform, and this is the policy established by the Sherman law. And it is useless for any one to conceive of the idea that a manly and courageous, honest and patriotic member of Congress, and a Democrat faithful to the Chicago platform and the history and teachings of the Democratic party and its policy, will vote for an unconditional repeal of the Sherman law until it has been given a full, fair, and honest trial on the lines indicated, and in the Sherman law itself, and failure is the result, or unless the law proposing to repeal the Sherman law itself provides for free coinage of silver.

It is the policy of the United States, that is of the people of the United States, that is established by the Sherman law and the Chicago platform, and by the election held on the 8th of last November, and not the policy of an administration or of an officer of the Government, it matters not how high, exalted, and powerful he may be in the execution of the laws of the land.

How can the Administration escape from its apparent partial policy in the administration and execution of the Sherman law, when it is manifest to everybody that the sole use of gold as a redemption fund has destroyed the maintenance of the two metals on a parity with each other, depreciated the value of silver and enhanced the value of gold, overthrew the development of the country, the advancement of the people, the prosperity of the laboring and industrial classes, paralyzed the industrial and manufacturing establishments of the country, and buried the hopes and energies of individuals in one devastating ruin and desolation?

Discretion was never conferred upon an official to destroy, but to build up, support, and maintain the policies of the people.

Congress intended that silver should be employed as a redemption fund for said Treasury notes, and that the Secretary should not arbitrarily ignore such provisions of the law providing for the use of silver dollars for such purpose.

What force and operation is given to the third section of the act that absolutely and imperatively commands the coinage of the silver bullion into silver dollars to provide a redemption fund for said notes by the course pursued by the Secretary?

None whatever. Yet the law must be so construed as to give some operation to every word, phrase, clause, and sentence of the act.

These silver dollars, when coined, became a trust fund under said law for the redemption of said Treasury notes, and the Secretary can not use them for any other purpose. They are directly and plainly appropriated for such purpose by Congress. Their money value was already in circulation in the shape of said Treasury notes, which are made a legal tender. The idea that said silver dollars are a trust fund and appropriated by Congress for the redemption of said notes is strengthened by the language of the second section of said act, which provides that the Treasury notes issued under the act shall be redeemed in coin.

And when so redeemed may be reissued, but no greater or less amount of such notes shall be outstanding at any one time than the cost of the silver bullion and the standard silver dollars coined therefrom then held in the Treasury purchased by said notes.

This language conclusively establishes the idea that the amount of silver bullion and silver coin in the Treasury should always be no greater or less than the amount of Treasury notes outstanding.

Is it not a fact, now, and the President's message declares it, and no honest man will deny it, that there is a greater amount of silver bullion and silver dollars now held in the Treasury than there is of Treasury notes outstanding, caused by issuing gold alone in the redemption of said Treasury notes? Does not this language of the law place beyond controversy that it was the intention of Congress that the amount of silver bullion and silver dollars procured under this act and held in the Treasury should never be greater or less, but always equal to and on a parity as to amount with, the outstanding Treasury notes issued under this law?

The employment of the use of gold alone and discarding silver as a redemption fund for said Treasury notes has caused a flagrant and palpable violation of the second section of the Sherman act, and the results of which violation could have been foreseen by the most simple intellect in America.

Surveying the provisions of the law, each and every word, clause, phrase, sentence, and the whole law together, it is manifest that Congress intended silver dollars to be used as a redemption fund for said Treasury notes.

At the arbitrary discretion of the Treasurer? No. But they should be used in the incipiency of executing the law, and continued until by such conjoint use of gold and silver it should become manifest that such conjoint use would tend to destroy the parity between the two metals. And when the parity was disturbed, then the Secretary of the Treasury should investigate and consider which metal by its use was disturbing such parity; after such discovery then the facts would have manifested themselves that would authorize and justify the Secretary in the use of his discretion as to which metal should be discarded, and which metal should be used solely as redemption money.

But no such intention grows out of the language of the whole act that Congress clothed the Secretary of the Treasury with an arbitrary discretion to discard silver money as a means to redeem said Treasury notes before an honest effort had been made to carry all the provisions of the law into operation, and silver money had been given a fair, equal, and just trial as a redemption fund for said notes.

Can any man, fair minded and unprejudiced, be convinced that in this free, representative Government of ours, the people's representatives would enact a law regulating their most vital interest, authorizing some of its most vital and important provisions to be ignored and discarded without any effort at executing them, merely upon the bald assumption of some official, whose intelligence, honesty, and patriotism were unknown at the time of enacting the law, that it was unwise to attempt to execute such provisions?

Such an idea is opposed to the very genius of our free institutions, and makes the interests of the people to depend merely upon the arbitrary discretion of an official. It would clothe the official with authority to suspend or nullify the operation of the laws merely at his individual will.

No such power is conferred or established under our constitutional form of Government.

The experience and observation of the country conclusively show that the sole use of gold has destroyed the parity between gold and silver. So far as the law is concerned, it is as much interested and anxious to preserve the unit value of silver, or its equality with the value of gold, as the monometallist is anxious to enhance the value of gold and depress the value of silver.

The statute does not say it is the "policy of the United States to maintain the two metals on a parity with each other," alone as to the value and purchasing power of the two metals without giving each an equal and fair trial under the law; but the phrase in the statute is, "maintain the two metals on a parity with each other," there is no limiting, qualifying, or modifying descriptive attendant upon the word parity. The word must be taken in its broad and comprehensive sense. It means parity in the operation of the law upon both metals—equality in manipulation and use by the officers of the Government.

No embarrassments or suspicions thrown around the one and not around the other—equality before the law in all things. This is the established policy of the United States toward gold and silver declared in the Sherman law, a bimetallic law pure and simple. If this equality before the law, this equality in use, in manipulation and freedom from embarrassments and suspicions that might be produced by law or officers of the Government as regards both metals, tends to and does destroy the parity between the two metals, then the time has arrived, and the circumstances present themselves, and not until then, when the Secretary of the Treasury may use his discretion as to which metal he will use alone as the fund of redeeming these Treasury notes and other obligations of the Government.

To show that the violation of the law was predetermined, and that gold alone should be used and silver discarded as redemption money, regardless of all surrounding circumstances and the welfare of the masses, the silver bullion has never been coined into silver dollars, as required by the law. The means pointed out—and the President so states in his message by the law—were never provided, and no effort made to do so. Have the Democratic masses been consulted about the continual execution of the Harrison policy by the Cleveland Administration? The Democratic platform, made and promulgated by the representatives of the Democratic masses, declares for bimetallism and a parity between gold and silver, as provided by the Federal Constitution.

These Democratic hosts exalted the present Administration into power on this platform. Will it obey the voice of the people?

A fearful responsibility rests upon it. Let it keep faith with the business interests and masses of the South and West, as well as with the East.

It is not amiss to here state the great body and masses of the Western and Southern people are more thoroughly aroused, and more determined in their action as to their financial matters, than they were as to their course toward the institution of African slavery and secession.

They know and they feel—the very want of their wives and their children and the peril of their homes give them the unerring knowledge—that the laws and administration of the Government is partial and oppressive upon them; that they are denied the aid and blessings of fair, honest, equal, and just government; and that they are burdened with high and heavy taxes to support this miserable and false administration of our laws, and to maintain this travesty upon honest and fair government. They are determined to resist it, and they will change it, or overturn it; so help them, Heaven.

No officer of this Government need take the flattering unction to his soul that he is more powerful than the people, and that they do not understand every act and motive being taken and manifested by every official in the Government in the administration and execution of our laws. No Democrat need be flattered by sycophants and office-seekers that he is greater and more respected than the Democratic party, and anything he may do will meet with approval and obedience from the masses.

The Democratic party has a history and a record to defend and maintain. It is the party of the people, the vindicator of popular rights, and the exemplar of "equal rights to all and special privileges to none."

Whenever these fundamental principle, guaranteeing freedom and happiness to the people, have not been observed and enforced, when the Democratic party was in power, was because the officials placed in power by the Democratic hosts have proved themselves recreant and unfaithful to the sacred trusts confided to them by a brave, patriotic, and confiding people.

This is the sum total and end of the whole affair; argue and consider it as you may, it is a breach of faith, pure and simple.

The success of the business and enterprise of the people, and the general welfare is more important and nearer their hearts than the splendor and success of any administration of the affairs of the Government.

An Administration is but a means to an end, and that end is the peace, content, and prosperity of all the people of all localities and sections of our great country.

The people support an Administration when such Administration supports the people and cares for and defends their interests. The rights of great financiers, powerful banks, and millionaire gold bugs and money kings must not alone be observed and their interests considered and respected. These great characters should not alone be the advisers around the council board. The views of the laborers, the wage-earners, the farmers, the people from the interior, should be heard and their advice sought, and their interests considered and respected.

An unconditional repeal of the Sherman law would wipe out of existence six hundred millions of the people's money, and nothing is offered to fill its place.

The misery and suffering that is now going on in the land, the bankruptcy and ruin of all industrial and manufacturing enterprises that surrounds us, the wants and necessities of the laborers that come up from all quarters, the desolation in our midst, each and all would be intensified and increased a hundredfold.

I confess that I have no particular respect for the Sherman law. It is truly a "makeshift," but makeshift as it is, it is a formidable bulwark against the destruction of silver coinage, and a redoubt under cover of which the friends of the people can rally and resist to the bitter end the march of imperialism that is seeking to overturn our institutions, and its advocates, the gold kings, banks, usurers, and sycophants following in its majestic train. We will not unconditionally surrender; we will have some consideration adequate to what we are asked to give.

This matter is one of impending trouble to our country, and should be settled, but it will never be settled until it is settled right. The Constitution of our country and the history and ad-

vancement of our people for eighty years suggest the basis of a settlement.

It is claimed, if the knowledge of the fact that gold is behind these Treasury notes was obliterated and banished from the minds of the people, that then they would depreciate.

For the sake of the argument I admit it, and then this conclusively establishes the fact that the Sherman law has nothing to do with our troubled and distressed condition.

We have been using gold since January 1, 1879, alone as our money of redemption, and as gold alone is so used under the Sherman law, how can the expectation of silver being used as a redemption money, have any force whatever in so far as the Sherman law is concerned? The demand for gold is to settle our balances with foreign governments, and the demand is promptly met, and we are informed by the public press that in the next ten days from twenty-five to forty-five millions of gold will return to America from foreign countries, yet the stagnation in business grows worse and the collapse o fbanks is becoming more frequent and widespread.

All our trouble arises from some internal disorder, disconnected with the use of gold and silver, and without any fear of the country being rid of its gold by the operation of the Sherman law. We are now in the rising tide of an influx of gold, and the Government is in no embarrassment whatever as to gold; the Government seems serene. The message admits that the solvent people and institutions of the country are hoarding their money.

The history of human affairs teaches, whenever there is an inferior and suspected currency in the land, people do not hoard it, but they seek immediate investments of it in property.

But in this instance the people of the South and West are clamoring for this suspected and dishonest silver dollar. They are ready to sell all the fruits of their labor and the product of their farms and any of their property for this dishonest silver dollar, but these Christian and disinterested philanthropic gold advocates say, "Oh, no; you shall not sell your products and your property for this dishonest dollar. We will keep it and hoard it, and if any loss is to occur we will suffer it, not you. We are too paternal, too generous, to let you lose anything on this silver that we consider a dishonest dollar. We are too honest for this."

Here are some of the inconsistencies the gold advocate is bound to admit that meet him on every corner in his tirade against the Sherman law.

But it is said that the continuance of the Sherman law will deplete our Treasury and the country of gold, because of foreign demands for gold.

Such is not the experience of this country prior to 1873, the date of the demonetization of silver; and such is not the experience of the present in France, that in the administration of its fiscal affairs is bimetal. We are informed forty millions of gold will arrive in the United States in the next thirty days. Silver has not been treated fairly and equally with gold since its demonetization in 1873, either by the banks or the Government.

From the outset of the passage of the Bland act in 1878 the national banks in the Middle and New England States have been shy of silver money and have been loth to receive it. They have been unwilling to use large quantities of it or allow large quantities to accumulate on their hands.

There can be no doubt this disposition arises from the banks' close connection with the creditor and money-lending class, to whom the lowering of the standard of the abnormal value of gold by putting silver on a parity with it, is very objectionable.

The banks are great money-lenders themselves, and credit transactions result largely from the banks' business and they deal largely in foreign exchange; hence they desire all money transactions and the business affairs of the country to be placed on a gold basis, and eliminate silver as money from our circulation.

This will make money scarce, create a great demand for gold, enhance its value, and raise the rate of interest, and all this manipulation is done alone for the interest of the banks and money kings to the detriment of the masses.

Shortly after the passage of the Bland act in 1878 the banks of New York, members of the clearing-house, adopted a rule—and the United States subtreasury at New York is a member of the clearing-house—prohibiting the payment of balances between banks at the clearing-house in silver certificates or silver dollars, except for change, say $5.

It is public history that this conduct on the part of the New York banks and the subtreasury at New York was a fatal strike at silver.

When Congress, in 1882, extended the corporate existence of the national banks, to break up this baneful practice, this debasement of silver, and secure its circulation, a law was enacted that no national bank should be a member of a clearing-house at which silver certificates were not receivable in payment of balances.

This forced the New York banks to drop the rule, but the enemies of silver could not be downed in this way. They have continued this baneful practice and it remains unaltered, despite the energy and authority of Congress was employed to prevent it, and the national banks, aided by the United States subtreasury at New York, one of the people's institutions, aided the banks in "boycotting" silver, the people's money.

Congress can compel a national bank to receive silver certificates, but can not compel it to offer them in settlement of balances.

The banks and the United subtreasury avoided this law of Congress by entering into a tacit understanding that none of them would tender silver in payment of balances. And thus it stands to-day, silver currency is not allowed to enter into any transactions between the New York banks and the United States subsubtreasury at New York, and so is the rule in all the controlling money centers of our country.

It is true the banks will receive silver currency on deposit, and will receive it in tender of debts when offered. But they endeavor to hold as little of it as possible, and employ all diligence to get rid of it at once.

They pay it out over their counters upon presentations of checks, and if this does not relieve them of it they get rid of it in another way. Silver dollars and silver certificates are each legal tender in payment of all public dues, custom or import duties included, and when they accumulate in the banks they are gotten rid of by turning them over to importers and custom-house brokers who carry them to the Treasury in payment of custom dues.

And now, under the policy adopted by Secretary Foster under the Harrison Administration, in executing and administering the Sherman law, and accepted and enforced by the Cleveland Administration, the banks, and any person else, can take any obligation of the Government and go to the Treasury and draw gold, although the certificate may declare on its face it is payable in silver dollars, and although the Sherman law declares for bimetallism, and that "the established policy of the United States is to maintain the two metals on a parity with each other."

To further show the wicked results of the practices of the clearing houses to destroy silver, aided by the United States subtreasuries at New York and Boston, it appears from the history of the times that in May, 1885, the reserve of gold in the Treasury declined to $116,000,000, the lowest point reached since the resumption of specie payments, January 1, 1879, until the present time.

The Government paid out all the silver certificates that would stay out and strengthened its gold reserve.

At the subtreasury in Boston silver was paid out in abundance, as there were no such rules there at the clearing house as in New York, that obligated the banks and subtreasury not to offer silver in the payment of balances; and it is thus seen that when there has been a fair chance, and there was no conspiracy to destroy it, it has circulated freely. In the transactions between New York and Boston the balance of payments fell in New York's favor. Under the tacit understanding with the New York banks and our subtreasury there, Boston's silver was unavailable to settle such balances.

Exchange on New York at once went up to a premium, and the Boston banks appealed to the Secretary of the Treasury to cease paying out silver at the Boston subtreasury, which appeal was granted, and the Boston banks at once adopted the New York banks' rule, and refused to tender silver in payment of balances at the clearing house.

The Philadelphia banks have adopted the same rule as New York and Boston. Chicago, St. Louis, Kansas City, and Denver banks, as well as other Western banks in the large cities, pass and receive silver certificates in all transactions between each other, as freely as any other currency and money.

From this history of the action of the banks in conjuction with the United States treasuries at New York and Boston, and at all other treasuries, and the policy of the Administration to discard silver as a money for final settlement and retain silver bullion in the Treasury as a debt against the people, is shown a most powerful and conclusive reason why silver does not circulate to any larger amount, and why it has declined in price.

This combination is of itself sufficient to destroy the circulation of any kind of money, even gold itself. One can not fail to discover that it is a combination between the banks and the money power to plunder the people and raid the public treasury of all its silver, that has been the best and most satisfactory money the people ever used.

One can not fail to be impressed with the fact that it requires the combined active and diligent energies of the banks of the great money centers of the Middle and New England States,

reënforced by the Federal Administration itself, to make any assault that can leave an unfavorable impression upon silver; and even then silver, handcuffed by this gigantic combination and irresistible power, still lives, and gives great hope and relief to the people against this unholy and unlawful alliance between the banks and the Administration.

When we compare the value of silver with the price of cotton, corn, wheat, iron, meat, and all the staple articles the production of which employs the largest majority of human skill and human activity, and learn as the value of silver decreases the prices of these staple articles decline in the same ratio almost, it is but logical and natural that one should be forced to the irresistible conclusion that in discarding silver as money the Administration is overturning the peace, happiness, and prosperity of the people, and burying all their enterprises, their energies, their hopes, and their expectations in one terrible vortex of ruin and desolation.

If the free coinage of silver should be restored and be placed on the same plane before the law, and as our Constitution intends, and as the Chicago platform demands, as gold; and the Administration would use, manipulate, and treat it as money as it does gold, and take the subtreasuries of the United States out of the partnership with the money power, the banks, and clearing houses of New York, Boston, and Philadelphia; make the banks and millionaire gold bugs transact their business in a fair, honest, legitimate, and patriotic way, then the past history of our own people for eighty-one years prior to 1873, and the history of the French people past and present, teaches us unerringly that silver would at once be on a parity with gold in all things and would circulate the same as gold.

The banks would aid in using and circulating silver, the subtreasuries would do so, and when a money king or bank should go to a Government subtreasury with silver certificates, Treasury notes, or greenbacks to raid the public Treasury of gold, silver could be paid out, the Treasury would be relieved from the dictation of the gold bugs, and soon the whole business and money power of the country would be coming to the aid of the Government and relief of the people, all our financial matters would be settled, business disturbances would be adjusted, labor would be rewarded, property would be in demand, hope would be revived, energies aroused, contentment and prosperity would spread over the land, and the great mass of the American people would be seen marching on as a band of brothers inspired by one thought, controlled by one sentiment, and directed by one purpose—the grandeur and glory of the American people.

Gold is the money of the king, the basis of imperialism; silver is the money of the people, the source of the thrift of the masses, the harbinger of liberty and happiness. Under these hostile conditions, these combinations of the money kings, national banks, and the United States Treasury itself, the wonder is not that only fifty-odd millions of silver was in circulation on the 1st of June, 1893, but the amazing astonishment is that there was one dollar.

Again, it is known of all intelligent persons that the banks and money interest made a desperate effort last February to have a law enacted to permit the Secretary of the Treasury to sell bonds to supply the Government with gold. Congress refused to do this, and there can be no reasonable doubt but a combination was then formed between the banks, the money owners, and monometallists, to bring on a panic and depress all business and ascribe it all to silver, and hence secure its destruction as money.

I know of my own knowledge that circular letters were sent South to national and other banks telling them unless the Sherman law was repealed that they could get no more accommodations, and they would be embarrassed in their business, and they must insist upon their representative voting for the unconditional repeal of the Sherman law. Was ever such diligence and efforts put forth in the history of this country by the New York press to ascertain the position of Congress on the silver question?

This was not undertaken as a mere matter of news, but it was for a purpose. Failing to receive such answer as accorded with their purpose, the panic has intensified until depositors have become frightened, and the panic is recoiling upon the banks, the authors of the panic, and at last they realize, as "they sowed to the winds, they are reaping the whirlwind."

My own judgment is that this distress does not owe its existence to the Sherman law, but to a combination between the money powers and the banks, aided by the Government, to destroy silver as money.

The passage of the bill introduced by the gentleman from West Virginia will not relieve the country unless some legislation immediately takes place to secure free coinage of silver.

We have no assurance such will take place. If such is intended in good faith to be effected, then the passage of the substitute of the gentleman from Misiouri [Mr. BLAND] which positively repeals the Sherman law in so many words, is a much more effective and ready measure to carry out such purpose and obey the Chicago platform than the bill of the gentleman from West Virginia [Mr. WILSON].

The President's message has brought distrust to the two-thirds of the Democrats on this floor and who propose to still remain Democrats and carry out the Chicago platform and obey the voice of the people as expressed in the election of the President on the 8th of November last, that there is no purpose on the part of the advocates of the unconditional repeal of the Sherman law, and of the President himself, to observe the Chicago platform, or to obey the will of nine millions of the voters of this country, and who elevated him to the Chief Magistracy of this country.

The President has departed from his own letter of acceptance and from the Chicago platform. In this act of infidelity to the Democratic party, and this trampling of the interests of the farmers and laborers of this country under foot, I can not maintain or follow him.

Gold and silver metal since the dawn of civilization, aye, from the time of Abraham, has been the metallic money of all nations.

England, after she had grown rich and powerful on the double standard of both gold and silver, after the white sails of her commerce had penetrated every waterway, and her flag was saluted with respect by every nation on earth, upon every sea and ocean, in every harbor and station, when she became so opulent and powerful that the London Exchange dictated rates to the world, and the maritimal and commercial laws of all nations were more or less subservient to British interests, and she had become the creditor of all nations, and where her arguments ceased her battleships and artillery forced irrevokable conclusions—in 1816 this island in the sea, our mother, demonetized silver, pulled the ladder upon which she had mounted to such opulence and power up after her, and declared gold the only metallic basis of issue, the only money that she would respect or receive in final payment.

From the foundation of our Government up to 1873 gold and silver, the double standard, was our basis of issue of paper money, the money we respected and received as money to be paid and received in final settlement and payment of all claims, demands, and debts of all and every character whatever.

In 1873 silver, by act of Congress, was demonetized, was declared not to be any longer metallic money in the United States, and not such money as should be a legal tender in settlement of any claim, debt, or demand.

No one to this day can tell with positive assurance who was the author of such an iniquitous measure. Its author, if living, refuses to honor his bantling; if dead, he has failed to leave any evidences of his paternity.

That demonetization is a bastard, is a crime, is conclusively established, because it is without acknowledged paternity and the father is ashamed of the child.

What public necessity demanded such an act? What condition in our trade and finance required such a revolution in our system? What industrial enterprise, what labor pursuit called for such an upheaval in values and disorganization of our settled modes of business? What crime had the American farmer, the American laborer, aye, the American people, committed as to call forth such a sentence?

Who constituted the author the judge to pronounce such a sentence? That he was a dishonorable man, a character more despicable than the youth who fired the Ephesian temple, and more to be derided and anathematized than Nero, who burned his magnificent capital, is believed by the present generation, and posterity will be convinced of the fact?

If so much benefit is to be derived from the act; if it is a truth in the settlement of financial difficulties; if its results are to redound to the general good and to the benefit of mankind, it is passing strange no man will step forth and claim authorship of the act.

Authorship is denied, paternity is disavowed, and responsibility disowned as cautiously as one shuns the leprosy or avoids the exudation of the upas tree. It seems to me such a want of authorship, such a disavowal of paternity, would cause a fair-minded and unselfish mind to hesitate to accept or attempt to defend the boasted results of good to arise from its existence.

What revolution was going on, that amid the clash of conflicting forces our laws became silent and our Federal Constitution became waste paper, its principles effete, and its plain provisions disregarded, disobeyed, and perjury became a fit instrument to defend the safety of the people?

I am surprised. I am astounded that men professing to be honorable and patriotic will attempt to defend such a confessed infamy, because no one will assume responsibility for its existence.

Prior to the year 1873 silver was a coördinate and equal metal for basic money in the United States. With this double stand-

ard, with this derided metal, silver, as an equal constituent element of our money, American liberty and American freedom were established.

A government was founded that has challenged the admiration of the world, and has presented a prototype for the advocates of liberty, the defenders of free representative government throughout the world, and for all ages. With it we have conquered the savage, cleared up the wilderness, established Christianity, and developed civilization until we are the equal of any people, the pride of nations throughout the world.

With it we purchased Louisiana, we overturned the imperious laws upon the sea of our haughty mother, England. We conquered Mexico and took from her the territory from San Diego and the line of the Rio Grande northward and eastward, embraced in the State of California, the Territories of Arizona and New Mexico.

We made the richest and happiest people, the most moral and religious citizens that the annals of man give any account of.

Thus it performed its duty, a faithful servant of the masses, until its legal death in 1873, and at that minute it was worth a premium in our markets, and has been and remained the equal of gold in all our financial transactions from the foundation of the Government to the date of its legal death. And yet we find men proclaiming themselves great moralists, immaculate patriots, agonizing as it were over the depressed condition of the people, yet attempting to defend the lynching and the unholy and monstrous assassination of the main and most efficient instrumentality of our former prosperity, content, and happiness.

With no feeling of animosity, no disposition to offend any, I can not otherwise regard him who indorses this assassination of silver, this demonetization scheme, as an enemy to the public welfare, a foe to the masses, and an adversary to popular interests, and hostile to the sweat, muscle, and brawn of the land.

All the arguments they use to sustain their cause are one-sided, contracted, and unfair, and are suggested alone by selfishness, greed, and avarice, and inspired by opposition to the agriculturist and wage-earner.

Silver needs no vindication or eulogy from any source, and the execration of the banks and millionaire gold bugs and the extortioners and usurers of the land will not be sufficient to destroy it. The voice of the great majority of the American people stand back of silver, and they will set up and defend the money of the Constitution and will demolish the cohorts of usury and extortion on every alignment and secure to themselves, their children, and their posterity that peace, that content, that happiness, and that success in the struggle of life vouchsafed unto them by the fathers of freedom and independence.

No argument is necessary to support silver as one of the essential metals of final payment, and upon which to erect a paper money. The progress of the ages attest the truth of this statement.

All history demonstrates that when gold and silver are equally and fairly treated by the law, that in the very nature of things, and under the laws of trade and business, a parity between the two metals will take place, and will be maintained and preserved.

The enemies of free coinage of silver are without any political organization. No political party in these United States that is organized with a hope of success, and will submit their claims and doctrines to the masses for their support at the ballot box, will dare engraft in their platform the ideas, arguments, and doctrines of the monometallists.

In the platform of every political party that struggled for success in 1892 there is an absence of every argument of the gold bug and usurer, and no such platform has ever been presented to the American people for their support and adoption.

On the contrary, in every platform of every party in 1892 there was a demand for the restoration of the free coinage of silver.

The Constitution of the United States expresses and declares for the doctrine of bimetallism and demands its enforcement.

The monometallist has no political party in this country, and no constitution upon which to erect his fabric of government.

What argument does the gold-bug employ to destroy silver?

He contends that gold being scarcer than silver, and being the single standard of the commercial world, it is more valuable than silver, has a greater purchasing value, and its monetary mint will always be stable as compared with itself; that stability in the monetary mint is essential to any financial system, and silver being cheaper than gold and more plentiful, the cheaper money will drive out the dearer money, and the country will be forced to a silver standard, and we will have to purchase gold at a great premium in settling our foreign debts, demands, and balances.

The monometallist says that in the use of one metal alone the monetary mint is always stable as compared with itself.

He who owns the gold is always in favor of the gold standard, because he lends money, and the one standard makes money scarce, and gold being scarcer than silver, it is therefore dearer than silver, and the rate of interest will be higher as the gold is scarcer.

But the usurer, the money lender, the extortioner, are not the only persons engaged in business, and the name Shylock does not include every family and individual of the community.

He who would meet the necessities of humanity, he would fill the demands of a Christian philosophy, he who would play the part of a wise statesman and engage in the business of making laws to direct and control human conduct, to secure human happiess and human prosperity, when employed in creating a financial system and regulating the money question of a people and country, must not circumscribe his vision, bound his intellect, or contract the impulses and inspirations of his heart alone upon the wants, necessities, and demands of the gold bug and money-lender.

The money-lender produces no wealth. Money is not wealth; it is a representative of values and a medium of exchange. The money-lender makes his gain by demanding and collecting interest for the use of his money; this interest is paid in money, and by his process of business he is always employed in concentrating the money of a country under his control and getting it into his possession and ownership.

As scarce money always raises the rate of interest, the money-lender is always the advocate of any system that makes money scarce and interest high. He always favors the gold standard, and will argue with some vigor, little humanity, and less of statesmanship, about the retaining of the stability of the monetary unit as compared with itself. The retention of the monetary unit stable as compared with itself is the argument alone of the gold advocate, the money-lender, as it builds up and sustains his interest as offering greater avenues for the enhancement of the rate of interest.

But we must remember that there are other avenues of business among a people by which they live and produce wealth than the business of money lending, and the interests of all these must be considered as well as those of the usurer.

In addition to the business of lending money, there are three other avenues that men engage in to secure a livelihood and gather wealth.

Profits that are earned by buying and selling, manufacturing, transportation, and commerce generally.

Rents, the money realized upon renting lands, houses, and other property.

Lastly, wages, the reward the laboring man receives for his daily labor, either by the day, the week, the month, or year, and is called in political economy a wage-earner.

These last three are dependent for the successful prosecution of their business upon the supply of money or capital as it is called in this connection, and money being the creature of law, money should be so managed and so distributed as to benefit all. In establishing any financial system, in enacting laws to regulate and control money, the interests of all the persons engaged in these four avenues of gathering and producing wealth should be considered.

Those engaged in the last three avenues of securing wealth are not so much concerned about the stability of the monetary unit as compared with itself, but they are seriously interested in its stability in its relation to everything else that is in its purchasing power. That is, they are interested in having such an amount and volume of money as will secure to each and all of them, regularly and with stability of value, a full and fair reward for all their products, for all their enterprise, and for all their energies.

This can be obtained and secured only when the supply of money is equal to all demands for which money is or can be used.

Contraction of the currency, scarcity of money, the increase of the rate of interest, are each and all antagonistic to the welfare and advancement of all those engaged in the three last-named avenues of producing and gathering wealth, and operate alone in the interest of the money-lender.

Hence, as the free coinage of silver increases the means and basis of expanding the currency, and doubles the volume of money as the means of final settlement of all debts, demands, claims, and balances, and decreases the rate of interest, appreciates values, elevates prices, and arouses the energies and hopes of the people, and incites to enterprise, the people engaged in the three last-named avenues are interested, and to advance their own interests should be firm and aggressive advocates of the double standard, of the free and unlimited coinage of silver, made a legal tender on the same basis as gold.

By restricting the coinage of silver, debts contracted at one time will be enhanced in value when paid in the future, and it will require the production and sale of more of the products of labor to secure the money to liquidate the debt than at the time

the debt was contracted. Hence restricted coinage or demonetization of silver, or contraction of currency, always operates in favor of the creditor and to the detriment of the debtor.

There is not enough gold in the world to meet the demands of trade and to secure to labor the just rewords of its toils. Any demonetizing of silver, a metal that the ages show has held a parity with gold when treated fairly and equally by law as gold is, is a crime against humanity and a violation of every principle of free, equal, and constitutional government.

The monometallist, or single gold-standard advocate, is a destroyer; he offers no remedy to meet the lack of gold, yet insists on the demonetizing of silver which meets the deficiency of gold.

VALUES.

An ideal standard of value is unattainable, the affairs of man are too varied, too complex and resting upon too many contingencies, the products of labor too unequal in quantity and quality, too liable to deterioration for such a standard to be obtained.

Our inability to reach such standard, does not relieve us from the duty to approximate it as near as possible.

The volume of money in circulation among any people is a most potent factor in receiving such an approximate standard.

Money is the representative of value of all the products of labor, of all the enterprises of man, and of all the human energies employed in temporal advancement; then, that the volume of money should always be kept at such an amount as to meet all the requirements of trade, the necessities of business, the demands of labor, and the wants of the people, is but the suggestions of the most ordinary intellect, of common sense, and of common justice.

A change in value is not created alone by the character of the article, or the conditions that surround and affect it, but the change may be caused by conditions affecting the dollar itself.

To illustrate: A bushel of wheat is of a certain grade and in a certain condition to-day and is worth a dollar; it may continue of the same grade and remain in the same condition and the supply and demand remain the same, and to-morrow, next week, next month, or the next year, and at each of the periods named it may be exchanged for more or less money than to-day. In this case the price of the wheat is not at all affected by conditions affecting the wheat, but it is affected alone by conditions affecting the dollar or currency given in exchange for the wheat.

The conditions affecting the dollar may be those of supply and demand.

If the supply of money is limited, contracted, and is scarce, and the demand for it great, then the price of the wheat will fluctuate; it will become less in price as the supply of money is lessened or contracted.

On the other hand, if the grade and condition of the wheat deteriorates and changes, then the price will decline and change, and these result from conditions affecting the wheat.

Or if the grade and condition of the wheat should remain the same, the supply is good. Yet there is no demand in such case; the price of the wheat would be affected by its condition. Another illustration: the volume of currency is normal; that is, it is equal to the necessities of trade and demands of the whole community, property will then reach its fair and intrinsic value.

A farmer contracts a debt, say, by purchasing 40 acres of land fors$200, payable in twelve months. All things being normal, the land is well worth the $200. In the mean time, before the debt is due, the volume of currency is contracted, the demand for money is great, the supply is small, the monetary unit is changed, prices decline, and values deteriorate and go down 50 per cent; and when the debt is due the land will only bring $100 because of conditions affecting the money of the country.

To pay off the debt the farmer is compelled to produce one-half more cotton, or if he fails in this, he will have to sell his other 40 acres of land he bought and for which he contracted the debt, and thus he has lost his 80 acres of land, his home, his all, to pay a debt he contracted to pay for 40 acres of land.

The destruction of the farmer in this case is caused alone by no act of his, but by conditions affecting the currency, over which the farmer has no control.

Another illustration, and it exemplifies the condition of many of my constituents:

In the regular and legitimate pursuit of his business a farmer contracts a debt and secures the same by mortgage on his 80 acres of land, embracing his homestead. At the time of contracting the debt the volume of currency is normal; that is, it is sufficient to meet the requirements of trade and the demands, needs, and business of all the people.

Every suggestion of prudence says to him, if money remains as it is, he can reasonably count on getting so much per pound for his cotton, and at such price he can easily pay off the debt but when the debt becomes due, the currency is contracted, there is not enough money to meet the demand, and the farmer will have to make twice as much cotton to pay the debt as he would have required had the currency remained as it was when he contracted the debt. Not having the cotton, the land and his home is sold, and the farmer loses all.

Thus you see the woes and injury resulting from a contraction of the currency, the creation of law, intended for the benefit of all the people.

But in this case the creditor's wealth is doubled and the debtor is ruined.

No wonder the money-lender desires a scarcity of money, and that the rate of interest should be increased. We hear much talk these days about the dishonesty of law that will allow a debtor to pay his debt in silver at 64 cents on the dollar.

This is considered by the gold-bug money lender as an unanswerable argument against silver and the double standard. But does this Shylock tell you anything about the dishonesty of a law that requires the debtor to pay 130 cents in the dollar to discharge a debt contracted at a hundred cents in the dollar? In other words, to pay $130 to discharge a $100 debt. This results under a contraction of the currency and demonetization of silver.

Oh, says the gold advocate, the farmer is not injured by this single standard, this demonetization of silver, because a gold dollar will now purchase almost twice as much as a silver dollar would when you had silver money as a legal tender. Admit it; but Mr. Shylock does not tell you that the farmer has to produce and sell twice as much cotton to get the gold dollar as he formerly did to get the silver dollar. Oh, he says, the silver dollar under the present condition will purchase as much as a gold dollar.

Admit it; but, as all prices are on a gold basis, our money all on the gold basis or standard, the farmer has to produce twice as much cotton to get this silver dollar as he would have to produce to get the silver dollar under the double standard, or the gold and silver standard. Yet, during all this time the farmer's power of production has not increased, but remained the same; in all probability it has decreased. The cotton farmer of the South certainly can not produce any more cotton to-day or since 1873 than he could in 1850, when we had the gold and silver standard. His occupation and mode of production is *sui generis*, unlike that of any other farmer, and unlike that of any other industrial pursuit.

The advance of machinery, causing one to produce as much as four or five before, has not and can not reach the Southern cotton farmer. Cotton can not be chopped out by machinery, and it can not be gathered by machinery. As to these, the same process is now in vogue as was employed fifty years ago. And there can not be any change; it must continue to the end of time as it now is, and must remain to be accomplished by the hand. His soil is impaired in its strength, in its power of production, and he is compelled to go into the markets and purchase each year fertilizers to put on his land. He makes but one crop a year, and by the laws of nature it requires the whole year to make and gather a cotton crop.

Hence all discussion about improvement of machinery and increase of the power of production to affect the decline in prices because of a gold standard, has no application and is of no benefit to the Southern cotton-farmer.

To all this the creditor and the gold-bug throws up his hands and cries out robbery and dishonesty!

Hold on, do not cry thief yet; find out who the thief is; maybe you are the man, and an investigation of the case will place the guilt at your door.

First, you enhanced the volume of your debt and reduced the price of the farmer's cotton by demonetizing silver; and it requires the farmer to produce one and a half times more cotton to pay his debt now than when he contracted it.

Second. The value of the silver is the market or bullion value and not the coin value; the ratio of silver in the dollar is still 16 to 1, an amount greater than any other nation puts in the silver dollar; more than France, that sustains a parity between gold and silver, an equality in value and purchasing and debt-paying power.

Now, if you, American creditor and gold-bug advocate, will restore the free coinage of silver and put it on the same footing and plane before the law and the world as you have placed gold, you will at once realize that there will be a demand for silver; it will enhance in value, its purchasing and debt-paying power will be in all things, at all times, and under all circumstances equal to gold, and the 16 ounces of silver is in truth and in fact equal in value to the 1 ounce of gold.

The history of the ages show this, and in our own country and in our own times, when silver was on the same plane with gold before the law, silver has in every instance and at all times maintained a parity in value and as sound money with gold, and has been oftener at a premium than gold.

FARMERS NOT ALONE INTERESTED IN SILVER.

There seems to be an impression abroad that only the farmers are interested in the silver question, and that the people who dwell in the cities and towns are freed from the depression of demonetizing silver.

It is true the demonetizing scheme has robbed the farmer of untold millions for the British traders and the American gold-bugs and national banks, yet he has got used to the process; the robbery can not go any further; it has reached its limit, and the farmer would not care a cent for the machinations of the oppressors if he was not in debt.

If he can get a little money to pay his debts, at a low rate of interest, so as to keep his land and home, the devil can take the gold advocates and national banks if he will have them. The farmer can fall back upon the balmy sun, the generous soil, the refreshing rains, the invigorating winds. These are the gift of God, that Wall street and the devil can not control; and in them lies the peace, independence, and happiness of the farmer.

Debt is his only master, and it should be the anxious and diligent care of all men to so arrange and direct the legislation of the country that he will be relieved of this tyrant at the earliest moment.

The farmer can compromise with the gold advocate more advantageously than any other business or industrial class.

He can say to the money-lenders: "Let me have money enough to get out of debt, and then you can proceed with your unholy and depressing schemes; I am now independent of you."

The finances of all gold-standard countries are in a most unsatisfactory condition, there is unrest and dissatisfaction among the producing and laboring classes. France, sandwiched between England, Germany, Austria-Hungary, Italy, and Spain, all gold-standard countries, maintains her double standard of gold and silver, her industries are all prosperous, and her people are happy and contented.

Now, the merchant and manufacturer are less able to stand the depression in prices, the stagnation in business, and the paralysis of enterprise than the farmer. If one will only look around him he can see storehouses filled with goods; no trade, and the merchant in debt, and bankruptcy threatened. Furnaces are blown out, mills closed down, and foundries stopped, and factories still. No hum of industry, but silence of death reigns throughout the whole space.

What is the cause of all this stagnation and ruin? A want of money, contraction of the currency, demonetization of silver, the gold standard, fall in prices, and all the evils of legislation that oppress the trading and industrial classes for the benefit of the money power.

The cry against silver and its denunciation by the gold advocates that it is of less value than gold is unjust and unfair, when the Government has turned its mighty power against it and degraded it.

The apparent fall in the value of silver, maltreated and debased as it is by the Government, is more a rise in the price of gold.

The increased demand for gold caused by the action of Germany, the Latin Union, the Scandinavian states, by Austro-Hungary and the United States in demonetizing silver, causes a rise in the price of gold and a fall in the price of silver.

The decline of silver has not been the result of natural laws, but alone by the destroying and debasing laws of government.

This fact is clearly established by the fall in the price of silver commencing with the act of 1873, demonetizing silver, and has been four times as great in the twenty years since 1873 as it was for the twenty years prior thereto, although the changes in the relative production of the two metals has been less since 1873 than prior thereto. This is shown by admission in the report of the English gold and silver commission.

Facts, not theories, should control and direct the lawmaker and statesman; the doctrinaire has but little weight and influence when he argues against facts and the experiences of a people.

The decline in prices can not be charged to the agitation of the silver question in the United States, this decline is almost universal throughout the world. While prices have not materially risen in silver-using countries, yet they have remained steady and free from fluctuations, as compared with gold prices in the gold-standard countries.

The fact is notorious that prices have largely fallen in all gold-using countries, and this indicates the fact that the change has taken place more in the value of gold than in the value of silver.

If one will compare the prices for twenty years before 1873, when we had free silver, and it was on a parity with gold before the law, and the prices for twenty years since 1873, the year silver was demonetized, it will be ascertained that prices have been lowered since the demonetization of silver than before. This conclusively establishes the fact that the gold or single standard produces the decline in prices.

It is said the low prices do not injure the wage-earner, because his wages will buy as much or more at the present time than ever before; and the improved machinery and modes of production, increasing his power of production, prevent the decline of prices injuring the wage-earner.

It was at one time thought, and the idea was maintained, that a rise or fall in prices was indifferent to all except the creditor and debtor class.

But this idea is now exploded, for investigation and reason has discovered that a fall in prices so affects men's spirits, their hopes and expectations, so depresses their energies and dwarfs their enterprise, all of which are connected with money, exert a depressing influence over all labor and industrial enterprises, and is exceedingly baneful and harmful, while rising prices stimulate hope, arouse energies, secure confidence, and excite to more active exertion and more plentiful production.

The manufacturer, the active manager of industry, is always in debt. He has to buy labor, material, implements, machinery, etc., and must sell his products on short time, and sales must be full and regular in order to enable him to conduct his business with profit; prices falling, business is stagnant, money being scarce, trade is dull and depressed, the manufacturer can not dispose of his products, can not pay his debts and liabilities, and bankruptcy takes place, and the business goes to the wall and laborers are thrown out of employment.

I have shown that this improved machinery, this increase in the power and capacity of production does not apply to the cotton farmer, and does in no way benefit him.

We must not forget that our population is increasing rapidly, our wealth has doubled rapidly, and our production of commodities to be exchanged for other commodities has multiplied rapidly, and the demand for money increases proportionably, and any contraction of the supply leads to ruinous results.

English and Irish tenants are demanding bimetallism, or both silver and gold coinage. The tenants find that while the rate of their rents is fixed for years in advance, yet it is becoming more difficult each year to pay the same because of the fall of prices of the articles they have to produce to sell to obtain the money with which to pay the rent.

Germany and England are each creditor countries, and they desire to destroy silver, enhance the value of gold, make money scarce, and thus raise the value of interest.

The masses of the people all over the world desire the gold and silver standard, yet the lawmaking power in all countries is to some extent dominated by the money kings and gold advocates, and the people are embarrassed. But the march of financial and industrial freedom has commenced; it is gathering strength as it wends its way, and the deluge will soon come; the money devil must disgorge, and freedom and equality must prevail as the directing spirit in all our laws and in the administration of our Government.

An increase in the quantity of money leads to higher prices, arouses the energies, excites to enterprise, suggests development, and gives hope and confidence to labor and industry. A permanent increase in the coin forming the basis of the machinery of exchange will be followed by an increase in the volume of money, and prices will rise and the rate of interest decline. Restore the free coinage of silver, make it legal tender for all debts and claims, put it on an equality with gold before the law, then the price of silver will advance, all prices will rise and appreciate with the advance of silver.

Take the financial and industrial history of the world and there can not be found an exception to the rule, that low and falling prices and declining values produce stagnation in business and a depression in the energies, enterprise, spirit, and hopes of men.

The root and basis of all our trouble is found in the fact that gold is constantly increasing in value.

The disturbance in Wall street, London, in Germany, and wherever the single gold standard prevails conclusively marks another step in the upward movement of the price of gold and the downward movement of all other values.

Take France, where the double standard prevails, both gold and silver is a legal tender, and both are placed and used by the Government on a parity, and you do not find any such disturbance in business matters and no such discontent among the laboring classes; but the producing classes are all thrifty, and energy and enterprise are making their grandest and mightiest strides.

Is not this conclusive evidence that the cause of such universal depression arises from the appreciation in the value of gold, and is not referable to the agitation of the silver question? The countries that use silver are quiet and progressive; their people are prosperous, happy, and contented.

You hear these gold advocates and money-lenders say that the restoration of the free coinage of silver will benefit the silver-miner at the expense of the people. We have shown it will not.

But can not the same be said about the gold-miner—when you

destroy silver, that he will be benefited at the expense of the people in enhancing the value of his gold? Have I not shown this to be true?

You hear the money-lender and the gold advocates complaining about the profit made by the silver-mine owner, but you never hear him complain about the profit made by the owner of the gold mine.

How transparently inconsistent are the money devils! The gold advocate says that, as the majority of the world use gold, if silver should be restored, then gold will flow out of the United States and we will soon be without gold and on a silver basis and single standard. This did not take place for the eighty years that we had the gold and silver standard prior to 1873. It has not taken place in France, that has a gold and silver standard.

Indeed, the agitation of the silver question does not cause the outflow of gold, because we are on a gold basis.

We produce too much to sell abroad to be embarrassed by the outflow of gold.

A silver dollar is now the equal of the gold dollar in the measure of values.

Let there be free coinage of silver, and let the silver dollar be made a legal tender as gold is, and a general demand will be made for silver by both creditors and debtors. From debtors, because they can always employ it to pay their debts, and from creditors because they can use it in making all their payments of every kind and character.

We will use one illustration to answer all the arguments that free silver will drive gold out of the country by foreign nations demanding payment of all balances of trade in gold and all the balances due us will be paid in silver.

A cotton broker in Liverpool buys a lot of cotton in New York from a cotton broker. Silver is a legal tender in America, and the Englishman proposes to pay for the cotton with silver. Where will the Englishman get the silver? It is not in Europe, and he will have to come to America to purchase it. He will have to buy it with gold, and in America silver is on a par with gold, so he will swap gold dollars for silver dollars, and pay the exchange or cost of transportation of the gold from Liverpool to New York to do it.

Does any sane man believe the Englishman will do this? No; he will pay the gold directly.

Here is a demand for silver, and thus a parity will be kept up with gold even in Europe.

Suppose the balance of trade is against the United States, does it force us to pay in gold? Not at all. We would pay in silver, because the Englishman would have a use for silver in his continued trade with America. Suppose, however, the American should have to pay in gold, then he would have it, as we produce thirty-five millions of gold each year, and now have in our country about five hundred millions in gold. France maintains her double standard; why can not we do it?

It is error to assert that gold is the universal standard of value. Two-thirds of the people of the world use silver as money, and over one-half use silver as the standard of values.

If England demands gold in payment of all balances, and continues her single gold standard, she will have to manufacture on a very small profit and sell at low prices, as the gold standard reduces all values, and this will disorganize and dissatisfy her whole industrial system, and revolution will be inevitable.

Heretofore England has been the largest producing country as well as the richest and most powerful nation on earth, and thus she has been able to dictate her policies to the world and force the world to accept them. But the United States, yet in its puling infancy, is the largest producing and manufacturing country, the richest, most opulent, and most powerful nation on earth; and while she does not propose to dictate the policies to be pursued by other nations, yet she does not propose to allow other nations to prescribe her policies. She does not propose to consult other nations as to what standard or principle her economic interests shall be placed under.

CHANGE OF RATIO.

Many persons advocate an increase of the ratio, and then they accept the double standard.

I am opposed to any change in the ratio. Let it remain as it is, 16 ounces of silver to 1 ounce of gold. This is the highest ratio in the world.

A change of the ratio now would be unjust to the farmer, as the products of the farm have declined in price since the appreciation of the value of gold and the fall of silver, and a change would fix the farm products at the present low rate and double the amount of his debt. It would be unfair to change the ratio now, because we are the largest silver-producing people in the world, and we should not, unless for the very best reasons, debase our own product and embarrass our laborers. To change the ratio now would necessitate a recoinage of all our silver dollars at a loss by shrinkage of $100,000,000.

If the change should be made by all nations the loss by shrinkage would be near a billion dollars.

A change of ratio is not necessary. France for seventy years, with only half of our population, has kept both gold and silver substantially at par with a ratio of 15½ to 1, less than our ratio.

A change of ratio can be made either by adding to the silver dollar or by taking from the gold dollar. If you change the ratio by adding to the silver dollar, you increase the debt and embarrass the debtor in favor of the creditor. To change the ratio by lessening the gold dollar would benefit the debtor at the expense of the creditor.

Our Government made a change in the ratio in 1834, by reducing the gold dollar, and the fact that the change now demanded is to increase the ratio of silver indicates that the change of ratio is demanded by the creditor class, and that the Government is more nearly under the control of the money power than it was in the early days of 1834.

The question is asked, Do you want a double standard? I answer, yes.

It is an admitted fact by all men that there is a scarcity of metallic money even under a gold and silver standard. What would be the consequences, then, under a single or gold standard?

Well, every man here sees and feels the consequences. Utter stagnation and paralysis. Can a country have a double standard unless the actual value of the metal is the same in each dollar in the world markets?

I answer, the history of the ages of the commercial world shows that when silver is put on the same plane with gold by law, and the Government treats it in such way, the market value of silver is about equal to gold, and sometimes the coinage value is a premium over gold. It is not so much the stability of the market value of silver as a commodity to sell, or the equality of the two metals as to the monetary unit, that the industrial and producing classes are interested in, as we have before shown in this argument, but it is the relationship between the metals as monetary units and the value of all other commodities, the products of industry and labor, that concerns the business and industrial community.

The money-lender, the usurer, is alone of all the community concerned about the relation of the two metals to each other as monetary units.

This question is propounded by gold advocates and money-lenders. Does not the demand for any commodity, gold or silver, taken in connection with the supply, fix the price? I answer, that ordinarily, all things being equal, it does. But when you decrease the demand, or do away with the use of any commodity by an arbitrary act of law, I do not care what the supply may be, great or little, the price of the commodity will decline.

As to silver money, if the coinage should be restored free and equal with that of gold, and silver made a legal tender, the history of all peoples and the experience of mankind and the experience of the people of these United States for eighty years prior to the demonetizing of silver in 1873 show that the silver will sustain its value as a monetary unit and its value as a medium of exchange on a parity with gold.

Here is, in this reply, an answer to every argument made by the gold-bug and money-lender against the double standard of gold, unlimited coinage of silver, put on a parity with gold before the law.

And the depressed condition of our laboring and producing classes, the stagnation in business, the paralysis of all enterprise, and the decline of prices that has been gradually going on since 1873 show conclusively that the demonetization of silver has been a national calamity, a sin against God, and a cruel and diabolical conspiracy against the industrial freedom and the labor prosperity, as well as the developing and producing advancement of the people of this country.

Another question is asked: Does not the United States purchase more silver and coin it in one year now than was issued by the United States prior to 1873? I answer, yes.

And the rapid increase of her population, almost doubled since 1870, the expansion of her industrial and producing power, the development of her mineral, commercial, and agricultural resources, the building of her railroads, the opening and cleaning out of her highways, the advancement and refinement of her people, the civilization and progress of the age, each and all justify and demand such purchase and call for its continuance until the handcuffs that the gold bugs, national banks, usurers, and money kings have bound and riveted upon the energies and enterprise of the masses are taken off, and a full, open, and untrammeled sweep shall be given to the grand genius and heroic spirit of young America, a lion in the struggle of life, a giant in opportunities and growth, a Crœsus in wealth, a Hercules in power, a Christian in religion, and a free man by birth,

possessing and occupying a country that is an asylum for the oppressed of every land.

Another question is asked: Since the United States buys more silver for use as money than ever before, why is not the falling price of silver checked?

The Government buys the silver, but does not use it as money, and this is the very evil we silver men complain of, the Government refusing to use silver as a money of final payment; and this very refusal is the sole cause of the uneasiness and disturbance now going on in this country.

If the Government would use silver as money, restore it to free coinage, and make it a legal tender, the decline in price would stop, and in a short while it would be on a parity with gold.

By what I have stated in this argument I have shown—

First. That since the formation of our Government up to 1873 silver has been a part of the debt-paying money of the people.

Second. I have shown that the act demonetizing silver has robbed the people of more than half of their debt-paying currency.

Third. Demonetization of silver increased the value of gold. Such increase in the value of gold has caused a fall in the prices of all commodities that are the products of human labor and industry and a depreciation in the value of all kinds of property, as well as depressed the value of silver.

I have shown that a restoration of silver to free coinage and made a legal tender on a parity with gold will cure all the evils created by the enhancement of the value of gold.

Fourth. I have shown that low prices create depression among the people, stifle enterprises, and retard the energies and enjoin the development of industrial pursuits.

Fifth. I have shown that the gold or single standard is devised to increase the profits of the usurers, money-lenders, national banks, and millionaire gold sharks in lending money.

Sixth. I have shown that the demonetization of silver is an invention growing out of the partnership between the European monarchies and the millionaire bankers to plunder the people, ob labor of its profits, to make the rich richer and the poor poorer.

The banks, money-lenders, and gold advocates are squeezing us, frightening the Government, unsettling the finances of the country, alarming the people, stagnating the labor, industry, and business of the country, all to coerce the Government to issue the bonds mentioned, generate a demand for gold, establish a gold basis, all to plunder and rob, to put gain in their pockets.

If the letter of the Sherman law, to say nothing of its spirit, was observed, this depression and distress would at once be relieved, and labor and business would realize the rewards of its toil, and the producers would get a fair price for their cotton, wheat, and other commodities, and all things would be relieved.

Shall silver notes or certificates be redeemed in silver as the Government contracted to do when it issued the note, and let silver be used as a currency for the people, and swell the volume of money, or shall silver purchases be charged as a debt against the Government, and the people taxed to raise gold to pay for it?

The voice of the people was expressed on this matter last November. The present system was inaugurated by Republican administration, and at the last election the people condemned it.

It seems the present Administration has not heard the sentence of condemnation yet. The gold bugs have conquered, and the people are chained to their triumphal car as victims of their avarice and greed and slaves to their will.

If the present Administration will pay out silver in redemption of all these demands, as it has power to do under the law, then all this commotion will be stilled these disturbances settled, business revived, energies aroused, enterprise excited, industry renewed, trade buoyant, producers receiving legitimate profits, and labor requited with the gain of its honest toil.

Under the Sherman law, properly administered and fairly to the people, silver is money and should be treated in the same manner and on a parity with gold. But under the Harrison Administration, and thus far under Cleveland, silver, the money of the people, is no more than a poker chip, it is evidence against the Government for the payment of gold.

If this mode of administration is to continue, the stagnation and paralysis of all business, trade, industry, and labor will be intensified and increased; prices will go lower, gold higher, and the rate of interest increased, and woe and lamentation will be heard throughout all trade and industrial centers. Merchants bankrupted, manufacturers despoiled of all profits, railroads in the hands of the receivers, and country banks in liquidation; and the money kings, usurers, and extortioners will be seen riding in their golden chariots, cracking their whips over the heads of an outraged and indignant people.

Let us be true to ourselves, stop our bickerings, and put on the whole armor for the great political battle. Let us marshal ourselves in one line, firm and steadfast, in defense of our liberties as freemen. Do our whole duty, be brave, be courageous, and leave the consequences to God.

Mr. PICKLER. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman rise?

Mr. PICKLER. To a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. PICKLER. To-morrow, I understand, the House commences consideration of the bill and amendments under the five-minute rule. I desire to inquire whether the debate will be had on the bill and amendments as a whole, or whether the amendments will be taken up for consideration separately?

The SPEAKER. As a whole. When the gentleman gets the floor he can debate any amendment he desires.

Mr. PICKLER. Or all.

The SPEAKER. Or all. The gentleman from Tennessee [Mr. RICHARDSON] will perform the duties of the chair at the evening session. The House will now take a recess until 8 o'clock, the evening session to be devoted to debate only on the pending question.

Accordingly (at 5 o'clock and 28 minutes) the House was declared in recess.

EVENING SESSION.

The recess having expired, the House, at 8 o'clock p. m., resumed its session (Mr. RICHARDSON of Tennessee in the chair as Speaker *pro tempore*).

SILVER.

The House resumed the consideration of the bill (H. R. 1) to repeal a part of an act, approved July 14, 1890, entitled "An act directing the purchase of silver bullion and the issue of Treasury notes thereon, and for other purposes."

Mr. HUNTER. Mr. Speaker, it may be somewhat immodest for me at this time to address the House, but the gravity and the importance of the measure introduced by the gentleman from West Virginia is my apology. I am here to-day to take a humble part in presenting and expressing the wishes of the people of the great empire State of the West. Illinois, with her vast agricultural and commercial wealth, at the center of the Republic, surrounded by every interest common to a free and enlightened people, demands that her representatives may be permitted to give their reasons for the strange unrest and demoralization that now obtains in every branch of business. The Republican platform reads:

> The American people from tradition and interest favor bimetallism, and the Republican party demands the use of both gold and silver as standard money, with restrictions, and under such provisions, to be determined by legislation, as will secure the maintenance of the parity of value of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be at all times equal. The interests of the producers of the country, its farmers and its workingmen, demand that every dollar, paper or coin, issued by the Government shall be as good as any other. We commend the wise and patriotic steps already taken by our Government to secure an international conference to adopt such measures as will insure a parity of value between gold and silver for use as money throughout the world.

I now quote from the Democratic platform:

> We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all of its supporters as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver, without discrimination against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in payment of debts; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the famers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

Mr. Speaker, does the man who claims to be for the pending bill—gold alone—stand by that platform? One gentleman said to-day that his own convictions are his platform, and that he votes as he pleases; that platforms do not bind him.

A contrariety of reasons has been assigned by the gentlemen on this floor for the unhappy condition of the country; but I have not heard any satisfactory explanation of how the purchase of 54,000,000 ounces of silver each year and issuing thereon fifty-four millions of silver certificates, and passing them out to the people to do business with, where they purchase just as much of the necessaries of life as gold, can bring on a panic. That is beyond my comprehension. How can this produce a panic? The less money there is in the hands of the people the greater the probability of a panic, seems to be the theory of some men in

this House. The Secretary of the Treasury sent a statement to this House to-day which I will read:

In reply, I have the honor to state:

First. The number of ounces of silver bullion purchased under the act of July 14, 1890, from August 13, 1890, to August 16, 1893, inclusive, was 161,521,000 fine ounces, costing $150,060,459. The highest price paid was $1.20½, August 20, 1890, and the lowest price 89.696, July 24, 1893—average price, 89.9328+.

Second. Treasury notes to the amount of $150,115,985 have been issued to date, August 16, 1893, in payment of the silver bullion, and that amount is still outstanding, the redemptions having been replaced by issues, with the exception of $714,636, which have been redeemed in standard silver dollars and retired from circulation since August 3, instant.

Third. Up to August 1, 1893, $49,134,109 in Treasury notes have been redeemed in gold, and since August 3, 1893, $714,636 in Treasury notes have been redeemed in silver dollars, this being the first redemption of these notes in silver.

Fourth. The number of standard silver dollars coined from bullion purchased under the act of July 14, 1890, to August 16, 1893, has been 36,087,185.

Fifth. The number of ounces of silver owned by the Government, purchased under the act of July 14, 1890, on August 16, 1893, was 133,161,375 fine ounces, costing $121,217,077.

Very respectfully,

J. G. CARLISLE, *Secretary.*

Hon. CHARLES F. CRISP,
Speaker, House of Representatives.

It will be seen from this statement that more than $150,000,000 has been placed in the hands of the people by this act known as the Sherman law. Had we established the principle three years ago that we are attempting now to enact on this money question, there would be $150,000,000 less in the hands of the people.

It was said with considerable vehemence by the gentleman from New York [Mr. HENDRIX] that all panics come from the common people. That I believe to be true; that is, from the depositors. The oldest financiers of this country stand in amazement when asked to define the cause of the present panic. No failures of crops; no wars or threatened difficuly in overtrading; no convulsions of nature or of men. How did this panic come about? The philosopher and the soothsayer have retired from the field. No gentleman speaking for the gold standard alone has been kind enough to tell us the real cause of this great panic.

The gentleman from Ohio [Mr. HARTER] tells us the remedy is to destroy one-half the money of the country, reduce the circulating medium to the gold standard alone. This is the panacea for all ills. It will bring happiness and prosperity, and will gladden every home. There is not a member upon this floor but who would be glad to see this enchanting picture. Does strong declamation unfold the mystery or enlighten the issue? Who has learned from the advocates of the gold standard the cause of this panic now in our country? Does any man of investigation believe that the one-hundredth part of our present trouble has grown out of the Sherman law? We will agree, however, that the Sherman law is inconsistent with every principle of sound monetary business, and ought to be repealed, and must be rejected.

The great cause of the present financial difficulties seems to be a perfect enigma, so far as the public mind is concerned. Almost every individual and every member upon this floor has a different view of the case. You have yours; I have mine. I hold that the laws of taxation which have been enacted during the last quarter of a century, discriminating against the wealth-producers and in favor of those who have large holdings, and who now have control of the wealth after it has been created, are the men who have brought about the present difficulty, and now hold the reins which are guiding the legislation here in favor of gold alone.

More than $600,000,000 have passed from the producers of wealth into the hands of the protected few, under the tariff laws, annually, for the past twenty-five years. This wealth thus obtained has been loaned back to the people who are impoverished by these discriminating laws; and now if these men who hold this vast wealth can go into this legislative assembly and secure the passage of a law that would demonetize silver and destroy its use as a commercial medium of exchange, they are thus enabled to double their claims against their debtors, and in the end become the owners, as it were, of the entire wealth over which they hold these mortgages.

Mr. Speaker, I was gratified to-day to hear my colleague on the other side [Mr. CANNON of Illinois] declare in forcible terms that he is in favor of both gold and silver as the true standards of value, and that we should coin these metals as the money of the people.

We are told by many of the ablest men upon this floor that this Government can not maintain a double standard or foster bimetallism unless England or Germany takes the initiative or some other of the foreign nations lead off: and when they have, we may follow. Such a confession of servility is, to my mind, inconsistent with the spirit, the enterprise, and the patriotism of the American people.

The United States stands to-day substantially at the head of all nations: with her 65,000,000 of people, her vast area of productive soil, her wide and deep forests, her inexhaustible mines, and her commercial relations with all the nations of the earth that we should now, to-day, admit our inability to do that which is the best for our people, unless we humbly go before some of the nations of the Old World and ask them to do that which we might do for ourselves—I do not think that the people will be content with this idea, that we are not able to sustain ourselves as a Government, not only in our monetary affairs, but in all the commercial relations with the nations of earth.

We have always been jealous of the patriotism and the sagacity, the foresight and the ability of our fathers, who molded and fashioned the institutions that have blessed this nation for more than a century. They in their wisdom laid as the foundation-stone of our financial system that gold and silver should be the money of the people. Under that system of bimetallism we have prospered and grown from the beginning of this Government to the present time, surviving all the vicissitudes and changes wrought by war and failure of crops and all the contingencies that could come upon a nation growing up successfully under a double standard. We feel to-day that we should not disregard and lay aside all these precedents; that we should take a new departure in the regulation of the finances of the country and destroy one-half the commercial medium of exchange and adopt monometallism, while every man must know that it is impossible to transact the business of the country upon that basis alone.

There is not enough gold in the world for the people to successfully transact the business of the world. There should always be enough money in the country to transfer the products of industry from the producer to the consumer, within the coming and the going of the seasons, without stagnation or waste. It must be admitted that on account of the enormous increase of population and of business transacted throughout the world, that gold is wholly inadequate to serve the purposes of a commercial medium of exchange.

Being the sole standard, and on account of its scarcity, its value is consequently appreciated, causing depreciation in the value of all articles and the impoverishing of a large part of the people, and silver is the only metal that can be called to its aid. There is but one way to give this metal a fixed value that will be recognized throughout the world, and that is for a government as strong and powerful as ours, representing large silver-producing interests, to coin all silver and gold that may be offered at the ratio of 16 to 1. I believe that to be the only remedy. I may be at fault.

There is claimed to be a knowledge on the part of some of the people, especially those people who have large accumulations of money to loan, that silver is being produced so rapidly and so fast that it should be discarded as a money metal. This is an error. It is a very grave mistake for men to fall into innocently. Some of the best mining experts now state that the mines of this country are being rapidly worked out, and as every section of the country has been surveyed, there is very little probability of the quantity of silver being increased. The greater probabilities are that it will commence to decline, as to quantity, in a very short time.

Should we take the production of gold and silver during the past sixty or six hundred years, the relative production has not been far from 13 to 1. In fact, if we are to be guided by the productions of the mines for the past eighty-eight years, it would be found to be wiser to decrease the ratio to 13½ to 1. Here are the figures: The world has mined of gold 7,042 tons, and of silver 95,550 tons in the past eighty-eight years, or just exactly 13½ of silver to 1 of gold.

All the figures that I shall present upon this question are from official reports of the Directors of the United States Mint or from Mulhall's Dictionary of Statistics. This authority, I apprehend, will not be questioned.

Specie and bullion holdings of leading European banks.

June 1, 1893.

Bank of—	Gold.	Silver.	Total.
England	$130,508,740	.....	$130,508,740
France	342,754,200	$256,247,000	599,001,200
Germany	165,813,750	55,271,250	221,085,000
Austria	51,870,000	87,350,000	139,220,000
Spain	38,570,000	32,000,000	70,660,000
Holland	15,430,000	35,600,000	51,030,000
Belgium	13,633,335	6,816,665	20,450,000
Total	758,580,025	473,374,915	1,231,954,940

Specie and bullion holdings of leading European banks—Continued.

June 2, 1892.

England	$129,553,830		$129,553,830
France	311,674,410	$258,382,125	570,056,535

Austria	28,470,000	82,750,000	111,220,000
Spain	37,980,000	23,180,000	61,160,000
Holland	16,025,000	33,135,000	49,160,000
Belgium	13,856,665	6,928,335	20,785,000
Total	724,703,655	466,756,710	1,191,460,365

Germany does not report the silver separately, but is included in the total specie. It is calculated, however, that 25 per cent of the total is silver, and it is put down at that figure.

Specie and bullion holdings of the United States Treasury.

	Gold.	Silver.	Total.
June 1, 1893	$197,669,428	$487,503,042	$685,172,470
June 1, 1892	271,563,291	443,891,436	715,454,727

Every reading man knows that a crisis has been forced in our financial matters; that the ratio between the metals has been disturbed. I claim that the whole cause of this difference in the parity of the two metals is the result of preconcerted legislation on the part of England and this country to force gold as the only standard, consequently reducing silver to a commodity and depriving it of its money quality.

All persons who have carefully studied this question from a statistical standpoint know that between the years 1849 and 1861 California alone produced more than six hundred millions in gold, and the United States during the same twelve years produced but $1,300,000 in silver. Gold was continually at a discount, as compared with silver, at this time, from 3 to 7 per cent. Many of the foremost financiers of the Old World, including the great French advocate, Chevalier, insisted upon demonetizing gold and making silver the only standard.

It is perfectly plain to me, and it seems it should be to the whole world, that it is not prejudice against silver which is making the present trouble. It is a desire upon the part of the money-changers of this country and of England to guard the interests of the money-loaners, so that as loaners they may have advantage over the borrowers. I am, so far as this question is concerned, as much in favor of gold and its free coinage as silver, and that they should be coined upon a perfect equality. I believe in an honest dollar, and I believe that we will be able to so legislate that our coin, both gold and silver, will be recognized as honest.

I do not believe that the gold standard can or will be adopted by this Congress, as it is such a great removal from the lines of legislation that have come down to us from the fathers. But I shall hold that the good sense of the people will maintain the standard of 16 to 1. The Sherman law should be repealed, and bimetallism should take its place, in such form as will meet the demands of business and relieve the country. The Sherman law impoverishes the wealth-producers, and brings misery, degradation, and shame to every home. More than sixty-five millions of dollars, of money metal annually produced by the people of the United States, will be as useless for purposes of money as clay in the pottery under a law of monometallism.

I believe that the only method by which this panic can be checked and placed under control and confidence restored is to stand inflexibly by the law which existed prior to 1873. France fixed her standard ratio between gold and silver more than seventy years ago at 15½ to 1, and she has been able through all panics and convulsions of war and of nature and failures of crops of every kind to sustain both gold and silver standards, and to-day she is the most prosperous nation of all western Europe. The most independent nation financially of all the countries of earth to-day is France. She has maintained an independent, unyielding, bimetallic position without reference to what other nations may have thought or done.

I believe that the United States should always be in readiness to join the other nations of the world for the purpose of adjusting the metals so that we would be enabled to have a uniform ratio with all the nations with whom we trade. The French people in having a decided policy of their own, and a disposition to maintain it without changing her coinage laws, and standing by them with a determination to maintain them, is worthy of our emulation. The discrimination by the laws of this country against silver as money has closed the silver mines and has wrought as much injury to the gold interests as to silver, and must very soon be felt in the production of gold, as we all know that 45 per cent of the gold produced in the United States is extracted from the silver-mine ores, most gold being found in combination with silver, not separately, as was originally the case in the placer mining of California. This is a danger which the gold advocates ought to consider with some care.

The United States is substantially a bimetallic nation, and is made so by the laws of nature more than any other nation upon earth, and it is very short-sighted to be afraid of producing too much good money. It is a strange condition of affairs that a nation like ours should be averse to the use of silver metal when we are its greatest producers. If the citizens of this country will but take a comprehensive view of this matter and be true to their own interests in both precious metals we will remain what we are to-day, and by natural laws are entitled to be, the wealthiest nation on the face of the earth, and our safety lies only in the direction of an honest maintenance of both metals as money upon an equality. The credit of this Government is always good for any changes or differences in the production if the Government will only take the position and maintain it firmly, as France has done.

The pending bill asks us now to repudiate the traditions of the Democratic party from the foundation of the Government to the present time, to take a new departure, and undertake to establish a new principle upon which the medium of exchange should be made for our people. I hold that this should not be done. There is no demand for such a step. We are treading upon dangerous ground. We are stepping upon the thin crust of a volcano, which is ready to engulf us at any moment. We can not be too careful and steady. To strike down one-half of the money metal of this country is to destroy one-half the property of the people and leave the creditor as the supreme ruler and governor over all the debtors.

We should legislate so that no extreme calamity could come to either, and thus we should pledge the complete and eternal credit of this Government to the maintenance of both gold and silver upon the present basis and let the coinage be entirely free to both. We should, if we look to the highest interests of our country, maintain a bimetallic standard, have gold and silver standards, and separate and distinct gold and silver dollars, each forever exchangeable with the other, and both legal tender for all debts, public and private, in any and all amounts.

The safest and most progressive nations to-day are the bimetallic nations—no better proof of which need be given than to refer to the United States, France, Russia, Italy, Switzerland, Greece, Belgium, and Japan. The single silver standard nations are at least as independent and self-sustaining in their relations to the balance of the world as the single gold standard nations, China, Mexico, Holland, Peru, Ecuador, India, Brazil, Central America, and others, with a silver standard. Germany, though acting at present under a gold standard alone, has a very large minority party earnestly in favor of returning to a bimetallic basis, and if the United States Government takes a firm position in the intended action, there is little doubt that Germany will soon follow our lead. I believe that there is but one course left for the people of the United States, and that is to declare in favor of bimetallism, although other nations may not join us in the near future, or at any time.

A significant fact, showing the enormous loss to this country from our foolish legislation demonetizing silver in 1873, and only partially reinstating it in 1878, and then insulting it again in 1890 with the Sherman law, the practical effect of which has simply been to keep it all the while the football for England, shows the dire results, which can not be misunderstood by the man who thinks. Let us compare the price of wheat, cotton, and silver for twenty years, or since the demonetizing of silver, and leave each person to figure for himself the amount of loss to the United States. These prices show a steady decline for twenty years in the commodities mentioned:

WHEAT.

Year.	Average price.	Year.	Average price.
1872	$1.47	1887	$0.89
1878	1.34	1892	.80
1883	1.13	1893	.60

While again the same is shown in cotton as follows:

COTTON.

Year.	Average price.	Year.	Average price.
1872	$0.198	1887	$0.095
1878	.111	1892	.073
1883	.108	1893	.064

Then let us note that silver, degraded by law, has been the thermometer, and represents this enormous loss in the same ratio (bullion value):

SILVER.

Year.	Average price per ounce.	Year.	Average price per ounce.
1873	$1.32	1887	$0.97
1878	1.15	1892	.86
1883	1.11	1893	.56

Honest money, sound money, is always as honest as the laws creating it. Dishonest legislation in 1873 and later laws make the dishonest dollar.

Soundness of money is the basis of bimetallism. The purchase of metal is a question of trade, not of money. Government ought to let it alone severely, as it ought to let other private business alone. The fundamental proposition with which the free coinage argument begins, is that a rise in the value of money, in comparison, with the values of commodities produced and traded in by the people, is a manifest evil. The evil is of such disastrous consequences that every nation should exert its power to prevent the continuous fall in the prices of articles of common production.

By using the two precious metals which the world has habitually used for centuries a double safeguard is provided against progressive decline of prices. When one metal becomes scarce in a country the demand upon the other restores the equilibrium. Neither gold nor silver varies beyond the slight premium charged for exchange when there is free coinage. The money supply is not limited to one metal, and the movements of either from one country to another excite no apprehension, since they foreshadow no abnormal scarcity.

This truth will not be kept in sight if a struggle is made to retain the Sherman act, which is not money legislation at all. When the act is repealed, as it must be sooner or later, those who have tried to keep it in operation will be defeated and their cause with them. The Sherman act is only buying bullion on a gold basis. It is a vicious violation of bimetallic principles, and a disregard of the Democratic theory of governmental powers. The evil consequences of its operation are an illustration of the correctness of bimetallism, and the soundness of the Jeffersonian doctrine.

Had the purchasing power of the silver dollar been maintained on a parity with the gold dollar, the difference in these standards would not have reached the point it has. By our legislation we have surrendered to England the control of the price of silver bullion. It seems to me that the time has fully come when our Government should look after its own interests, based upon our own productions and ability to sustain ourselves as an independent Government and nation and give less attention to the threats and defiant actions of England and Germany. If our dollar is not satisfactory to Europe, the result will be less intercourse in business. We have repeatedly called upon the nations of Europe to join us in adjusting an international standard of money, but without decent recognition.

Shall we stand here from year to year and do nothing to relieve our own people, unless some foreign nation takes the initiative? Such a confession of weakness and imbecility is un-American and undemocratic. This country would soon go into decay under such servile policy, although we have many English allies who call themselves American, to advocate the British policy of the money-holders. What have we to fear if we but stand by the measures of value fixed by the Government which has blessed this nation with prosperity and property for more than a century.

I submit the following table showing the distribution of gold and silver:

GOLD.

France	$800,000,000
United States	700,000,000
England	650,000,000
Germany	600,000,000
Total	2,750,000,000

All the other combined nations have but $900,000,000 of gold under their control. Now, observe the distribution of silver coin:

France	$700,000,000
United States	600,000,000
Germany	200,000,000
England	100,000,000
Total	1,600,000,000

And the balance of the world has the vast sum in silver of $2,350,000,000.

If you will carefully study these figures you will readily discover that the United States is in a position to sustain bimetallism, and thus have the good will and support of more than two-thirds of all the people of earth. I think we hold the key to the situation, and if we are but firm and true to the standards of both gold and silver, England and Germany will be forced to establish bimetallism or lose the trade of the silver countries. All the nations of the world that have any considerable trade are well supplied with silver, with the exceptions of England and Germany. Silver is almost the only money metal in use in China and India. It may be said the same is true of Korea, Japan, Cochin China, and throughout the Orient. These countries after long centuries have reached a final conclusion in regard to the silver question, and our best financiers in this country and in western Europe have no hope or anticipation of any change on their part.

We should always remember that the money loaner, in this country and throughout the world, is found in all legislative bodies asking for laws that will make the world's money dearer. It is to his interests to have such legislation, and who can blame the capitalist for his efforts in behalf of his own gain? Every country, too, is expected to look after its own best interests, and I am proud to say that in this country, for more than one hundred years, the Democratic party has been recognized as the friend of the masses, and they have always kept their pledges to the people.

England, powerless to sustain her own existence by her own products, must needs live upon her interest and dividends from the world at large. She wants the world to pay her in the dearest money possible. She wants this country to adopt the dearest money, which would be worth to her hundreds of millions of dollars. Why should she not have her advocates upon this floor? No nation has ever been able to devise such far-reaching schemes of plunder as she. A few years ago she demonetized her own silver, melted it into bullion, and put it upon the market. Germany, supposing that she, too, could make money for her own people by demonetizing her two hundred and fifty-seven millions of silver, placed it in the melting pot, reduced it to bullion, and threw it upon the market. In the fullness of time England brought her power to bear upon India; and without notice or consideration, stops the free coinage of silver there. So you see, step by step, this peculiar method of financiering, which might be denominated robbery, is consummated.

We find, now and here, her agents advocating her cause and saying to us, in not the most polite language, "Look at your fifty-cent dollar, a dishonest dollar: the unhappy condition of your country, falling prices, men out of work, mines closed, the fires of your furnaces drawn, and the stagnation of business general throughout the land;" and then, as a remedy, they propose, "Let us establish a gold standard, and march side by side with England, and sustain the English policy of a gold standard."

I have no complaint to make against these insidious encroachments that are sought to be carried out by the capitalists of Europe as well as our own. It is to their interests to make all the money they can, and if we are so stupid and ignorant as to permit them to prey upon our country and surrender our manhood and independence to their domination and suggestion, they are not to blame but we are and the people will hold us responsible, not them.

The British people have never wasted any love upon us since the days of the Revolution, and I presume they never will. However, we are compelled from day to day to buy our bullion fixed by the market of London. I recognize the fact that it is to our interest to hold the most close and intimate commercial relations not only with England, but with all the nations of the earth. Yet I think this is the opportunity of the century for the American nation to assert its dignity and character financially. The English gold advocates in the United States beg for a gold standard, because it is apparent to England that should we maintain or establish the free coinage of silver she would be compelled to trade with us upon a double standard, and that in the redemption of more than one hundred and eighty millions of securities now held by her we would be enabled to pay them in the same money that we pay our own people.

She bought most of her bonds at less than 50 cents on the dollar. She has already received more than 100 cents on the dollar for all of them, and can get a premium to-day. Pass this bill repealing the Sherman law without a substitute for the free coinage of silver and you enhance the price of those bonds more than $50,000,000. Should we establish bimetallism in this country and maintain it we would be enabled to redeem every outstanding security according to the contract, and be free from the annoyance of the debt.

It seems to me that it is time Congress took thought of our own people and our future, and let England look after her own business. The expression that we must adopt a gold standard because it is the recognized money of the civilized world, means simply that it is the money of England; and if she can, by adverse, unfair, and determined warfare, here and now destroy silver as money, she will have the financial world at her feet. It is equivalent to saying that France and the United States are not civilized because they insist upon coining money in either metal upon a just ratio, and refuse to recognize gold only.

England has, by all the power of legislation and trade, destroyed as far as she can the money value of silver, and now we must surrender our dollar, or fight her for their joint use. The

cheap silver dollar is simply like cheap wheat when the bears have broken the market, and nothing else. We have the ability to force both England and Germany to recognize silver as money if we will adopt a liberal and reasonable ratio. I think we should adhere to the old standard of 16 to 1, as it would take millions to make the change.

Mr. Speaker, with reference to this new departure in finance which we are invited to pursue by the friends of the gold single standard, I know full well that there is not a sufficient amount of gold in the world to supply the countries now demanding a gold standard. I would be pleased to know from whence all this gold is to come? If equalized among the nations of the world, after the gold standard shall have been adopted, this country would have to surrender more than one-half of its money. But our friends of the gold standard are quick to respond, that we could issue bonds and buy gold to maintain our currency and thus supply the people. But would not all other nations issue bonds and enter the market to do the same thing? In that case could we hope to secure all the gold that we must necessarily have without paying a higher price than any other nation? So the necessity of having a sufficient amount of gold in each country makes it a mere article of merchandise to be shifted from one country to another as a mere commodity, in order to have a gold basis.

This new doctrine of a single gold standard, if carried out, will bring into full play among gold countries Zimri Dwiggins's plan of financiering. During the past four months we have been experiencing something of that system of finance.

Austria is now issuing bonds; in the market buying gold in order to establish a gold basis for her Government. As soon as she secures seven hundred millions of gold then she can declare she has established a gold basis. Then the Empire of Russia concludes that she must have a gold basis, and she commences issuing bonds to purchase a sufficient amount of gold for her purposes, but finds that the only gold in the country has been purchased by Austria. Austria, unwilling to sell her gold without a profit, demands eight hundred millions for it, sells it, and it is carried over to the vaults of the Czar. Then Russia announces to the world that she has established a gold standard.

And England, too, concludes that she must establish a gold standard, and commences looking around for gold. She finds that Russia has the only gold to be had, and she issues bonds in order to purchase it for her country. Finding that Russia will not sell her gold without a profit, England is compelled to pay nine hundred millions for the necessary gold for her country. Then England becomes a single gold standard nation. Should we pass this bill, then we, too, must have gold. How shall we obtain it? We are compelled to borrow, to issue our bonds, bearing interest in gold. Then we will be upon a gold basis, but we have had to pay England $1,000,000,000 for $700,000,000 of gold. France discovers that she is surrounded by countries that are gold alone and where silver is of no value in commercial exchange, and she must have gold. France issues bonds to the amount of $100,000,000, comes to this country, buys our gold, and then France is upon a gold basis.

So this new Dwiggins system of establishing a gold basis may be extended to all the nations of earth. Can it be said that Austria, Russia, England, and the United States are upon a gold basis under such a system? They are, according to the modern system of banking and the advocates of the gold standard, alone upon this question. This international contest for gold, in order that all countries may attempt to establish a gold standard, will in time bring about a disturbance in the intercourse and business relations that no good citizen wishes to see. The coined gold and silver—mined and minted throughout the world for circulation—controls all prices and values.

It is no concealed fact that unfriendly legislation against the free coinage of silver has reduced every bushel of wheat, oats, corn, and barley, every ton of hay, every pound of beef and pork, and the price of labor more than 30 per cent throughout the country. It has increased the value of every bond, mortgage, note, and every dollar in money, and it has added 30 per cent to all national, State, county, and municipal indebtedness; and this burden is also laid upon private debts. It has also stopped the mines and forced labor to stand idle at the threshold of the shop and the mine while in need of bread. It has thrown out of employment 2,500,000 laborers, inflicting a direct loss to the wage-earners in this country of $1,500,000,000 yearly.

Our best financiers estimate the amount that we pay annually as interest to our foreign creditors at the enormous sum of $240,000,000. This money must and does come from the wealth producers alone. This vast sum has to be raised by those who sustain thirty per cent loss on their products, under a gold standard, and there is no reduction in the amount of interest that has to be paid.

Suppose, by way of illustration, that a man buys ten horses at $100 apiece and gives his note to-day for $1,000, payable in ninety days. Those horses were valued, upon a gold and silver basis of equality as money, at $100 apiece. This bill becomes a law, striking down silver, which is one-half the measure of value. Then, I ask, how much are those horses worth in the market? They would be worth only one-half what they were before, $50 each, or $500. Does this bill liquidate one-half the face of the note? No. It still leaves the note $1,000. So you see the debtor is compelled to surrender and lose one-half the value of his property, not only his horses, but other pieces of property he may own, and labor as well, while the creditor sustains no loss.

Then this whole question may be summed up in a single statement, that the creditor class, which is less than one million people, shall have 50 per cent advantage in all money transactions over the debtor class of sixty-four million people. Or that they shall have the power under the present scheme of legislation to reduce the money of the people from $24 per capita to $12 per capita without reducing the debts one cent.

Mr. Speaker, whenever we are told that silver must be demonetized to prevent the depreciation of the poor man's money we must be on guard against such men, and not allow the trick of 1873 to be repeated. Who gets the money? Surely not the poor man. This pathetic and heartrending solicitude of the millionaire is the old story of the wolf and the lamb. If we adopt the substitute for this bill introduced by the gentleman from Missouri [Mr. BLAND] establishing free coinage the downward tendency of values will stop.

Give us back the coinage law which existed prior to the demonetizing act of 1873, and 98 per cent of the people of the United States will approve the act and enjoy its benefits. The farmer, the laboring man, the mechanic, all the wealth-producers of this nation, will call every man blessed upon this floor who stands by the money of the people. Let us have such an enactment as will be fair to all parties, including the Government and the producers of bullion. I hope no man, nor any class of men, wants this Congress to legislate in his or their special interests. If we intend to be fair, let us take the experience and the precedents of the past. Take the Constitution, that blessed torch which has given light and encouragement upon this question for more than a century, and follow its plain teachings of equity and justice.

And to all those who would strike down the plain requirements of the Constitution, and trample under foot the platform of the party for the sake of gold, I ask them to pause and let us take counsel from the experience and knowledge of some of the best writers upon political economy. Ricardo, one of the most eminent of this class, says that—

> Commodities would rise and fall in price in proportion to the increase or diminution of money. I assume it as a fact incontrovertible that such would be the case. The most celebrated writers upon political economy are agreed. The value of money does not wholly depend upon the absolute quantity, but upon the quantity relative to the payments it is to accomplish. And the same effect would follow either of two cases, from increasing the uses of money one-tenth or diminishing its quantity one-tenth, for in either case its value would increase one-tenth.

The world's greatest astronomer, Copernicus, in on[e] [of] his political works, dedicated to the King of Poland, used th[e] [words]:

> Numberless as are the evils by which kingdoms, principalities, and republics are wont to decline, these four are, in my judgment, the most baleful: civil strife, pestilence, sterility of the soil, and corruption of the coin. But the fourth, which concerns money, is considered by few, and those the most reflective, since it is not by a blow, but little by little, and through secret and obscure approach, that it destroys the state.

John Stuart Mill, in his treatise upon money, says:

> That an increase in the quantity of money raises prices and a diminution lowers them, is the most elementary proposition in the theory of currency, and without it we should have no key to any other.

Again he says:

> If the whole money in circulation were doubled, prices would double. If it was only an increase of one-fourth, prices would rise one-fourth. The very same effect would be produced on prices if we suppose the goods (the use for money) diminished instead of the money increased, and the contrary effect if the goods are increased or money diminished. So that the value of money, all other things remaining the same, varies inversely as its quantity, every increasing quantity lowering its value, and every diminution raising in ratio exactly in an equivalent.

Senator Sherman, in his letter to Mr. Groesbeck, of Cincinnati, of July 15, 1878, in the concluding portion of his letter says:

> During the monetary conference in Paris, when the silver in our country was excluded from circulation by being undervalued, I was strongly in favor of the single value of gold, and wrote a letter, which you will find in the proceedings of that conference, stating my views. At that time the wisest among us did not anticipate the sudden fall of silver or rise of gold that has occurred. This uncertainty of the relation between the two metals is one of the chief arguments in favor of the monometallic system, but other arguments showing the dangerous effects upon industry by dropping one of the precious metals from the standard of value outweigh in my mind all theoretical objections to the bimetallic system.

Not only Senator SHERMAN, but every member of the commission, entertained the same views, and regarded the demonetization of silver as the cause of depression.

Baron Rothschild, who is regarded by our people as not favorable to silver in any way, used this language in November, 1892:

I need hardly remind you that the stock of silver in the world is estimated at some thousands of millions, and if this conference were to break up without arriving at any definite result, there would be a depreciation in the value of that commodity which would be fearful to contemplate, and out of which a monetary panic would ensue, the far-spreading effect of which it would be impossible to foretell.

I am pleased to quote from ex-Senator Ingalls's speech, delivered some years ago in the United States Senate upon this question. He said:

The assertion of Senator SHERMAN that the single gold standard was an American idea is so singularly incorrect that it seems almost like a premeditated preliminary to the fatal error of 1873. No doubt there must be a money unit which should have a standard value regulated by law. This unit should be established in the precious metal which is least subject to fluctuation, which is most abundant, and has the widest uses. That metal is silver. If we are to have a monometallic standard I believe silver to be immeasurably preferable to gold. It is less subject to fluctuation, its production is more steady, its cost more uniform.

No enduring fabric of national prosperity can be builded on gold. Gold is the money of monarchs; kings covet it; the exchanges of nations are effected by it. Its tendency is to accumulate in vast masses in the commercial centers and to move from kingdom to kingdom in such volumes as to unsettle values and disturb the finances of the world. It is the instrument of gamblers and speculators and the idol of the miser and the thief. Being the object of so much adoration, it becomes haughty and sensitive, and shrinks at the approach of danger; and whenever it is most needed it always disappears. At the slightest alarm it begins to look for a refuge. It flies from the nation at war to the nation at peace. War makes it a fugitive. No people in a great emergency ever found a faithful ally in gold. It is the most cowardly and treacherous of all metals. It makes no treaty that it does not break. It has no friends whom it does not sooner or later betray.

Armies and navies are not maintained by gold. In times of panic and calamity, shipwreck and disaster, it becomes the chief agent and minister of ruin. No nation ever fought a great war by the aid of gold. On the contrary, in crises of greatest peril it becomes an enemy more potent than the foe in the field; but when the battle is won and peace has been secured gold reappears and claims the fruits of victory. In our own civil war it is doubtful if the gold of New York and London did not work us greater injury than the powder and lead and iron of the rebels. It is the most invincible enemy of the public credit. Gold paid no soldier nor sailor. It refused the national obligations. It was worth most when our fortunes were lowest. Every defeat gave it increased value. It was in open alliance with our enemies the world over, and all its energies were invoked for our destruction. But as usual, when danger had been averted and the victory secured, gold swaggers to the front and asserts the supremacy.

But silver is the money of the people. It is the money of wages and retail. Its tendency is trade diffusion and dissemination. It enters into the minute concerns of traffic, and is exchanged day by day for daily bread. It penetrates the remotest channels of commerce, and its abundance, bulk, and small subdivision prevent its deportation in sufficient amounts to disturb or unsettle values. If it retires at the approach of danger or from the presence of an inferior currency, it still remains at home, ready to respond to the first summons for its return. During a late visit to a remote portion of Arkansas, I was surprised at the great amount of old silver in circulation, including Mexican and pillar dollars and American halves and quarters coined half a century ago.

Seeking an explanation, I was told by the merchants that upon the withdrawal and retirement of the fractional paper currency these old coins immediately appeared in sufficient quantities to supply all needs of trade, conclusively showing that when silver vanished at the beginning of the legal-tender paper period it had been hoarded among the people and had promptly returned to circulation when its presence was required. I have no doubt that the two hundred and fifty millions of silver would be thus readily absorbed among the people of the United States, forming a vast, permanent, stable accumulation, which would be an enduring basis of prosperity, less liable than any other currency to the mutations and vicissitudes of financial panics and disasters.

Repeal the purchasing clause of the Sherman law, without a proper substitute providing for the coinage and use of silver in its place as money, and what will be the condition of the country? Fifty-four millions of dollars will be taken out of circulation every year. The coinage and use of silver as money will cease. One-half of the basis of our circulation will be stricken down. Shylock will emerge from his hiding place and demand that bonds be issued by the Government to buy gold to sustain our credit. Interest will advance. The debtor and laboring classes will be completely under the control of the money power. Mines will be closed. Labor will be without employment. One-half of the business of the people will be paralyzed.

Capital and labor standing face to face as enemies; the farmer without hope, and the laboring man in distress. Silver, which has been the handmaid and the servant of the toiling masses for centuries, is stricken down as money at the command of cupidity and avarice. The Congress of the United States has been the arena where the venal and vicious have always come to secure by law advantages and control over the wealth produced by the laboring people. These men expect to make money through the tricks of legislation, and not by honest toil.

I think the good sense of this Congress stands ready to defeat all such schemes. I confess my inability to understand this revolutionary departure on the money question. We are told by the monometallists with all the grace of fairness that all they want is to stop the purchase of silver, the issue of silver certificates; stop the coinage of silver as money, make gold the only standard. Then they are in favor of bimetallism. This is a paradox I can not understand.

We now have a panic upon us that these men all predicted, and it has been the result of the laws destroying one-half the money metal of the country. Mr. Carlisle, the Secretary of the Treasury, said, when discussing this same question in 1878:

I know that the world's stock of the precious metals is none too large, and I see no reason to apprehend that it will ever become so. Mankind will be fortunate, indeed, if the annual production of gold and silver coin shall keep pace with the annual increase of population, commerce, and industry. According to my view of the subject, the conspiracy which seems to have been formed here and in Europe to destroy by legislation and otherwise, from three-sevenths to one-half the metallic money of the world, is the most gigantic crime of this or any other age.

The consummation of such a scheme would ultimately entail more misery upon the human race than all the wars, pestilence, and famine that ever occurred in the history of the world. The absolute and instantaneous destruction of one-half the entire movable property of the world, including houses, ships, railroads, and all other appliances for carrying on commerce, while it would be felt more sensibly at the moment, would not produce anything like the prolonged distress and disorganization of society that must inevitably result from the permanent annihilation of one-half the metallic money of the world.

Mr. Jefferson, who is recognized as the leading character at the head of the Democratic party, said more than a century ago:

Let us found a government where there shall be no extremely rich men and no abjectly poor ones. Let us found a government upon the intelligence of the people, and the equable distribution of property. Let us make laws where there shall be no governmental partnership with favored classes. Let us protect all in life, liberty, and property, and then say to every American citizen, with the force God has given you, your brain and brawn and strength, work out your own fortunes under a just government and equal laws.

Mr. Cleveland said, in reply to the notice of his nomination:

The people are entitled to sound and honest currency, abundantly sufficient in volume to supply their business needs. But whatever may be the form of the people's currency, national or State, whether gold, silver, or paper, it should be so regulated and guarded by governmental action or by wise and careful laws that no one can be deluded as to the certainty and stability of its value. Every dollar put into the hands of the people should be of the same intrinsic value or purchasing power. With this condition absolutely guaranteed, both gold and silver can be safely utilized upon equal terms in the adjustment of our currency.

[By cable to the Herald.]

LONDON, *August 8, 1893.*

The Post, commenting on President Cleveland's message, says:

"America can not well stop at the mere repeal of the Sherman act. The President throws out no suggestion, but some action is certainly necessary. It is probable that the problem which the United States has to solve may lead not to bimetallism, but to more mature and unbiased consideration of the possible uses of silver. As a part of the world's currency the metal can not be demonetized with safety, and if through America some method for its more extended employment were devised the benefits to the world would be of supreme importance."

Cable despatches from Bombay, Calcutta, and other Indian ports agree in stating that the export trade there has almost ceased. Every English industrial center which has had commercial relations with India is feeling the unfavorable effects of the general suspension of orders. The expectation is that in time trade will be adapted to the new conditions; meanwhile the bankers and traders most concerned view fearfully the immediate future.

FRAUGHT WITH UNFORESEEN PERILS.

The most ardent advocates of monometallism and currency reform in India are beginning to discover that the changes ifraught with unforeseen perils. This week, out of 500,000 rupees offered for tender, the Government succeeded in placing only 80,000. This sum was placed, moreover, at 15$\frac{1}{4}$*d*, or one eighth of a penny below the minimum of 16*d*.

ANOTHER UNWELCOME RESULT.

The fall in the price of opium has been another unwelcome and unexpected result of India's action. The report of the currency committee did not predict any considerable diminution of the rupee value of opium exports, yet this week's opium sales in Calcutta showed not only an immense decrease of the quantity bought, but also a reduction of 17 per cent in price. If the loss of the Indian government's opium revenue become permanent the budget will be seriously disturbed.

[By cable to the Herald.]

LONDON, *July 8, 1893.*

The developments in the silver market during the last week have intensified the anxiety caused by the action of the Indian government. The committee of bimetallists in Parliament have issued a manifesto, signed by Sir William Houldsworth and Mr. Henry Chaplin, to protest against the closing of India's mints to the free coinage of silver.

In view of the comparative changes in the value of gold and silver growing out of its discovery, and the fluctuations that have occurred since their use has been recognized as money, it seems to me that we should be exceedingly conservative in making any changes at this time. There not being time to call the attention of the House to some of the money acts of the principal governments of the Old World, I shall content myself by restating the fact that England and India to-day are not satisfied and content with the effect that the demonetization of silver in India has had on the business interests of those countries. I will have the Clerk read an extract from "Empire of Finance and Trade," a document published in New York.

Precisely the same contest upon the subject of remonetizing silver is to take place in England that is now taking place or will hereafter be carried on in this country. The thing which produced a change of opinion and disposition to open the question in that country was the act of the Indian Government in refusing free coinage in India. The disastrous consequences of the act have sharpened the minds of English financiers, and brought the Government to a full consideration of the subject again, and before the banking population expected it several very competent members of Parliament began to debate upon the subject, and some of them have found faith in the worship of silver as well as gold.

Mr. Balfour has actually discovered that the world can not get along in its business without silver money, and some other worthy minds are coming to him in this small beginning of what will be the fearful destruction of gold supremacy and the Bank of England in the money affairs of the world

within the present period. Let us suggest, for the purpose of startling the friends of gold in this country, that there will be no cessation of the agitation of the subject in the English Government, in Europe, and all British colonies, until the whole problem is solved, and silver is converted into money, so far as it is not employed in the arts and manufacturing of the nations.

The bare beginning of discussion of this subject in England is the certain assurance that the agitation of the question will pass over all such parts of the world, and bring all nations to their senses upon the subject of metallic money. Those of our friends who are pleased with what they suppose is a prospect of the further demonetization of silver have only to look to the few things spoken by English officials at the present time to find another great nation becoming wholly enwrapped by the discussion of such subject, and in a way to presage a whirlwind of change in the money and present opinion of the financiers of that country.

All the pleasure arising from the expectation that our Government will put a stop to further discussion of such question, and settle the fate of silver for the world, is to be put to flight by a few more utterances by British officials in Parliament and elsewhere. The jubilant feeling of gold worshipers of the present moment will be of so short a period, it will be little better than a dream of the sleep.

You may look for your hopes to be blasted, and also for the whole world's discussion of the silver problem, before Congress has been in session a month, and eventually you may look for a complete restoration of silver to money in all parts of the world.

The following recent utterances from England are both relevant and interesting:

The January number of the Forum contains a very able article, entitled "The Crisis in Silver," from the eminent financier, the Hon. Henry Hucks Gibbs, ex-governor of the Bank of England. He speaks strongly in favor of bimetallism, deprecating the attitude of the English Government in defense of her old single standard, which he considers now inadequate for her large wants, industrial as well as commercial, which have been suffering greatly for years, owing to a great extent to this short-sighted policy, and urges the Government most earnestly to take an active interest in favor of the general use of silver at the coming international silver conference.

Lately another distinguished statistician, the Hon. William Lidderdale, also an ex-governor of the Bank of England, was interviewed by the London correspondent of the New York World, and the correspondent cables thus:

His views are encouraging to us, but he nevertheless thinks that America has to face "a very, very serious financial problem." He does not believe that the repeal of the Sherman silver law is all we need. Mr. Lidderdale's opinion is that in view of our rapid increase in commerce and population the output of properly guarded legal tenders has not been sufficient to keep pace with the demands of the country. He does not feel so encouraged, however, about his own country so far as relates to the near future.

As an evidence of the growing popularity of bimetallism in England, it may be said that after this article was written a motion was made in Parliament by Sir Henry Thompson in the interest of bimetallism. Although this was strongly opposed by Mr. Gladstone personally in a long speech, 148 votes out of 377 were cast in its favor, many of them from Mr. Gladstone's own party. A change of 41 votes would have resulted in a victory for bimetallism. Lord Salisbury, Hon. A. I. Balfour, and many other distinguished statesmen favor it. England has been working under the single gold standard for over seventy years, but is now finding it oppressive.

Mr. Speaker, there has been but few periods in the history of our country when more care, consideration, and patriotism was enjoined upon the people's representatives. To radically change and disrupt our whole monetary system, that more than three generations of our people have been taught to revere and defend, is a momentous question and worthy of the highest consideration. No section, no man, no class, or business should be taken as the basis of our action, but the whole country, embracing every interest and every business of our people. Any act short of this is inconsistent with the broad principles upon which our fathers founded our institutions.

Had the candidates of the Democratic party gone before the people in the last campaign and told them that the platform adopted by the national Democratic convention at Chicago meant that silver was to be stricken down as money and the standard of gold alone was to be enacted, how many electoral votes would we have polled? How many States would we have carried? And how many Democratic members would there be on this floor? Mr. Harrison would have had a much larger electoral vote than Mr. Cleveland. Ten States that we carried would have been lost, and the Republican majority upon this floor would be greater than we have to-day. I feel assured in saying that, instead of carrying the great State of Illinois by 25,000 majority, we would have been beaten by more than 50,000. I have great doubts if the State of Texas could have been carried for Mr. Cleveland upon such a construction of the Chicago platform.

Mr. Speaker, had this docrine of the gold standard alone been made the issue in the West and South upon the lines sought to be carried out by the bill now before this House, the Democratic party could not even have been organized, or have made a fight. I do not believe there is a district in the great State of Illinois, outside of Chicago, which could have been carried upon that issue by the Democratic party.

CONCLUSION.

Every member of the Democratic party who is true to principle should carry out the platform upon which he was elected. The question is: Shall we redeem the pledges that we made to the people, or shall we stultify ourselves? Shall we follow the traditions of the fathers, or shall we launch out into unknown political seas, which have always stranded the men who betrayed the people? I for one shall never do so. I know no creed but the platform of my party. I know no leadership but Jeffersonian Democracy.

We are here to-day in full possession of every branch of the Government. We are here by the virtue of the doctrines that were advocated by us and their ratification by the people. This is no accident. The people will always sustain true Democracy when they are fully advised. The Democratic party, under the leadership of Thomas Jefferson, imbedded in the Constitution the principle that gold and silver should be the only real measures of value, and the ages fully attest this conclusion. The Democratic party took its stand upon gold and silver at the inception of the Government, and it has marched through the century as its only defender. And it stands here to-day, as Andrew Jackson stood more than fifty years ago, as the defender of the people against the money power.

We are here to-day to do battle for the money of our fathers, not as partisans, but as patriots. From the camp fires of the Revolution come the principles for which we struggle. In this day and hour let us be heroes. Let us vote from influence of reason and right, and not from brutal instincts of prejudice. With our eyes upon the Constitution and with our hearts reaching out to every home that is suffering under the black cloud of monometallism, let us have the courage of honesty and vote for the best interests of all the people. I hold that every vote upon this floor should be the incarnation of correct principles, that it should be the outline of a blessed hope, and that it should bear to struggling humanity the consummation of our promises. [Loud applause.]

Mr. DUNN. Mr. Speaker, after listening to the various speeches on the subject and the arguments advanced on both sides of the measure before the House, and being somewhat green in legislative matters of this kind at this time, I may subject myself to severe criticism when I say I do not think that any member who has yet spoken has taken the same views that I do, at least upon one point, which is, in my judgment, a vital one. Our form of government is the result of the wisdom of all the ages of the past analyzed by the founders of our Constitution, and the best effects derived from the experience of all former governments has been molded into that which we now live under.

There are two principles upon which the whole structure is built. The first is that all men are born free and equal, entitled to life, liberty, and the pursuit of happiness; and the second, protective of the first, is that all just powers of government must be derived from the consent of the governed. The last proposition being true, I put it that if this question of the repeal of the Sherman act were to-day submitted to the people of this country there can be no question in the mind of any intelligent person at all conversant with the situation but that the purchasing clause would be at once repealed, by such a sweeping majority (and in this country majorities rule) as would astonish the defenders of private interests on the floor of the House, and satisfy them, beyond doubt, that the act has not the consent of the people. But legal consent is engrafted and embodied in the Constitution of our country.

Now, I will make this proposition to the defenders of the silver interests on the floor of this House: that is, to vote against the repeal of the Sherman act, provided they will furnish me a brief before the vote is taken, that would satisfy even a third-rate justice of the peace, that the Constitution of our country has in a single sentence, line, or word given the power to the Congress of 1890, or to any other Congress, to enact a law such as the Sherman purchasing clause; a law that compels the Secretary of our Treasury to furnish a market for an already debased product, to compel him to coin it into money at a rate from 35 to 40 per cent above its commercial value in the markets of the world, and to force upon the many for the benefit of the few, the mine-owners, that debased coin whereby a robbery, under the pretense of law, is committed upon the people to the extent of the difference between the commercial and the coin value fixed upon the silver by the fiat of the Government. I find no portion of the Constitution that can be in any way construed to give that fearful and dangerous power, though there are some who claim that under the first clause of the eighth section of the Constitution the words "provide for the common defense and general welfare of the United States" justifies the act.

It is well, however, to remember that this power, by construction only, was used in such a manner, soon after the adoption of the Constitution, that the implication of power led to many difficulties and to much distrust. The result was that a limitation clause was afterwards adopted in the ninth amendment, which says that "the enumeration of certain rights shall not be construed to deny or to disparage others retained by the people," and in Article X of amendments the powers of the Constitution before adopted were limited and defined as follows:

The powers not granted to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people.

So clear is it fixed in my mind that the purchasing clause of

the Sherman act is unconstitutional, that I do not believe there is a lawyer in this country to-day of respectable ability who will not agree with me when I say that if this bill was submitted in proper form to the Supreme Court of the United States it would end the debate on the subject in this House at once. That body would declare it utterly unconstitutional, and say that the act did not come properly within the constitutional power of Congress. First, because there is no grant of power in the Constitution to warrant the passage of such an act; second, because it is against the genius and intent of our Constitution, which is rigidly against the grant of special privileges or special immunities to individuals or corporations.

In its inception it was clearly enacted, and meant to be in the interest of a single product, that is, the product of silver, to which it granted special privileges, under the plea of its being necessary to stamp it into coin, when in fact it was utterly unnecessary, and has proved to be dangerous and against the public welfare, as is now shown by the misery, desolation, and want that this unfortunate, unjust, and unholy measure has brought upon our country.

I need go no further for arguments to satisfy my mind that my duty, under my oath, can have but one direction, and that is immediate, unconditional repeal of the act, as that seems now to be a quicker method of disposing of it than by taking it before the Supreme Court in regular form and having it declared null and void. I am at a loss, however, in view of these facts, to see how so many men can entertain the views they appear to hold with reference to the repeal of this law.

I can not for my life see what reason they can give to their own consciences, in view of their sacred obligations when they called God to witness that they would maintain the Constitution; and yet, with this bill clearly unconstitutional, condemned by all, acknowledged to be an excrescence, denounced and denied by its fathers, they refuse upon one pretext or another, private or public, to vote for the repeal of this bill forthwith unless they can force a bargain in favor of a private interest as a condition of their performance of their public duty.

The real and proper object of a Government such as ours is to maintain the peace and to execute justice between its citizens, leaving to each a choice of occupation without favoring one at the expense of another; and what is true of the individual is true of every interest, whether individual or corporate, and wherever the Government obtrudes itself into private enterprise as it has done in furnishing a market for the silver industry, it makes not only a constitutional usurpation, but a fateful mistake, because as in this case it has cramped and dwarfed every other industry in the land to benefit this one.

The province of government is to secure the liberty, the properties, and the possessions of its citizens by wise and wholesome laws, and there can be no civilization where there is not security for life and property; and any law which makes property less secure, unsettles and throws down established values as the Sherman act has done, is not only unconstitutional *per se* and against the spirit of our Government, but is a menace to civilization and an injury to mankind.

The poorest judgment at all familiar with political economy must be satisfied that it is impossible for any Government to maintain and circulate in the same business community two dollars, one worth 100 cents anywhere in the world, and the other worth but 57 cents, yet each purporting to be value for the same amount of product. The proposition is so absurd that I am astonished that any man or set of men with good sense can for a moment entertain it. The most valuable coin will at once disappear from the channels of trade and the baser be circulated, and then only at its real or bullion value, as prices will vary to meet the debasement of the coin; for no man will part with a dollar's worth of his product for a 57-cent coin, although the Government fiat had stamped it as worth a dollar, unless the Government says that it will redeem it with $1 of standard gold on presentation for redemption at the Treasury of the United States. The conclusion arrived at by the best business minds of the country, is that the unlimited flood of cheap and debased coin which free coinage of silver would impose upon the country would prevent the Government from redeeming in gold.

Now, why should we keep this law upon our statute books? I do not believe that there is a silver man in this House who does not feel it to be his duty to repeal it at once, but they argue against repeal while admitting it to be an evil. Why? Simply because they want to force an unholy bargain with those who favor repeal—a bargain that their special interest, silver, and not the public good, may be conserved. What would you think of a burglar who, when caught stealing your silverware, admitted that he was wrong, but, under the threat of a pistol, wanted to make a bargain for his escape from the punishment he deserved by restoring only a part of his plunder.

It seems to me that the silver kings having already plundered the people, having been caught in the act, the power about to be denied to them to plunder any longer, they are bargaining, as it were, through their mistaken friends, to retain a part of the power which they have so long unjustly held, to keep a portion of their plunder before they will permit justice and right to prevail. This is strong language, and I am sorry that I am obliged, in accordance with my views of duty, to give it utterance.

Now, what is the excuse offered for the conditional retention of this measure? I have admired the speech of my friend from Nebraska [Mr. BRYAN]. There is no doubt that it is molded in a cast of eloquence that is rare indeed; but when it comes to argument, and he attempts to make a bargain in favor of bimetallism as a first condition under the plea that there is not gold enough in the world, etc., he lays down a platform which is a mistake of fact. He says that if bimetallism is not adopted we will go to ruin, and that there is not gold enough with which to transact the business of the world.

Let us see whether that is true or not. He forgets that the world has progressed, that bimetallism is not only unsafe but unnecessary under present conditions. Let me put this proposition before you. If silver was a product of Nova Scotia, in which this country and no man on this floor had an interest, I ask him would he still retain the same views that he now holds? I can not believe it.

In the matter of "the insufficiency of gold coin with which to transact the business of the world," the one potential argument set up by the advocates of bimetallism, I now quote from the work of Hon. J. H. WALKER, in his address before the World's Congress Auxiliary at the Columbian Exposition. His facts and his figures taken together with what I have gleaned from other sources are to my mind conclusive as against this theory of insufficient gold with which to transact business.

According to his statement the average daily transactions of banks are about "$400,000,000."

I believe that to be a correct statement; we have had sufficient money right along to meet the business demand and we have now. We do not propose in the repeal of this bill to have any less, as we stand by the redemption of the silver already coined and also the bullion in the Treasury, and I for one flatly and absolutely refuse to be a party to increasing that amount at the risk of our Government's ability to redeem it with the standard coin of the world. "The loanable fund held by the national banks in this country is shown by the report of the Comptroller of the Currency to be in round numbers $2,800,000,000. Of this sum $1,800,000,000 are deposits of customers and the balance belongs exclusively to the banks. The loans and discounts are $2,200,000,000, and the other $600,000,000 are held as a reserve."

This means that the banks hold titles, mainly in the notes of their customers, to $2,200,000,000 of the consumable wealth of the country; that there is now in the hands of the farmers, merchants, and manufacturers title to $1,800,000,000 of the funds now in banks by way of deposits. As the deposits are $1,800,000,000, and the daily transactions are $400,000,000, it is evident that the average time each deposit remains in bank is four and one-half days. This $1,800,000,000 of deposit capital in the banks can only be made available to the community for use in our daily needs by a proper system of banking; and here let me say, that I have no sympathy—I have nothing but condemnation—for those uncalled-for and unintelligent assaults upon the banks of our country at this unfortunate period.

I do not believe in those gold-bug cries or those assaults on the banks. They are simply the stock catchwords of demagogues who appeal and pander to the ignorance, the passions, or the prejudices so likely to be awakened in the hour of distress, to divert the minds of the suffering artisans and laborers of our country from the silver blight, the true cause of our misfortune, to the goblin held up by the silver interest and shaken in their faces by the wild, unreasoning spirit of self-interest and demagoguery.

If we had to-day a sound currency, good money, absolutely redeemable in coin of a standard value all over the world, the distress that surrounds us would disappear like the mists of the morning before the noonday sun, all this sophistry uttered upon this floor to the contrary notwithstanding. Let it be known to the world that we have a sufficient amount of the best reserve coin in the world ready at all times for redemption purposes, and the demand would be only sufficient to meet the daily wants of exchange.

The people would not rush for gold, as they do not want it in the daily business of life. This demand may be made and answered ten or a thousand times in a day, as the case may be, during a given time, in every instance almost immediately to be returned to the bank from which the gold is drawn. But where two coins of different commercial bullion value are legal tender, sure redemption means that it be instantly done in the coin of the highest bullion value, which is hoarded at banks as is the case to-day.

To doubt money is to discredit it, and that portion of our money, silver, which to-day is doubted and discredited, would drive every dollar in gold coin from the country because the drafts made on the banks for gold would never be redeposited, while obligations could be paid with a cheaper money, and we would be obliged perforce to rest all our financial transactions upon a silver basis, which means a debasement that would be death to the financial life of the country and mean poverty to its working people.

As all values depend upon supply and demand and the cost of production, so all values would be regulated upon a silver basis according to the amount of production of silver each year, as the supply or demand of the market required it. As silver fluctuated, so would every value, and no man would want to engage in business, thus depriving labor of its looked-for reward.

In England, the visible gold upon which all her transactions and her foreign exchange rest is $125,000,000. Every dollar of that represents a foreign commerce of at least $25, while the gold in our country—the visible gold—is rated at $337,000,000, with a foreign commerce of only 2⅔ dollars to each dollar of visible gold.

The actual daily need of coin for the business of our country is not a speculation; the daily bank exchanges are about $400,000,000, and we know with absolute certainty that only 1½ per cent of those exchanges are made in coin. Now, the efficiency of each $1,000 in coin to-day, in making the exchanges of the world, has increased a thousand-fold faster than have exchanges of any other country in the world.

This efficiency has increased faster in the last ten years, and is now increasing faster than ever before by the use of railways, steamships, telegraphs, telephones, and, above all, in improved commercial methods and economies. In trade between Boston and Canton or New York and Canton as one instance, the efficiency of each $1,000 in gold coin has increased thirteen thousand times since 1830, $1,000 now being the equivalent of $13,000,000 under the methods and appliances of commerce and exchange in 1830. Then a ship loaded for a six months voyage to Canton took its supercargo to trade for a return cargo, and with him took the coin needed to make up the difference

The gold is not sent there now; it is simply placed to the credit of the factor until the exchanges are made. Then thirty days were consumed in going from Boston to St. Louis. Now money is transferred in one minute; so that you will see that coin—I speak now of the coin recognized by the business world—is ten thousand times more efficient in trade. One thousand dollars in 1893 in the exchanges of the world is the equivalent of ten millions in 1830. This is a startling proposition, but it is an undisputable fact.

To prove this the returns made by the Comptroller of the national banks in our own country show that each day's transactions is about 1½ per cent of coin and 4½ per cent of bank notes and other currency, and 94 per cent of checks, drafts, bills of exchange, and other tokens of property. The banks of our country, and especially of the metropolis and the clearing-house at New York, deserve not the assaults made upon them, but the lasting gratitude of the country for the honorable manner in which they have stood together and stemmed the tide of financial misfortune, which would have spread to a much greater extent but for them. Had they been what they are represented to be by some of the advocates of a debased currency, financial wreck would have been much greater from one end of this country to the other than it is to-day, such a financial wreck indeed as the world has never yet seen.

Money is in the commerce of the world a token of value, whether in coin or in bullion, but you would not of yourself be able to determine the real value of a bullion token given you in exchange for something that you had produced and offered for sale, and consequently you might give a much greater amount of your product than was fair for a given amount of bullion. Coinage has therefore been fixed as one of the most important functions of government; that is to say, the Government at its Mint assays the gold and silver, purifying them and marking each coin with its fineness and weight, that you may know exactly what you are getting for your produce.

The Government certifies that the coin has a fixed amount of grains of the metal required by law to be put in the particular coin, and it is bad money unless when it is recoined it is worth in bullion what it represents itself through the Government stamp to be in coin. The Government can not in the process of coining the bullion into a money token give it a greater commercial value in the coin than it has in the bullion. If it does, by its own act it debases the coin and is, to all intents and purposes, a forger of false coinage. It does that of itself which false coiners do, and for which it decrees a severe penalty. It cheats the people with a false measure of value, and the Government has no more right to rob the people than a forger has.

The money of circulation should be of such value that no matter what I hold as its representative, whether it be a piece of paper, a piece of leather, or a piece of silver, those who issued it to me, having my money or my property, should, at my demand, return to me what is mine, not 57 cents worth of silver for a dollar, but the value of 100 cents or $1. It is the fear of the Government's inability to make this redemption on my demand or the demand of the business world, in view of the immense flood and consequent debasement of silver, that has caused the panic, and those who believe the panic to be unreasonable do not understand the keen intelligence of the business world.

When the Government coins money it does not create gold or silver; it never owned gold or silver; it has no constitutional right to own it for the purpose, and never pretended to own it before the passage of the Bland act in 1878 and a still later one of 1890, since when it exercises an unconstitutional power to purchase for currency purposes. The business interests and intelligence of the country are keen enough to see that the Government is filling up its vaults with an unredeemable or fluctuating metal that is becoming cheaper and cheaper each day. Whenever it coined money before the acts named it coined, not the Government's metal; it coined the metal of John Jones or John Stewart and fixed its stamp of value upon it.

Now, while it had the power to stamp the gold or silver bullion of John Jones or John Stewart and to make it a legal tender if it chose to do so, it had no right and has no power to make even gold a legal tender for more than its actual or real value. It does not, and can not from its very nature, create a value where a value does not exist, or rightly give a fictitious or a greater value to an existing one than it is worth in the markets of the world.

It does none of the things of itself which creates value and out of which values grow. It neither produces nor saves, neither toils nor exchanges; it only expends or destroys what is given to it by society. Like a pauper, it exists by the contributions of the citizens paid into its Treasury by way of taxes. And therefore to attempt to create a value where no value exists, and can not exist, is as vile as it is dangerous and criminal, and is a usurpation.

We who believe in an honest token of value, having within itself the intrinsic merit which makes it exchangeable for its face value of any other commodity of a like value, are told by the adherents of the silver fallacy that with them we have come to the parting of the ways, if we do what under our oaths of duty we are obliged to do by the repeal of this bill. That is to say, a portion of the great Democratic party threatens it with dire destruction if it attempts to carry out that which it is pledged to do in its platform. And this threat is held over the friends of honest money to compel them for party's sake to bow their heads to the Moloch of silver.

I want to say to those men here and now, that I am a Democrat by nature, training, and instinct, that I believe the Democratic party will live while the Constitution of our country lives notwithstanding those threats; that when the Democratic party dies, as an effective protector of the principles of our Government, the Government will die with it; that the principles of our party are as indestructible as the eternal hills of God, and I would rather see it buried out of the sight and sound of men forever by the forces of nature or revolution rather than that the party should abandon a single one of its principles under the threat of a private interest which seeks to dominate this House and overthrow all principle of right and justice amongst men to serve their own aims and interests.

There are men on the floor of this House to-day, both older and younger than I am, who remember the threats made in the Charleston Convention "that we had then come to the parting of the ways." Do those men remember what that parting meant? Have they forgotten the flaunting of the bloody shirt? Have they forgotten the dreadful sacrifice that their parting of the way brought about? Do they undertake to-day, when the common sense, the intelligence, and the patriotism of the American people has covered the bloody shirt in the oblivion which it deserved, to establish in its place at the parting of the way the bloody bridle of the silver king? If they do persist in that course, it will be history repeating itself, and they will be the first to suffer.

The men who are first to step off the broad platform of the Democratic party and the principles of right and honest government will be the first to fall into the mire and the last to be relieved from the predicament in which they have placed themselves.

There are measures of relief in the direction of an elastic currency which I might present at this time, but I believe it is somewhat irrelevant to the matter upon which we are called to act. I will, however, offer it later on.

The American gold dollar contains 25.8 grains of gold, 900 fine. One ounce, or 480 grains, 1,000 fine—that is, pure—would mint in this coin $20.68. This coin has a standard value all over the world equivalent to 4.86\frac{65}{100}$ for the English sovereign, and $3.86 for the French piece of 20 francs. It is to-day the basis of value of all descriptions of United States notes, by reason of legislative mandate and the ability of the United

States Treasury to draw from its reserve the gold coin which may be required to meet any exchanges or redemption.

The full legal-tender silver dollar contains 412½ grains of silver, 900 fine, sixteen times the quantity contained in the gold dollar, and, with pure silver selling at 70 cents per ounce, has a bullion value of only 54 cents, but a currency value equal to a gold dollar, so long as the Treasury can, by free exchanges, maintain the parity of the two coins. The mint rate between gold and silver is 16 to 1, but the coinage value of an ounce of gold being $20.68 and the market value of an ounce of silver being 70 cents, the commercial ratio is then over 29 to 1. How can the Government maintain it at a parity; only by a loss of the difference?

The value of a silver dollar and the paper notes which it represents can thus plainly be seen to now depend upon the ability of the Government to maintain a sufficient gold reserve to make all necessary exchanges at the established ratio.

The standard silver dollar has always been a full legal-tender coin, but it has never filled a prominent place in the business transactions of the people. Its bullion value for a long time prior to resumption being greater than the gold dollar, it was coined in but small quantities and was soon exported or consumed in the arts, and in the coinage act of 1873 no provision was made for its use.

This often-named conspiracy or demonetization of silver has been much discussed since then; but at the time the omission attracted very little attention, as the bullion required to make a silver dollar had a market value of about $1.03. A few years later silver began to decline, and has continued ever since to do so, by reason of its abandonment by leading nations as an unrestricted money metal, and also in consequence of a great increase in its production and a diminution in the expense of obtaining it.

Great efforts have been made to induce the United States to protect the interests of the producers of silver. The free coinage of standard dollars has been vehemently urged, and many times rejected by Congress. The Bland act of 1878 required the Government to purchase silver and to coin not less than two million nor more than four million silver dollars every month. This experimental measure was, even by its authors, admitted to be a failure, having been based on the expectation that the people would readily accept and circulate those coins. "The dollar of their daddies."

But the day for a popular demand for such coin had passed. The use of Government and national-bank notes of uniform appearance, and therefore easily recognized and difficult to counterfeit, of certain redemption and universal acceptance, had become more acceptable to the public than any use of silver except for subsidiary coin for small change, and this feeling applied to gold as well as to silver coin. The new coinage of silver dollars was highly unpopular, and the silver interest hastened to placate the people and preserve the continuance of the coinage and consequent absorption or market for silver, by the creation of certificates based on it, circulating as currency.

In 1890 $297,556,238 of this sort of currency had been put in circulation. It was useful for the time being as money in the transaction of business, and somewhat obviated the difficulty that seemed to threaten because of the reduction in the amount of national bank notes caused by the redemption of United States bonds which had been issued to secure those issues. But the value of the certificate really rested upon the value of the gold reserve behind it, and not upon the hoarded silver coin which it represented, and which no one wanted to either store or handle.

This coin, which at first was below the mint standard in value, declined more and more each year in bullion value. The resumption of specie payments had been effected with about $350,000,000 United States legal-tender notes outstanding, for which a gold reserve had been by law provided. It is sufficient now to say that this $350,000,000 of United States notes, supported by a reserve of $100,000,000 in gold coin, has had a use the benefit of which it would be hard to deny while the law so rigidly restricted the issue of ordinary bank notes.

A glance at official figures shows some remarkable changes in the volume of United States currency and money as well between 1878 and 1892. The amount in circulation had increased from $729,132,634 to $1,601,347,187; the per capita, from $15.32 to $24.40. United States notes secured by the $100,000,000 gold reserve remained at the same figure, $346,681,016. Of gold, there was, in 1878, only $25,000,000, circulating in California. In 1892, in Treasury, bank reserves, etc., there were $664,275,335. The amount of national-bank notes had been reduced to $172,683,850, a decrease in this kind of circulation of some $150,000,000, while circulating notes based on silver purchases had been created to the extent of upwards of $430,000,000.

The growth of this currency issue was regular up to 1890, and at the beginning of President Cleveland's term had reached $208,538,967, but the free gold in the Treasury was about $150,000,000, and having this new Government paper issue to take care of, as well as nearly $350,000,000 of legal-tender notes, the policy was adopted under Mr. Cleveland's Administration of building up the Government's supply of gold, which was done to the extent of over $200,000,000. The large surplus then existing permitting this line of action and also great stability in Government credit as a result, although some distrust was felt in consequence of the continued decline of the price of silver, of which there was so large a stock being carried.

Under the Harrison Administration the surplus in the Treasury disappeared, and a large part of the Government's gold reserve was, in consequence of the mad extravagance practiced, necessarily used in the payments of debts, but the purchase of silver kept right on and, indeed, was greatly increased by the act of 1890. In 1888, in addition to an amount of $120,888,448 of gold, for which there were certificates outstanding, the Treasury held $203,885,218 (in December) of free gold as a reserve, with only $308,000,000 legal-tender notes and $200,759,657 of silver certificates outstanding—about 40 per cent of gold reserve.

July, 1892, the gold reserve had diminished to $110,444,391 of free gold, with $309,559,904 legal-tender notes, $326,693,465 silver certificates, and coin notes (act of 1890) $98,258,692, a total outstanding of $734,512,061, while the percentage of gold reserve was only about 15 per cent. A year later, July, 1893, the notes based on silver purchases had increased some $50,000,000, and the gold reserve declined to $95,000,000, and doubt and distrust seemed to have taken possession of the public mind, until now we are in the midst of the direful consequences of a discredited and doubtful currency.

In order that a silver dollar should have the same bullion value as a gold dollar it would be necessary that the price of silver be as high in commercial value as $1.29 per ounce, but this has not been the case since before the passage of the Bland act of 1878, and the decline has been steady in spite of the extraordinary and unconstitutional efforts made to check it, until as low as 70 cents per ounce has been reached. And with recent events in Germany, Austria, and India, tending to a still further depression of silver, the public is becoming aware of the lack of confidence arising from the fact that this Government is carrying so large a part of its bullion reserve in this unstable metal, and therefore the business world doubts its ability to carry out its promise to redeem in gold, and hence the panic.

We have parted with $60,000,000 in transactions on foreign account in a single six months, and the return of part of this when the present depression began would have done much to have checked the tide of destruction, but the menace of a debased silver standard supplanting the gold basis in this country has prevented this usual and natural relief. As the buying of silver affords only an unstable basis for the issuance of United States notes, this feature of the Sherman act should be at once absolutely and unconditionally repealed. [Applause.]

The following comparative table from the last report of the Secretary of the Treasury would seem to show that there was circulation enough in this country if confidence was restored:

Countries.	Gold.	Silver.	Uncovered notes.	Totals.	Per capita.
United Kingdom.	$550,000,000	$100,000,000	$50,000,000	$700,000,000	$18.42
France	800,000,000	700,000,000	81,000,000	1,581,000,000	40.56
Germany	600,000,000	210,000,000	107,000,000	917,000,000	18.54
United States	654,000,000	575,000,000	405,000,000	1,634,000,000	25.15

This table shows a per capita of $25.15, the greatest per capita of currency ever before in circulation in this country. The largest in the flush times before 1888 was only $16, or thereabout; the present circulation being a fraction more than a third greater than it was then, and yet we are told by the silver men that there is not enough of currency, and they offer this as one of the arguments against the repeal. It is idle and vicious, because it is untrue.

Gold coin is not any longer as desirable for a currency as its representative in paper, except occasionally when needed to settle foreign balances. The stoppage of silver purchases and the decision by the Government to maintain the gold redemption at all hazards, for the sake of the national credit as well as the national honor, should be arrived at without loss of time. The measures for the increase of the gold reserve require economy in the Government, and, if taken with care and judgment and a sound discrimination, will at once restore confidence and impart stability to business affairs from the moment of their adoption.

The return to specie payments was accomplished in 1878 by the issuance of United States bonds to create a gold reserve of about 30 per cent of the notes then outstanding. A similar expedient would seem necessary now to increase the reserve in a fair proportion to the increased issues of currency, and thus maintain the

credit of the United States, though the issuance of interest-bearing bonds should be the last thing resorted to.

There are some suggestions, however, that I desire to offer at this time, though they are hardly pertinent to the matter of the repeal of this bill, except in so far as they would supply the place of an elastic currency, which is the real thing the bimetallists want, though they hardly seem to know it. At no time since the ending of the civil war and the unexampled development and increase in prosperity that followed has the country been free from the lurking danger arising from the use of a large volume of unelastic Government paper, which has constituted a chief part of the circulating medium of the country. The rigid restrictions connected with the issuance of notes by national banks have caused this very serviceable kind of currency to decrease, while the rapid growth of business and population required constantly more and more circulation.

No other nation than ours is more given to the habitual use of banking privileges, and the free use of checks and drafts in the transactions of ordinary business and the settlement of the normal expenses of daily life. Under ordinary circumstances a person of good repute can travel where he wishes, buy what he wants, and settle his indebtedness by a check on his home bank without difficulty. The amount of current money most people have to hold and carry about compared with their total expenditure is a mere trifle, but to avoid delay and the trouble of identification a person will require a larger amount of currency when he passes outside of the locality in which he is thoroughly known.

Just as a fair portion of gold held as a reserve is able to impart a standard of value to a much larger amount of paper issued, so the currency reserves of the banks can in ordinary times sustain a cash indebtedness three or four times as great. When there is no adequate provision for the issue of circulating notes by the banks there will come from the people an irresistible demand for governmental issues of some sort, and if these are made in paper or in coin not having full value abroad to an extent sufficient to meet the full tide of active business and exchange, there will be times of stagnation in the movements of the products of the country when the supply will be redundant and the accumulation of money at the financial centers will be such that it can only find employment in speculative transactions injurious to the people at large, and from which it is difficult to withdraw the capital they have absorbed and restore it to the regular channels of trade in times of panic.

In times of distrust and contraction there often arises a demand from many solvent merchants for an increase of bank credit to tide them over a temporary depression, and at the same time there is likely to be an increased demand from all classes of persons on their deposits of currency, whether in ordinary banks of deposit or in institutions for savings.

A reduction in the cash resources in the banks has the effect of enforcing a contraction of its loans, and thus it comes about that at the very time of a demand for increased discount the ability to extend this accommodation is taken away by the reduction in the reserve due to the demands of customers for the payment in currency of their accounts. When adverse conditions produce a demand for currency and a bank is required to pay out $100,000 of legal-tender money, then in order to maintain its reserve on a 25 per cent basis it must call in $400,000 of its loans, and the embarrassment becomes great when this curtailment of credit is coincident with a demand for an increase in its line of discount.

If under these circumstances a bank could freely emit its own circulating notes in exchange for the checks of its depositors, its total liabilities would not be changed by the operation; it would owe more on account of circulation but less to the depositor whose check had been exchanged in this way, and the percentage of reserve to liabilities would remain the same, and the demand for currency would have been met without a reduction in the amount of legal-tender money held by the bank. In times of financial stringency and distrust there will always be, as there is now, some hoarding of legal-tender money by persons of small means, and the aggregate of their collections and withdrawals of customary deposit accounts is enough to seriously affect the cash reserve of many banks. Actual suspension is then only escaped by avoiding the payment of large checks except through the clearing-house exchanges with other banks, where clearing-house certificates can be used, and a premium on currency becomes an established feature of the situation.

In my opinion the business demands for currency, which cause this premium, could be readily met if the bank in which the depositor has a credit balance could exchange for the individual check its own promises to pay lawful money in convenient amounts for the settlement of small transactions. Amongst the legal restrictions which now cut off this method of relief is to be found the Government tax of 10 per cent on State bank notes. This tax, designed to protect national banks and promote their purchases of Government bonds, had a war origin, and, like the revenue stamp on checks and promissory notes, was submitted to with patriotic resignation. It should have been abolished when the others were.

In the light of experience, it is the duty of every State to regulate the issues of bank notes so that no loss attending upon their use shall fall upon the people through whose hands they pass. This can readily be done, and it would be preferable that action by the State Legislatures of uniform character and in harmony with the currency legislation of the General Government should be taken before the present restrictions are entirely removed. A State-bank issue can be made just as secure to the people as any other circulating note by the enactment of wise legislation. Banks of issue should be under governmental control and examination at frequent intervals of time.

The stockholders should be held liable to an amount equal to their stock, and notes of circulation should be a first lien on all assets of the bank in case of failure. All the banks in any State made liable by a percentage on the circulation they have issued, for any possible loss on the bills of any one of their number which may fail. This, of course, while, as I said before, not pertinent to the issue before this House, is offered as a suggestion which I invite the bimetallists and those who desire a safe and elastic currency to think over.

I have not examined this matter in the light of constitutional reflection, but if power can be found in the Constitution to work out such a measure it would supply an elastic currency, the one great need of the commercial and industrial interests of our country. This matter, of course, is and ought to be an after consideration. The one great want of this country to-day is the repeal of the Sherman act, and if good sense, patriotism, and the obligations of public duty are to prevail there ought not to be a single moment of unnecessary delay in reaching that end.

Mr. HALL of Minnesota. Mr. Speaker, "The times are out of joint." A country richer than all others in the variety and extent of its resources, stronger than all others in the intelligence, enterprise, and ingenuity of its people, greater than all others in its opportunities for individual effort and success, finds its resources stagnant, its enterprise clogged, its progress stopped by an impending financial crisis, dangerous in its present severity and terrible in its possibilities.

These wise men, if I understand them, find nothing in the present alarming condition of the country except an all-pervading fear of the early demise of McKinleyism. The financial distress, the suspension of banks, the hoarding and almost total disappearance of money, the failures of jobbing and commercial houses, the closing of factories, the bankruptcy of railroads, and the universal stagnation of all kinds of business are, in their judgment, mainly due to the fear that this Democratic Congress will in good faith carry out the tariff reform it promised the people.

We are summoned in extraordinary session not to prescribe a remedy for all the ills which afflict the people's business, but to check—to stamp out the financial epidemic which is carrying distress and ruin to every threshold in the nation. Gentlemen tell us that before we can do this we must diagnose the disease. Over the writhing, dying patient these learned doctors consult, quarrel, and disagree in approved professional manner. The venerable practitioner from Ohio [Mr. GROSVENOR] and his boisterous associates from Iowa [Mr. HENDERSON and Mr. HEPBURN] and from Illinois [Mr. CANNON] have diagnosed the case with great relish and self-satisfaction, and have reached the profound conclusion that the patient is suffering from too much fright and too little nourishment.

"Madam," said an eminent specialist, "your husband is afflicted with a complication of disorders which we are utterly unable to understand. But I assure you, my dear madam, everything will be made clear and satisfactory at the post-mortem." [Laughter.]

"To this lame and impotent conclusion" does all their skill, wisdom, and experience lead them.

What quackery it is! If these doctors had but looked into the eyes of the suffering patient, seen his coated tongue, felt his throbbing, feverish pulse, they would not have had the hardihood to speak as they have.

The Almighty has so constructed humanity that in every age and in every country there are men whose patriotism is so diminutive and partisanship so intense that even in a nation's distress and a people's suffering they can see nothing but an opportunity for factional gain and personal profit. To them and of them I can only say in the language of the venerable Senator from Massachusetts [Mr. HOAR]:

> No man whom the American people have trusted with any share of political power is entitled to be respected who approaches the duty of this hour in any partisan or sectional spirit or inspired by the desire to reap partisan advantage from the public calamity.

But let us diagnose the diagnosis of these wise men.

Sherman's silver law was passed in July, 1890. For twelve years prior thereto, under the Bland-Allison act, this country had been annually coining $24,000,000 worth of silver into silver dollars of the average market value of 73 cents each. Over 400,000,000 of these coined dollars were then directly or indirectly in circulation as a part of the money of the country. The Sherman differed from the Bland-Allison law about as two drinks differ from one. It doubled the dose. It compelled the purchase and compelled, substantially, the coinage of twice as much silver as the Bland-Allison act. The shrewd financiers of the world at once comprehended the ultimate effect of the law. They knew that it inevitably accelerated our speed on the down grade to silver monometallism. The wiping out of the magnificent surplus which Mr. Cleveland left in the Treasury was additional cause of alarm.

I can not give you statistics, but every intelligent man knows that the great and rapid development of this country has not been solely due to our people. It is the British pound sterling and the Dutch florin in the hands of the enterprising Americans which has set this country spinning on the highway of development, to the astonishment and admiration of the world. Foreign capital borrowed at low rates of interest has created our railroads, opened our factories and mines, and developed our resources. No undertaking involving the use of large amounts of money could be successfully carried on without the aid of foreign money. Our own capital was too limited, our rates of interest too high to admit of this. But in the cheap markets of Europe we found cheap money. This we borrowed in untold millions and utilized it for our own profit and advancement.

To the people who lent us this money—to the Rothschilds, to the Jews, that marvelous race who are the bankers of the universe, Sherman's law came as a threat of repudiation, an act of partial bankruptcy, an attempt to pay back the money we had borrowed in a debased currency, in clipped shillings of inferior value. They began to draw in their loans, to unload our securities, and, worst of all, they refused to loan us more money.

At once upon the enactment of Sherman's law, gold began to go out of this country in large quantities. In the first fiscal year ending June 30, 1891, our net export of gold was over $68,000,000, and in addition we sent a net export of $44,000,000 of crops and merchandise, in all, over $112,000,000 to pay our called-in indebtedness.

In the next year ending June, 1892, we had a net export of only a half million of gold, but we added to it from our magnificent crops of that year an export surplus of nearly $216,000,000. Did McKinley's law or the fear of its repeal have anything to do with this? Why this enormous payment of our called-in indebtedness occurred while McKinleyism was triumphant; before the American people had rendered their verdict and passed sentence upon the felonious measure?

This distrust and lack of confidence on the part of European money-lenders speedily communicated itself to our American capitalists. They began to prepare for the coming storm by hoarding gold. The banks did likewise. All this time gold was flowing out of the Treasury, and only silver going in. It was apparent that the $100,000,000 of gold held for redemption purposes must soon be encroached upon. Early in the fall of 1891, scarcely a year after the passage of Sherman's law, Ohio's magnificent plunger, then Secretary of the Treasury, announced that he stood ready to use the reserve "upon a pinch." For the first time since 1879 that reserve, the sheet anchor of all our currency, of silver as well as paper, was in danger. All this occurred before the Presidential election. How, then, doctors, could the fear of the repeal of the McKinley law have produced it?

When the people discovered that the bankers and capitalists were scared, they became scared themselves, and began to draw out their money from the banks and hoard it. They got but little gold, for the capitalists had already taken that. But they got currency and hoarded that, until it is almost literally true that there is no money in circulation. Whatever business is carried on consists of small transactions requiring currency of small denominations, and we consequently have the seemingly mysterious phenomenon of small currency at a premium.

From the New York Press, a leading Republican newspaper, I have clipped a column of disasters reported in a single issue—twenty-six in all. They comprehend a variety of business establishments, protected and unprotected. This record of a single day tells of the failure of six banks, three railways, one packing-house, five mercantile houses, two board of trade brokers, one Chicago hotel, one large creamery, and only seven establishments which, by the wildest stretch of imagination, could be in anywise affected by a reduction of the tariff.

It is absurd to say that the banks are dependent upon tariff taxes; equally ridiculous to claim that a fear of the reduction of the cost of steel rails has bankrupted the railways; or of the tax on hog's bristles has closed the packing-house; or of that upon eggs has sent the hotel into the hands of a receiver. The mercantile houses, the brokers, and the creamery were not included in McKinley's distribution of illegitimate profits. And as this day's record is, so has the daily record been for two months past.

Probably the most reliable commercial journal in the United States is Bradstreet's. In a very recent number of that journal I find a list of 800 manufacturing establishments, employing one-half million of people, which have closed since June 1. A large part of these are protected industries. Many of them, such as wagon factories, brick yards, common potteries, sewer and drain pipe works, and others of similar character are in fact wholly unprotected by tariff duties. Of these 800 establishments, according to Bradstreet's, 79 per cent were closed by reason of financial stringency, only 1 per cent claimed that its suspension was due to "a fear of impending tariff changes," and the others were closed for repairs, taking of invoices, or by reason of fire, etc.

If these learned doctors had looked into the columns of a daily newspaper or glanced at the commercial reports of any trade journal, they would not have had the temerity to submit to us a diagnosis so frivolous and absurd.

Here and there doubtless are a few vicious protectionists, enriched by tariff favoritism and reluctant to surrender the special privileges of profit which McKinleyism has given them, who are reckless enough to attribute the embarrassment which comes from a financial panic to a fear of tariff reform. But such men are few in number and worthless in character.

Later on, when we approach the great work of tariff revision, we shall have a howling wail from every protected cradle in the country. All the infants will scream in unison, and tears will flow by prearranged schedule. [Laughter.] The calamity-shriekers from Pennsylvania will outdo their modest brethren from Colorado and Nevada. But it is too early for that now. They are not yet in politics. I do not regret that gentlemen upon the Republican side of this House have endeavored to make partisan capital out of the present distress. It is well that we have them, their diagnosis, fears, and predictions upon record.

In my judgment the unconditional repeal of Sherman's silver law will afford relief to the business of the country so swift and decisive that when this Congress enters upon the great work of tariff reform these prophets of protection will be so discredited by the failure of their present diagnosis that all the fears, prophecies, predictions, and threats they may then utter will be received with universal derision as "full of sound and signifying nothing." [Laughter.]

The undeniable truth is that our present financial distress is universal; that it penetrates every corner of the land and lays its paralyzing hand upon every industry, protected and unprotected. Wherever there is a business which depends upon bank deposits or borrowed money it has gone to the wall.

Such, Mr. Speaker, is the epitomized history of our greatest financial crisis. It commenced—the hoarding of gold, the money famine began—immediately upon the passage of Sherman's law. It was, in a measure, tided over and relieved by our unusual and enormous crops of 1891; it has now reached its culmination.

Doubtless many minor causes have contributed to it; I believe that our protective policy has so debauched and enfeebled our business system as to render it particularly sensitive to such attacks. I believe that the financial disturbances existing in South America, Australia, and to some extent in Europe have more or less contributed to our own distress. But none of these, singly or combined, are sufficient to account for our present condition. It is self-evident and universally acknowledged that the direct cause of our distress is distrust and want of confidence in our ability to maintain the money of this country at a par with the international money of the commercial world.

The vaults and coffers of Europe are bursting with unusable money. It is worth only 1½ per cent in London. Cheap as it is, it lies idle awaiting safe investment. Driven out of South America, frightened out of Australia, it has accumulated in mountainous hoards awaiting the call of him who will give good security for its repayment. Here in the United States, in spite of our past financial idiosyncracies, Europe has found the best and safest field for investments.

But she loans us no money now, and is withdrawing that which we already have as fast as possible. True, within the two weeks past we have imported much gold. We are not borrowing it; we are buying it—sacrificing our securities and surplus crops at forced sale for gold. As it comes here it disappears as effectually as though the ship which brought it had gone to the mid-ocean's bottom.

Never has there been such an opportunity for the immediate development of our railways, our manufacturing, mining, and industrial interests and the funding at low rates of our corporate and individual indebtedness. The cheap money of Europe—

cheaper than ever before—is ours to hold and to use if we will but guarantee its repayment in the same kind of money in which it is loaned to us. But the financiers of the Old World will never send us gold and accept 53-cent silver tokens in payment. [Applause.]

I come from beyond the Mississippi, modestly representing one of the undeveloped States of the Northwest, a marvelous empire with almost boundless resources still slumbering in her virgin soil. Our lands are mortgaged; we need cheap money, not a depreciated currency, not clipped shillings, not a bankrupt's dollar, but low-priced, honest, cheap money to renew our mortgages and render agriculture profitable. We have growing manufactures; we need cheap money to operate and develop them. We have inexhaustible mines; we need cheap money to open and work them. We have large cities and prosperous villages; we need a network of railways over the State, connecting with great trunk lines, which will carry our surplus products at low rates to the seaboard. We stand at the fountain head of two great waterways connecting us with the Atlantic and the Gulf; we need steamboats and enlarged canals. Cheap money builds railways, canals, and steamships.

I have not the courage, Mr. Speaker, to look my intelligent constituency in the face and tell them by my vote that we have locked out the cheap, low-priced money of Europe. For years I have been preaching to them the gospel of free trade. They sent and resent me here, because they believed in that gospel. Having challenged the right of the Government by its tariff legislation to exclude foreign competition from our home markets, I can not now aid in shutting out the low-priced money of Europe in order that the capitalists of Boston and New York may have a monopoly of the home money market. My political economy knows no such paradox as this. If anywhere on this round globe there is money to be had at lower rates of interest, I want my farmer constituents to get at it and to get it.

Sherman's law shuts the door in the face of every foreign investor; it warns him that if he sends gold into this country he will only receive depreciated silver in return. It shuts him out and leaves the great borrowing West and the borrowing South to the tender mercies of the Shylocks of Wall street and the bloodsuckers of New England.

To me this is a sufficient reason why Sherman's law should be repealed. It should be immediately repealed. Whether it is a wise or unwise measure, whether it is or is not the real cause of the existing distress, the people believe it to be so. Unquestionably it is the cause of the panic which prevails; and to appease the panic instantaneous repeal is necessary. It should be unconditionally repealed. For if you attach to its repeal any new financial scheme, any untried monetary experiment, you still leave in the public mind the doubt, distrust, and alarm which already exists.

The house is on fire. The first thing to do is to put out the fire. When that is done we can determine the extent of the damage and the nature of the repairs necessary. It is the height of folly to attempt to rebuild the roof while the smoke is pouring and the flames coiling out of the second-story windows. The gentleman from Missouri [Mr. BLAND] tells us that he purposes to hold the Sherman law as a "hostage" for the enactment of a free-coinage law. What financial wisdom! He would take a chattel mortgage upon the conflagration as a ecurity for the reshingling of the roof. [Laughter.]

The amendments offered to this bill are offered for the purpose of preventing the repeal of the Sherman law, and not with the expectation of securing free coinage at the hands of this Congress. It is a cunningly devised scheme to defeat by amendments a bill which can not be openly defeated.

Interesting as the subject is, I shall not enter into a prolonged discussion of the question of bimetallism, for in my judgment the only thing for us to consider is: Shall we stop buying 4,500,000 ounces of silver bullion per month with gold, or shall we exhaust our gold to accumulate silver?

I am a bimetallist. I believe in the use of both metals as money. I believe that with certain restrictions and upon certain conditions both can be wisely and safely utilized as a circulating medium. But bimetallism does not mean two standards of value. There can not be such a self-contradiction as a double or a triple standard. You can not say that 36 and 30 inches shall constitute a yard, but you can have yardsticks of steel, brass, wood, or tape. Each is a measure of length, but each must conform to the single standard of 36 inches. You can have a gold, silver, copper, or paper dollar, and if they are kept equal with each other they have equal purchasing power and each is a dollar.

Gold, and gold alone, is the commercial, the international money of the world. Whenever any other kind of money comes in contact with it, it is measured, valued by gold. The price of silver bullion, of copper, of iron, is measured by gold. A grain of gold is the yardstick of the nations. It derives no additional strength from coinage or legal-tender laws; whether stamped by a nation's mint or not, coined or uncoined, it is the grain of gold which for more than a century has been the single common standard of value throughout the world, in every mart where civilized man trades with his fellow. We could not discard it if we would, unless, following the logic of McKinleyism, we maintained absolute nonintercourse with all the world.

We can utilize silver as money, not as a substitute for gold, but as an auxiliary and equal to it. The gold and silver dollars can be made equal to each other in three ways. I call attention to the fact that each of these three methods of equalization is specifically set forth in the last Democratic national platform. First, they must be of "equal intrinsic or exchangeable value," so that, put into the melting-pot, either one as commercial bullion would purchase the other in any of the world's markets. This equalization of the two dollars has been feasible at any time within the past twenty years.

If the advocates of free coinage had demanded a silver dollar containing a dollar's worth of silver, instead of advocating a bonus or indirect bounty to silver mine owners, they would have succeeded. To-day, however, such coinage is utterly impracticable. India has closed her mints to the coinage of silver, and so unsettled the silver markets that no one can to-day predict the price of silver to-morrow. No ratio between the metals can be fixed at the present time which would last a week.

Second. Or, "be adjudged through international agreement." Undoubtedly by unanimous consent the nations of the earth can maintain whatever ratio they see fit to adopt.

Third. Or, "By such safeguards of legislation as shall insure the maintenance of the parity of the two metals and the equal power of every dollar at all times in the markets and in the payment of debts." Making both dollars a legal tender would give them equal power in the markets. The only way to make and keep them equal in the markets is to make them interchangeable—to redeem one with the other.

Since 1879, when specie payments were resumed, we have been able to do this by the accumulation of a large gold reserve in the Treasury. We have kept greenbacks, bank notes, silver certificates, Treasury notes, silver itself, at par with gold, because the Treasury has at all times been ready to exchange gold for them—to redeem them in gold.

All this time we have been and still are upon a gold basis, with gold as the single standard of value. But we have had bimetallism; we have used both gold and silver and paper, too, as money; we have maintained their equality in our own markets, at least, by using them interchangeably and being at all times ready to redeem the silver and paper with gold; we have maintained their debt paying equality by our legal-tender acts. From 1879 to the last hour of the Harrison Administration a gold reserve of $100,000,000 has been set apart and sacredly held in the Treasury as a fund pledged for the maintenance at par with gold of all our silver and paper money.

When Mr. Cleveland surrendered the Presidency to Mr. Harrison in 1885 an additional $100,000,000 had accumulated in our vaults. This was our great surplus saved by an honest and economical Democratic Administration, and held as a further guarantee of the equality of all our money. When Mr. Harrison surrendered the Presidency to Mr. Cleveland in 1893 only a few pennies of the magnificent surplus could be found in the Treasury vaults.

Under the operation of Sherman's law since 1890 our silver and paper currency has increased and our stock of accumulated gold decreased to such an extent that the world has lost confidence in our ability to redeem the one with the other and thus maintain their parity.

We must either increase our stock of gold or stop increasing the currency redeemable in gold. If we fail to do one or the other of these things gold must necessarily become a mere commodity, purchasable with silver or paper, and the gold dollar will be worth in the market a premium equal to the difference in the commercial value between gold and silver bullion. We will no longer continue upon a gold basis, but we will sink to a silver basis upon a level with Mexico and China.

We are brought face to face with the problem whether we shall continue as we have been since 1879 upon a gold basis, or whether we shall Mexicanize our currency and sink to a silver basis. On a gold basis we can maintain bimetallism; we can utilize silver as a part of our money so long as we stand ready to redeem it with gold. On a silver basis we become monometallists; we drive all gold out of circulation, because we could not redeem a gold with a silver dollar. The cheaper coin can not purchase the dearer.

The pending bill stops the further increase of Treasury notes issued in purchasing silver. If it fails to pass, it still remains the duty of the Government to maintain the parity of gold and silver as required by Sherman's law. The only way to do this is to increase the gold reserve in the Treasury. To do that we must sell bonds and increase the national debt.

I shall not now pause to discuss the much-mooted problem as to whether or not under the resumption act of 1875 the Secretary of the Treasury has authority to issue bonds and purchase gold for redemption purposes. In the conflict of opinion which exists upon that question, I shall assume that in the stress of a great emergency he might be justified in giving that act such a construction as to authorize an issue of bonds, for in no other way would it be possible for him to carry out the declaratory clause of the Sherman law that it is the established policy of this country to forever maintain the parity of our gold and silver dollars.

The heart of the question before us is not the free coinage of silver, for the enactment of such a law by this Congress is a recognized impossibility, but whether we shall stop buying silver or issue bonds and accumulate gold to maintain the parity of the two metals, as the law requires.

The estimated stock of coined gold in this country is $604,000,000, or $9.01 per capita. Only $100,000,000 of this is in the Treasury; the balance is withdrawn from circulation and hoarded by the people. Our stock of coined silver (including the bullion purchased under the Sherman law) is $615,000,000, or $9.18 per capita. We have more silver than gold in circulation. No one proposes to touch the silver we now have. It is not to be demonetized or "struck down." It is to be left standing as a part, and a large part, of our circulating medium.

When we recall the fact that only about 8,000,000 silver dollars were coined by this Government in all the years prior to 1878, when the Bland-Allison silver law was enacted, and that 607,000,000 silver dollars have been coined since 1878, under the Bland-Allison and the Sherman laws, can it be fairly said that we of this generation have been unfair or unjust towards silver? When we keep in circulation a larger amount of silver than of gold are we not in the true sense of the word bimetallists; do we deserve to be stigmatized as "gold bugs" in the hire of Great Britain?

France has in circulation $800,000,000 of gold and $700,000,000 of silver. She maintains the parity of gold and silver by redeeming her silver in gold. Our purpose is to follow the example of France—to maintain bimetallism by keeping the relative amount of gold and silver in circulation equal to each other. France has $100,000,000 more gold than silver; we now have $11,000,000 more silver than gold.

The Sherman law and the McKinley law were the twin monstrosities of the billion Congress. In each is to be found the same principle, but a different method of protection—of special legislation for the benefit of interested parties. As McKinley gave to Carnegie and to such as Carnegie a home market for the product of their mills, so did Sherman give to the mine owners a home market for the production of their mines. Both laws were passed for the direct purpose of assisting influential capitalists in their private business—of giving them large and illegitimate profits. They are both based upon the same political theories, they emanated from the same source, they were enacted by the same Congress, they received the solid vote of the Republicans in both Houses, they were approved by a Republican President.

If, Mr. Speaker, I was disposed at such a time as this to indulge in remarks of a partisan character no subject could be more tempting than that now under consideration. But, in my judgment, the condition of affairs is altogether too serious and threatening to justify discussion of that character. It matters not where the responsibility for the law which has produced these conditions may lie, the duty of this hour and this Congress is to at once and unconditionally repeal the Sherman law, and give to ourselves and to the world restored confidence in the stability and integrity of the American dollar, be it of gold, silver, or paper.

I listened to the eloquent gentleman from Nebraska [Mr. BRYAN] as he told us the enchanting story of the drummer-boy of Marengo. Pardon me if I inclose his charming picture in the rude frame of my remarks.

Mr. BRYAN said:

Muehlbach relates an incident in the life of the great military hero o France. At Marengo the Man of Destiny, sad and disheartened, thought the battle lost. He called to a drummer boy and ordered him to beat a retreat. The lad replied: "Sire, I do not know how. Desaix has never taught me retreat, but I can beat a charge. I beat that charge at the Bridge of Lodi; I beat it at Mount Tabor; I beat it at the Pyramids: Oh, may I beat it here!" The charge was ordered, the battle won, and Marengo was added to the victories of Napoleon. Oh, let our gallant leader draw inspiration from the street gamin of Paris.

I do not know, sir, that historical accuracy is at all essential to a free-coinage speech; but as a student of correct history I deeply regret that my friend should have torn from the gallant Desaix the laurels he won at Marengo, and plastered them over the cropped head of a Parisian gamin. [Laughter.]

I am sure my friend is mistaken both as to the time and place of the incident to which he refers. If memory fails me not, it was upon another field and on that dread, eventful day in June, 1815, that the historic drummer-boy was summoned into the war councils of the great emperor.

All day long Napoleon had hurled his veteran forces against the British guards upon Mount St. Jean; the grenadiers, hardened by Moscow's terrors, had been driven back in irreparable disorder; the steel-clad cuirassiers who decided the day at Austerlitz had been shattered and crushed in the storm of battle; even the invincible Old Guard, with Ney at its head, had reeled, hesitated, and fled under the fire of the unbroken squares; far to the east, through the shimmering dust-clouds, came the gray mustaches of old Blucher and his sturdy Prussians. The field of Waterloo was irretrievably lost. The time to retreat had come. The battle was lost; it was time to save the army.

Then it was that Napoleon drew inspiration from the street gamin of Paris. [Laughter.] Confident still in his destiny and bewitched by the rub-a-dub-dub of the little drummer-boy, he ordered the remnant of the guard to charge. Side by side with Cambronne and surrounded by the heroes of a hundred victories, he went in himself; and he came out, so Hugo says, "the mighty somnambulist of a shattered dream." [Laughter.]

Years afterwards, on St. Helena's stormy isle, chained like Prometheus to the ocean rock, unwritten history says the great Corsican fought his battles over again, and in tremulous accents left to his faithful Bertrand the dying injunction, "Put not your trust in drummer boys." [Laughter and applause.]

This country has gone far enough—it has gone too far—upon the road to Mexico. Threatened now with financial disaster, it is time to retreat. Let not our great commander heed the rub-a-dub-dub of the drummer boys of Missouri and Nebraska; let him rather listen to the throbbing heart-beat of a distressed and indignant people, and lead us back to the security of honest finance.

The battle for the free coinage of unlimited quantities of silver is irretrievably lost. There is yet time to save the armies of honest bimetallism. [Applause.]

Mr. IKIRT. Mr. Speaker, the question under consideration is of grave import and far-reaching effect. It reaches the hearthstone of every home in this broad land. It is, then, indeed proper that we approach it with calmness, solemnity, fairness, and a patriotic desire to reach the best solution possible with the least possible delay.

It is true that Thebes, that ancient city, had not more gates than have been the ways proposed by which to dispel the cloud that to-day hangs like a dark pall over the nation. And yet out of all the ways proposed not one is of such a character, by reason of the varied and various interests of our country, as to give assurance of concurrence therein of the two Houses of Congress.

This is not pleasant to contemplate I know full well, but it is true nevertheless; and there is nothing to be gained, but much to be lost, by closing our eyes to a painful fact when we should have them open to a full realization of the impending danger. It has been well and frequently said that history oft repeats itself, but I hope and sincerely trust that when the record of this extraordinary session shall have been made up, it will not be found to be a repetition of the history of the extra session called by President Harrison in 1841. Harrison having died, the session was held under Mr. Tyler, convened May 31 and ended September 13, 1841, and the record, as given by Cooper in "American Politics," says, "was replete with disappointed calculations and nearly barren of permanent results. The purpose for which it was called into being failed."

We are all, irrespective of party, doubtless, desirous that such shall not be the record and epitaph of this session, and yet many on the floor of this House feel assured that unless there is a coming together on some middle ground such may be the record; and it is believed and admitted that the United States Senate will not concur in the unconditional repeal of the silver-bullion purchasing clause of the Sherman law. Such being the situation, there is, then, great danger, that of this extraordinary session, called especially to furnish relief, it may be written, as of old, that it failed for the reason that—

> Man, proud man—
> Robed in a little brief authority,
> Plays such fantastic tricks before high Heaven
> As make the angels weep.

The extremes have taken their position. Come, let us in the spirit of conservatism reason together and see where lies conservative ground, if indeed there be such.

President Cleveland, in his message calling Congress to assemble, says:

I earnestly recommend the prompt repeal of the provisions of the act passed July 15, 1890 (the Sherman act), authorizing the purchase of silver bullion, and that other legislative action may put beyond all doubt or mistake the intention and the ability of the Government to fulfill its pecuniary obligations in money universally recognized by all civilized countries.

Mr. Cleveland has been criticised because he was not more explicit and failed to specify what was meant by other legislation after the repeal of the provision of the act authorizing the purchase of silver bullion. I see no valid reason why Mr. Cleveland should be criticised. The message is clearly on constitutional ground. It recommended the repeal of the silver-bullion purchase clause, and that other legislative action (said other legislative action to be, as a matter of course, the wisest and best that could be given the coun-

try at this time), and he asks that it be of such a character that it may put beyond all doubt or mistake the intention and the ability of the Government to fulfill its pecuniary obligations. How? In gold? No; he does not so state, but "in money universally recognized by all civilized countries." To my mind that is susceptible to the interpretation that gold, silver, and paper, all on a parity at home, must have been meant, and I am further strengthened in that belief by what he said in his letter of acceptance.

In his letter accepting the nomination for President, Mr. Cleveland discussed the money question in the following language, in a letter dated Gray Gables, September 26, 1892:

"Every dollar put into the hands of the people should be of the same intrinsic or purchasing power. With this condition absolutely guaranteed, both gold and silver can be safely utilized upon equal terms in the adjustment of our currency."

Now, I submit this proposition, that, inasmuch as the President has nowhere declared that he would not officially sanction a measure to coin silver at a proper ratio, that he wisely left both roads open for Congress to do its work and to criticise him under these circumstances and at this time, is premature and unwarranted.

There are conservative men upon the floor of this House that might vote for either unconditional repeal or repeal with conditions to give relief from the present tense financial condition, and, in view of the position of the Senate and the condition of the country, Mr. Cleveland showed his wisdom and patriotism in leaving both roads open. By so doing he says, in fact, to Senate and House, I expect you and the country expects you to agree on one or the other of these methods of giving relief.

The responsibility now rests with the two Houses of Congress, disregard it they may; escape it they can not.

It is therefore pertinent to inquire, not in a spirit of levity, but in all seriousness, "Where are we at?" and what authority have we for being where we are at?

I reply to the first that we are at the point where we must repeal a part of the act of 1890 unconditionally, or the whole of that act conditionally, or humiliate ourselves and the country. As the first seems impossible the second is the course still left open.

In reply to the second question as to our authority for being where we are at, that is, traversing the road of conditional repeal, I submit the authority of the finance planks of both the great parties, which read as follows:

GOLD AND SILVER.—We denounce the Republican legislation known as the Sherman act of 1890 as a cowardly makeshift, fraught with possibilities of danger in the future, which should make all its supporters, as well as its author, anxious for its speedy repeal. We hold to the use of both gold and silver as the standard money of the country, and to the coinage of both gold and silver without discriminating against either metal or charge for mintage, but the dollar unit of coinage of both metals must be of equal intrinsic and exchangeable value, or be adjusted through international agreement, or by such safeguards of legislation as shall insure the maintenance of the parity of the two metals, and the equal power of every dollar at all times in the markets and in payment of debt; and we demand that all paper currency shall be kept at par with and redeemable in such coin. We insist upon this policy as especially necessary for the protection of the farmers and laboring classes, the first and most defenseless victims of unstable money and a fluctuating currency.

GOLD AND SILVER MONEY—The American people, from tradition and interest, favor bimetallism, and the Republican party demands the use of both gold and silver as standard money, with restrictions and under such provisions, to be determined by legislation, as will secure the maintenance of the parity of values of the two metals, so that the purchasing and debt-paying power of the dollar, whether of silver, gold, or paper, shall be at all times equal. The interests of the producers of the country, its farmers and its workingmen, demand that every dollar, paper or coin, issued by the Government shall be as good as any other. We commend the wise and patriotic steps already taken by our Government to secure an international conference to adopt such measures as will insure a parity of value between gold and silver for use as money throughout the world.

The people having subscribed almost wholly to one or the other of these platforms must mean that as their expressed desire. We should then find the proper ratio in accordance with the commands of the people irrespective of party, class, or condition in life. The people, by subscribing to these platforms, having said to you, gentlemen upon the floor of this House and the honorable Senators assembled yonder, that we will be satisfied when you do this as nearly as possible according to your conscientious judgment, have said but one thing more since that time, and that is a universal demand that this work be accomplished without delay. It likewise should be heeded and the work promptly done. It has been argued upon the floor of this House that the present ratio is sufficient and should not be changed; that if it were not changed and the equal right to coinage with gold were extended to silver it would be all that is necessary and all the people desire.

This is the extreme silver view of the question and I deny that proposition. The people expect a dollar of increased intrinsic value and have so said in subscribing to those platforms, and while I admit that silver has greatly depreciated by reason of adverse legislation, yet with other present conditions it is unreasonable to assume that the intrinsic value of the silver dollar could immediately increase to any marked degree if the ratio of 16 to 1 obtain. Times and conditions change. This must be admitted by all. In the early history of our nation Thomas Jefferson and Alexander Hamilton believed, after mature investigation based on the history and customs of other countries, that a ratio of 15 to 1 was right, and that was accepted and continued down to 1834.

In 1834, the conditions having changed, the 15-to-1 theory, together with that ratio, was abandoned because the ratio was too high, was driving gold out and inviting silver in, and the present ratio, 16 to 1, substituted. I believe now that the conditions have so changed that the ratio should again be changed, and in making this change the conditions should be carefully considered.

Taking the average commercial ratio of silver to gold for the year 1873 (the year it was demonetized), which was 15.92, and the average commercial ratio in 1892, which was 23.72, we find the difference in the commercial ratio of the world to be 7.80, an increase of near one-half, and that the intrinsic value to-day, measured by the bullion value in the market of the world by the gold standard, which has in the meantime appreciated, the intrinsic value of the silver dollar is 58 to 60 cents.

But how much has the standard, gold, by which we compute the value of the bullion in the silver dollar, appreciated? This we must admit is an unknown quantity, but it is safe to assume it has appreciated. While the amount of silver in the silver dollar should be increased so as to bring its bullion value up to a point where, through international agreement anticipating the same, its intrinsic value can and will likely be made equal to its face value, it is not necessary to make its intrinsic value correspond with its face value under the unprecedented conditions of to-day. This to my mind is clear from the fact that, strictly speaking, there is in existence now no money anywhere that is universally recognized by all civilized nations.

The fact must be patent to all, that either gold, silver, or copper coins are money only in the nation that made them and that outside of that nation, they are, strictly speaking, treated as commodities only, and not money. I aver that while silver has depreciated by reason of natural laws, yet the decline is out of all proportion to what it properly should be; and in seeking to find the proper ratio which we could with propriety adopt we must then be guided by a comparison of commercial ratios through a period of years.

By reference to a table (page 50 of the Statistical Abstract, No. 15) it will appear that from 1872, the year previous to which silver was demonetized, down to and including 1878, a period of seven years, the commercial value fluctuated 2.31. That during the next seven years from 1879 to 1885, inclusive, the fluctuation was but 1.36 and that for six consecutive years of that period the commercial ratio never changed but a fraction from 18 to 1 while for the next seven years, including 1892, the fluctuation was 3.97.

It is further worthy of note that the average commercial ratio during that seven years period from 1879 to 1885 was 18.73 to 1. This too, after the full depressing effect of demonetization. It is, therefore, reasonable to conclude that a ratio of about 18 to 1, or 19 to 1, would be indicated and that the latter might be preferable in view of the fact that the United States would for a time at least have to maintain the coinage alone.

It has been argued to change the ratio would entail a large expense to recoin our 419,000,000 silver dollars. It is not absolutely necessary. What inconvenience would it be if we had two legal-tender silver dollars of slightly different sizes? None whatever. At the ratio of 19 to 1 your new dollar would contain about three-sixteenths more bullion and would be slightly thicker and heavier. No necessity, then, to recoin.

But if, on the other hand, the bullion now stored like so much cordwood in the Treasury was at once coined at 19 to 1, the Government would be the gainer to the extent of about $40,000,000.

But the rights and conditions of the West and particularly the silver States have been urged. I for one am not unmindful of their rights, but do regard them, while disregarding the threats. Private life is an Eldorado of peace that has no terrors for true manhood, while fear is the stalking specter of feeble minds, and word pictures of gory-charging squadrons but the transitory vapor of a superheated brain. I for one regard the rights of your "breadwinners" as I do the rights of all others, no matter where they toil, whether in the mines East or West, or whether they follow the corn row in the North or the cotton row in the South. I regard these classes everywhere, and maintain that labor should have the higher consideration by reason of the fact that it is above all, older than all, produces all, and pays for all.

But this measure, Mr. Speaker, has little of class legislation in it, since all classes have united in making the same request, and in complying with that request as best we may we are seeking to benefit all. The bimetallists are not unmindful of that other great principle that there are more than 65 millions of people whose best interests demand the careful maintenance of stability in values, and they, therefore, do not wish to see a further contraction.

Sirs, we have had too much contraction since 1866. Take the history of the ten years from 1866 to 1876, and behold the ruin and wreckage all along the wayside.

I desire to quote from the Machinery Moulder Journal for July, as follows:

On the 12th day of April, 1866, Congress passed a law authorizing the Secretary of the Treasury to sell 5-20 bonds and with the proceeds retire United States currency, including greenbacks.

When this act was passed there was in circulation $1,996,687,770 of currency. During the year there were 520 business failures in the whole country, involving a loss of but $17,625,000. Labor was well paid and fully employed.

In 1867 the work of contraction was vigorously pushed and there were 2,386 failures, with a total loss of $86,218,000.

During the year 1868, $473,000,000 of money was called in and destroyed. The failures increased to 2,608, with a loss to creditors of $63,774,000. In 1869 over $500,000,000 of money passed into the cremation furnace, producing 2,790 business

failures and a loss of $75,054,900. Money growing tighter and wages lower. In 1870 only $67,000,000 was destroyed, and 3,551 failures were recorded, involving a loss of $88,242,000. Money was very scarce and wages were reduced all over the country. In 1871 $35,000,000 was retired and 2,915 failures reported, with a loss of $85,250,000. More men out of work and wages still going down. In 1872 only about $12,000,000 was destroyed, but such had been the strain upon the business of the country for the past five years that this proved the last straw to 4,069 business firms who went under, involving a loss of $121,058,000.

More cutting of wages, great uneasiness among the workingmen and strikes talked of. In 1873 the storm reached its climax. Notwithstanding that only $1,609,000 were destroyed, the people became panic-stricken, and 5,183 business firms were precipitated, with a loss of $228,499,000. Five hundred thousand men were out of employment, wages cut down all over the country, and strikes were of frequent occurrence.

Notwithstanding the terrible results of contraction in the previous year the work of destroying the money of the country—it's lifeblood—goes steadily on in 1874. In this year $174,579,045 in legal tender and fractional currency is destroyed, resulting in 5,832 failures and a loss of $155,239,000 to creditors. A million idle men begin to tramp the country in search of work to keep their families from starvation. Wages still decline and strikes more numerous.

In 1875 the volume of currency was reduced $40,817,418, and failures reached 7,740 with a loss to creditors of $201,060,000. Two millions of laborers out of work. Famine and hunger stares them in the face and tramping became a profession. In 1876 the contraction of the currency was estimated at a little less than 100,000,000, there being 10,000 failures with losses amounting to over $300,000,000. Three million men were out of employment, wages were cut down to the starvation point, and most of the States were enacting laws against the tramp nuisance. Strikes, riots, and general consternation seized the people and the circulation was cut down from a little over $40 per capita in 1866 to less than $10 per capita in 1876. In 1887 the great railroad strikes and riots stirred the country from end to end; the red torch of the vandal lighted up the country from Pittsburg to Chicago. Such is the history of the contraction of the currency and the resumption of specie payment.

Think you we need more contraction? I propose to treat this question fairly. I have no maledictions to heap on the heads of bankers; but in the light of the facts given it is so plain that none need err—that the interest of the small banker, the manufacturer, the farmer, and the wage-earner all lie on a common plane in this matter, and that he is a false friend that advises either of these classes that his interest will be benefited by a marked contraction such as the single gold standard people want. The only men benefited would be your very rich banker and retired business man that buy up mortgages.

Let us see; the United States Treasury is the great heart, the banks are the arteries, and the people are the veins, of business. Thus it will be seen the interest of all lies in the very opposite direction from contraction, and neither of these great classes is independent of the other. The normal working of all is just as essential to perfect financial prosperity as is the normal working of the heart, arteries, and veins to perfect physical health. I think the banks throughout the country, national and private, have done their best to breast the storm, and I, for one, give them credit for it; but do not for one moment think that I include in the list some of the associations on Wall street that are in league with Lombard street, and have contributed much to bring on the present condition. The country wants no further contraction.

On the contrary we need expansion, as the volume of business has far outgrown the available capital. I know of no process of legerdemain by means of which we can increase our circulating medium by striking down a very large portion of what we have. The principle is therefore wrong. The gentleman from Mississippi [Gen. CATCHINGS], who made the strongest argument, in my opinion, that has been made on this floor in favor of the single gold standard, admitted the effect would probably be, or might be, to increase the indebtedness on long time obligations. Then in the name of justice why largely increase such obligations? The bimetallists neither desire too much silver nor yet too little gold. They refuse to bow down to either the golden calf or the silver cow. They worship neither, but respect both. They recognize the interest of the whole people, while they regard the honor of the nation. I care not so much whether we have the precise dollar of the daddies in form, but I do care that we have an honest dollar, whether gold or silver. I mean a dollar that is honest toward the debtor and honest toward the creditor, and in no other way should this matter be settled in order to be right; for nothing is settled until it is right, eternally right. They remember that on the 1st of July, according to the Director of the Mint, that while the amount of silver in the Treasury is larger than the amount of gold, yet our entire stock of gold was estimated at that time at $654,000,000 and our entire stock of silver at $575,000,000.

In the light of that statement both these metals have rights which entitle them to consideration, and hence the desire of the true bimetallists, who are the only conservative element upon this floor, that both metals be used and recognized as money metals, as the Constitution designed. We have no right to demonetize either gold or silver. Now, having considered the extreme silver view, let us turn for a little to the views of the opposing extreme. It is claimed by the advocates of the single gold standard that unaided and alone the United States can not sustain the free coinage of silver at any ratio. They aver that international bimetallism is their aim, and I assume they are sincere, but declare it can only be reached through unconditional repeal of the purchase clause. If gentlemen really desire repeal why not so vote when the ratio is reached that they believe in? They are like the man that, figuratively speaking, has a patent on religion to the extent that he thinks (remember he is sincere, too) that no man can go to heaven except through his particular church.

But the two extremes then are a unit in desiring international bimetallism. The great question then is, How shall we attempt to reach it? Through monometallism or by direct bimetallism at home and a declaration of American principles? It is admittedly the harbor of rest, the sunny Italy of a more stable national prosperity all long to enjoy. But before the anchor is dropped in the harbor of rest comes the vicissitude of the voyage, before the higher prosperity of international bimetallism, the traversing of the Alps that lie before us, bold, rugged, and uninviting.

Again we are confronted with the fact that unconditional repeal being apparently beyond hope, international bimetallism must be obtained in some other way if at all. The allegation and theory that there is no other way, as the United States can not sustain bimetallism at any ratio, will bear investigation. It is said, that years ago a wise man racked his brain and burned the candle low at midnight to write a book proving that a steamship could not carry sufficient weight in coal to enable her to generate sufficient steam thereby to propel her across the Atlantic.

Inventors were at work and, strange to say, the first trip the ship made across the Atlantic she carried that book to America. Possibly the story is not true, but I add the moral which is both original and true. Theory may be, and often is, but a transitory dream, while fact is ever an abiding substance. Turn on the flash-light of fact, which is the argument of to-day and worth a thousand theories. It is known that France, with much less area and fertility in resource, did sustain bimetallism for a period as long as the children of Israel journeyed in the wilderness--seventy years, and that, at a ratio of 15½ to 1, she kept the metals together.

For explanation on this point, see Report of the Gold and Silver Commission, p. 83, sections 191 to 197, made by George Howell, M. P., and published in 1889. But again, on page 50 of the Statistical Abstract of 1892, the fifteenth number, will be found a statement of the commercial ratio of silver and gold for every year from 1687. It is a veritable mine of information on the subject of ratios, and shows that for two hundred years the commercial ratio never went higher than 1 to 16½, except in 1813, and that the ratios during that two hundred years remained at 15½ to 1, substantially, under all the various fluctuations of both metals by the production variations of each, and was not affected by the gold discoveries in either Australia or California, nor by the demonetization of silver by England, in 1816. It remained practically permanent under all conditions of peace and war, down to the demonetization of silver, in 1873, by the United States.

Then the commercial ratio that had been uniform and stable began to change, and has since for the last twenty years risen steadily, and in 1892 reached 23.72 to 1, the highest ever known to that time, and last month (July, 1893) was 28.52. I assert that this table which I here submit, is proof positive that the act of 1873, together with similar acts of other nations resulting therefrom, caused the marked change in the commercial ratio.

No. 28.—Commercial ratio of silver to gold for each year since 1687.

NOTE.—From 1687 to 1832 the ratios are taken from the tables of Dr. A. Soetbeer; from 1833 to 1878 from Pixley and Abell's tables; and from 1878 to 1892 from daily cablegrams from London to the Bureau of the Mint.]

Year.	Ratio.	Year.	Ratio.	Year.	Ratio.	Year.	Ratio.	Year.	Ratio.	Year.	Ratio.
1687	14.94	1722	15.17	1757	14.87	1791	15.05	1825	15.70	1859	15.19

1720	15.04	1755	14.68	1790	15.04	1824	15.82	1858	15.38	1892	23.72
1721	15.05	1756	14.94								

I challenge successful contradiction of this statement and this table upon the floor of this House. I further assert that if this table be not successfully contradicted, then it must stand as an irrefutable answer to the prophecy repeatedly made upon the floor by pseudo-prophets (I mean no disrespect by that term) that the United States can not sustain coinage of both metals because they will not stay together at any ratio.

I intimated that the act of 1873 led to similar acts on the part of other nations, which helped to account for the rapid and steady decline in commercial ratios since 1873. Now, what did happen? Previous to 1873 the great commercial nations, except England, made gold and silver interchangeable at fixed proportions—some making silver and some gold the national standard, but the greater number silver. Silver began to fall in 1873, when the United States and Germany changed their standard to gold. Then Belgium, France, Switzerland, and Italy, known as "The Latin Union," by reason of the action of the United States and Germany, denied the free right of mintage to silver. Thus it is clear the action of the United States and Germany compelled other countries to demonetize silver, and that increased both the demand for and potency of gold, and then began the scramble among nations for gold.

Thus America with Germany walked into the trap set by England in 1816 and caused other nations by necessity, and not from choice, to follow, with the result that in the same sense that the silver dollar is a dishonest dollar, the gold dollar is also a dishonest dollar. The gold dollar is dishonest just to the extent that the metal contained therein may have appreciated while the silver dollar is dishonest to the extent that the metal in it has depreciated, below the mean value of both metals. The one has gone above, the other below, the mean value of both metals.

That is all there is about it, except that legislation brought about by England, as she desired to establiah her supremacy as mistress of the financial world, is responsible directly for the legislation, while America is culpable for allowing herself to be entrapped. I have no censure to heap on anyone, and have been sorry to hear so much about the British lion from our Republican friends. The British lion was let in through the demonetization act in 1873 by Republicans and ever since; the American people, menaced by his lordship's financial presence, have been trying to turn him out again.

Our country is to-day, mid peace and plenty, brought face to face with a condition of great danger which by unwise legislation it brought upon itself. What is the remedy? Apply the principle "that God helps him that helps himself."

As there is not sufficient gold in the world to supply the demand; as two-fifths of the gold we produce is taken out in connection with silver and two-fifths of the silver of the world is produced by the United States, England naturally, in a financial sense, fears us more than any other nation and it follows, as the day the night, that we surely have a greater interest in ourselves than other nations have in us. Therefore it is proper that we move first in our own behalf and then ask other nations to join us. It would seem we can coin both metals at a ratio of 18 to 1 or 19 to 1 and practically keep them together and then when we appear at the fourth International Monetary Conference it will be in such a manner as to command respect and not as an humble humiliated subject. But we might not long be alone. Other countries equally anxious will join us and international bimetallism would more assuredly and more speedily come.

Gentlemen of the single gold standard only faith on the floor of this House have sought to appeal to the patriotism of their colleagues, but in vain. Their appeals touch no chord that vibrates in harmony with a supplicating, enervating policy.

Unlock the shackles and let America assert herself.

Speaking for myself and the very large majority of the 199,000 people I have the honor to represent, I believe in the use of both metals, and believe international bimetallism may be achieved in more ways than one; but I believe the surest and safest way is for the United States to declare herself. Sirs, we stand this hour in the uncertainty of a financial night; but while the night is not so dark as it has been painted, the call comes up from every farm, village, town, and city in this land, from banker, manufacturer, and wage earner. Watchman, what of the night? And may "Uncle Sam," the national watchman, by reason of the work here done, be enabled to answer back, the light cometh. May that light be to the people, when it shall come, as the first glint of morn to the bright and perfect day; the opening of the dawn of a truer, better, and more abiding prosperity than we have ever known before.

Mr. Speaker, gentlemen may talk of patriotism while the nation anxiously waits for something to be done. Speaking for myself, and myself alone, it looks to me as though what we need most at this time is another Declaration of Independence, and this time a declaration of financial independence; and in order to make it we need more of the spirit of Patrick Henry and John Hancock. We should rise equal to the emergency and preserve the honor of the nation as the people demand, by an unfaltering declaration that the United States of America no longer waits, but from this time assumes to lead.

Shall we, then, declare the ability of the country to take care of itself without dictation from a foreign monetary power that alone blocks the way to international agreement, and that will always dictate terms favorable to herself? Are we in this hour to halt and waver?

Mark it well, "To halt is to lose, and to waver is to fail." Said Patrick Henry, in the Virginia convention in 1775, and his words are applicable here and now: "They tell us, sir, that we are weak; unable to cope with so formidable an adversary. But when shall we be stronger? Will it be the next week or the next year? Shall we gather strength by irresolution and inaction?" Shall we? Again I ask, shall we be of the number of whom it is spoken in Holy Writ, "That having eyes see not, and ears hear not, the things which so nearly concern their temporal salvation?"

Mr. Speaker, we shall see what we shall see; but may He that, all unseen, guided the prow of the Columbus fleet, and guarded the frail Mayflower to Plymouth Rock, in His Omnipotent wisdom ordain that we shall not thus humiliate our country by a policy both withering and blighting in its effects. [Applause.]

Mr. McDEARMON. Mr. Speaker, perhaps a more important session of Congress was never held in this country than this. A nation seems with bated breath to be awaiting with manifest impatience to hear what Congress is going to do in the present emergency when a phenomenal state of affairs exists. Suddenly, in the midst of plenty and contentment, when the husbandman is preparing to harvest and send to market a most bountiful crop, amidst the hum of industry on every side; when the nation is enjoying the blessings of health and prosperity; without apparent cause, a money panic spread its baneful shadow over our fair land; seized with insane fear, timid capital shrinks back into its covert and the lifeblood of commerce and industry is cut off and commercial congestion and paralysis result.

Banks have been wrecked, factory wheels are still, and the strange contagion is spreading to all departments of human effort. Tens of thousands of the unemployed throng the streets of our great cities; apprehension and fear rule the hour, and all eyes are turned toward Washington. It behooves us, then, to most earnestly and solemnly address ourselves to the consideration of the grave questions now under discussion. The President, in his message, attributes this strange condition of affairs to the operation of the act of July 14, 1890, and urges Congress to speedily repeal the obnoxious law.

Mr. Speaker, I most sincerely admire Mr. Cleveland. I honor him for his pure and exalted patriotism; I love him for his sturdy and courageous manliness; I revere him for the honesty of purpose and conscientious devotion to duty which have characterized his official life. America never produced a more heroic spirit, or a more loyal, true and noble citizen. And in many things, Mr. Speaker, I would be inclined to defer to his judgment and follow his leadership.

But, sir, after a most careful and thoughtful consideration of this great subject, and after having patiently listened to the many able and eloquent speeches which have been made on both sides in this great debate, I am reluctantly compelled to dissent from the recommendation of the President and to vote against the bill introduced by the gentleman from West Virginia [Mr. WILSON].

Mr. Speaker, I do not believe this financial crash was caused by the operation of the Sherman act, or that that law has much, if anything, to do with it. It has been admitted by some advocates of the Wilson bill that the act of July 14, 1890, is not the cause of the present crisis. The most that can be fairly argued on that point is that the effect of that law, in connection with many other causes, has brought about the panic.

Mr. Speaker, the pages of history are replete with records of panics similar to the one which now afflicts the country. The Bank of England, the greatest financial institution that the world ever saw, has been frequently affected and endangered by panics. The advance of the Highlanders under the Pretender as far as Derby in 1745 caused a run on the banks which threatened the destruction of the "Old Lady of Threadneedle street," and she was saved by the device of making payments in shillings and sixpenses.

In 1792 a general panic took place in England and Wales, and three hundred of the three hundred and fifty banks then existing in those countries were compelled to stop payment, and fifty of them were utterly destroyed, causing an extent of misery and bankruptcy before unknown.

In 1797 a general panic caused the suspension of many banks and compelled the Bank of England to suspend specie payments.

In 1825 another great convulsion took place in England, which brought woe and dire distress in its train, and so from time to time these strange panics have occurred in Great Britain and often almost wrecked the Bank of England until 1844, when Sir Robert Peel procured the passage of the law which limits the general issue of the bank to £15,000,000; and for every note above

this amount that is issued to be secured by a deposit of its equivalent in coin in the bank, thus putting the bank upon a firm and apparently impregnable basis.

In the United States, between 1811 and 1820, about one hundred and ninty-five banks in different parts of the Union failed, causing a state of distress, as stated by the Secretary of the Treasury, in his report, dated May 12, 1820, so general and severe that few examples of the like had before occurred.

The great revolution of 1837, when every bank in the Union suspended, followed in 1857 by another mighty financial crash, when every bank from the Gulf to the Lakes again stopped payment. The great crisis precipitated by the failure of the firm of Jay Cooke & Co., in 1873, is fresh in the minds of most of us, to say nothing of the recent financial earthquake caused by the failure of the great banking house of Baring Brothers, which "shook realms and nations in its jar."

The annals of every other great nation furnish many similar examples of these bubbles which form and break ever and anon upon the tide of commercial life. A writer says:

A panic has no laws; it has no fixed shape; it is precipitated, we know not how; and we are in the midst of it before we are aware; "To attempt to define the condition of that which is, in its essence, unreasonable is a logical contradiction.

I respectfully insist, therefore, that when we carefully analyze the present crisis we will find it to be simply an old-fashioned panic, without any reasonable cause for its existence, and that its worst features are the result of that insane, unreasoning fright and dismay which always characterize large bodies of people when alarmed or panic-stricken; and that the only remedy is a little time, for these financial spasms are of short duration, and reason and good sense will surely and speedily resume their sway.

My humble opinion is that confidence would long since have been restored and the worst would have been over if this extra session had not been called upon the assumption that the Sherman law "was the Illiad of all our woes." I believe that many of the people most alarmed and most clamorous for the repeal of the Sherman act were unaware that there was a "Sherman law," and still less familiar with its nature or effects until their attention was directed to it by the President's message.

And, Mr. Speaker, I am convinced that the advocates of a single gold standard and circulation are taking an unfair and unpatriotic advantage of the unfortunate and deplorable state of things, and are appealing to the fears of the members of this House and the public in order to work its destruction to silver as money, and to fix upon the country as a permanent policy monometallism, which in my judgment is tenfold worse than the disease sought to be remedied.

The passage of the bill introduced by the gentleman from West Virginia would leave the country upon a gold basis pure and simple: it would be tantamount to a reënactment of the infamous and much abhorred act of July 14, 1873. In other words, Mr. Speaker, the issue is made clear and sharp between monometallism and bimetallism.

The great battle is now on. The enemy has selected his position, and planted his batteries; it is true he thinly disguised his frowning cannon, but it can scarcely be called a masked battery. The last clause or section of the Wilson bill, to the effect that the policy of the Government shall be to maintain the parity between silver and gold, is calculated to deceive but few: if it means anything, it can only mean that this parity between the silver coin now in circulation and gold is to be maintained. There is no promise, express or implied, that another silver dollar shall ever be coined by the American mints.

A careful reading of the President's message shows that he is opposed to further coinage of silver, and that he is unmistakably a monometallist, and would in all probability veto any bill that Congress might enact providing for free and unlimited silver coinage, or the further coinage of silver. The refusal of the opposition to accept any amendment to the bill proposed shows that their real policy is to adopt monometallism as the fixed policy of the country, as the Wilson bill unquestionably does.

If they are sincere in their professed willingness to legislate for the further coinage of silver, why do they not in this bill insert sections to that effect? The universal method of substituting one law for another is to enact the new law and repeal the old in the last section.

Mr. Speaker, it is palpable that in view of the recent shutting down of the East Indian mints against free coinage of silver and the consequent fall in the price of bullion the simple repeal of the purchasing clause of the Sherman act without further, or other, legislation friendly to silver will be an abandonment of silver bullion to its fate; and will indeed be, in the eloquent language of the gentleman from New York [Mr. HENDRIX], "the last tolling note of the funeral bell ringing over the doom of silver as money". Silver bullion is no exception to the universal and inexorable law of supply and demand.

Before it was degraded and dishonored by the law of 1873 it was equal with gold, and had been for "a time whereof the memory of man ran not to the contrary." Of silver, as of the ocean, it could then have been said in the language of the poet,

Time writes no wrinkles on thine azure brow.
As creation's dawn beheld thee, thou rollest now.

On account of the difference between the ratio of the metals of this country and the Latin Union in 1873 silver was at a premium over gold in the United States. But immediately upon the passage of the act of 1873 whereby the mints of the country were closed against silver, silver bullion began at once to decline, for the simple reason that the principal use to which that metal had been put, viz, its unlimited use as money at $1.2929 per ounce, was cut off, the demand was curtailed and limited; and as corn or wheat or any other commodity, if prohibited from being used to the extent it now is, or if the demand for it was cut off, would decline in market price, so silver yielded and obeyed the law of trade, and depreciated in value.

I am no apologist or defender of the Sherman act, but I submit that even as it is administered by the Secretary of the Treasury it is a slight support of silver, in that a market is provided for an amount of bullion each year nearly equal to the output of the American mines; and it is indisputable that it prevents silver from further declining.

And I further suggest that if, instead of storing the bullion in the Treasury, as has been and is being done, the Secretary of the Treasury would, as he is commanded to do by the act, have the bullion coined into American dollars, reserve enough to pay the outstanding Treasury notes issued in payment for the bullion, and cover the seigniorage or profit into the Treasury and pay it out on the various demands against the Government, thus increasing the circulation at least forty millions of dollars, this much-abused Sherman act would not be as black as it is painted; under it a constant inflation of the currency is had each month and the country is supplied with what the opposition claims is so much needed on Wall street, *i. e.*, more money. They, however, clamor for a repeal of the act, the cutting off of this addition to the currency, and a contraction of the volume of circulation. If one could have any faith in the sincerity of those who make this argument, he could but pity their judgment.

Mr. Speaker, I have been driven to the conclusion, from a careful perusal of Mr. Cleveland's message, and from close attention to the language and the trend of the arguments of the advocates of the Wilson bill, that the great struggle between monometallism and bimetallism is now in progress, and that a vote for the Wilson bill is a vote for the destruction of bimetallism as the permanent policy of this Government and the establishment of monometallism in its stead; if this bill becomes a law not another dollar will be coined in this day and generation, and very soon the work of retiring the silver coin now in the hands of the people will begin. Indeed, if this measure is adopted, it seems to me that the consistent and logical course to pursue would be, as suggested in the Washington Post of the 19th instant, to issue bonds and buy gold, and prepare to adopt the policy now practiced by England and other gold-standard countries.

Mr. Speaker, with the convictions I entertain as to the duty of a Representative of the people, I could not conscientiously vote for this bill, even if I were converted into the belief that it is a wise measure, for I think that a "public office is a public trust," as said by Mr. Cleveland. I was elected upon the Chicago platform and construed it in my speeches before my constituents to mean what it so plainly says upon the financial questions, and I feel that I would be guilty of a breach of trust and treachery, if forsooth, because there is a panic in Wall street and among the banks and merchants and business men at this moment, which I believe to be temporary, as I have argued, and which I am confident has no connection with the question before us, I should vote for a bill which would, in the strict letter, it is true, carry out one sentence of the platform, but would distinctly and clearly violate other and much more material and important declarations. I do not intend by anything I say to impugn the motives of any gentleman upon this floor, but I accord to each the same honesty of purpose which I claim for myself.

And I will say right here that I have a contempt for the threats which I have heard suggested by some of my associates on this side, to the effect that a member who votes for the Wilson bill will never be sent back here, etc. Mr. Speaker, a man who would not vote according to his convictions of right and duty regardless of its effect upon his chances of being returned to this floor is not worthy to sit here.

But, I repeat, with my convictions and understanding of my duty, if I was convinced of the wisdom of the proposed bill I

would not misrepresent my people, and if I could not cast my vote in accordance with their wishes I would resign my seat and go home and let a true exponent of their views be sent in my place. I believe the people are the sovereign rulers of this country and the majority of each Congressional district in this nation is entitled to have one vote recorded upon this and every other measure acted upon by this House as they desire it to be cast, and we are the instruments and trusted agents selected to cast those votes, respectively.

But, Mr. Speaker, I most earnestly and with all my soul believe that bimetallism is the best financial policy for the country, and that bimetallism is just, honest, and equitable to both the masses of the people and to the creditors of our nation, State, and individuals, and that with bimetallism as our permanent policy our beloved country will continue in its marvelous career of happiness, prosperity, and greatness; upon the other hand, I believe that monometallism would be unjust, vicious, and extremely disastrous to the tax-ridden and debt-burdened toiling millions of this great country.

I ask not proud philosophy to tell me that the contraction of the currency tends to reduce the prices of labor and commodities, adds to the burdens of those that "labor and are heavy laden," renders debts more difficult to pay, and increases the purchasing power of the money that is left, thereby enhancing the wealth of the wealthy, and adding to the luxury and ease of those who "toil not, neither do they spin." The college professors and authors of works on political economy all agree upon this undeniable and self-evident truth.

Mr. Speaker, silver has been one of the standards of value as far back as history, tradition, and God's revelation throws light upon the habits and customs of man. Both gold and silver were accumulated by the ancient Babylonians and Assyrian emperors. The Persian kings from the time of Darius levied tribute of gold upon India and of silver upon their other provinces. Gold and silver have been in all ages "a common drudge 'twixt man and man," measuring and being exchanged for every commodity bought and sold by the human race.

The production of these precious metals, while at times it fluctuates more or less, has on an average kept approximately equal pace through the centuries. The best authorities now estimate the amount of gold and silver coin in the world to be something like seven and one-half billion dollars, of which $3,733,000,000 is gold and $3,880,891,346 is silver.

In fixing the ratio between the two metals for coinage, the relative amount of each in existence should be and is considered, not the amount annually produced for any given period. This is demonstrated by the incident which happened during the period between the years 1851 and 1871, when about $2,500,000,000 of gold was coined; an amount almost equal to the entire stock of gold then in the world, and an amount largely in excess of the silver produced during the same period, as shown by the following table:

Estimated production of gold and silver from 1493 to 1879.

Period.	No. of years.	Amount in kilos.		Value in millions of francs.		Ratio of gold to silver.
		Gold.	Silver.	Gold.	Silver.	
1493–1520	28	162,400	1,316,000	560	292	11.3
1521–1544	24	171,800	2,165,000	592	481	11.2
1545–1580	36	273,000	10,976,000	940	2,438	11.5
1581–1600	20	147,600	8,378,000	508	1,862	11.9
1601–1620	20	170,400	8,458,000	587	1,880	13.0
1621–1640	20	166,000	7,872,000	572	1,749	13.4
1641–1660	20	175,400	7,326,000	604	1,628	13.8
1661–1680	20	185,200	6,740,000	638	1,498	14.7
1681–1700	20	215,300	6,838,000	742	1,520	15.0
1701–1720	20	256,400	7,112,000	883	1,580	15.2
1721–1740	20	381,600	8,624,000	1,314	1,916	15.1
1741–1760	20	492,200	10,663,000	1,695	2,370	14.8
1761–1780	20	414,100	13,055,000	1,426	2,900	14.8
1781–1800	20	355,800	17,581,000	1,226	3,906	15.1
1801–1810	10	177,800	8,942,000	612	1,987	15.6
1811–1820	10	114,400	5,408,000	394	1,202	15.5
1821–1830	10	142,200	4,606,000	490	1,023	15.8
1831–1840	10	202,900	5,964,000	699	1,325	15.7
1841–1850	10	547,600	7,804,000	1,886	1,734	15.8
1851–1855	5	987,600	4,431,000	3,402	985	15.4
1856–1860	5	1,030,000	4,525,000	3,549	1,006	15.3
1861–1865	5	925,600	5,500,000	3,188	1,223	15.4
1866–1870	5	954,500	6,666,000	3,305	1,488	15.6
1871–1875	5	853,400	9,847,000	2,940	2,188	16.0
1876	1	171,700	2,365,000	591.5	525.5	17.8
1877	1	182,800	2,428,000	629.8	539.8	17.19
1878	1	183,700	2,603,000	632.6	578.3	17.96
1879	1	156,900	2,557,000	540.3	568.2	18.39
RECAPITULATION.						
1493–1850	358	4,752,100	149,828,000	16,363	33,292	14.5
1851–1879	29	5,451,200	40,937,000	18,778	9,101	15.55

Estimated production of gold and silver from 1880 to 1892.

Period.	No. of years.	Fine ounces.		Value.	Value.
		Gold.	Silver.		
1880–1885	6	29,516,883	538,795,324	$614,168,000	$713,728,000
1886	1	5,127,750	93,276,000	106,000,000	120,660,000
1887	1	5,093,984	96,189,000	105,000,000	124,356,000
1888	1	5,316,412	109,911,000	109,900,000	142,107,000
1889	1	5,746,950	125,830,000	118,800,000	162,690,000
1890	1	5,473,631	133,213,000	115,150,000	172,235,000
1891	1	5,830,107	144,425,000	120,519,000	186,733,000
1892	1	6,328,272	152,062,000	130,817,000	196,605,000

The ratio was very slightly changed, if at all, by any nation in the world. It is true that several European nations, actuated by the same spirit of greed and avarice now manifested by some of the gold-standard advocates, demonetized gold under the pretext that gold was getting to be too cheap and was a base metal.

After the discovery of the great silver mines in the West the production of that metal was greatly increased, but not to as great a comparative degree as the production of gold in the first period named. Hence it would be unfair and unwise to fix the ratio upon any calculation as to the relative production of the two metals since 1871, for the same reason that it would have been wrong and unwise to fix it in 1871 upon the estimate of the production of the metals during the period between 1851 and 1871.

It is argued in substance by the advocates of the single standard that free coinage of silver at any ratio with gold could not be maintained by the United States alone; because they assume in the first place that silver bullion after the mints are opened would remain below the coinage value and that the same disparity between the market value of the two metals would continue as it now exists; and second, that not only would all the silver bullion in the world flow to your mints to be coined, but that many of the nations of the world which are on a gold basis would gather up their old silver coin, and send them also here to be converted into American silver coin, which, in case this Government should maintain the parity between the two metals—which could only be done by exchanging the one for the other—would be under that policy exchanged for gold coin only to be exported, to take the place of their silver coin imported as aforesaid. This is a familiar argument and is not without at least some plausibility, and deserves respectful attention; for, to my mind, it presents the main difficulty in the way of free coinage of silver, if indeed any difficulty really exists.

I respectfully submit that the first assumption that silver bullion would remain below par after our mints are opened to free coinage is unsound and ridiculous. "A thing is worth what it will bring," is a maxim as old and trite as it is true. One of the prime elements of the value of all commodities is the use to which they can be put, the demand for them, and the abundance or scarcity of the supply.

Silver is now below par as compared with gold, for the simple reason that its use is restricted to the arts and a very limited use for money purposes, whereas every ounce of gold that can be procured can be converted into a legal-tender money at a fixed sum at the mints of almost every country on earth. Its value is fixed by law and the demand or use to which it can be put is unlimited.

There is now over three thousand millions of dollars' worth of silver coin in circulation in the other countries of the world outside of the United States, and it has been thus circulating for centuries. Gold-standard England has over a hundred million dollars' worth of silver subsidiary coin; France, seven hundred million; Germany, two hundred and five million; Spain, one hundred and twenty-five million; India, nine hundred million; China, seven hundred million, and every country under the sun has millions of silver coin which is performing every function as a medium of exchange that can be performed by gold, and as subsidiary coin it is preferred to gold the world over. About 90 per cent of the silver coin in the world is in circulation in the countries outside of the United States.

This vast and enormous quantity of silver coin has circulated for centuries, and the volume is kept up and increased year by year to meet the requirements of the constantly multiplying population of the various countries by immense additions, by free coinage, or by purchases by the respective governments for coinage.

The minority report of the Committee on Coinage, Weights, and Measures of the Fifty-first Congress shows that, according to the figures of the Director of the Mint, the total coinage of silver outside of the United States for the years 1887, 1888, and

1889 was $327,901,031, an average of over $109,000,000 per annum. This amount included some $20,000,000 of recoinages, which being deducted, leaves about $90,000,000 of new silver which the world, outside of the United States, needs and actually coins each year, which amount increases every year; and it is estimated that this demand for new silver, to keep up the volume of circulation of other countries, is about equal to two-thirds of the world's supply of silver.

It seems to me to be absurd to say that all or any of the other countries of the world, after using silver from the earliest dawn of history, now wish to exchange it for gold, and are lying in wait for this country to open its mints again, and will, in that event, at enormous expense collect up their coin and ship it to our mints to be coined at a ratio greater than that prevailing anywhere on earth for our present ratio of 16 to 1 is the highest in the world—except, perhaps, Mexico and Japan—which of itself would be a loss to them of from 3 to 12 per cent.

Why, Mr. Speaker, the gentleman from Kentucky [Mr. McCREARY], in his able, fair, and eloquent speech delivered upon this floor the other day, stated (and he is borne out by the report of the proceedings of the International Monetary Conference which assembled at Brussels last fall) that—

> The feeling among her people (England) in favor of international bimetallism has greatly increased in the last few years, and again the day will come when he (Mr. Gladstone) will cease to be prime minister of England; then friends of bimetallism, with such leaders as Balfour, Goschen, Houldworth, Thompson, Chaplin, Archbishop Walsh, and many others, will show to the world that they appreciate the value of international bimetallism, and a new monetary policy will be inaugurated in England which other countries in Europe will follow.

It is well known that the countries composing the Latin Union—France, Italy, Belgium, Switzerland, and Greece—as well as other nations of Europe, have a bimetallic system similar to ours at present, and are prompted by the interests and desires of their people to favor the increased and enlarged use of silver; and for the reasons given by the gentleman from Kentucky.

I think it clear that if this, the greatest nation of earth, should boldly take the lead and go to free coinage at 16 to 1, the nations of Europe, instead of combining to defeat the object so much desired by all or most of them, as demonstrated by the gentleman, would joyfully applaud our course and follow our example; and, Mr. Speaker, in conclusion, permit to me say that I shall stand upon and defend with my vote and my feeble voice every plank in the Chicago platform, and I feel that I have as much right to disregard or violate that plank which demands a revision of the nefarious and villainous McKinley tariff as to refuse or postpone until an international conference can be had, or until the gorged and fatted plunderers of the substance of the toilers in the fields, who constitute the great majority of all who labor with their bodies in our land, should become satiated and cry, "Hold, enough," as to fail to do all I can to bring about the use of both gold and silver as the standard money of the country and to insist upon the coinage of both gold and silver without discriminating against either metal, or charge for mintage.

The Democratic party, after a lapse of over thirty years, has been restored to full power and control of this nation; the people have trusted us and lodged in our hands a power and dominion which, if Alexander the Great had possessed, he would not have wept for other worlds to conquer, but would have trembled at the thought of assuming such responsibility; the happiness, the peace, the liberties, and the prosperity of nearly seventy millions of the bravest, brainiest, and noblest people that ever lived upon God's footstool are intrusted to our custody for a time.

But I remind my fellow Democrats upon this floor that the keen and critical eyes of our masters are upon us, our every word and action are being weighed and scrutinized, and as sure as there is a sky above us, if we falter or hesitate in the discharge of the vows we made them, or if the grasp of our hand upon the helm of state betrays the slightest tremor, evidencing weakness or cowardice, the thunders of their indignant wrath will smite our ears and we will be unable to face them as faithful stewards.

When the Democratic party last year was true to its teaching and ancient traditions, and became inspired with that divine courage which conquers defeat and declared for a tariff for revenue only, and nominated an ideal exponent of that doctrine, the people believed it and trusted it, and in the mightiest political revolution ever witnessed on this planet the Republican party was dethroned and destroyed, and Democracy was restored to its former dominion.

But, my colleagues, if we begin our career by forgetting our pledges to the people, or dare to break our covenants with them, or cease to remember the mission we were sent to perform, our doom will be read in the scowling faces of our constituents and our reign will be short. [Applause.]

Mr. HARRIS. Mr. Speaker, I must confess that I occupy the time of the House with some trepidation. I have been told since I came here that the people of the West, where money is scarce, where they are poor, have no right to a positive opinion upon these subjects; that they must come to the great centers, where wealth is accumulated in vast amounts and where the great operations or exchanges of the country are carried on, before this subject can be understood. I desire to say that I do not agree with that idea. I have read a good many commentaries on the Merchant of Venice; and not even among the most profound German commentators has there been evolved the idea that Shylock possessed any of the qualifications of a professor of political economy. There was another distinguished accumulator of wealth known not far from New York a great many years ago; but I have never heard that Captain Kidd "as he sailed" was supposed to have any of the qualities which rendered him fit to be a teacher of monetary science. There have been worthy successors to Captain Kidd in the vicinity of New York in the last twenty years; but we of the West do not feel that we are obliged to accept our opinions on these subjects from men who accumulate wealth by such or similar processes.

Who are these people in the great West who are so treated with contumely and scorn—this remote and alien horizon, as it seems to be to some of these people. Let me call your attention for a moment to the manner in which that country has been settled and the class of men who occupy those magnificent plains.

At the close of the greatest war that this world has ever seen, your younger brothers and your sons turned from the scenes of that great combat. The flame of battle still in their faces, begrimed with powder, they turned their steps to the great West. In that transmissouri region they have built up empires; they have faced all the privations, all the sufferings. With their young wives they went out into the wilderness, and they have builded an empire where beats the heart of this great American continent.

Wherever the bread of life is eaten all over this globe men rise up and call them blessed. And all over the prairies of that region are dotted the graves of those wives gone down prematurely with unrewarded, unrequited toil. Those people have been the victims for twenty years of the avarice, of the remorseless greed, of the concurrence of selfish interests which seems to guide and control the eastern part of the country. It is time, sir, that they should rise in revolt, and that they should demand of both these great parties the rights which have been so long denied them, which have been so long falsely promised and refused.

The political parties of this country have boasted time and time again of the loyalty, of the devotion to party, which those people have displayed. For a quarter of a century Kansas was the tenth legion in the army of the Republican party. Her eagles never turned their backs on the enemy nor were ever bowed in defeat. For a quarter of a century the gentlemen on the other side of the House have admired the dogged persistency and devotion which the Democracy of that State has displayed. Like the "old guard" they might die, but they never surrendered. Again and again they came up in line of battle and met inevitable defeat, true in every respect to the traditions of the Democracy.

Both of these great parties in their political platforms from 1873 down to 1892 have promised over and over again that the straw should not be taken away from them, that their tale of bricks should not be produced at the expense of any more or greater effort than when the contract was made.

What were the conditions that these people found when they went into that region? I happen to know, as I was there with them at an early day, that they found the whole of that vast region had all practically been preëmpted by the widows and orphans and servant girls that we are told constitute the creditor classes of the East. These enterprising individuals had all gone out there, and, through land-grant railroads, through the acquisition of magnificent Indian reservations, and by other means, all of those magnificent prairies had been taken possession of by these people here. The settlers had to pay an increased price. Instead of getting their lands, as they should have done, from the Government, they had to pay millions and millions of dollars of profit into the coffers of these parties in the East. If they wanted to build schoolhouses, railroads, or any other improvement, the money was always ready and forthcoming—for a consideration. Bonds were voted everywhere. These railroads, which had been endowed by the Government, took advantage of their opportunities to pit neighborhood against neighborhood, county against county, for the voting of greater and greater amounts of bonds. We have been covered with debt, because we had faith in the future, because we had faith in our country, and we had faith in the great political parties that we believed would do us justice.

We believed that the means which were promised for increasing the amount of money for the payment of these debts would continue and not be denied us. There were men in those days who said we could depend upon it.

Let me call your attention, Mr. Speaker, to the utterance of one of the greatest, if not the greatest, of Americans. Mr. Lincoln, in an interview with Mr. Colfax, who was about to visit the West, said to him on the day he ended his life:

> Mr. Colfax, I want you to take a message from me to the miners whom you visit.

I have very large ideas of the mineral wealth of our nation. I believe it practically inexhaustible. It abounds all over the western country, from the Rocky Mountains to the Pacific, and its development has scarcely commenced. During the war, when we were adding a couple of million of dollars every day to our national debt, I did not care about encouraging the increase in the volume of our precious metals. We had the country to save first. But now that the rebellion is overthrown, and we know pretty nearly the amount of our national debt, the more gold and silver we mine, we make the payment of that debt so much the easier. Now—

Said he, speaking with more emphasis—

I am going to encourage that in every possible way. We shall have hundreds of thousands of disbanded soldiers, and many have feared that their return home in such great numbers might paralyze industry, by furnishing, suddenly, a greater supply of labor than there will be demand for. I am going to try to attract them to the hidden wealth of our mountain ranges, where there is room enough for all. Immigration, which even the war has not stopped, will land upon our shores hundreds of thousands more per year from overcrowded Europe. I intend to point them to the gold and silver that wait for them in the West. Tell the miners for me that I shall promote their interests to the utmost of my ability, because their prosperity is the prosperity of the nation; and—

Said he, his eye kindling with enthusiasm—

we shall prove, in a very few years, that we are indeed the treasury of the world.

In addition to that, sir, I remember well myself hearing a speech which Mr. Blaine made in our country some twenty years ago, in which he said that we need no longer concern ourselves with regard to the rates of freightage to the Atlantic seaboard; that in a few years the Western mountains would furnish a market for all we should produce; that it was the great mineral storehouse of the world; and so from that time on down we have been encouraged to believe that those who went into these mountains and those who went on the plains would alike meet their reward.

We have believed that their efforts would be encouraged and that they would receive the final reward which their unexampled toil and bravery entitled them to.

Now we have our friends in the East whose eyes seem to be all turned in the other direction. They are more concerned with regard to the rate of exchange on London than in regard to the great internal financial interests of this country. They continually tell us that we will sink into the condition of Mexico. That if we remonetize silver it will put us on a silver basis and drag us down.

Mr. Speaker, I would like to ask these gentlemen if they consider that the condition of Mexico is owing to the fact that their currency is silver, or to the fact that they have not enough of silver? They are a poor people. They produce but little, and to ascribe their poverty or ignorance to the metal they use in their exchanges is absolutely absurd. And I wish to say further that, supposing we should come to that point, and we should for a time be placed on a silver basis, as an American I should not consider that an irretrievable mischief.

President Andrews, of Brown University, says:

I propose to consider what in all probability would come to pass should the United States begin free coinage alone. No doubt after the first stringency accompanying the announcement of a free-coinage policy, a stringency arising from the fact that gold would be instantly withdrawn from circulation, while silver could be coined to take its place but slowly, our country would derive great advantage from siding with the silver status. The fall of prices would be stayed, perhaps some rise of prices ensue, besides the United States would take its place as the one great manufacturing nation of the silver world, and derive from that position the immense gain which England has hitherto reaped, but largely lost by the demonetization of silver. We should manufacture for Mexico, South America, China, and Japan, and England, owing to the lack of par exchange with them, would lose most or all of their custom. No doubt here is a splendid chance. We may effectually dish England as a manufacturing and commercial nation by the means suggested. I do not wonder that this prospect carries away so many, for it is indeed a glorious one.

And I should be proud if we could have a financial arrangement with the vast empire south of us, the vast undeveloped region which affords the nearest market for our manufactured products, our agricultural products, and our steel and iron, for years to come.

We can well afford to drop our financial relations in the way of borrowing money with Great Britain or with any of the other powers. In fact, on this subject of borrowing money, which seems to be the leading argument of the gentleman from New York, I have pretty nearly reached the opinion of old Polonius, that for a time it would be better for us—

> Neither a borrower nor a lender be;
> For loan oft loses both itself and friend,
> And borrowing dulls the edge of husbandry.

I do not regard our condition as a perpetual borrower of Great Britain to be one that will lead us ultimately to the high position that we ought to occupy. I believe that by the adoption of a liberal remonetization of silver, as it was prior to 1873, we will so encourage the production of wealth, we will so encourage the accumulation of capital, that we will in a short time be rendered independent of those people. Capital is timid, but after all I have never yet known conditions to be so risky or so fearful that capital will not seek the more profitable investment. A great and growing country like this will attract capital, whether the par of exchange be maintained at all times or not. That has nothing whatever to do with it, and would not present any insuperable obstacle to the doing of business with those great people.

A great many of the gentlemen who have spoken on this subject, who call themselves international bimetallists, seem to be willing to aid to precipitate in Europe another fall in prices so aggravated that the most obdurate banker of Lombard street will have to admit that gold can not be safely taken as the sole metallic money in order to bring about silver coinage in this country. They seem to be willing to perform the part of Sampson. They are willing to pull the pillars of the temple down, to destroy their enemies, regardless of the consequences to themselves or to their countrymen. I have no special desire to destroy Great Britain or to destroy France. The prosperity of those people is a matter which vitally affects us, but I certainly would not seek to advance it by first destroying ourselves. I am more inclined to respect the opinion of the great people in the West on these matters when I recall the speech which Edmund Burke delivered on the floor of the House of Commons in defending Woodfall, the publisher of the Letters of Junius. He exclaimed:

The wisdom of the whole nation can see farther than the sages of Westminster Hall. The collective knowledge and penetration of the people at large are more to be depended on than the boasted discernment of all the bar. The reason is clear: Their eyes are not dazzled by the prospects of an opposite interest. The Crown has no lure sufficiently tempting to make them forget themselves and the general good.

And I desire to commend that extract to gentlemen who some day may find inconsistency a hobgoblin if they do not now find consistency having anything frightful to them.

Why should we not do then, Mr. Speaker, what the great majority of the people have so often desired, what they have time and time again expressed themselves as in favor of? How should we arrive at what is the opinion of the majority of those people, or what is the opinion of the great mass of the people? Is there any better means of arriving at it than to study the political platforms which for twenty years have been made with special reference to catching the majority of votes? There is not a single solitary exception in any of the platforms in any of the parties, where the delusion has not been held out that they intended to remonetize silver. Ever since the great revolt in 1878 no public man has dared to face these people upon any other kind of pretense. They have one and all endeavored to give the impression, no matter what their real opinions were, that they would consult the wishes and the will of the people; and I wish to say that the time has come when the people are becoming indignant, when they deem it a crime that public office is not treated as a public trust, when political expediency and jugglery will no longer avail.

Now, sir; we are told that the sum of iniquities, that the cause of all this trouble and unrest, is the purchasing clause of the Sherman bill; and we are brought here for the express purpose of repealing that law. That is supposed to be all that is necessary to put us back upon the high road to prosperity.

Why, gentlemen, we in the West some five to eight years ago began to see that there were a great many causes conspiring to this unfortunate end. The present condition is but the culmination of those causes, most of them antedating by years this Sherman bill. The people of the West as a rule did not approve of the Sherman bill. They did not consider that it was in accord with true monetary principles; but the Republican party enacted it and the Republicans of the West accepted it as affording some measure of relief. It was not all that they desired, yet they thought in time free coinage would come; and it did make a positive addition to the currency; and had it been administered by its friends, I have no doubt that it would have been a powerful auxiliary in reëstablishing the remonetization of silver.

We do not regard it as a vital thing in the present condition. While, as I say, we do not regard it as a proper monetary measure, yet we do not propose to repeal that which we have, without some knowledge of that which will come hereafter. We desire to know that the pledges of the Democratic party—that being the party in power, that being the party which we have all looked to more or less as intending to act in good faith and honestly in this matter—we look to that party to carry out the platform as an entirety. We do not consider that it is legitimate to select a single clause and to act upon that in a manner which will jeopardize for years to come the vital principle of free coinage.

In the State of Kansas there is no division on this question; Democrats, Republicans, and Populists alike are all agreed that we will stand by the Sherman act until we get free coinage of silver at a ratio of 16 to 1. [Applause.] There is nothing indistinct in the utterances from that part of the country. There are no juggleries in language out there. They say exactly what they mean, and propose to do exactly what they say. There will be no chance for any party in this country that does not stand upon that platform so far as that part of the country is concerned.

Now, sir, this question has been thoroughly examined. It has been taken before conferences and before commissions without end, where the ablest and most expert financiers have controlled. The argument has been gone over and over, and our people out there are impatient of delay. They say the time has come when you must act, when you must say what you mean. I desire to have the Clerk read an extract from the unanimous decision of the great English monetary commission, which practically covers the points that have been so much discussed. It will show that a commission composed of twelve men, six bimetallists and six monometallists, unanimously agreed on the power of a single nation to fix the ratio, not only in her own limits, but in outside countries, a nation not comparable

in strength, commerce, importance, population, territory, or resources, to this great country of ours.

The Clerk read as follows:

Now, undoubtedly, the date which forms the dividing line between an epoch of approximate fixity in the relative value of gold and silver and one of marked instability, is the year when the bimetallic system which had previously been in force in the Latin Union ceased to be in full operation, and we are irresistibly led to the conclusion that the operation of that system, established as it was in countries the population and commerce of which were considerable, exerted a material influence upon the relative value of the two metals.

So long as that system was in force we think that, notwithstanding the changes in the production and use of the precious metals, it kept the market price of silver approximately steady at the ratio fixed by law between them, namely, 15½ to 1.

Section 196. Nor does it appear to us *a priori* unreasonable to suppose that the existence in the Latin Union of a bimetallic system with a ratio of 15½ to 1 fixed between the two metals should have been capable of keeping the market price of silver steady at approximately that ratio.

The view that it could only affect the market price to the extent to which there was a demand for it for currency purposes in the Latin Union, or to which it was actually taken to the mints of those countries, is, we think, fallacious.

The fact that the owner of silver could, in the last resort, take it to those mints and have it converted into coin which would purchase commodities at the ratio of 15½ of silver to 1 of gold, would, in our opinion, be likely to affect the price of silver in the market generally, whoever the purchaser and for whatever country it was destined. It would enable the seller to stand out for a price approximating to the legal coin and would tend to keep the market steady at about that point.

Now, sir, this is what the people believe and have a right to believe.

And, sir, as the doctors are so confused, would it not be well as a representative body to be guided by what the people want, and to make an honest effort to execute the popular will? Is there doubt in any man's mind what that is? That in spite of the tremendous enginery that has been employed to turn them, the vast majority of the people of this country for twenty years have steadily and continuously struggled with wonderful patience and persistency to have silver placed back on the throne from which it has been expelled, but which it has never abdicated.

The simple fact that every political party in this country has in all this time recognized this demand, and everywhere has promised, or pretended to promise, to be governed by it, is an all-sufficient proof of the fact. That they have juggled with words till they quarrel among themselves as to what their platforms really mean only adds to their deeper damnation.

Let me quote from a distinguished Senator [Ingalls]:

I say, if without impropriety I may do so, to the Executive of the nation, that there will come a time when the people will be trifled with no longer on this subject. Once, twice, thrice, by Executive intervention, Democratic and Republican, by parliamentary proceedings that I need not characterize, by various methods of legislative jugglery, the deliberate purpose of the American people, irrespective of party, has been thwarted; it has been defied; it has been contumaciously trodden under foot; and I repeat to those who have been the instruments and implements, no matter what the impulse or the motive or the intention may have been, at some time the people will elect a House of Representatives, they will elect a Senate of the United States, they will elect a President of the United States, who will carry out the pledges and execute the popular will.

In all this discussion as to the single standard and double standard it is strange that no mention has been made of that which is the single and only standard by which we form the mental conception, which we call exchangeable value, and that is, human effort or labor. The average labor cost of the greatest number of articles involving human effort would be the nearest possible approach to an unvarying standard. Gold and silver bullion are simply two commodities selected and used by society at something near the average cost in labor, as an expression of this idea, having in the smallest bulk the greatest labor cost.

That the accidents of mining and the vicissitudes attending the production of the two would have an average of fluctuation less marked in range than would one is unquestionable, and the average price line which is established by the mean between the two metals is the nearest approach to stability which we can have.

The gentleman from Ohio [Mr. HARTER] is partially right in contending that there is a tendency to the alternate actual use of the metals, and it is in that very fact that, as so superbly shown by the gentleman from Nebraska [Mr. BRYAN], exists the automatic regulation which tends to insure stability. As a man in walking rests his weight first on one foot and then the other, his stability would not be increased by cutting off one of his legs and leaving him to hop on one alone. [Applause.]

Here the hammer fell.

The SPEAKER *pro tempore*. The time of the gentleman from Kansas has expired.

Mr. PENCE. Mr. Speaker, if I can be recognized, I will state that the only speaker to follow the gentleman from Kansas [Mr. HARRIS] is my colleague [Mr. BELL], and at his suggestion, I ask that the time of the gentleman from Kansas be extended at least five minutes, so that he may follow the present thread of his argument.

There was no objection.

Mr. HARRIS. I simply wish to add a quotation from Francis A. Walker:

The abandonment of silver will result in the enhancement of the burden of all debts and fixed charges, acting as a drag upon production, and suffocation, strangulation, are words hardly too strong to express the agony of the industrial body when embraced in the fatal coils of a contracting money.

Now, sir, the supply of the two metals has never been so great that the prices of other things have been very greatly raised at any time, and now that a determined effort to destroy the use of one metal, and thereby double the demand for the other, is being made, as an undoubted result prices have been falling all over the world with all of the dire results which universally follow such a condition, and which will result in the ruin of all debtors and the steady concentration of wealth in the hands of the few.

One of England's truest poets once, at such an era, exclaimed:

Ye friends to truth, ye statesmen who survey
The rich man's joys increase, the poor's decay,
'Tis yours to mark how wide the limits stand
Between a splendid and a happy land.

Whenever men have protested against the metallic base as narrow, fluctuating, often insufficient almost to ruin, at other times flowing in with such abundance as to lead to wild excitement and speculation for short periods, as unscientific and unphilosophic, they have been met with the argument that God made these metals for man's needs.

With our catechism we have been taught that the precious metals were provided for the use of mankind as money, that the automatic theory was something sacred; that human intelligence and honesty were all insufficient to regulate or restrain human authority in providing society with a medium of exchange and that only the limitation of nature could and should be trusted with this greatest of functions. When darkness covered the world and civilization was about to perish it was a providential interposition that inspired Columbus to open the way to the metallic treasures of the New World. Again, when from the same cause, in the first half of the century, poverty, suffering, and discontent opened the bloody gates of revolution upon Europe, divine pity directed men to the golden store of California and Australia, and hope returned to the hearts of the people, civilization, with its science, art, and literature received a mighty impetus and the world laughed.

Allison, alluding to the discovery of the silver mines of Mexico and Peru in the sixteenth century, and of the gold mines of California and Australia in this, says:

If ever the benevolence of the Almighty was clearly revealed in human affairs, it was in these two decisive discoveries made at such periods; and he who, on considering them, is not persuaded of the superintendence of an ever-watchful Providence would not be convinced though one rose from the dead.

Predicting the great output of gold, he says:

Before half a century has elapsed prices of every article of commerce will be tripled, enterprise proportionately encouraged, industry vivified, debts and taxes lessened.

And—

We can now contemplate with complacency any given increase in mankind; the growth of their numbers will not lead to the aggravation of their sufferings.

Hardly, however, had these words been written when a new gospel was discovered and preached. It was found that this "happiness of mankind" was about to interfere with the interests of a small but powerful class, debts were being paid too rapidly and easily, "the financial world was becoming saturated with gold" (Chevalier), the debtor was about to escape, and human intelligence and honesty were now invoked to stop the flow of God's beneficence. But the memories of revolution were too fresh. As Mr. A. Allard (delegate of Belgium to the Brussels conference) says:

We had just left 1848 behind us. Besides, both prophets of good and of evil were disappointed, and the stream of gold gradually diminished.

The numbers and needs of mankind continued to increase, however, to 1860 to 1870 found half the civilized world on a paper basis, the arts and natural loss depleting the accumulated stock more and more, the strain and stress again began to be felt, when lo! a miracle—in the West the dawn of light appeared.

A third time (under the automatic theory) God turned again His face towards His creatures, and from the frowning heights of our Western mountains a silver rivulet began to descend. The parched and thirsty earth was gladdened at the sight and mankind rejoiced. Here in our own country we were inexpressibly exhilarated, saved from the reaction of a great war; a new field opened for the bold and active; the road to resumption made plain and easy; the great debt of the nation to be paid as no other had ever been. We girded up our loins, and, full of hope and courage and patriotism, we started on our great work. But we reckoned without our host. A new power now essayed to dominate the world; somewhat timid in 1857, it had grown great on the world's misfortunes or mistakes.

The "bondholder" asserted his right to limit the means of the debtor to pay, and the "financier" waved his glittering wand before the eyes of the people, and from the rosy mists of confidence evolved castles of credit-currency upon the steadily thinning foundation of gold, and claimed that under the modern art of exchanges (swapping checks) practically so much metal money was a burden, a relic of barbarism, cumbrous and to be abandoned; and so the work was done, this time silver, the selected victim. Here it was done "in the night," no man daring openly to avow the full design, nor to this day has any party dared to face an indignant people with a frank avowal of such a purpose.

The two great parties have

Paltered with us in a double sense,
Keeping the word of promise to our ear
And breaking it to our hope.

Grudgingly have they been forced to concede various paliative measures, all alike unfairly and dishonestly administered. The last (the Sherman law), a compromise forced upon us, a monstrosity, a violation of every principle, and, as administered, an open dishonoring of silver as a money metal, and yet to-day it, instead of being the cause of gold leaving us, is, to the extent to which the currency has been increased, standing between us and panic.

Gold is leaving us. Why? Because the world is trying to keep warm under a blanket all too small, and each nation is tugging for a part of it. Austria is paying a premium (4 per cent bonds at 95½ or less). The Baring failure, and later the Australian crash, started a flood of our bonds home, to save the gold-based English credit system from a collapse not yet ended.

An unfavorable balance of trade, in spite of high tariff, if not caused by it, and a determined effort to scare the nation from its purpose, and this outflow was in no way to be prevented or cured by going in debt or issuing bonds. "We are like children who make a shadow on the wall, and are as alarmed at it as if it were a reality."

Had we never demonetized silver "the shadow would never have existed and we would still be in that era of prosperity which we regret to-day" (Allard).

If the flow of gold is a misfortune, which I do not believe, why not check it, as would England, France, or Germany when demanded for export? The law gives Mr. Carlisle the option in payment of Treasury notes to coin silver and use it. The "honest dollar" is the dollar of the contract; no more, no less. Open the mints, coin dollars "of the present weight and standard of fineness." Establish "parity" by parity of use. To expect the bullion values of gold and silver to approach equality, with one sustained by an increased demand originating in legislative action, and an open mint with its fixed unfailing price, while the other is made a commodity, to be purchased at the lowest bid, is an absurdity and a sham.

Give both equal treatment and fixed mint values, then if in due time there should be any inequality, exercise the constitutional right "to regulate the value thereof" in the interests of the great "plain people" of the country. But, says some bright genius, "the silver miners will be benefited." Why should we hate the silver miner or love him less than the man who with a minimum of cost washes the gravel of placers for gold? Shall we freeze because the coal miner might make a profit on coal?

Let no one think that there is unjust prejudice against the legitimate and well-guarded use of bank credit currency; but no one will deny that it is the most subtle and dangerous form of inflation known to the world, and capable of being used to the greatest injury of mankind, especially when the reserve of money of redemption is admitted by all to be inadequate, as is the case with gold.

With all the gold and all the silver the world will still be scantily supplied and the arts will more and more encroach on the stock accumulated.

Let us lead the way alone, and the world will follow. Otherwise the metallic basis for money, or automatic theory, will be forever destroyed by the calamities which will follow and overwhelm us in the attempt to do the business of the world on bank credits resting on the basis of diminishing gold, for the benefit of the "financiers." [Applause.]

Mr. BELL, of Colorado. Mr. Speaker, however we may disagree upon other matters I think we may unite upon these propositions:

First. The demand for money of some kind is equal to the sum of our demands for all other purchasable things.

Second. That our trouble does not arise as to differences between varied products of the field and shop, but the discrepency arises between all of the products of toil and promiscuous property on one side and legal-tender money on the other.

Third. That there is not a depreciated coined silver dollar in France, the United States, or any other great nation, and in the United States coined silver is at a premium over gold.

Fourth. That when silver was demonetized and reduced to a commodity it was at a premium, and that no political party, newspaper, or petition from the people demanded its demonetization.

Fifth. That since demonetization prices of all commodities including silver bullion have gradually decreased, as compared with gold, until they have reached ruinously low prices.

Sixth. That there is now a money famine raging in Europe and America.

When we reach the causes leading up to these injuries and the remedy to be applied we meet a chaotic confusion of ideas.

Our friends east of the Allegheny Mountains and some others plant themselves firmly upon the narrow and, we think, illogical foundation that the purchase of 4,500,000 ounces of silver monthly is the principal cause of disasters and the transcendent question of the hour. If it is possible that this great Government, with its matchless wealth, intelligence, and enterprise, is so weak and unstable in governmental sagacity as to be thrown into irretrievable ruin with so little provocation, then our friends are quite right; we are incapable of self-government, and should supplicate with the mother country for a financial policy. Think of the absurdity of a Government with $27,396,055,389 in assessed valuation quaking at the drop of a mere pebble. It is illogical and, it seems to us, unworthy of serious consideration.

WHY ALL OF THIS SHUFFLING?

We were told long prior to the object lessons given us by the officers of the Government, financial circles, and the public press that the tightening up of money was caused by our securities being thrown back upon our hands from foreign investors. We were then told that the cause of this was losses sustained in India and the Argentine Republic. These were mostly gold securities. Why this change?

We know our gold drifted to Europe early in the year because of adverse balances of trade, and is now flowing back because of reverse conditions. Why did not the Government use the means at its command? Because the Administration is unfriendly to silver.

It is puerile to talk about a failure of silver to circulate when the Government is determined that it shall not circulate. People are clamoring for silver and can not get it. Ever since the Bland act the Executive and the Treasury Department of the Government have done everything in their power to make these acts odious.

Why is it that the silver dollar is now at a premium over gold? (This should bring the blush of shame to the cheek of its defamers.) Silver is and always will be the money of the people in cash transactions.

When people say hold on, we will check up and balance our accounts. We have another object lesson: that is your gold and bank conveniences are satisfactory while we are running on unlimited credit, but when we have to check up and cash in we must have money.

These panics come surely and regularly every few years, and it is here that the mighty and strong swallow up the weak. They call it cleaning out the unstable financial and commercial institutions.

WHAT DID CAUSE THE PANIC?

It was partially caused by the Baring failure, Argentine Republic complications, large purchases of cheap goods from overstocked merchants in Europe and an attempt to further spread gold as a money standard, and the hoarding of money. The officers of the Government, the bankers and boards of trade, which represent one and the same class, sent out interviews, circulars, and inflammatory articles through the press for the purpose of influencing this Congress, and intimidated the laboring men and women and that class of our citizens not in active commercial or manufacturing pursuits, but who owned and held the idle and ready money of the country, and caused them to lock it up in safety deposits.

In Colorado it was a significant fact that practically all of the panic-stricken were women and citizens not engaged in active business. They took you at your word when you predicted the great danger. It is also a significant fact that the scramble was not for gold but for any kind of legal-tender money. The merchants and manufacturers generally owed the banks, and their fears were "that the banks would run upon them."

It is said that in the panic of 1864 in India a large financial and commercial institution failed with £100,000 of gold, upon which it could not obtain a loan of rupees.

In July, in Colorado, money could not be raised on gold ore. In India silver was legal tender, and in Colorado coin and paper, and the banks were expecting the demands of depositors at any moment and would let no one have a legal-tender dollar even upon gold bullion. Legal-tender money is what we need and must have, and abundance of it, to prevent panics.

Bankers and this line of specialists in finance tell you there is abundance of money. This is deceptive. While the business of the country is prosperous and 80 to 90 per cent of our transactions are on credit we may thrive, but the moment a disturbance arises credit is shut off, a money famine sets in, and the weak fall into the hands of the strong.

If it can be said that we had an abundant amount of money while our credit was expanded to 90 per cent of our transactions, then after credit has been contracted three-fourths it would leave us short of money just to the extent of the contraction of credit. Credit is a circulating medium that expands and contracts with the ebb and flow of good or bad conditions, but never does or can pay a debt when people say we will stop, invoice, and cash in. Then the crash comes, as the legal-tender money does not exist.

Our gold-standard friends insist that there is abundance of money if the people would place it back in the banks that they might lend it to the people. The world has gone mad in its scramble for gold and manipulations of money for the purposes of hire. This is not the object of money. This country has so legislated that the great army of producers have been forced to become mortgage-ridden and it has taken away and is trying to take away from them the power to repay.

It is not a loan of your money or England's money we demand—we demand that our mints be thrown open to the free coinage of silver, and that Mexico, South and Central America, and all other silver using and producing countries of the world be invited to bring on their silver, coin it into standard dollars, buy our wheat, cotton, and other products at good prices, that we may pay our debts and owe no man.

The increase of population in the United States, estimated at 3 per cent of 67,000,000 people, equals 2,010,000 people. This increase must have, from the new or old money supply, a per capita of $24. This will require $48,000,000 per annum. Mr. Henry Hucks Gibbs, ex-governor of the Bank of England, after allowing for abrasion any irretrievable losses by shipwreck and otherwise, says that $35,000,000 in gold is a liberal allowance for additions to the old stock of the world. What part of this would the United States obtain?

If she received her portion, as equitably divided between the gold-using people of the world, she would receive only $4,020,000 per annum, or 6 cents per capita, and no provision for the increase of population. Do you wonder that the scramble is so sharp for gold?

The weight of silver in the world is only about 15.7 of silver to 1 in gold—not 16 to 1. This may seem at first blush to be deceptive, as the world has more dollars in silver than gold, but when we take into account the great mass of light-weight divisional silver coin, this reduces the weight of silver as above.

Six hundred and fifty-eight millions of the world's population have an exclusive silver currency, and the remaining 561,000,000 use both metals in some form as a full or limited tender, as shown by table below.

Monetary systems and approximate stocks of money in the aggregate and per capita in the principal countries of the world.

Countries.	Monetary system.	Ratio between gold and full legal-tender silver.	Ratio between gold and limited-tender silver.	Population.	Stock of gold.	Stock of silver.			Uncovered paper.	Per capita.			
						Full tender.	Limited tender.	Total.		Gold.	Silver.	Paper.	Total.
United States	Gold and silver	1 to 15.98	1 to 14.95	67,000,000	$604,000,000	$538,000,000	$77,000,000	$615,000,000	$412,000,000	$9.01	$9.18	$6.15	$24.34
United Kingdom	Gold	.....	1 to 14.28	38,000,000	550,000,000	.....	100,000,000	100,000,000	50,000,000	14.47	2.63	1.32	18.42
France	Gold and silver	1 to 15½	1 to 14.38	39,000,000	800,000,000	650,000,000	50,000,000	700,000,000	81,402,000	20.52	17.95	2.09	40.56
Germany	Gold	.....	1 to 13.957	49,500,000	600,000,000	103,000,000	108,000,000	211,000,000	107,000,000	12.12	4.26	2.16	18.54
Belgium	Gold and silver	1 to 15½	1 to 14.38	6,100,000	65,000,000	48,400,000	6,600,000	55,000,000	54,000,000	10.66	9.02	8.85	25.53
Italy	....do	1 to 15½	1 to 14.38	31,000,000	93,605,000	16,000,000	34,200,000	50,200,000	163,471,000	3.01	1.62	5.27	9.91

* Silver-using people.

† Gold-using people.

TREASURY DEPARTMENT, *Bureau of the Mint, August 16, 1893.*

How is it that $714,636 in Treasury notes have been redeemed in silver during this month (August, 1893) on demand of the holders, while the Government has been freely offering gold instead? Why is it that the people have been offering gold for silver and can not get it? It is because silver is, and always will be, the money used in our ordinary domestic transactions.

THE SIXTY-CENT DOLLAR.

This is a delusion and a snare. The silver dollar is and always has been the honest 100-cent dollar, but the gold dollar has appreciated and has been a 140-cent dollar. This is not only proven, but demonstrated. Mr. Allard, director of the Belgium mint, and others, the representatives from Mexico at the Brussels Conference, showed that the Mexican dollar bought as much of the necessities of life now as it did in 1873. An ounce of bar silver in 1873 would buy a bushel of wheat, and has purchased the same ever since when general conditions of crops were normal. I submit here an interesting table published by "Coin" relative to cotton, silver, and wheat:

Year.	Wheat.	Cotton.	Silver.
1872	1.47	29.3	1.32
1873	1.31	18.8	1.29
1874	1.43	15.4	1.27
1875	1.12	15.0	1.24
1876	1.24	12.9	1.15
1877	1.17	11.8	1.20
1878	1.34	11.1	1.15
1879	1.07	9.9	1.12
1880	1.25	11.5	1.14
1881	1.11	11.4	1.13
1882	1.19	11.4	1.13
1883	1.13	10.8	1.11
1884	1.07	10.5	1.01
1885	.86	10.6	1.06
1886	.87	9.9	.99
1887	.89	9.5	.97
1888	.85	9.8	.93
1889	.90	9.9	.93
1890	.83	10.1	1.04
1891	.85	10.0	.90
1892	.80	8.7	.86
1893	.72	7.3	.78

MEXICANIZING AMERICA.

The gentleman from Ohio [Mr. HARTER] appeals to us not to level this country with Mexico by Mexicanizing our coin. Comparisons are odious unless conditions are proximately similar. Mexico has 751,700 square miles of territory; the United States 3,602,990 square miles. Mexico has 11,632,924 inhabitants; the United States 67,000,000 people. Mexico is inhabited by a people whose wants are yet limited, credit small, etc. But let us take the condition of Mexico from one of her citizens and not secondhand:

CHICAGO, *July 29*, 1893.

EDITOR EVENING POST:

Your paper of July 25 brings an optimistic article about Mexican money and trade. I am Mexican myself and well acquainted with my native country, and as such beg to submit the following remarks: Mexico is the only happy country without monetary troubles, because it has free coinage of silver, and for that reason Mexican banks are in excellent condition, as they do not try to transact business with a substance they can not obtain—gold.

Mexican silver mines continue partly their work for the same reason as banks continue business; they pay their laborers in solid silver coin and don't swindle them with "paper that only means gold," but when redeemed proves to be based mostly on "credit and confidence," which are of no value in hard times.

The "silver trouble" is a wrong expression for the present situation, which is really a genuine "gold trouble," that upsets banks and produces panics. Free coinage of silver on a 20 to 1 ratio would bring to the United States the whole Mexican and South American and even East Indian trade, and Europe would be obliged to adopt also free coinage of silver as it could not eat and drink gold. Silver depreciation is a consequence of its demonetization and not vice versa. If you give a law to prohibit the use of diamonds, these pretty stones would be worth one cent a dozen.

The interior trade of Mexico does not depend much on the silver question in London and New York, as inside of Mexico $1 is always 100 cents; but exterior trade will be reduced to the most indispensable articles, and even their importation must decline in proportion to the increase of the gold-currency premium, and at last we would have to live after the old Aztec's fashion.

Gold standard is a wicked monopoly of money and the only way to kill it is free coinage of silver. I am on a visit to the World's Fair, and should be much obliged if you would publish these ideas.

JOSE MAXIMILIANO DAMEN,
Durango, Mexico.

Let us take France, with only 204,177 square miles, while we have 3,602,990 square miles. France has 38,218,900 population, the United States 67,000,000; France fully developed, the United States in the very midst of her developing period. France supports without a ripple $17.95 in silver for every inhabitant, the United States only $9.18. The United States produces the silver, France

does not. It would require $1,192,650,000 in silver to make our per capita equal to that of France.

The people ask why is it this per capita can be maintained in France and not in this country.

RATIO.

This portion of the discussion should not be neglected. We should not be deceived into changing the ratio. When silver was demonetized it was above par and silver dollars are now at a premium over gold.

The New York World, silver's worst enemy, on August 13 said:

It is not so long ago that apprehension was felt that the continued purchases of silver by the Government would send gold to a premium. A hoarding of the yellow metal resulted in consequence. Last week, however, gold was actually worth less than the Government promises to pay or paper money, and even the discredited silver dollars commanded a larger premium.

A ratio of 20 to 1 would not only require a recoinage of our present stock of silver, contracting the currency by over a hundred million dollars, but would probably disturb and cause a like recoinage and shrinkage in France and other silver-using countries. We can not be indifferent to the volume of money in our foreign markets. If our customers have an abundance of money prices will range high. An abundance of good automatic metallic money of final redemption is what we need.

The actual weight of silver in the world is only about 15.7 of silver to one of gold. There is a sharp demand for it on both sides of the Atlantic. It is simply borne down by an infamous brokerage system. The world has not only absorbed all of the silver produced since 1890, but has greatly reduced the old supply.
